station to see the entire platform lined with ducks waiting for the train to bear them out of the State. He said that in warm weather it was no unusual thing to see two or three wagon loads of spoiled ducks hauled out into the country and dumped into a coulee. He seemed to take comfort in the hope of better things. Both he and Warden Bowers are assured of the wisdom of the non-resident act, whatever the non-resident himself may think about it. I think both the Chief and myself would be disposed now to say that if a shooter can in anyway afford it, it would pay him better to pay his $25 in North Dakota, where he can get some shooting and where the birds are not being destroyed in such quantities for the markets, than to go to some more liberal but more illy-stocked State for a sporting trip. I know this license law has stopped much shooting and cut off much non-resident travel to North Dakota, for the gun stores of St. Paul and Minneapolis complain that it has hurt their trade with sportsmen who outfit for shooting trips to the Northwest. Even the railroads don't like the law, for it lessens their traffic. The ducks, however, are to be congratulated upon it, and so are those whose fate enables them to get a look in at one of the greatest remaining sporting grounds of America.

Home of the Wildfowl.

It was 11:45 in the morning when our long ride over the easy prairies came to a pause at the famous Chase Pass. From the high ridge which rims in this valley we looked down and saw two great lakes, each reaching away four or five miles from the point of view, each perhaps half a mile or more across. Between these two bodies of clear water there stretched a high ridge of hard, dry ground, apparently a quarter of a mile across from water to water, and about 40ft. above the surface of the water at the summit of the ridge. There was a light wind moving, and the water was rippled and moving, so that we could see no ducks at first. As we drove down nearer to the bank we caught sight of thousands of black, bobbing figures, all over the whole face of the waters. In shore, and now not over a few hundreds of yards from us, there rested upon the bars literally a black mass of ducks, thousands upon thousands. This is not the enthusiasm of a man who has never seen many birds before, but is the literal and calm truth. I never in my life have seen so great a body of wildfowl at one time. Soon the birds began to soar up and circle blackly about, and in time the air was dark with a countless multitude of circling, twisting and turning fowl, each bunch with a different direction from the others. It was enough to drive one crazy.

Neither Bowers nor Gokey showed any signs of losing his mind, though I feared for the Chief. For my own part, I have a vague recollection that I stood upon one foot while the team was being turned out and the deliberate preparations made for the hunt.

"Take plenty of shells." was about all the advice Warden Bowers had to offer. "You'll need them all, for you won't kill every shot."

So we took each a back load and hurried off to the pass over which the birds were streaming. We had been told that on this pass, no matter what the weather, the ducks fly all day long. This we did not believe, but set down as "agi'n natur'." Yet we found it true this day at least, though the morning started in very fair and warm.

We found that a series of pits had been dug along the ridge, a few feet below the summit, deep enough so that the shooter would be concealed when he crouched down. In these pits we saw many old shells, but these were weather-beaten, and showed to be those of last year. We were the first to shoot on this wonderful pass in the wonderful duck year of 1897.

The Battle.

Gokey took the furthest pit, Bowers next to him, then myself, then the Chief, who thus was furthest to the left as he faced to the west, from which direction the first flight came. We hurried under many passing flocks as we trotted into the firing line, and as soon as we got located each began to shoot. The ducks were most accommodating, and came to us at first in a vast mass, out of which it was next to impossible to pick out any individual birds. The speed of the flight was terrific, and the hiss of the wings cutting low and close or whispering high overhead was never absent from the ear. Nor was there absent the steady cracking of the guns. Gokey's regular double report, mingled with the cornsheller activity of Bowers's repeating Winchester smote my ear on the right, while nearby on the left the sharp crack of the Chief's little 12-gauge sounded incessantly. Not one shot out of four landed its game, but, none the less, there was a series of heavy thumps all about us, more especially to the right of the firing line, where the two Dakota men were in action.

After a while we had a little let up and I looked over to see how the Chief was getting along. I then had about a dozen ducks piled up in my pit, most of them belonging to Bowers, I presume, but when I approached the Chief he was sitting with his head in his hand, gloomily looking down at a hen spoonbill which he had chased into the grass and killed with a stick.

Couldn't Land.

"What's the matter, Chief?" I asked him, kindly and like a perfect gentleman.

"The truth is," said he, sadly, as he looked up from the hen spoonbill, "I can't land on 'em. Now, I've been holding for the solar plexus of about 4,000 individual ducks that have sashayed across here, but I can't seem to land on 'em. When I lead they—don't misunderstand me—they duck, as it were. They ain't there. How about that? Are these things too good for everybody? How did you fellows happen to get any? Did you shoot into the flock, and hit another flock?"

Duck Delirium.

I explained to the Chief that I got ducks by watching closely where Mr. Bowers was shooting, and then shooting into the same flock with him. He regretted that he was so far out of the way of this sort of assistance that he could not avail himself of anybody's skill but his own, and he hadn't any. (The Chief is good over decoys, but this was his first day on a redhot fast pass, and he met the customary difficulty in shooting before the birds were over on the next lake.)

The Chief and I then concluded to visit a while, and we shot together out of his pit for a few rounds. By this time the birds had begun to come back from the east, and now the fun grew yet more fast and furious. The flocks would start from the eastern lake high up in the air. "Mark east!" would come the warning down the line, and each man would get below the level of the ridge. As the birds approached the high ground they would drop rapidly, and come over the pass parallel with the ground and very low. They would roll over the top of the little ridge beyond us, dip down into the coulee across our front, disappear for a moment, and then come surging and boiling and whistling up in a long, swift, feathery wave over the crest of our breastworks, hissing almost into our faces as they swept on out toward the water. Never was such an exciting situation in the world!

Never in all my life did I see such shooting. It was a glimpse, a glance, and then a swift wheel to get a fair shot at a disappearing bunch almost over the edge of the reeds which lined the water's edge behind us. Sometimes the ducks flew almost into our faces. Often we dodged down to escape what seemed an imminent danger of losing a hat or a head. Twice I shot ducks ahead of me which fell 30ft. behind me. Once I had a fat duck come crushing into the pit beside me, and once I dropped a teal against the bank of my pit. A more perfect embodiment of a hot corner on ducks never existed. It was almost bewildering in its tension. It was a delirium of ducks.

The Chief and I shot from his pit together, and after a time we both began to improve, coaching each other on the lead as the different flocks came by. I could see that he was stopping his gun when he fired, and holding about six feet ahead on birds where he should have led twenty. I could see the line of his smoke cut in apparently a dozen feet behind the bird which he thought he was leading almost too much. He did an equal service by me, and soon we began to acquire the lead, a distance which seemed utterly absurd at first. The pile of birds at out pit began to grow. At lunch time the Chief had become a finished performer on the pass. A very nice looking farmer lady came out with a very nice looking lunch, and as she drove up, the Chief and I rose and cut out four ducks from a passing flock, just to show the lady how it was done. Alas for me! I fell down on my next chance, but the chief killed a pair out the next flight over. Then, as we gathered at the reed bed for luncheon, he cut down a high single, and a moment later yet another. I saw a glance of triumph come into his eye. He had caught the knack of it.

At lunch we paused now and then to kill, or try to kill, the ducks which continued to pour over. Mr. Bowers told me that he and some friends once killed fourteen ducks at that same spot, while they were eating lunch one day. I think we dropped half a dozen or so before we had cleaned up the lunch. A bountiful and well-cooked one it was, and to have it thus brought down warm from the farmhouse was the last touch of comfort on this dry, comfortable, and absolutely ideal fly-way. A good part of our lunch was made up of four grouse, which we had picked up along the road; almost the only grouse we saw in this part of the country, where they are very scarce this year.

Amenities on the Duck Pass.

After our lunch we resumed position in the skirmish line, minus Gokey, who had a headache and did not shoot for a while. It was an old story with Gokey, and it did not take him long to kill the twenty-five birds which make the limit *per diem* for a shooter in the State of North Dakota. With the Chief and myself it was different. We got a good deal bigger run for our money than anybody else, because we shot worse. It now began to be a struggle of courtesy between us all. "I never touched that bird; it's yours, my friend," I would say to the Chief. "Your bird, sir," he would reply, with equal courtesy; and so we would argue over it. Bowers and I nearly scared the Chief to death by covertly piling up a lot of our birds in front of his pit, and then proceeding to count them before him. We made it out to be twenty-nine birds, and the warden told him it would cost him $400!

It would seem that one should soon kill his limit on a flight like this, and so he can, even though he be new at the sport of pass shooting—the hardest shooting in the world, and not to be compared with the easy work of shooting over decoys. Yet I have noticed that even the best shots will spoil 100 shells to pick up twenty-five ducks on a pass like this, and it takes a little while to shoot 100 shells, especially after the first flurry is over and one steadies down and behaves like a shooter, picking his shots and taking care. We had shot a little over a couple of hours before we thought it best to rectify our rough counts of individual bags and to go after the birds which had fallen dead back of us in the reeds. Bowers and I went over the crest of the ridge to look for some birds we had killed on the hard ground, and while we were there we saw the prettiest bit of shooting done on the trip.

The Chief was then alone in the pit over which the main flight was passing, and he had his eye on the birds. He took toll out of everything that crossed. Five times we saw him rise and fire at flocks and small bodies of birds, and each time he got meat. Once he killed all three of three ducks that went over down wind, high and fast—a handsome bit of work. Twice he dropped his double out, and out of five accepted chances he did not miss a shot. It was good enough fun to sit and watch this, and Bowers and I both concluded we had no more advice to offer him. When we got to his pit we found him radiant, and hugging to his bosom the light 12-gauge with which he was now thoroughly infatuated. He expressed himself as for once absolutely satisfied with the world. "Did you see me deflate that last un?" he asked, cheerfully.

When we picked up our birds we found that, counting a half-dozen birds we had given the farmer's wife, we had our limit, or so near it that we did not care to go closer—ninety-eight birds in all. Thereupon came up human nature, as the Chief and I both realized. It was the first day we had had outdoors with a gun for a long time, and the best chance to kill a lot of ducks either of us had ever had in all his life. I confess that my personal wish was to kill some more. I wanted to try just one or two shots more. I wanted to see if I could kill a double out of the flock just heading for us. I wanted—well, I admit I wanted to go ahead and shoot a lot. But this we did not do, and after we saw the awful pile of game we had when we got it together, every one of us was mighty glad we had killed no more, even the question of the law aside. All of these birds, except those eaten by ourselves, were taken to Fargo and there disposed of, Mr. Bowers and myself laboring faithfully till we had them all given away. It is sure we killed enough. How many we could have killed had we all shot all day long as steadily as possible, I should not like to say. I believe we could easily have fired from 500 to 600 shells apiece, and have killed perhaps one-fourth or more of that number of birds apiece. But what a butchery that would have been, for even our one party. What a butchery it would be for many parties, taken for not one day, but for many days. I never had the lesson of moderation more forcibly impressed upon me. It was not at first pleasant, I admit, and I vaguely found the customary excuses for doing what I wanted to do, just as human nature always finds such excuses; but once the temptation was overcome we each of us felt happy. We are each ready to say that the killing of twenty-five ducks on a red-hot pass is fun enough for one day for any man, and that the law is a good one and should stand and be respected. This limit is one which should be set in every gentlemen's shooting club all over the land. It is enough. It is at the moment hard to realize it, but it is enough. Stop at twenty-five, and you feel bad at the time, but good after a while.

So we went away long before evening, while a cold storm was blowing up, and while over the greatest duck pass of the Northwest the long black streamers of the flight were growing thick and thicker. Into the night, over roads made softer by a drizzling rain, we drove, reaching town late, but very well contented. And so ended our day with Gokey, of Dawson, whom we voted a man in whom alike truth and skill abode. We left him with genuine regret, for we had sat at his board and eaten there of duck cooked as one finds it not from Dan to Beersheba, for Mrs. Gokey can cook as well as her versatile husband can shoot. When the Chief and I go out after our winter's meat next year, it is more than likely that we shall endeavor to have that occur in the company of Gokey, of Dawson. And betimes a load is shifted from my mind. Many men in the course of a year write and ask me where they can find shooting. In human nature, this means not a little shooting, but a lot of a shooting. I can answer truthfully: Go to Gokey, of Dawson. There are no chickens there this year, and there may be very few next year, as indeed there may not then be so many ducks; but if the duck shooting then is one-half what we know it was this fall, it is absolutely certain that the visiting shooter will be more than satisfied.

It Protects.

The main body of non-resident shooters will not be at Dawson until about Oct. 1, when the goose season begins. Then the special cars and the special parties will begin to flock in, and Gokey will be busy all the time, as well as all the other guides. If you go thither, Gokey will take you out shooting. He will shave you, play to you or take your picture. He will try you if you break the law. He will put one-third of your $25 in his pocket, and don't you forget it; and if you kick will arrest you and try you before himself, and levy on your stuff if you don't pay.

Protection is beginning to protect out in the far Northwest, but it does not by any means follow that the end of the world has come, or that all the fun and all the shooting must come to an end. If you think that, look at the Dawson *Register* a week from now, or ask the opinion of Gokey, first citizen of North Dakota.

I call Gokey thus deliberately. Warden Bowers is an old friend of mine, and a square man. He can throw Gokey in a fair wrestling match, as he proved many times on this trip. But can he shave Gokey, play to him, picture him or try him, all at once? I trow not. There is but one Gokey, and he lives at Dawson. E. Hough.

1206 Boyce Building, Chicago.

REMINISCENCES OF AN OLD SPORTSMAN.—I.

There is scarcely a sportsman who has shot any considerable amount of game, who has not at least one curious shot to his credit, perhaps scores of them. For a great many years I have hunted our different varieties of game more or less every season, and have both made and witnessed many singular shots, and have been mixed up in not a few odd incidents.

One of the first curious shots that I remember occurred many years ago. My companion and I, with the help of a cur dog, were working out an alder run just at the foot of a steep, well-wooded side hill. We had gone but a short distance when the dog flushed a rabbit, and at once gave chase up the run. When about 100yds. above us, he put up a grouse that came down past us at lightning speed, but as I always took all such chances, I threw the old gun well ahead and cut loose. The bird kept right on, and I was greatly surprised to hear my companion, who stood a few yards to one side, exclaim: "What a wonderful shot. That beats anything I ever saw." Just then I was still more surprised to hear a bird come fluttering in its death struggle down the opposite bank.

I at once grasped the situation, and knew that I had unwittingly killed it on the ground; but my companion thought that I had actually stopped the thunderbolt, as it disappeared from his sight just as I fired; and he was so loud in praise of my wonderful shooting that out of regard for his feelings I never said a word, and until now the true version of the affair has never been told.

I was not at that time a very good shot, but I had an almost overpowering ambition to become one, and in my almost entire ignorance of the customary practice of sportsmen under such circumstances, I actually thought that the next best thing was to have the reputation of being one; and I assure you that in this respect, I gained vastly more by the fluke than I did in the next two years by good shooting. After I became passably proficient in the art, I was made acquainted with a goodly number of the crack shots of the day; and it is perhaps needless to say that in associating with them, I soon learned that a reputation on paper will not "cut ice" when you come to the scratch.

In my youthful days I dearly loved to hunt rabbits, as our American hares are called. One long-legged fellow had escaped us several times, always taking refuge in a hole under some rocks where we could not dig him out nor reach him with a stick. Finally we became quite interested and determined to have him, so one day I took position within fair shooting distance and in plain sight of the hole, while my companion and the dog proceeded to hunt him up. I kept a good lookout, but somehow my eyes wandered for an instant, and when I again looked at the hole I caught a fleeting glimpse of our friend as he was disappearing in its mouth. I walked to the hole and was awaiting my com-

panion, when I heard a smothered squeal from the rabbit, and immediately after there was quite a rustling down in the hole. Thinking that our fleet friend was coming out, I retreated backward in order to be at the proper distance when he should show himself. I had gone but a few yards when he slowly crawled out of the hole with a mink on his back that had its teeth fast in the poor rabbit's neck. Without stopping to think I took a hasty aim and fired at the struggling mass, and killed them both so dead that they hardly gave a dying kick.

As these notes are partly a record of confessions of what I now believe to have been not just up to the mark, viewed from the standpoint of ethics of the field, I may as well get the burden of that mink skin off my mind.

Our storekeeper was rather close-fisted, and always tried his best to drive a good bargain; and just previous to the shot recorded above he had bought of me a prime mink skin that I had learned was worth $2, but he had given me for it only $1.50. Of course this rankled, and came forcibly to mind when I was skinning this one. Not only thoughts of the trade bothered me, but I was much put out to find this skin, otherwise a good one, to be so full of shot holes that it was nearly worthless. I cured it, however, and took it down to the store one evening when the proprietor, after glancing at it, offered me, as he said, the usual price, $1.50, which I took without a banter. When he sold his peltry this skin only brought 25 cents, and he came down on me for the balance; but I declined to respond, and thus I made an enemy for life. Of course I now realize the turpitude of this transaction, and sincerely hope that in view of my youth and inexperience no part of it will be laid up against me.

Once, when hunting rabbits in a large swamp, I placed my companion near a little run that entered the swamp and took my station at a similar run some 50yds. below in plain sight of him. The dog soon had one going, and after a turn or two in the swamp the rabbit made straight for my companion. I saw him as the chase came nearer brace up and with a tighter grip on the old gun he raised it nearly to his shoulder, and with one foot advanced, his body bent forward, stood there ready for the fray. When he caught sight of the quarry he deliberately drew a bead on him and pulled the trigger, then stood still for a few seconds, then, dropping his gun, bounded through the brush at his best speed, meantime yelling for the dog at the top of his voice. Thinking that the rabbit was only wounded, I hastened to him and was greatly surprised to meet him coming out of the brush with the rabbit in one hand and a grouse in the other, both stone dead; of course he knew nothing of the grouse until he heard it fluttering, and even then he did not realize just how matters stood until he arrived on the spot; but that evening, when we gathered around the big stove at the store, he not only saw the partridge all the time, but quietly waited until the rabbit was in line, as he had only a single-barreled gun and wanted them both. Of course I had to back up his statement, although I am now sorry that I did so, as I have since learned that it is very unsportsmanlike to vary in the least from the cold facts and literal truth when telling or vouching for any performance afield.

While upon the rabbit question I may as well tell about the one that Cud shot out of a tree. His full name was Henry Caldwell, but every one called him Cud. He was about one-half farmer and one-half shoemaker, and all a jolly good fellow, with a pat story or anecdote for every occasion. Cud loved to hunt and was usually afield once or twice a week as soon as his farmwork for the fall was done. One morning as I was starting for the big swamp to have a rabbit hunt I met a young friend who wished to go with me, and as an inducement for me to consent he said that his folks had a cat to dispose of, and that he would take it in a bag and when we came to a good place we would let it out and give Milo a run. This suited me, as Milo was an excellent cat dog, and between us we had about cleared our section of country from that pest of the forest, the common house cat run wild. Just before we arrived at the big pasture, our chosen coursing ground, a rabbit jumped close to us and after a few leaps squatted under a small bush. I was about to let him have it when Tommy, my companion, begged for a shot, and I handed him the gun and gave him instruction how to use it. Resting it over a big stone he blazed away, and greatly to his delight killed the rabbit.

Milo came in at the report of the gun, and as we were nearly to the pasture I kept him at heel. Some ten rods from the fence stood a big white oak tree, nearly 4ft. through, with not a limb for more than 20ft., when there was a dead branch about 6in. in diameter that stuck straight out about 4ft., where it was broken off. Making for this tree, I held Milo while Tommy laid down his rabbit, and letting the dog have a sniff at the cat he took the bag about 30yds. away, and shaking out the cat, whacked her with the bag, giving her a good send-off, when I slipped Milo, who went for her for all he was worth. But our fun was short-lived, for the blamed cat just took a half circle at her best gait and came back to the tree, and went up it about 1½in. ahead of the dog, and never stopped until she reached the dead limb, when she crawled out nearly to the end of it, and curled up and watched the dog, who was barking his very best. Tommy came back disgusted, and proposed to go and find some stones and pelt her off; but I said, 'No, it is cruel to throw stones at a cat; let us go back the proper distance. A charge of shot always fetches them." So we went to a clump of hazlewood bushes some 40yds. away, and I was just ready to fire when I saw Cud running toward the tree. Laying down the gun, we crouched under the bushes and awaited events. Milo had kept up his barking, which had attracted Cud, who made for the tree, expecting to find a squirrel. When he arrived within about 40yds. he spied the cat, and as quick as a flash the old gun came to his shoulder and he blazed away. The cat sprang more than 10ft. from the tree, and as she struck the ground she pulled just the best she was able with Milo about a rod behind her, also putting in his best licks and gaining at every jump, and as they went into a little hollow I saw the cat go into the air some 4 or 5ft., and as I knew what that meant, I turned to see what Cud was up to. He was loading his gun, and as soon as he had returned the ramrod he started toward the tree, and as his eye fell on Tommy's rabbit he dropped his gun, and grabbing the rabbit he pulled out his jack-knife and cut its throat. This performance almost retched me, but I somehow managed to hold in, but I had to grip Tommy by the windpipe and hold on or he would have spoiled the fun. How that boy did laugh when I let up on him after Cud had gone, in fact I was not far behind him, and both of us was very near hysterics. To see Cud as he looked at his prize and then at the big tree, shaking his head as his eye rested on the dead limb, and then to see him walk around the tree and again shake his head as he again inspected the rabbit, was about as much as poor, weak human nature could stand.

That evening, at the store, when Cud came in and casually remarked that he never knew until to-day that rabbits could climb trees, I had to take Tommy by the collar and lead him out into the fresh air, and so I lost the remainder of the story, but I often heard it afterward, with the facts in the case just as I have told them, for Cud was always truthful, but he had not seen the cat after he fired, and he thought it was a rabbit, and he said that the fool dog was afraid of the gun. I had sworn Tommy to profound secrecy and I never lisped a word, all of which I now know to have been very wrong, as I have long been convinced that many of the "facts in natural history," as well as in other cases, are learned by the scientist from Cud and his representatives throughout the land, who will prove to you that rabbits do climb trees, or some other "fact" equally absurd.

SHADOW.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

Minnesota Indians and Game.

(*Special interview.*)

CHICAGO, Ill., Oct. 9.—I have interviewed by mail State Executive Agent S. F. Fullerton, of Minnesota, so supplementing recent personal talk with him upon the subject of the order from the authorities at Washington, restricting the shipments of game from Indian reservations in Minnesota, and to day am in receipt of his opinions in regard to the effect of the order. His letter reads in part as follows:

"I have taken a trip to both the Indian reservations, that is, the Red Lake and the White Earth. I wanted to see how they felt in regard to the order that was issued from Washington. Was at Detroit, where our friend Davis lives, the man we have had so much trouble with. Some of the people there take the ground that Indian Commissioner Jones has exceeded his authority, and has no right to issue such an order, but they will obey it just the same, as the Commissioner is very much in earnest about the matter. The last words he said to Mr. Byrnes, our attorney, when he left Washington, was that if that was not strong enough he would make it just as strong as the Commission wanted it, which is very gratifying indeed to us. If necessary we will have the president revoke the treaties in regard to the Indians, so far as shooting is concerned, and that will surely settle all controversy.

"We have a case coming up in our Supreme Court that has a great bearing on this same question. Mr. Stephens, our warden at Detroit, found in the possession of a Mr. Lacy two prairie chickens on Aug. 28, this year. He seized them and arrested Mr. Lacy. The judge fined Lacy $10 for each bird. He immediately appealed to the Court Commissioner of Becker county for a writ of *habeas corpus*. The case was heard and the Commissioner discharged him from custody, he claiming that the game was killed on the White Earth Indian Reservation. The Sheriff of Becker county immediately appealed to the Supreme Court, and it comes up on the 5th inst., when the court convenes. We are almost certain of winning this case, and of course it is in line with all the others that are pending. You will remember making mention in FOREST AND STREAM of a case that came before the Minnesota Board of Pardons, in which we caught two Indians from the Fond du Lac Reservation with two saddles of venison in their possession in the village of Carlton, in Carlton county. They claimed that they had shot the deer on the reservation and could sell it if they wanted to. We arrested them and put them in jail. They made application, through the District Attorney, Mr. Stringer, for a pardon. Our Attorney-General, Mr. Childs, and Chief Justice Start, of the Supreme Court, are members of the Board of Pardons. They both looked into the matter very carefully, and decided that an Indian had no more rights than a white man and would have to submit to the police regulations of the State the same as a white man. Of course it is very gratifying, on the eve of the trial in the Supreme Court, to know that we have the best legal talent in the State, viz., the Attorney-General and Chief Justice, on our side; so we have no fears of not winning our Indian cases, and we think by this time next year the vexed question of what the rights of the Indians are in regard to game will be settled for all time to come.

"They are just changing Indian agents on the Reservation, and of course we could not get anything very definite out of the ones in power. Mr. Allen, the present agent, has never been very friendly to game protection, judging by his actions, as I have written him several times, and he has never even answered my letters. Of course he will have a chance to reflect now, as he will be an 'ex' in a very short time, and Mr. Sutherland, of Detroit, will take his place, who, we expect, will make the Indians obey the laws of the State. Of course he can do nothing less than to follow the instructions of the Indian Commissioner in regard to his recent order.

"You ask me what we think of the order, as a Commission, and I will say that nothing has ever happened in Minnesota, in our judgment, that comes anywhere near being as good as this. You have no idea, living in Chicago, how much game is marketed by Indian traders. The poor Indian gets little or no benefit from it. He simply does the hard work of hunting, and sells his venison for from 2 to 4 cents per pound and his partridges and ducks at from 5 to 10 cents apiece, the trader making all there is in it. We think that in the interest of the Indian, Commissioner Jones's order is a splendid thing, as well as in the interests of the game of the State at large.

"I have just had a letter from the State Game Warden of North Dakota, Mr. Bowers, giving myself and deputies authority to seize all game coming from North Dakota, whether going through Minnesota to another State or stopping in our State. I am awaiting the same authority from Wisconsin and South Dakota and also from some of the States further west. You can see at a glance what a splendid thing, with co-operation, this will be, if we can only get it in good working order. It will absolutely shut off the shipment of game out of any of these States if we can get all the State game wardens interested."

All the News from South Water Street.

I have to-day had a long personal interview with State Warden H. W. Loveday, of Illinois, and have his opinions in regard to the game market of Chicago. Mr. Loveday says that he has now appointed 246 deputies at different parts of the State, and he has had reports of over 400 cases tried under the game laws this season, to say nothing of many reports not yet turned in by deputies. This is a good showing for out-of-town work, but it appears that on South Water street also Mr. Loveday has really been doing som business, and that in a way to give the average game dealer a genuine and sincere touch of *Weltschmertz*, as we say in Chicago. Since Oct. 1 he has tried nineteen city cases and will be busy the rest of the month, usually having two cases each day, one in the morning and in the afternoon. The large majority of these cases are for illegal shipping of game. Warden Loveday says he has taken game from almost every dealer on South Water street. Some of the dealers have pointed out for him packages of illegal game which they did not want to receive, and some packages he has seized contrary to the intention of the dealers. He claims that some of the heaviest dealers have observed the law, or at least have turned over to him boxes of game which came to hand before the opening of the season. (We may doubt, as I think Mr. Loveday does, that they have advised him of each and every package of illegal game received, but each lot so turned over to the warden is that much of a discouragement to the country shipper of contraband game.) In all, the warden has seized about 4,000 to 4,500 head of illegal birds in good order, to say nothing of many partially spoiled birds, only portions of which could be saved, this usually the breasts, which were salted down and sold at about half the price of a good bird. Were there nothing more to be said about the work than the above, it would be a very fair showing.

Mr. Loveday says that he is sorry the newspapers got wind so soon of his seizure of the game of the Monarch Cold Storage Co., 1,500 partridges, for otherwise he might have gotten the name of the shipper of these birds, which came from some party in Minnesota, whose name was never learned, the cold storage outfit claiming not to know the shipper. This being the case, all the warden could do was to take the game, which, under the law, he sold at auction. All these birds went last week to New York, at $4.50 per dozen. This made quite a neat little sum for the warden, who gets the whole amount, not being forced to divide with the school fund as he does on fines. Thus it may be seen that, while this sale clause in the law is in some of its bearings a very vicious and dangerous one (as I have pointed out in the celebrated, or rather infamous, Kewanee case), it certainly is a very good one for the encouragement of the warden, who otherwise would have rather slim picking for a living. With nothing but the fines to depend upon no warden could afford the job and administer the duties of his office honestly. By means of the confiscation clause, a good active warden on this dishonest game street of ours can make himself comfortable, and make a lot of crooked dealers very uncomfortable. I think I violate no confidence when I mention that Mr. Loveday told me that the office, with these confiscation moneys and all, would be good for about $3,000 a year, but that he would not make so much out of it, as he was forced to spend a great deal out of his own pocket in traveling expenses. He has no State fund to use, and personally thinks that the office should have a salary and an appropriation behind it, so that the warden can have proper tools with which to work. There is certainly much reason for complaint about the present game law, which was accepted by the game dealers' lobby because it was well nigh fatally weak in its executive clauses. It is not beyond hope that we shall have a better game law yet in this State before many years.

Loot of the West.

Warden Loveday uncovers one rather staggering item of the possibilities of the confiscation clause of our game law. He has been advised that he cannot hope to win in a fight against the big cold storage companies unless he can show that they are holding Illinois game, or game from other States, which was put in storage illegally. His lawyer advises him not to try under the present law to assail these big fences for having in possession train loads of game, merely on the ground that they have it in possession. It is necessary to specify, to prove title, to trace the game indisputably before attempting to break open these repositories. It seems that no one is ignorant of the fact that this game is held here over the legal season, and indeed Warden Loveday says that he and his agents, after inspecting some of these big houses, that in three concerns there were piled up over $135,000 worth of game! He saw whole rooms full of venison hams. He saw untold thousands of dozens of game birds, lying here iced up, waiting for the demand of a trade whose dimensions are really known to but very few. All this vast amount of game is held with perfect calmness by the dealers, who know, or think they know, that they cannot be held to account under the present law. Warden Loveday may be following legal advice when he refrains from going after this game, but if I was in his place, even at the risk of getting a legal licking, I should certainly have to go after that little pile. I see no reason, under the law, why the warden may not as legally and as legitimately get rich out of this game as the game dealers themselves. In fact I would rather see the warden have this money. Should he try for it and fail, he will meantime have so stirred up the question of game protection, of which the bulk of the public remains in the densest ignorance, that thenceforth the matter of enforcing the law would be a far different and far easier task. It would please me to see Warden Loveday get that $135,000 worth of game at least tied up in the courts, so that the dealers could not rush it out to the Eastern markets. Let them carry it, so tied up, for a few years, paying interest and insurance on it, and putting up a good stiff bond for it besides! Methinks we should then have some fun and some news. If Warden Loveday will go after that $135,000, he can't any more than lose it, and he can make a reputation if he loses, a fortune if he wins.

Figures.

The figures of the game trade are very large ones, and not much understood. Thus, at the beginning of the open selling season on the street, F. M. Smith, one of the big dealers here, opened the doors of his cold storage rooms, and sent to New York at one shipment, 2,000 *dozen* quail! His books opened (for the legal season only) to the warden, show that he puts down daily 200, 300, 400 *dozen* quail. He is on. dealer only. This is one city only. That is where the game goes. The industry is an enormous one. It has reaped the woods and fields and streams of the West one after another. It has reaped, but none has planted for the harvest. It has been the pillage of an army of invasion, ruthless, barbarous, destroying, defiant, taking all and leaving nothing for pay except contempt and laughter. And this the American people suffers after its indifferent fashion. The one comfort lies in the fact that, though the American people is slow to act upon suspicion that anyone is imposing upon it, it acts swiftly and sternly when it once begins. Hasten that time for our odoriferous thoroughfare!

Devices of the Dealers.

There is a regular system in the conduct of the illegal business on South Water street, and the concert and interdependence of the men engaged in the business are perfect. Every dealer on the street knows what to do, and when one way of smuggling is detected another is taken up. Thus, when he first went to work on the street this fall, Warden Loveday gave it out that he did not intend to bother so much about shipments of game which came by express to private parties, and not for the purposes of sale. He preferred to devote his time to the better paying work of watching shipments to the hotels, restaurants and game dealers. Boxes shipped from shooters to themselves or their friends at home here in Chicago were allowed to slip through, and the warden allowed this to be understood. Note the result: In less than a week he and his men began to see an unusual number of boxes coming to "Mrs. So-and-so," or "Miss So-and-so." After the mysterious "Miss" name would be the address of some dealer, or sometimes the box would be addressed to a "blind" address, and handled twice here in the city as a matter of precaution. After Mr. Loveday began to see feathers sticking out of a box now and then, and to feel how heavy some of the boxes were, he concluded that too many "Misses" were in evidence, and he began to seize the boxes. The whole street had caught on, and the word had been passed that this was the latest way to evade the warden and the law.

After the warden broke up the "Miss" business, there was a sudden lull in receipts of game here at the depots. Inquiry developed the fact that the shippers were ordering their express packages to come, not direct by rail over the roads running into Chicago from the game fields of Dakota and Minnesota, but only so far as Milwaukee, where they were transferred and sent down by boat, over the Goodrich line of steamers. It was known that the warden had no men watching at the steamer dock for illegal game, though he had four men under salary at different railroad depots watching the express companies. A little visit to the Goodrich docks one morning developed several boxes and barrels that were promptly seized.

I have already mentioned the fact that for a time early in the season the dealers got a great deal of game shipped in butter tubs, labeled as "fresh butter," and apparently packed as such, with the nice edge of the cheesecloth ostentatiously sticking out from under the rim. A great many "sooner" chickens were seized in this way. Lately the warden got so he could tell these packages pretty well, for sometimes the country shipper would use an oldish tub, one a little more weather-beaten than a butter shipper would be apt to use. Then a large influx of "fresh eggs" fell upon the market. The warden one day saw some feathers sticking out of an egg crate, and thinking perhaps some of the chickens had hatched, as they very often do in South Water street eggs, he opened the box to set free the young fowls. He found a layer of eggs on top and the rest of the box was full of half-grown prairie chickens! The express companies gave Mr. Loveday permission to examine all suspected packages, and many is the little device of the canny dealer which he has thus uncovered

The Inference.

Such are some of the ways the game comes into Chicago before and after the legal shipping season. Now, let us see about the real case as to the hold-over privileges of these big storage companies which carry it. At the end of one season, Feb. 6, I reported that a train-load of game was shipped from Chicago to the East. It is stated regularly by the dealers that they do not hold over any game here after the close of the selling season, but ship it all out as soon as the selling season ends. Very well; let us suppose they do. But comes Warden Loveday, and with his own eyes sees in three storage houses here this fall, before the season opened, over $135,000 worth of game. How did it all legally get in there? Is it not all plain enough that, in spite of all that is done or can be done, the illegal game is pouring into this market all the year round, open season here or not, non-export laws observed or not, legal or illegal as the game may be here or in the State in which it was killed? Is this not self-apparent? If it be so morally certain, is it not legally possible to show, in some way, that this game is held here contrary to the Illinois law, one of the most glaring violations of the laws of the land that ever went unpunished?

We are having on trial here now a man charged with wife murder, charged with having burned up and destroyed all evidence of his crime, having burned up the *corpus delicti* till nothing but some questionable fragments remained. Yet the methods of modern justice confidently hope to prove this man guilty, or to prove him innocent, even with the *corpus delicti* gone forever. Here, in heaps on South Water street, is *corpus delicti*, proof absolute, testimony and evidence in tons. Is there no legal way of establishing guilt or innocence of these men, when evidence is so near and so abundant? The thought that we cannot do this is an admission that we have no government, that we have no law in Illinois. Is it true that we cannot punish our murderers? Is it true that we cannot confine our burglars? Is it true that we cannot imprison our thieves? If we cannot do these things, we have no law. We are not yet a society. We are still unorganized. We still are savages.

Some of the Cases.

Among other cases now on hand, Warden Loveday has that of "Turkey" White, of Momence, who shipped two boxes of illegal game to Chicago, and thoughtlessly left a letter in the box with the game. He will be tried at Kankakee. The agent of the express company will be on hand to testify.

A. M. Lynch & Co., Chicago, arrested last week for handling illegal game, took a continuance. The case comes up Oct. 13.

Doussangs, a restaurant on Wabash avenue, Chicago, will be tried next Monday. T. J. Fellows, of 2026 Wabash avenue, for some time openly advertised on his bill of fare, and in his windows, illegal quail and chickens. Warden Loveday and his attorney, Mr. Exline, both called and had a meal of these "sooner" birds. "Have you been well served?" asked the proprietor as they rose to go. They allowed they had been. "Then come and try us again," said Mr Fellows. "All right," said Mr. Exline, "we *will* try you." And he did! Thirty dollars and costs.

The Monroe Restaurant, on Monroe street, this city, has been selling "sooner" chickens as "owls," a very foolish thing to do one would think. The case against them was clear, and they will be convicted without doubt.

Deputy Phil. Goetter, who watches suburbs near the city on the west side, has had arrested five young Sunday bird-shooters, who were out having a *fête champetre*, with four kegs of beer and some shotguns last Sunday. They had a number of robins, larks, jays, etc. Their guns were confiscated, and warrants are out for the men for non-appearance at the court for trial. Their names are: Henry Stine, 1252 Twenty-second street; John Moran, 522 California avenue; John Black, 1250 California avenue; Frank Rich, 171 Twentieth street, and Frank Micks, 171 Twentieth street.

George Airey, who is deputy for Morgan Park and Blue Island region of the suburbs, lately arrested the engineer of the Oxford building, this city, a Frenchman, whose name is not at hand, accusing him with killing song birds. He promised to appear for trial, but did not do so, and was fined $60. A writ was issued for him, and he was told he would have to loosen or languish. He loosened.

Local Weakness.

Above are the most prominent features of the work of game protection up to date as applying to the warden's work, more especially in Chicago. Of course, this is outside the question of the sooner shooting all over the game regions of the State. Of this a great deal went on, without doubt, and of course all this ought to be stopped; but I want to close this long resumé of the Illinois season in protection by showing some of the reasons why it is difficult to stop it all at once, no matter how good or how bad a warden may be. It is the old case of local timidity, the resident ready to complain under cover, but not ready to testify in court. The following correspondence from the warden's office covers this part of the situation very pointedly, and it may prove interesting reading to a great many country residents who have some chicken shooting, and who want a special and secret interposition of Providence in order that it may be preserved for them without effort of their own. The letter from Mr. Cusson is from De Kalb, earlier mentioned as one of the points where the residents had taken it into their own hands to set the chicken date, making their own construction of the law. Mr Cusson' letter reads:

"DEKALB, Ill., Sept. 9—*Mr H. W. Loveday, State Game Warden, Chicago, Ill.:* Dear Sir—Pot-hunters and law breakers have had their way here this season, and when Sept. 15 comes they can well afford to stay at home and laugh at those who go in quest of birds, for they have been shooting chickens since July 1. They have dared the law, defied arrest and invited prosecution, but nothing has been done. Our local warden is discouraged by the refusal of your assistance, and complains that he is not even favored with a reply to his letters.

"Even the farmers complain of the slaughter that has been going on and wonder if there is a law why some one with full power cannot appear during the scene of destruction and put a stop to it. In view of these facts, with the experience of the last two seasons, we may with certainty look for the full extermination of our game birds and chickens. Yours very truly, J. S. CUSSON."

To this Warden Loveday made the following pertinent reply:

"*Sept.* 10.—DEAR SIR: Yours of the 9th inst. duly received and contents noted; in reply, permit me to say that complaints have come to me from your county—more than from any other of the one hundred and more counties in the State—relative to the unlawful hunting of prohibited game birds and fowl; but when I call upon the citizens of DeKalb county for proof in the shape of evidence against the offenders, it is not forthcoming—either the parties complaining do not have the evidence, or from financial, political or social considerations they will not, or at least do not, disclose it.

"Parties from your county have offered to furnish the evidence of the killing of *one bird*, for the purpose of making a *test* case to go to the Supreme Court, if a fine should be imposed in the Justice Court, and in the Circuit Court; the fine in such case would be not less than $5, nor more than $25.

"The expense attending such a proceeding would amount to several hundred dollars, which I would be compelled to pay; and, as you are aware, or should be, that I receive no salary as game warden, it seems to me that you must recognize the folly of such a course.

"If, as your letter, and other complaints, would imply, prairie chickens have been slaughtered by the hundreds, perhaps thousands, and people should come forward with the evidence showing the extent of the slaughter, the names and places of residence of the offenders, and approximately the number and kind of fowl killed by each, and then if my appointee at DeKalb fails to prosecute I will take the matter up, provided I find that your State's attorney is willing and ready to put forth his best efforts to vindicate the law, as that same law says he shall. But if, as I have been informed by some of your citizens, he is a violator of the law himself, or advises or encourages others to disregard it, you will readily see how futile my efforts must be in attempting to obtain a fair presentation of the case in court if he, the highest law officer in the county, is in opposition to the law which he finds on our statute books, and in the enforcement of which he is, therein, directed to assist me.

"The law has been tested several times in the appellate and supreme courts; with a fair presentation of the case to any judge, I should have no misgivings as to the outcome; but, according to the information given out by your own people (which, by the way, may do your State's attorney great injustice) it would seem eminently proper that, if any additional test cases are to be made, the prosecution should be inaugurated and carried on by the friends of the law, and not by its enemies.

"My appointee at your place is a gentleman of your own selection, and has just as complete right and power to prosecute as I have; and he should receive the same moral and financial support as would be accorded me by all true sportmen and loyal citizens; and as pot-hunters and game-law breakers are odious to all true sportsmen and gentlemen, I should like to see De Kalb Co.'s citizens give a much better account of her.

"My duties in preventing the receipt of and traffic in game keeps me busy from 5 in the morning until 7 or 8 at night, and am obliged to depend on my appointees to look after the country, and some of them are doing nobly.

"If the farmers, law-abiding citizens, and sportsmen will allow personal considerations to control them, and if they will persist in withholding evidence that would lead to the conviction of many persons, possibly some members of the best families, but insist on trying a cooked-up case, for the killing of *one bird*, they alone will be to blame for the extermination of the game birds."

Illinois Game Crop.

From all accounts obtainable, chiefly from the reports of deputy wardens at different parts of the State, it would appear that the game birds of Illinois are not yet all gone nor are their species threatend with extinction. The prairie chicken has done about as well here as in States further to the West. Mr. Loveday in his talk with me said that in Bureau, Wanye, Henry, Clay and Kankakee counties the chickens were abundant this year. In two days' shoot in Henry county, he bagged 70 birds himself, a bag greater than I have heard of to one gun in any part of the West this fall. Mr. Loveday will go out quail shooting in Wayne county with Gov. Tanner on the first of the quail season, and expects to show the Governor that there is still some game in Illinois. Gov. Tanner is a very fair field shot, and is fond of the sport of the gun and dog. This is a thing to be thankful for, since a sporting Governor is something we have not had for a long time. Perhaps the sportsman spirit in high places may become fashionable yet, and then we may expect results different from those of the past.

Marsh Burning.

All over the West we have been having a very dry season, the droughty area being very large and very seriously affected. The marshes of the Kankakee have been like tinder, and wide and destructive fires have been raging along the Kankakee in Indiana the past week. In these marsh fires the peaty sod burns down several feet deep at times, making vast holes in which the vegetation is absolutely destroyed for a long time. This cuts off the duck feed, but opens up the heavy rice and reed beds so that the water stands in ponds. Much property was destroyed by these marsh fires the past week, and the farmers were out in force fighting fire for days at a time.

Dakota Chicken Country.

Mr. Th. Gjerdrum, of Mayville, N. D., writes me, and gives some information which may well be filed away for future reference by readers of FOREST AND STREAM, who next fall will want to know where to go chicken shooting. I wish to thank Mr. Gjerdrum very much for the information. He says:

"I notice your remarks on prairie chicken shooting in this country and also that you have been very close to this vicinity, at Fargo, N. D., from where you did some shooting with game warden Bowers. In this connection allow me to say that if ever you come round here again it should afford me great pleasure indeed to arrange a trip and find some birds for you, if I could manage to get away. I was out the latter part of August for six days, and our party (three guns) got all the birds we could handle and take care of, and I thought birds were quite plentiful. If you will look at the Great Northern Railway's maps main line out west of Grand Forks, you will find Larimore. From there south runs a branch to Breckenridge. The second station from Larimore is Northwood, and that is my starting place for chickens. I was fifty miles straight west of Northwood, where the country is sparsely settled and the ground densely covered with grass. Here is the place where you find the grouse, but then we call chickens and grouse the same thing out here. We had so much fun over the dogs and grouse that we did not molest the ducks at all, although we carried one of the Mullins 'Get There' duck boats along."

The Saginaw Crowd.

The Saginaw crowd this year is not really a Saginaw crowd, but it is a good crowd and a jolly one none the less. The special car W. B. Mershon rolled into Chicago over the Michigan Central Tuesday morning, this week, and left that evening over the Wisconsin Central. As stated earlier in these columns, the party will shoot at Dawson, N. D., for a part of a week, then go further west to the Bad Lands in Montana for a deer hunt, with a very good possibility of getting a silver-tip or so. Then they will return and shoot geese at Dawson for a few days, and get back through here in about two weeks or so from now. It was my very good fortune to dine on the car with these gentlemen this time, and so far as I can see, the old car is about as good as it was when we went trout fishing with it last spring. It is admirably equipped for a hunting trip, with tents, boats, sleeping bags, full supplies for camping, and everything that heart could desire on a modern *fin de siècle* hunt. The party this year is made up as follows: Mr W. B. Mershon, Lord High Janitorius, of Saginaw; Mr. W. A. Avery, of Detroit; Mr. A. P. Bigelow, of New York city; Mr. H. P. Dain and Dr. P. H. Mason, of Peekskill, N. Y.; Mr. W. D. Schultz, of Zanesville, Ohio. Each and every one of this hearty contingent was able to eat a square meal when checked up at Chicago, and every one was looking as if he was glad to be alive. It was rather tough luck to have to climb down off the car when the trail rolled out. We should hear of a big story about a week or so from now.

From the South.

Any man from the South is welcome at the FOREST AND STREAM office, and the only trouble is that too few of them come. To-day I am in receipt of a telegram from Tom Divine, of Memphis, running to effect that he will jar the city by landing against the south edge of it about noon to-morrow. He comes just too late to meet here a friend from his own section of the country, Coahoma (Major Dabney, of Clarksdale, Miss.), who has been up North attending the Waterways convention at Davenport. Major Dabney is the Government engineer in charge of levee work in the Delta country of Mississippi. He says that the redoubtable bear hunter, Capt. Bobo, still gets his bear every now and then, and remains as hearty as ever and as full of hunt. He tells me also of a bit of country where a friend of his, who lives in New Orleans, has been still-hunting bears with a good deal of success, shooting three thus in one day. This was indeed good fortune, for in that dense cane country it is rare indeed that the still hunter gets to see a bear.

Coahoma is a lover of snakes, as all men know, but I am glad to state that he did not, at least while here in the city, carry about his customary pocketful of rattlers and copperheads in order to prove his assertion that the bite of such a snake is very mild, and indeed distinctly tonic in its effects. The truth is that Coahoma has in his work in the Delta bottoms grown so familiar with the face of the alleged venemous reptiles, that he has first endured, then pitied, then embraced. I care not what others may think, but when I see a yellow-headed snake with a green eye and a stub tail, give me a 10ft. pole or give me death. Yet, outwardly, Coahoma evinces no sign of his preferences for snakes as friends, being very tall and rugged and with a normal eye. You would not think, to look at him, that he habitually checked his package of pet snakes at the depot or hotel when going out to dine, and that in doing his surveying along the levees he uses a chain made of highly educated moccasins with their teeth all in. He says that he fancies this sort of a surveyor's chain more than an iron or steel

one, owing to the fact that it never has to be watched to keep it from getting rusty, it being, indeed, practically waterproof.

Club Wins.

In the cases brought against members of Horicon shooting clubs in Wisconsin, for putting a man off the grounds of the club, the club members have won, the prosecuting attorney entering *nolle pros* in the cases this week, Oct. 5, at Juneau, Wis.

Western Quail.

From all sources of information at hand, it is thought that the ensuing quail season will be a good one so far as the birds are concerned, for they have done well this year over a large section of country in Illinois and Indiana, but it is feared that the prolonged season of dry weather will make hunting rather disappointing, as in such dry times the dogs cannot do much with the birds. We need rain very much. Yet last spring, all over the West, the waters were so universally high as to attract general comment. On the whole, the season has been much above the average in abundance of game.

It is a fact very well worth record that the quail has lately come into lower Minnesota in most surprising numbers. From the latitude of St Paul south, and even somewht above that line, the birds have this year and last been so numerous as to offer far better sport than the chickens. The Bob White is to day one of the regularly considered factors in a Minnesota day. E. Hough.

1206 Boyce Building, Chicago.

THE SEASON ABOUT BUFFALO.

Buffalo, N. Y., Oct. 10.—Fishermen have been enjoying the most wonderful perch fishing of which there is any record. Lewiston has carried off the palm, though many other places have been almost as good. Some rods have taken 1,000 fish in a day. This is the more remarkable, as fishing up to Sept. 15 was poor, much below the average; black bass have been particularly scarce, owing probably to the fact that they have been systematically caught while still guarding their nests, the law permitting this unfortunately. Pike, perch and mascalonge have also been taken in less numbers than formerly, but the pike fishing is improving every day, as the water grows colder and the fish get more on the feed. One peculiarity has been noted as to the Lewiston perch; as a rule the lake perch are large, but of poor flavor compared with the smaller perch taken in the Niagara River; but at Lewiston, the fish are both large and of excellent flavor. Lewiston, it may be remarked, is a few miles below the falls.

Several Buffalo men are very keen disciples of Isaac Walton; among those that are proverbially lucky are Messrs. G. J. Bowen, Thos. Carter, Ed. C. Randall, Geo. Blirstain, Edward Kimer and Joseph Gresz. Some affect one branch of the art, and some another, while a few are sufficiently catholic in taste to indulge indiscriminately in any fishing that happens to be in season.

Owing to the wealth of electric power available in this region, trolly lines have multiplied in a marvelous manner of late; so it has come to pass that one can go anywhere by electric line, and all the neighboring towns are connected by bands of steel. This has had a very disastrous effect upon the shooting, and it would appear as though the days of the ruffed grouse and woodcock are numbered in this part of the country. There are any number of crack shots in Buffalo, and they own an imposing array of well-bred pointers and setters; yet bags have been extremely light so far. Very few cock were shot last month. It is said, however, that on the Indian reservation, some fifty miles out on the B. & S. W. R. R., there are often plenty of birds. A few snipe have been picked up at Derby, seventeen miles from the city; but they are less numerous than in former seasons, though that is easily accounted for by the long dry spell from which western New York has suffered. The land is too dry and thirsty for Master Gallinago.

Over in Ontario there are plenty of birds, but the Canadian authorities enforce the $25 license laws with great strictness so that few men shoot across the line. Later on there should be some good shooting at Bufflehead and Old Squaw, a few miles up the lake, but only those that are past masters at early rising are likely to have much luck. The names of a few of those that have had more or less success so far are as follows: Messrs. William H. Jaeger, Dr. Gilroy, Jacob P. Fisher, Dr. E. Erb, Dr. Fisher, George P. McArthur, Charles Geisdofer and U. E. Story. St. Croix.

Game in Central New York.

Rome, N. Y., Oct. 9.—If a wild goose can live to the age of 100 years, and if a wild duck can fly at the rate of 100 miles an hour, then I no longer wonder how it was that so many of them gave me the go-by when in my boyhood days I was banging away at them with a flint-lock gun.

Very few edible ducks ever alight in the Adirondacks, there being no wild rice to call them down. Of shelldrakes and other fish ducks, innumerable numbers sometimes stop over for a rest on the way to their breeding ground in far-off Labrador, or it may be to the shores of the Klondike, where from this out it may be they will be laying golden eggs in nests of eider down, feasting on young salmon, crawfish, wild celery and brook trout. Their ducklings should bring their weight in the precious dust, which so many are now gathering in their dreams. "Go West, young man."

I am just in from a long drive, scaling the hilltops which environ the grave of the illustrious Baron Steuben. Had I been out for game, I could have called in an immense Canadian owl, five squirrels and a fine lot of yellow-hammers. I have them all marked down, and as soon as the nutting season rolls around I intend to retrace my tracks and will surely have my weather-eye peeled for the owl, his pinions yielding most gorgeous plumes for the wings of some of our salmon flies. Later on our ears may once more be delighted with the sweet *angelus* of the bluejay, the bird which the great naturalist Audubon declared to be the most beautiful of all the feathered tribe. Robins are on the increase, but where are the bluebird and the bobolink? Stuffed it may be and tettering on the hat of some bonnie lassie.

Gray squirrels will probably soon be on the jump, where they will come from will be best known to themselves. So far as I can learn, there has not been a black one seen in all central New York in years. Will some clever nimrod kindly advise us as to where they are "living at"?

Mac.

PHEASANTS FOR VIRGINIA.

Charlottesville, Va.—*Editor Forest and Stream:* The inclosed correspondence in regard to the introduction of the Mongolian pheasant into Virginia may be of interest to your many readers. W. O. Watson, of this place, is the prime mover, and an enthusiast on the possibilities of stocking our forests with this fine game bird. True sportsmen everywhere will hail with delight this move, with fond hopes for its success. The work of introduction is under the management of the Charlottesville Gun Club.

James H. Ferguson.

The following letters written to Mr. W. O. Watson are of interest:

Corvallis, Ore.—The Mongolian (rechristened "Denny") pheasant was brought to this country by Judge O. N. Denny, the United States Minister to China, and through vigorous protection by the State for ten years they increased to such an extent that the whole of the Willamette Valley is full of them. Being a beautiful bird, very gamy, cunning and very much sought after in the markets, they are continually hunted by sportsmen from all over the world from the time the season opens till it closes, but still they withstand all of this and become more plentiful every year. There is nothing equal to them on American soil. Edwin Stone.

Salem, Ore.—The Mongolian pheasant multiplies very fast, hatching two and sometimes three broods in a season; and they are, without doubt, the finest game bird in the United States. F. A. Turner, County Clerk.

Office State Fish and Game Protector, Portland, Ore.—I do not think the Mongolian pheasant has a superior as a game bird anywhere on the face of the earth, and in my opinion, is superior and of more value as such than all of our native birds combined. Under separate cover I send you a copy of my third and fourth annual reports, in which you will find a full description of the Mongolian pheasant.

Hollister D. McGuire, Game Protector.

Oregon State Board of Agriculture, Salem, Ore.—I have lived in Oregon for the past twelve years and I do considerable shooting, and I believe the Mongolian or Chinese pheasant is the king of birds for upland shooting, for several reasons. They are very gamy and it takes a good dog and some work to get them—they are well able to take care of themselves—but the best feature of all is that after they have been planted thoroughly once they will not be killed out, and if they should be thinned out to any considerable extent, if protected for a few years they will be as numerous as ever. We have a game law here, but it is not enforced, and yet we have plenty of the birds every year.

C. D. Gabrilson, Sec'y State Board of Agriculture.

Office Ohio State Fish and Game Commissioner, Athens, O.—I would state that we are having the greatest success in propagating the Mongolian pheasant. We furnished more than 2,000 eggs this year to private parties, and from reports they have done reasonably well. We have a pheasantry maintained by this State at Van Wert, O., and we have hatched about 3,000 of these birds this year, and we are in the act of distributing them now. Of course we could not send the birds or eggs out of the State.

L. H. Reutinger, Chief Game Warden.

Board of Fish Commissioners, State of California, San Francisco, Cal.—Your favor of Aug. 28 is at hand. We are introducing the Mongolian pheasant into this State, and have a contract for 400 pairs to be delivered this fall. We consider them a very valuable game bird.

A. G. Fletcher, Clerk of the Board.

Bridgetown, Va.—Replying to your favor of the 28th instant referring to the desirability of introducing the Mongolian pheasant into this State, I beg to say: The attempt is well worth making, and will eventually be successful if undertaken by a practical, patient and sport-loving person.

I have been in correspondence with the fish and game commissioners of some of the New England States where they claim to have been successful beyond their most sanguine hopes, and I find they are well satisfied with the result of their experiments.

I am not now the fish commissioner of the State, but my interest in developing her resources in every way is unabated, and I am ready to attempt any reasonable project looking to the State's material welfare, or to add to her attractions for the tourists. I would be glad to co operate with you, should you decide to try the experiment.

John I. Williams, Jr.

THE VIRGINIA QUAIL LAW.

Warrentown, Va., Oct. 9.—*Editor Forest and Stream:* As a Virginian very much interested in the protection of game, I want to thank you for your editorial in your issue of Oct. 9 upon the decision with reference to the game law in Virginia. I am glad to say, however, that so far as known, the decision referred to has been given by but one judge, to wit: the County Court judge of Mecklenburg county. This decision, therefore, is binding only in that county. As you will see from the inclosed clipping, taken from the Richmond *Dispatch* of recent date, the Attorney General for the State of Virginia is of opinion that the law referred to is constitutional, and he refers to the same case that you quote in your editorial, to wit: Greer vs. State of Connecticut, 161 U. S., 519.

I have been doing what I can in this county to have game protected. The Commonwealth's attorney has written an article warning violators of the law, and I am glad to say that the birds are increasing; and if the law can be enforced, it will be but a short time before we again have a plentiful supply. C. M. White.

The opinion of Attorney-General Scott is given in the Richmond *Dispatch*, which says:

Knowing that thousands of people are interested in this subject, and realizing the importance of having the questions raised passed upon by high authority, we asked the opinion of the Attorney-General of the State, with the result following:

Commonwealth of Virginia, Attorney-General's Office, Richmond, Va., Oct. 7.—*To the Editor of the Dispatch:* Chap. 148, p. 175, Acts 1895-96, entitled, "An Act to Prevent the Extermination of Partridges and Quail in the State of Virginia," provides that it shall be unlawful for any person to kill or capture any partridges or quail in the State of Virginia for the period of two years, or to offer for sale or buy any partridges or quail so unlawfully killed or captured in said State within the aforesaid period, and fixes the penalty for violation a fine of $10 for each offense, and imprisonment until the fine is paid.

The operation of Sec. 2079, Code of 1887, and any special game law so far as it relates to this particular game and in conflict with this act, is suspended.

The above act was approved Jan. 27, 1896, and was in force from its passage.

It is my opinion that the above act is constitutional and binding authority upon the people of the whole State.

To hunt and kill game is a boon or privilege granted either expressly or impliedly by the sovereign authority, not a right inherent in each individual, and consequently nothing is taken away from the individual when he is denied the privilege of hunting and killing game. The ownership of the sovereign authority is in trust for all the people of the State, and hence it is the duty of the Legislature to enact such laws as will best preserve the subject of the trust and secure its beneficial use in the future to the people of the State. The question of individual enjoyment is one of public policy and not of private right. The ruling of Judge Homes is binding authority only within his county, and does not affect any other county in the State. It is against the law to hunt or shoot partridges or quail in Henrico county until Jan. 27, 1898, and the people of the county should see that the law is obeyed.

Mr. Justice White, in "Greer vs. State of Connecticut," 161 U. S., 519 to 544, discusses this question and cites many authorities. R. Carter Scott.

The New York Venison Possession Season.

Albany, N. Y., Oct. 8.—*Editor Forest and Stream:* Replying to your letter of the 7th as to what course would be pursued by this department relative to the conflicting law regarding the killing of deer and possession of venison, would say that the only way out of the matter is for people to cease killing in time to dispose of their venison before Nov. 16, as the season closes the 15th for killing. The law of 1895, see Section 40, Chapter 974, provide that wild deer may be killed from Aug. 16 to Oct. 31, both inclusive, and that it was lawful to possess venison up to and including Nov. 10, see Section 41 of same act. The amendment of Section 40 by the law of 1897 changed the open season for killing deer, making it Aug. 15 to Nov. 15, both inclusive, but the persons interested in this change did not look ahead to see the importance of amending Section 41 which related to the possession, therefore, Section 41, laws of 1895, is in force, but the wording of said section is such that it may be considered lawful to possess venison up to and including the 15th, the last day for killing, but no longer.

The open season for hunting deer is now three months, which is considered to be too long by all who take an interest in the preservation of the deer of our forests, and it is the intent of this department to ask the press generally to call the attention of the public to the law as it exists and warn people that they must not load up with venison at the last moment, thinking that there is the usual ten days to dispose of it as in former years, as the protector will be instructed that with the close of the season for killing, viz.: Nov. 15, the law will be enforced as to the possession of venison. J. Warren Pond, Chief Protector.

In Nova Scotia.

Fredericton, N. B., Oct. 2.—Mr. Fred J. Talcott, of Providence, R. I., arrived yesterday from Blissfield, Miramichi, where he has been hunting with the veteran moosecaller George Fowler, who is eighty-one years of age. Mr. Talcott says he had a fair chance to shoot his moose, but a combination of circumstances prevented the event from taking place.

Mr. William Barnes, of St. John, who was out in the Bear River region with John McEwan as a guide, shot a four-year-old moose one day last week. Mr. James Buckler, of Dalhousie, also bagged his moose there. William Ellis, of Digby, after an absence of six days from home, has returned from Lake Jolly, N. S., with a fine specimen of a bull moose.

Mr. J. W. Burdick, general passenger agent of the Delaware & Hudson Railway, has been hunting with two friends—Samuel Hopkins and G. W. Wright, of New York—near Brookfield, N. S. The party secured three moose, the heads of which were shipped to Sumner L. Crosby, the Bangor taxidermist.

Four American sportsmen—Benjamin, David; Daniel and Edmund Allen—were arrested on the 23d at Yarmouth, N. S., on the charge of hunting without a license. The information in the case was laid by Charles R. Kelly, agent of the Nova Scotia Game and Inland Fisheries Protection Society of Halifax. Mr. Kelly did not wish to make the offenders pay the fine, and agreed to take the amount of the license and costs.

A Virginia Game Country.

In their handbook of Mecklenburg county, say the supervisors' report for 1897: "Owing to our extensive uncultivated fields, dense forests and large streams, the county is well stocked with wild game. The wild turkey is here in its native heather Partridges or quail are in every field. Of late years deer have become numerous in some sections of the county, while the old hare, squirrel, opossum, coon, fox otter and beaver furnish food and sport for the huntsman. In winter, along the chief water courses wild ducks and geese are in endless profusion. Various kinds of fish are found in all the streams."

North Carolina Quail.

Garfield, N. C., Oct. 4.—In this part of North Carolina we will have better quail shooting this fall than we have had for the past five years, thanks to the favorable weather we had for the quail to raise their young. I have made special inquiry all through this vicinity, and everybody reports more quail than we have had for years. Yesterday I rode to our Kirk plantation, distance one mile, and saw five large coveys of quail along the road. Several droves of wild turkeys have been seen. Wild ducks are also commencing to come up Dutch Creek. A. H. Grof.

Wads.

Wads are cut by machinery. Sheets of prepared cardboard or felt are fed to the machines, and sets of punches with cutting edges punch out the wads very rapidly. Another machine does the lubricating.

Vermont Deer and Scenery.

JERSEY CITY, N. J., Oct. 9.—*Editor Forest and Stream:* Have just returned from a hurried trip to Rutland county, Vt. The people are said to be quite divided on the subject of the present deer law. Some farmers, whose crops have suffered, and some sportsmen, are glad of the present opportunity to kill. Others wish the law had not been changed. Therefore the hunting in that section does not seem largely successful. I heard of a few deer being secured in Mendon, a mountain town near Rutland, and of two or three being wounded in another town, but these escaped. Reports say that in Mt. Tabor, an Italian woodchopper was killed by a shot in the head from a small caliber, long range rifle in the hands of some unknown sportsman at a distance; and also, that in an adjoining town a hunter was killed by a comrade through the old mistake of taking him for a deer.

Large tracts of forest are being bought and denuded of softwood for the pulp industry. Some mountain brooks that afforded good trout fishing when I was a boy are now mere brooklets, owing to the cutting off of wood and timber.

Vermont scenery is now magnificent in autumn foliage, and will abundantly repay the lover of nature for a trip. Though less in number, the lakes and ponds rival those of the Adirondacks, and the cultivated portions of hillside and valley give pleasing variety to the scene. *En route* from Bennington, with its fine history and battle monument, to Rutland, at the foot of Killington, one sees the unusual sight of two rivers flowing out of the same pond in opposite directions—the Batten-Kill southerly, and the Otter Creek northward to Lake Champlain. JUVENAL.

Lands for the Adirondack State Park.

ALBANY, Oct. 4.—The State Forest Preserve Board has purchased of W. W. Durant, of New York city, 23,872 acres of Adirondack land in township six, Hamilton county, which embraces a portion of Raquette Lake. This land is of the best timbered property in the woods, and is considered a valuable addition to the State's holdings within the boundaries of the Adirondack State Park. The purchase price has not yet been made public, but it is understood to have been $7 an acre.

Connecticut Wardens.

SOUTH NORWALK, Conn., Sept. 30.—*Editor Forest and Stream:* Pot hunters have been at work openly breaking the game laws of the State of Connecticut, in this town, also in the neighboring towns of Wilton, New Canaan, Darien etc., arrests have been made in Darien, we are informed, but in Wilton, New Canaan and Norwalk birds are shot openly at all times, Sundays included. Can the FOREST AND STREAM enlighten the writer as to the necessary steps to be taken to have a good and efficient game warden appointed in places mentioned? SPORTSMAN.

Michigan Quail and Drought.

SAGINAW, Mich., Oct. 4.—There are a good many quail being found by the boys here, but the dogs cannot work, as it is too dry and hot. We have had no rain for weeks, besides the leaves are not off from the trees at all, and a good many of the coveys are not half grown. Really Nov. 1 is early enough for the opening of the hunting season in Michigan. M.

New Jersey's System in Operation.

THIS is the business-like report of New Jersey game law enforcement for August and September:

To the Honorable, the Board of Fish and Game Commissioners of the State of New Jersey:

The record of prosecutions since the date of my last report is as follows:

Deputy Hill—John Luke, trespass; fined $25 and the costs; appealed.
Warden Dunham—Jimmie Ricca, possession of a rabbit; fined $20 and the costs.
Warden Dare—Joseph Gandy, killing dove; fined $20 and the costs.
Warden Pierson—John Paget, killing dove; fined $20 and the costs.
Warden Dare—John Woodlin, killing quail; fined $20 and the costs.
Warden Pierson—Howard Woodlin, killing thrush; fined $20 and the costs.
Warden Wise—Jacob Rice, netting fish; fined $50 and the costs.
Warden Ricardo—Carl Schultz, possession of robins; fined $40 and the costs.
Deputy Stewart—Paul Farkush, possession of robins; fined $20 and the costs.
Deputy Stewart—Edward Geiger, possession of robins; acquitted.
Warden Muller—Joseph B. Reitz, possession of robins; case not disposed of.
Warden Brown—F. T. Nau, Sunday gunning; left the State.
Warden Wise—Charles F. Shaw, Jr., killing king bird; fined $20 and the costs.
Warden Newell—John Powell, Sunday gunning; fined $20 and the costs; appealed.
Deputy Hill—John Luke, maintaining setlines; ordered discontinued.
Protector Shriner—Alonzo Low, William Hagar and William Gardner, netting fish; acquitted; appealed.
Warden Hendershott—Henry Domady, netting fish; case not disposed of.
Warden Wise—William Hall, killing insectivorous bird; fined $20 and the costs.
Warden Gutheridge—Jacob Weindel, killing thrush; fined $20 and the costs.
Warden Gutheridge—Thomas Jackson, killing snipe; thirty days in jail in default of fine.
Wardens Riley and Kerr—William Polhurst, taking bass under size; fined $20 and the costs.
Deputy Stewart—George Kopasko, possession of robin; fined $20 and the costs.
Deputy Stewart—Joseph Forsman, possession of robin; fined $20 and the costs.
Warden Hendershott—Jacob Morris, Joshua Shay, Alonzo Depue, Alfred Elliott, Allen Morris, Harry Bensley and Charles Bensley, shad fishing on Sunday; fined $100 and the costs.
Warden Brown—John Herder and Wesley Herder, netting fish; sentence suspended on payment of costs.
Warden Schneider—Robert Thurlow and George Thurlow, netting fish; committed to jail in default of fine.
Warden Mathis—Robert W. Scott, Sunday gunning; fined $20 and the costs.
Deputy Ten Eyck—Julius Delmotti, possession of robins; fined $100 and the costs; appealed.
Deputy Ten Eyck—George Van Buren, possession of robins; acquitted.
Wardens Tooker and Dunham—James Zazelli, possession of squirrels; sentence suspended on payment of costs.
Wardens Tooker and Dunham—Alonzo Juhi, Sunday gunning; fined $20 and the costs.
Wardens Tooker and Dunham—Anton Rosario, Sunday gunning; fined $20 and the costs.
Wardens Tooker and Dunham—John Rocco, Sunday gunning; sentence suspended on payment of costs.
Mr. D. M. Buckalew—Frank Gosling, killing reed bird out of season; fined $20 and the costs.
Warden Huston—Antonio Mazzione, killing robin; fined $20 and the costs.
Warden Wescoat—Louis A. Fermuth, killing quail; fined $20 and the costs.
Warden Hilton—Josi Tonsi, Sunday gunning; sentence suspended on payment of costs.
Warden Brown—Robert Schrafft, Sunday gunning; fined $20 and the costs.

I also desire to report the receipt of the following sums of money:

Warden Dare—Conviction of John Paget and Joseph Gandy, $13.33.
Deputy Vanderhoven—Conviction of Frank Oclipo and Mattho Poulon, $13 33.
Deputy Stewart—Conviction of Paul Farkush, $6.67.
Warden Ricardo—Conviction of Carl Schultz, $13.34.
Warden Wise—Conviction of Charles T. Shaw, Jr., $6.66.
Warden Dare—Conviction of John and Howard Woodlin, $13.33.
Warden Wise—Conviction of William Hall, $6.66.
Warden Gutheridge—Conviction of Jacob Weindel, $6.66.
Warden Riley—Conviction of William Polhurst, $6.66.
Deputy Stewart—Conviction of George Kopasko, $6.66.
Warden Wise—Conviction of Jacob Rice, $6.66.
Deputy Stewart—Conviction of Joseph Forsman, $6.66.
Warden Hendershott—Conviction of Jacob Morris *et al*, $33 33.
Warden Dunham—Conviction of Jas. Ricca, $6.67.
Warden Mathis—Conviction of R. W. Scott, $6.67.
Warden Huston—Conviction of Antonio Mazziore, $6. 67.
Warden Pierson—Conviction of Sidney Baker, $6 67.
Mr. D. M. Buckalew—Conviction of Frank Gosling, $6.67.
Warden Brown—Conviction of Robert Schrafft, $6.67.
Warden Westcoat—Conviction of L. A. Fermuth, $6.67.

All of which is respectfully submitted.

CHARLES A. SHRINER, Fish and Game Protector.

PATERSON, N. J., Sept. 30.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

MY BEST CATCH.

IT is now more than twenty years since the first trout rose to my fly, and I am indebted to Salmo Fontinalis and his family for more unmixed joy than I can credit to almost any other one source. He has given me many a delightful day, many a pleasant remembrance, and has fully earned my heartfelt affection. But the pleasantest recollections are not of the days when trout would rise to every cast, and at any fly, and one must stop fishing from sheer shame at such slaughter; but rather of the times when it took many casts and much care to stir a fish, when finally one would rise short and settle back, when one must go further down stream, or sit behind the bushes, waiting for him to forget his fright; and, finally, when the carefully planted fly would bring him up in earnest, when the tip would quiver in response to the quick strike, and the final reward would be earned only by much patience and care.

John Stuart Mill, if I remember my college course aright, said that the true value of anything depended upon two elements, viz.: "Value in use and difficulty of attainment." Good as the trout is on the table, his greatest charm to me is his shyness, uncertainty and capriciousness. If one could at any time catch all the trout he wanted, if the few days of glorious success were not separated by many of hard work and small results, would any of us care much for trout fishing? I think not.

But to-day I have to tell of an ideal day and an ideal catch—one of those red-letter days which are the hope of youth and the happy recollection of age. Such a day as comes but rarely, and fortunately so, for its frequent repetition would deprive the sport of its chief charm. This day, which in results far surpassed all my feeble efforts in the past, and which, I sadly admit, will probably far exceed any that I can reasonably hope for in the future, brought far the best catch of trout I have ever made, far the best I have ever seen, and one that, with all due modesty, I offer as the champion score made in reasonably civilized waters, under similar conditions, within the last few years, and within equal time. If anyone has done better within these limitations I congratulate him most heartily, and only hope that he may be moved to publish his experience and let me read the story.

Toward the end of August the big trout gather together from the waters of Munising Bay and the adjacent parts of Lake Superior, and assemble near the mouth of the Anna River, probably for the purpose of spawning in the stream. They are in large numbers and of large average size, but are the most freaky, uncertain and capricious fish that it has been my lot to see. One who fishes for them must make up his mind to unlimited patience, and to regular and unremitting attendance, for he may be perfectly certain that, if he abandons the effort for a single day, perhaps even a single hour, those abominable trout will select that particular time for gratifying their appetites, and will then be ready for another long spell of fasting and reject his best and most skillfully presented lures.

During the past three years I have spent my vacations at Munising, and most of the time in tempting these particular trout. Many good catches I have had, with many more days when the most diligent efforts brought little or no success. This year also brought me to those waters and several days were spent in the same way, with barely tolerable results. My companions had become openly doubtful and disgusted, and I myself had begun to fear that the rapid growth of the new City of Munising had driven the trout from their usual haunts, at least to a great extent.

Aug. 24 and 25 were days of bright sun, a strong northerly wind, and very poor fishing. Our party had arranged to spend Thursday in an excursion down the new railroad, proposing to fish a certain alleged lake somewhere on the line, of which no one seemed to know very much. I was to go with them, so, early on the morning of Aug. 26, put my second best rod into the boat, left my landing net at home, and rowed my wife and boy three miles to the city, where our party assembled. The wind had changed over night and was now a fresh breeze from the south, and the day was cloudy and threatening. All the way down I mentally discussed the advisability of abandoning a place where I was sure there were fish, to go wandering after strange lakes that nobody knew anything about, and finally told the party that they could go without me, and I would try the Anna again. I was derided and hooted at, but stuck to my resolution, and just at 8 o'clock, solitary and alone, dropped anchor and let the boat drift toward my favorite spot.

During previous days the trout seemed to greatly favor the dark Montreal fly, so I had two of these flies on my 6ft. leader, backed by 40yds. of No. F. luster-finish silk line, and a 7oz. split-bamboo rod—not my best one, but a nicely finished cheap rod with a good action. I anchored in shallow water quite near shore, and the ground within reach was tried thoroughly without result. Then 20ft. of line were paid out, and the same process and results repeated. Twenty feet more anchor line brought my boat within 50ft. of two patches of weeds, with a channel between, and about 6ft. of water around them. The flies dropped just at the edge of the channel, and were drawn a foot or two, when there was a mighty rush and splash, a flash of gold, crimson and silver, a quick jerk of the right hand, the indescribable jar that tells of a well-set hook, and the rod was bending double under the rush of a splendid trout. The reel screamed to his first wild efforts for liberty, but rod and hand were working together in harmony, and the runs soon became shorter, the pressure less; then there were short dashes under the boat and away which were easily checked, and finally the great trout lay on his side completely exhausted. He was slowly brought alongside, the hook seen to be well fixed, the leader carefully grasped in the left hand, and a quick lift brought him into the boat—over 2½lbs., and a beautiful and perfect specimen.

The line was again lengthened, and the flies dropped near the old spot. Another rush and strike instantly followed, and ten minutes of hard work produced the twin brother of the first one. He was duly landed and admired; another cast was made and another huge fellow hooked, and so on for nearly two hours big fish rose at practically every cast, were hooked, played and landed. Every trout took the fly with a rush, was well and deeply hooked, and not a fish was lost nor a rise missed.

A little before 10 o'clock I was just about to recover my line for another cast, and the rod was well back over my shoulder, when the biggest fish of the day rose with a tremendous surge. Instinctively my hand went back and the strike told, but the poor rod gave a startling crack. The fish fought splendidly, but was played and landed without great difficulty, and a careful examination of the rod disclosed no break, but I knew that something was very wrong. This, however, was the last really big fish taken, and the rod still struck, played and landed a number of smaller fish, but just at 11 a ½lb. fish rose awkwardly, and at the strike my second joint snapped short close to the ferrule of the butt. By this time I was pretty well exhausted and not sorry for good reason to rest, so pulled in the ½-pounder "endways" with the line, landed, and started for a rod repairer and something to eat. It was well into the afternoon before the damage was repaired and fishing resumed, and then the rise was over, and I took only a half dozen or so small fish, none exceeding ½lb.

I selected out and gave away nine of the little fish and took home the rest of the catch, weighing, measuring and photographing them after they had been several hours out of the water, and the total left then proved to be as follows: One fish, 19in. long, weight 3¼lbs.; three fish, 18in. long, weight 2¾lbs. each; one fish, 17½in. long, weight 2¼lbs.; one fish, 16¾in. long, weight 2lbs.; two fish, weight 1½lbs. each; two fish, weight 1lb. each; two fish, weight ¾lb. each; three fish, weight ½lb. each; seven fish, averaging weight ¼lb. each.

Total, twenty-two fish, weighing 25lbs. The enclosed photograph gives a tolerable idea of the catch, although it unfortunately cuts off the tails of the larger fish and leaves out some of the little ones entirely, and the carpenter's square in the center furnishes a scale for estimating their size. It may be interesting to know that only two of these trout took the tail fly while twenty-nine took the dropper, though the two flies were exactly similar.

Now, looking back on this eventful day I almost regret it. Never can I reasonably hope to do so well again, and all my future laurels will be blighted under the shadow of the past and greater triumph. Yet I would not repeat the day if I could. Such things should not be made too common, and in fact my success was too easy and too great. Fortune poured me out her sweets until I was cloyed with them, and I fear the edge of my appetite is permanently blunted. Alas! that man should be so made that only pursuit gives pleasure and attainment brings satiety.

A. ST. J. NEWBERRY.

CLEVELAND, O.

THE ALGONQUIN NATIONAL PARK.

Editor Forest and Stream:

I have been asked by some of my friends, who have just returned from a short visit to the above park, to give you a short account of their trip to that region, which has already been mentioned in FOREST AND STREAM's notes on the game preserves of the country.

This excursion came about in this way: Mr. E. J. Chamberlin, the superintendent of the Ottawa, Amprior & Parry's Sound Railroad, is an old chum and companion of Mr. B. H. Murray, the veteran conductor on the Vermont Central Railroad, who resides here, and for twenty years has made his tri weekly trips to and from St. Albans to this place, and told him to invite a party of his friends to come up and see the new road and look at the Algonquin Park, through which it runs.

Accordingly on Sept. 16 a party composed of Mr. Murray, Mr. William R. Sheldon, station agent and ticket master, with his father, Mr. Henry Sheldon, of Windsor, Vt., Mr. C. H. Bradford and Dr. N. G. Brooks, of this place; Mr. Lyman Brooks, of Keene, N. H., and Mr. Charles Skinner, of Waltham, Mass. Leaving here at 11:25 P. M. by Vermont Central Railroad, the party reached Ottawa by noon on the 17th, and thence by the O., A. & P. S. Railway to Madawaska, which they reached that night, and arrived at Caché Lake, in the park, at 11 Saturday morning. They enjoyed the ride through the heavily timbered country, of pine, birch and cedar, studded with lakes and streams, and found the park itself to be about one-half water area. Here at Caché Lake they stopped at a camp used by the engineers while building the railroad, and fished here and in other lakes and the Madawaska River until Tuesday noon. They report the fishing as "beyond description," and brought home with them over 100lbs. of trout for distribution among their friends, of which the writer enjoyed a 3lb. sample!

The trout were of two varieties, the gray trout of Canada, similar to the togue of Maine, and a very dark trout with a forked tail, which they took from the Madawaska River, the flesh very deep colored, and much resembling my recollections of *Salmo oquassa*.

Besides the trout they brought home, they consumed a great many in camp, so that they think they must have caught nearly 200lbs. It being close time, they took no firearms with them, but saw no end of deer sign and one bear track. Moose was reported as plenty. All their fishing was done with live bait, but the trout are said to rise freely to the fly in May, when the writer hopes to be able to join the party next year. The size of the Algonquin Park is about 1,200,000 acres, second only to the Yellowstone Park, and besides the moose and deer, contains bears, wolves, ruffed and spruce grouse.

While in camp the party were in charge of Mr. George J. Root, C.E., of Ottawa, one of the engineers who had built the road, and desire to express the great obligations they are under to him, and to say that any party who can secure his guidance in the future need feel no anxiety as to the results.

Mr. Root also provided them with a capital cook, a Scotchman, but known all over that country as "Darky Plaunt," one of the old railroad employees also. They found the Park Rangers hospitable and agreeable, and speak in the highest terms of the treatment received at their hands.

After three delightful days, in which they did not fish half the time, as the fish were so plenty that they had all they wanted, the party left the lake on Tuesday, Sept. 21, about 12 M., and by 7 were safely lodged at the Grand Union Hotel, Ottawa. That evening and the next morning they spent taking in the Canadian Central Fair, leaving Ottawa at 3 P. M. and reaching home at 5 Thursday morning.

Mr. Chambers, and your other Canadian correspondents, would be rejoiced at the delight they all express with their excursion, and with the aspect of the country generally, which was a *terra incognita* to some of them, and as well of the hospitable treatment they received from every one with whom they came in contact.

They were particularly struck with the exhibition of horned cattle at the fair, who, they say, "looked as if they had been groomed and their horns polished till they shone, for the occasion!" The sheep, also, were greatly admired, and one of the party says he never saw so fine a display of fruit and vegetables. Taking it all in all, they had a most successful and delightful trip, and think the columns of FOREST AND STREAM the most suitable medium in which to express their gratitude to their Canadian hosts. VON W.

CHARLESTOWN, N. H., Oct. 4.

MY BEST CATCH.

Amateur Photo by A. St. J. Newberry.

MEN I HAVE FISHED WITH.

LVIII.—Hon. James Geddes.

WHEN I sketched Nessmuk, alias George W. Sears, a short time ago, he introduced himself into a camp where Mr. James Geddes, of Syracuse, N. Y., and I were secure from a most violent storm, and we took him in out of the wet and brought him to life. That was not my first fishing trip with Mr. Geddes, and I had known him for many years at the N. Y. State Sportsmen's tournaments and at the State fairs, but we never became really intimate until we found ourselves as superintendents in the Agricultural Department of the Centennial Exposition at Philadelphia in 1876; he of the mowers and reapers, horses and live stock, and I of the aquaria. We were both hampered by a man in authority, and could do little except through him, and such friends of his as we mistrusted paid him a commission. The red-tape was formidable. I resigned, but Mr. Geddes fought it out. The great acres of grain were ripe for the trial of reapers, and no horses could be had. He got them, however, by some of the plainest kind of talk, which was music to my ear.

Late in April Mr. Geddes asked me if I knew of any trout streams that were within easy reach from Philadelphia. I did not. But Mr. Norris said, "You may get a few trout in Monroe county. Take the morning train and go to Stroudsburg, just beyond the Delaware Water Gap, and get Johnson to drive you out to Jake Wilkins', it's only fifteen miles, and you'll get there at night. I'll give you letters to both; you'll stop with Wilkins all night, and he'll show you the stream in the morning." We went, on a two days' trip which included only one-half day's fishing.

Said I, "Mr. Norris says we must wade the stream or not fish it at all, for it is fringed with bushes. Do you use waders?"

"No," he said; "I have no waders, and I don't like them. They're clumsy things, and in a swift mountain stream such as we are going to a man with wading trousers on is apt to slip and find himself in the water. Rubber wading stockings and heavy shoes are a nuisance, also, for a man stews in them. I'm not fond of wading, but if I've got to do it I'll get some woolen stockings and a pair of old shoes, and go in that way; but I will not promise to go in over knee-deep. I tell you, Fred, it isn't right to wade deep in a cold stream on a warm day, with the sun shining on your head."

Up to then we had "mistered" each other, but from the time we planned our trout campaign we dropped that formal custom. I answered, "You have said just what I would have said if you had asked the question. I hate rubber clothing of all kinds. I'd sooner get my clothing wet from the outside than to stew in perspiration which cannot escape. Let's go down town this afternoon and get stockings and such things as we need, and start in the morning."

Jake Wilkins couldn't read, but one of his daughters read our introductory note, and he said: "So-o, you vas frents by Mr. Norris. Den you shall be velcome. I co gill some shickens, already."

"Don't kill any chickens for us, Mr. Wilkins," said Geddes; "we never eat them. Just give us what you have in the house and were going to have for your own supper."

"Vell, ve cot some mush and milik, und some pork mit beans, oof dot was all ride for you."

"That's all right; and the same for breakfast and a noon lunch. We love pork and beans." Afterward Jim said to me: "These Pennsylvania Dutchmen will kill a chicken and put it in the pot half an hour afterward. I wouldn't touch it with a 10ft. pole unless the animal heat was entirely gone before it is cooked, and I'm sure you wouldn't."

"I'd have to be hard up to eat it; but his layout is good enough—better than I expected in this wilderness. He's a good old fellow, if I'm not mistaken."

The family gathered at the table. With Mrs. Wilkins and two girls, who might have been twins, of eighteen or twenty years, the family could muster eleven at table, and one who took its rations in lacteal form. Dad Wilkins, the children called him dad, said grace in a brief manner, and the business began. The table was not conducted on the lines of the "Autocrat of the Breakfast Table," but no doubt Holmes would have enjoyed it.

"Say, dad, I want some more mush in this milk." "Vell, bass oop your blate." "I do' want no mush; gimme some beans. Put on more." "Shonny, you geep schtill w'en de shentleman's vas here oder I schlaf you on de kopf." "Mom, gimme some more sugar in this tea," and so it went. Poor Jake Wilkins and his wife tried to instil company manners into the younger Wilkinses, but it wouldn't work. They knew just what they wanted, and they went for it. Two strange outsiders were not going to deprive them of mush, beans nor sugar—not if they could help it; and they did get all that they went for.

The children had some American schoolmates, and had not followed their parents dialect in speaking English, and the twins entertained us with several songs which surprised us. One was: "When this Cruel War is Over," and could only have been brought to the mountains by some Union soldier, for it was hardly more than a dozen years old. They had old songs from across the water and entertained us until time for bed.

Men who never think of bed before midnight may turn in at 9 P. M., because there is nothing else to do, but sleep at that hour is to them another thing. Jim and I turned in with two boys, the boys in the middle. They snored a little, but they rolled and kicked without waking up. I think I would as soon sleep with a threshing machine as with the boy next me. The kitchen and dining room were combined; then the boys, the girls, Dad and Mom, each had a room. From the latter great waves of sound rolled up. Possibly Dad was sleeping on his back with his mouth wide open and his nasal valves fluttering, but if the shingles on the roof did not vibrate in unison with the snores of either "Dad" or "Mom," and cause the roof to leak during the next wet spell, then I'm no prophet.

An early breakfast and a half-mile walk brought us to the mountain brook, and a winding brawling brook it was. The great boulders and the washed banks were evidence that at times it was a mountain torrent. We agreed that it was wide enough to fish side by side, and the rocks were so plenty, and there were piles of gravel at intervals that there was no necessity to wade nor to cast a fly, for one dropped on the water could be let down as far as we wished. Our rods were split bamboo, with appropriate click reels, and each of us had a creel on the left shoulder and a short-handled landing net. The only thing we differed on was the selection of flies for the first trial, he choosing the light Reuben-Wood and a silver-dun, saying: "On a day like this when there are heavy clouds I think the chances are best with light-colored flies."

"That is good for a combination of light flies, and I will follow it so far as to put on a coachman, but for a second fly will use a darker one, say a ginger-hackle."

We tried the smaller pools, and took a few trout under 6in., which we carefully unhooked and let go.

"I noticed that you wet your hands before you unhooked that little trout," said Mr. Geddes. "What did you do that for?"

"That is one of the first things that a fishculturist learns to do. A wet hand will not remove the slime from a fish, but a dry one will, and if the slime is removed fungus grows and the fish dies."

"That's something new to me," he said. "How does fungus kill the fish?"

"By making a sore where it can get a foothold, and the roots of the fungus destroy the skin. If you want a fish to live after you've handled it, always wet your hands before you touch it. You may lift a trout carefully from the water, dry it in a towel, and it will swim away. In a few days it will have a bloom, looking like that of a plum, upon it, and then the cottonny growth appears, and in a week or ten days the trout is dead. I've seen a dead trout with the finger and thumb marks all eaten into by great sores, and—That's a good one, it will do to basket."

"Yes, and you've got the mate to it. What fly did it take?"

"The coachman. And yours?"

"The Reub-Wood, the tail fly."

"The coachman was my hand fly, and I have a notion that any tail fly is presented to a trout in better shape than the other flies, and if I find a fly that the trout like on a certain day, I take off all others. I never want to take two fish at a time and have them jerk different ways, and perhaps break the leader. I'll take off the hackle now and put the coachman below, and fish with only one."

Our fish were of about 4oz. each, and well matched in shape and color. The pool was larger than the others, but we got no more from it. Then there was a series of rapids with no pools for a long way, and then we came to a place where for nearly a mile we must wade. The brook wound about and there were occasional fallen trees, heaps of driftwood and other places where a trout could hide, feed and not have to exercise too violently to keep its place. This was evidently the favorite pool that Mr. Norris had described, for it was only in occasional spots that a man on the bank could drop a fly in the water, and from those it would be difficult to land a fish. The water was cold, but not deep. We could distinguish the shallow portions by the ripples, and about 2ft. was the deepest we got into, a few inches above the knee. In this pool we took some fine trout and lost a few flies among the drift stuff. The sun was near meridian when Geddes yelled, sat down on a rock and yelled more. I found that he had a cramp in one leg, and it was all in knots, for he was a large, well-built man, muscular as an athlete, and handsome in face and figure. I rubbed away on the calf of his leg as hard as I could, while he kept saying: "Harder, harder." When the muscular spasms ceased he said: "Don't you think we've had sport enough? How many trout have we got?"

A show-down resulted in thirty-one trout, none of which would weigh less than ¼lb. When we reached Philadelphia the lot weighed 11½lbs., or an average of 6oz, a very good morning's work.

We would fish no more, but find a good spot for luncheon and go back to Jake Wilkins'. There was no road on either side of the stream, not even a trail, but we worked our way up through the woods, and reached the house about 3 P.M., drove to the railroad, and fortunately caught a train which landed us in Philadelphia before midnight.

Going down on the train Geddes said: "Now, we've got the trout, what will we do with them?"

"Take enough out to the American restaurant, in the Exposition grounds, for two breakfasts for us and a possible guest or two, and send the rest around to Uncle Thad Norris."

"Well," said he, "I had laid out the breakfasts in my mind, but was troubled about the rest. I figured that we could use about 5lbs. at two breakfasts if we had some help, which will not be hard to get; but the remainder bothered me. Norris is just the man to appreciate them. I met him in your office one day, and he's a fine old man."

"That's from your limited point of view. I tell you, Jim Geddes, that Uncle Thad is a grand old man, and if he could have been with us you and he would have been lifelong friends. Let's sort out the trout here on the cars, and you take our portion to the grounds to-morrow and I will send the remainder to Mr. Norris in the morning with our cards; but be sure you don't rob Uncle Thad."

There was no need to set a breakfast time, for we took our breakfasts in that café regularly at 10 A. M., six days in the week. At our first trout breakfast an incident occurred which we never forgot to refer to in after years. The waiter had just brought the oysters and informed us that the trout would be ready in a few minutes, when the following scene occurred. The bar of the café was plainly visible from where we sat, and at that hour the place was quiet. The barkeeper was polishing his glasses and preparing for the expected trade when in came a lank old hayseed, who had evidently been bitten by the worm of the still many times the night before. He reminded me of those verses of Eugene Field's, in one of which he celebrates the clink of the ice in the pitcher which the hall-boy brings up in the morning, only this yokel could never have seen any poetry in it, because he wasn't Eugene Field.

The particular verse of the poem, which seems applicable to the rural dipsomaniac before us, is:

"Notably fond of music, I dote on a sweeter tone
Than ever the harp has uttered, or ever the lute has known.
When I wake at five in the morning with a feeling in my head
Suggestive of mild excesses, before I retired to bed;
When a small but fierce volcano vexes me sore inside,
And my throat and mouth are furred with a fur that seemeth a buffalo hide,
How gracious those dews of solace that over my senses fall
At the clink of the ice in the pitcher, the boy brings up the hall!"

No doubt this old fellow felt all this, but it was not "the clink of the ice" he was seeking. He was after a "hair of the dog that bit him," and we heard him ask: "How much do you tax fur whiskey?"

"Fifteen cents," sententiously, while the polishing of glasses went on.

There was a moment of silence, and then: "That's what they tax all about here. I can get lots of it up in Pike county, Pa., fur 5 cents."

The man behind the bar gave the subject but little thought before he said: "Then why don't you go there and get it?"

The rustic recognized that as a business proposition, and, planking his money down, merely said: "Gimme some."

The bar glasses in those days were large, for I am told that there is a fashion in these things as in others; and the rural toper took the bottle, which went "glug, glug," until the fluid actually rounded up on top of the dry glass. Then he grasped it, but was restrained by the bar-man, who shouted, "Hold on!" and turning to a pile of empty cigar boxes, tore off the picture of a woman and said, "There's a chromo goes with that drink!" At one of our fly-casting tournaments I induced Geddes to tell that story to the Rev. Mr. Ziegenfuss, who had a keen sense of humor; and often when they were in the boat as judges, Mr. Ziegenfuss would say: "There's a chromo goes with that cast!"

Mr. Geddes was widely known, not only throughout the State of New York, but wherever scientific agriculture is practiced. He was born at the Geddes homestead near Camillus, N. Y., in 1831, and received a liberal education. He learned civil engineering under his father, who did that work for the Syracuse & Oswego Railroad. When twenty-two years of age he married Miss Frances Terry, of Geddes, and assumed the direction of the widely-known Geddes farm, which was famous as a model of high farming. At the time of his death, at his home in Syracuse, N. Y., in 1887, he was president of the New York State Agricultural Society.

Mr. Geddes spent eight winters in Florida and one in Cali-

fornia trying to recover from an attack of pneumonia, and he often urged me to go to Florida and fish with him. Once he wrote me: "Come down here and try the fishing, if only for a month. We can't give you salmon nor trout, but can give you some other good fishing. How I would like to have old Nessmuk and you here together, and hear each of you tell the story of that rainy night on the Fulton Chain and of the fishing next day. If you and he get fighting over the proper kind of fishing rod, I assure you I would referee the fight with strict impartiality."

I replied that it was impossible for me to get off in the winter, when the hatching of salmon, trout and tomcods was going on; but I would write to Nessmuk and try to get him to go, for he could make shoes in Florida as well as in Pennsylvania.

In 1882, and again the next year, Mr. Geddes was elected a member of the State Legislature, where he watched all bills that affected fish, game or agriculture, having been appointed on the committees on game laws, State prisons and charities. He was the highest type of a sportsman, but being of a high type of manhood he could not be otherwise. He could not tolerate the game hog nor anything that savored of him, and he was frank to the point of bluntness when offended. He was a most companionable man with men who could be companionable.

When he formed the Ragged Lake Club, to put up a club house and hatchery on the lake of that name in the northern Adirondacks, I planned the hatchery and met him at North Creek when he was on his way from Albany to Malone. "What are you doing in this desolate place?" he asked.

"Don't mention it here; I am studying the effect of sawdust in the river from this place to Mechanicville. I want to see where the eddies deposit it, and how. But I go up and down and take a few trout with the fly, or an occasional pike with a spoon or a minnow, and they take me for an ardent angler who does not know of better places to fish than these almost barren waters."

"That's a good idea. We may want some such information before the fish and game committee this winter, and I'll make a note of it This dumping of sawdust into the streams smothers the trout spawn, and it should be stopped."

"There's another point," said I, "and one which the angler would naturally overlook, which the fishculturist knows, but which no writer has published, and it is that pine or hemlock sawdust need not cover trout eggs in order to kill them, for water containing an infusion of fresh pine or hemlock is a poison to trout eggs or to trout fry, if it hatches in such water. Livingston Stone charred his troughs to burn out the turpentine some twenty years ago, but now we coat them with asphalt or coal tar, with better results, and get a smooth trough"

"How does the raw wood in the trough affect the fish?"

"It puffs out the yolk-sac with water, in which the microscope shows loose blood corpuscles to be floating around, and the swollen sac has a peculiar bluish cast, and in the hatcheries this is vulgarly known as 'blue-belly,' and a baby trout so afflicted was never know to live long enough to take food. But I did not meet you here to give you a lecture on fishculture, but to talk on any other subject or to take a trout in Thirteenth Brook or a pike in the river"

"What are the chances? I don't know this place well."

"In Thirteenth Brook you may fish several miles up to the pond of the same number, and you may get a whole lot of fingerlings which you would not kill, with a chance of half a dozen 4oz. trout. Yesterday, between here and the hotel at North River, I hooked a pike while skittering with a spoon. That pike took away my spoon for which I had paid $1, currency of the United States, and also a foot of gimp, all of which is my property. Mark me, it is not the value of the goods which disturbs me, but it is the principle of the thing. As a legislator you will concede that I have the right to cast a bit of bright metal into the river, and that I retain ownership in that metal as long as I have a string tied to it by which it may be recovered, and if a fish attacks and carries off my property it is a felony. It is my belief that a big, and therefore dangerous, pike, weighing a ton, or less, did, with felonious intent, rob me of personal goods worth $1."

"Well, what are you going to do about it?"

"I'm going to try to replevin my property, try to have his corpus, if I can get it; and I want you to stop here a day and help me."

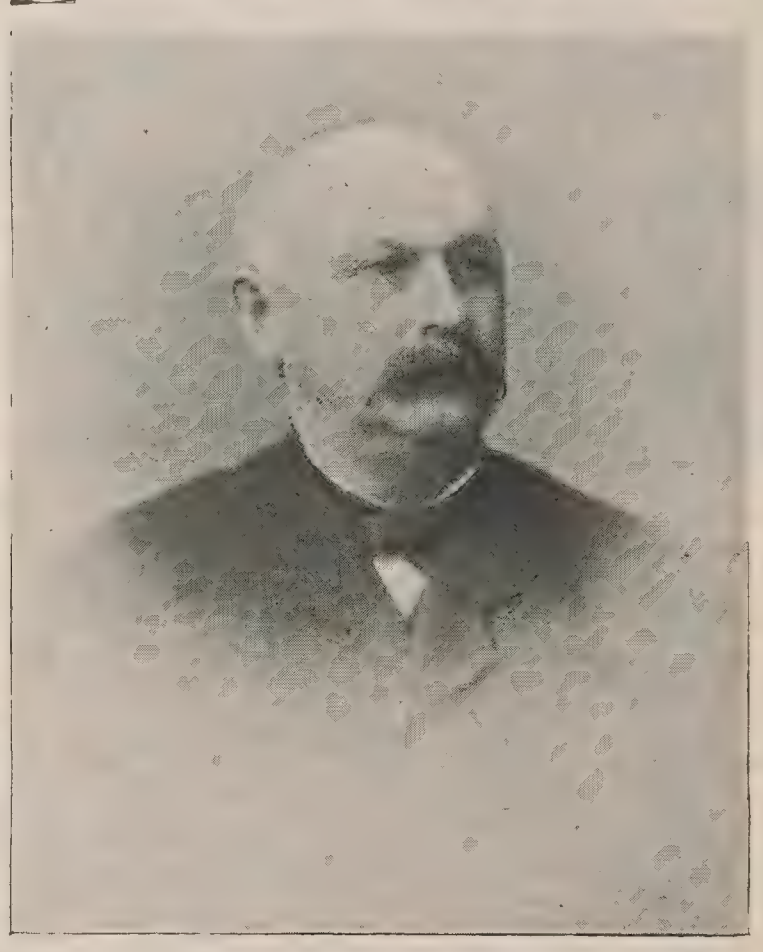
We took the stage to the little hamlet called North River, some six miles above. I was stopping there, and I rigged my friend out with a rod and a trolling rig, for I always carry a lot of tackle that I seldom need, but is so handy if you do happen to want it; and we fished that river back to North Creek that day, casting our spoons into the pools and trolling them, but the big pike did not show up. We took six small ones, none over 3lbs., and a big sucker, which was hooked in the back. The pool where I lost the spoon was fished faithfully, with no result.

We hired a man to drive us back, and we spent the night at Roblee's. Early to bed and early to rise is the rule in all country hotels, yet the men who keep them do not seem to be healthier, wealthier, nor wiser than other men I said to my friend: "This house will be closed before ten, and we'll have to retire early. That means getting up early, and we can fish this six-mile stretch after breakfast and come back with the stage. I don't care anything about that pike, but I do want to recover my property. He's sporting that spoon-hook up and down the river as an ornament, doing the grand at my expense, and I don't like it He may want another to wear on the other side of his nose, and if you'll fish with me the chances of arresting him will be doubled."

"All right. I'm not going to sit here and wait for the stage when there is fishing, either good or bad, to be done. We had some good exercise and a little sport with the pickerel yesterday."

"Pardon me, but we have learned to call those white-spotted fish pike, no matter whether big or little, and to reserve the name of pickerel for the greenish-yellow fellows which have a more or less distinct black net-work on their sides. The fish we caught were true pike."

"Correct. I'm glad you mentioned it. I knew the distinction, but it comes hard to change names. In western New York, where I was born and have always lived, both these fish are termed pickerel, and the name of pike is confined to one of the perch family, variously called wall-eyed pike, yellow pike, glass-eye, etc., and it comes natural for me to use these names, which I learned in boyhood, although I know better. Always call me down when I need it, for we are the fellows who must try to educate the people in not only a uniform name for each fish, but the proper one, also."



Here was a chance to do good, and I replied: "Then get your Onondago Fishing club to protest against the name of 'Oswego bass' for one of the black basses. It is a black bass of the species big-mouth, yet New York law says: 'Black or Oswego bass.' Get the absurd name of California trout replaced by rainbow trout, and straighten the kinks out of all the absurd names now on the statute books, as far as they relate to birds and fishes."

He thought a moment, then said: "That would be a desirable thing to do, but it would make trouble when some ignorant fisherman was on the witness stand. He would swear that an Oswego bass was not a black bass. How do you suppose these names got so mixed?"

"Seth Green had much to do with it. He was a noted sportsman, and was in the fishcultural field soon after Dr. Garlick and Mr. Ainsworth, and people thought he must be an authority on fishes because he bred them. He caught his first big-mouthed black bass near Oswego, on Lake Ontario, and named it from the place, although the fish originally ranged from Dakota to western New York and south to Florida. Seth got eggs of the rainbow trout from two places in California, and christened them the California brook trout and the California mountain trout, but there was no real difference in them."*

In the morning we had breakfast early and started for my pike. It was my pike, because he was wearing jewelry which belonged to me, and as far as I knew, he was not any other fellow's pike. The river was low and swift. Great rocks and gravel beds were frequent, and we took three pike before we came to the pool where I had previously struck a pike and lost a spoon.

We both cast, and Geddes called: "I've got him!" I reeled up and ran over to see the fight—and it was a fight. A great fault with many anglers is to get excited when another has a fight on hand, and to shout advice to him. I have been annoyed by this so much that I never say a word if the man who has the fish hooked is an expert, unless I see some danger of rock or drift which is not visible from where

HON. JAMES GEDDES.

he stands. This pool had some large rocks but no piles of drift wood. I stood beside Geddes and watched the contest without remark. He gave line when forced to do it, or smash his tackle, and kept a taut line on the fish all the time. Just how long the fight was we did not know, for neither of us was cold-blooded enough to put a watch on it. It seemed an hour, it may have been ten minutes, when a tired pike was reeled up and towed on a sand-bar, sporting my jewelry in his nose.

"There's your spoon," said Jim, "and I've lost a day trying to recover it for you; but the fun I've had wipes out the score. How much will he weigh?"

"I don't know. You mark what you think he weighs on one side of this card and I'll mark on the other. The one who comes nearest pays for the cigars."

Jim marked 9¾lbs. and I put down 10½lbs.

Jim won—the fish weighed exactly 8lbs.

FRED MATHER.

* In 1883 I imported eggs of the brown trout from Germany, and gave some to Seth Green for fear of accident. The fish is common to all the cold waters of Europe, but unfortunately I told Seth that they came from Germany, and he sent out their progeny as "German trout," a name that survives in some places to-day, and at the Caledonia hatchery I have even heard them called "Dutchmen" by the employees.

On A Cuban Sugar Plantation.

MAINE.—In the 60s I was engineer on one of those Cuban sugar estates, which at that time were fortunes for the owners. One day I called one of my firemen, and ordered him to take a large flat basket such as was used to gather the bogasso for fuel; we went to one of the deep holes that never run dry, and the slave walked into the creek and stirred up the mud. Then slipping the basket under the fish, he would throw them on the bank, and I would put them in a bag. Soon my boy struck a large one, which was darting around the roots of the trees under the bank, and holding on to the roots with its mouth, as he explained in an eager voice. However, after tiring it he got a firm hold and threw out a large spotted snake, as large as my wrist, at my feet. I left instanter, and so did my colored helper. That fish we did not eat.

The small fish called "behaccos" were sweet and firm, and resembled the salt-water cunners. L. MCLELLAN.

Flycasting Record 112ft.

SAN FRANCISCO, Cal., Oct. 11.—At the annual tournament of the San Francisco Fly Casting Club, Walter D. Mansfield, the champion long distance caster, who broke all existing records a few months ago by a cast of 111½ft., again broke the world's record yesterday, held by himself, increasing his cast by 6in.

The American Fisheries Society.

Editor Forest and Stream:

I note what you say about the reports of the American Fisheries Society and its policy of restricting their issue to members only. I agree with you that to be of value "in fishculture and fish protection they should be given the widest possible publicity." But, there is another side to the shield.

If the policy of wide distribution was adopted there would be no reports to distribute. All that a member gets for his $3 dues, paid annually, is his report, and as an old member of the Society I opposed a free distribution for the above reason. A few members of the Society travel long distances at their own expense to attend the meetings and listen to the papers which are read and to the discussions which follow them. Others, who cannot find time or means to attend, prepare papers to be read, or pay their annual dues to help on the good work.

The Society is poor. Many years there was not enough revenue from its members, the only source it has, to pay for the printing of the report, and a reference to some back numbers will show a line in the financial statement which reads: "Due Treasurer, $——."

I speak by the card when I say that dozens of wealthy men have asked for copies of the report, but would not join the Society and help support it. I have been besieged for copies, both in person and by letter during the years when I was an officer of the Society, but always replied with a suggestion that the applicant could help the Society and get its reports regularly by becoming a member.

To quote your words again: "The American Fisheries Society is and should be educational in its aims." From a few fishculturists who organized it in 1872 for the purpose of a trades union to regulate the price of trout eggs, it jumped away from that purpose and never entertained it. It assumed a broader scope, and became an educational institution which deserved greater encouragement than it ever received. To your statement that "it is made up of men who are in public service," I would invite an inspection of the list of members which is published in each report. It is true that the list of officers of the Society shows many names who are in the service of their States as Fish Commissioners or fishculturists, and these men usually attend the meetings as a matter of interest to themselves and to their States, but they do not comprise the bulk of membership in the Society. Writing without access to a list, I doubt if State or Government officials form one fourth of its members.

For reasons which I have given, I approve the action of the Society in restricting its reports to members, but would approve sending them to journals which will make extracts and let the world know that such a society exists; and if they, the people, want its reports they should join the Society in such numbers that it could afford to reduce its annual dues. KEGO E-KAY.

The Pennsylvania Association.

THE PENNSYLVANIA FISH PROTECTIVE ASSOCIATION, Philadelphia, Sept. 27.—At the convention of citizens and fish protective associations held in Harrisburg, Sept. 15, to devise ways and means to maintain the work of the Fish Commission, about $11,000 were subscribed. This is less than one-half the sum desired, and it has been decided to make a further appeal to the citizens of the State, with the understanding that the next Legislature will be asked to refund the money to the subscribers. It is confidently expected and believed that the sense of justice, and the practical and disinterested work that the Fish Commissioners are doing will induce the next Legislature to make an appropriation for this purpose.

The brood fish, the property of the State in the care of the Commission, are worth not less than $45,000. All of this will be lost to the State unless relief is given as proposed.

Advances may be made on the following basis:

First—Advances of $500 or more may be paid in quarterly installments; one-quarter at time of subscription, one-quarter Jan. 1, 1898, one-quarter June 1, 1898, and the last quarter Dec. 1, 1898.

Second—Advances of from $100 to $500 can be made on the same terms and conditions.

Third—Advances of less than $100 it is desired should be made, one-half at time of subscription and one-half on June 1, 1898, or all at time of subscription.

The Pennsylvania Fish Protective Association has subscribed $500 from its treasury, and desires, in fact is pledged to raise $2,500 additional from its members and friends, a part of which has already been subscribed.

Subscriptions and remittances should be sent to Alfred Hand, Treasurer, 204, Walnut place, Philadelphia, who will issue a proper receipt therefor.

The sum of $25,000 will enable the Fish Commission to preserve the brood fish and other property of the State for the years 1897 and 1898, and also moderately to continue the propagation and distribution of food and game fish to the inhabitants of the State. Since June 1, '97, the Commission has preserved the property without aid from the State or others; but inasmuch as the Commissioners are unsalaried officers, they should be immediately relieved in their disinterested work.

THE "PAINTED FISH."

A SHORT time ago I was examining some coal deposits in eastern Colombia. It was a rough country, and after the manner of foreigners from the North, I was making remarks about the things that served as food in that isolated place. I employed a great, big, good-natured colored woman as cook, who came three miles each morning in time to get breakfast, and who was really distressed at my opinions of the resources of the country. She did her best, but that was not much, though she could not help it. She was always clean, however, and that was a great deal, more in fact than she ever realized.

One day she said, "If we could get you a 'painted fish' (*Piscado pintado*) you would be pleased."

They described a fish that reminded me very much of a large trout; never having heard of any such thing in tropical waters, I gave orders that one should be secured for me. I was told that they would not take the hook, but that when the water was low and clear, numbers of them could be seen lying along the banks of the river, and that it was then easy to spear them from the shore.

For a few days there was no success, though the man I sent insisted that he had seen them jumping out of the water toward evening, but as the river was high he could not get any. Some days later a boy caught one. He immediately brought it to camp, and there was no denying that it looked like a trout, though quite different from any species with which I was acquainted, and it will probably prove to be a Hoplochiton.

The upper part was dark brown with indistinct mottlings, the colors shading much darker on the head. Along the sides the brown became lighter and gradually turned to a dirty white on the belly, and the mottlings on the back faded out along the sides leaving small indistinct red and yellow irregular dots and blotches, some of which were oblong. They were clearer along the center of the fish and were entirely lost along its lower portions.

The tail and dorsal fin were indistinctly blotched like the upper parts of the fish, the pectoral fins were edged with a light muddy brown, and the adipose fin was pronounced and rather large.

Generally the appearance of the fish was as if some taxidermist had taken a fine appearing brook trout and flattened it a little till it had something the shape of a perch, and had then filled up along the sides to make it look heavy like a trout, and in doing this had blurred the colors and drawn out the spots a little, and then, to make it look more natural, had covered the fish with a dull varnish, and toned it all down to such an extent that the original colors could scarcely be seen.

My good old cook said that I would like a painted fish, and so I did, excepting that I felt somewhat guilty, and would much rather have preserved it for a specimen; but this seemed impossible, and in fact, I had but little choice in the matter, because while I was called away to examine some specimens of coal that were brought in just then, the fish was cleaned and cooked, and after that there was nothing to do but eat it.

The weight was perhaps 4lbs., and the fish was a substantial addition to the dinner of four men. It was very fat; the flesh was solid and quite pink, almost the color of fresh canned salmon, and it had a rich, gamy flavor that was certainly very agreeable.

The exact spot where this fish was taken is in the Rio Rancheria at a point about fifty miles back of the city of Rio Hacha, near the mouth of the Rio Cerrojon, in Colombia

These rivers flow through a broad, deep valley, between ranges of high mountains. At the point where the fish was taken the climate is very hot, and the valley but little above sea level; just such water as we have at numerous places in our Southern States, where this fish, if introduced, would probably become an important acquisition to the food supply, as the natives claim that it grows to 10 and even 20lbs., and they all spoke of the specimen that was secured for me as a very small one and scarcely worth cooking. It may be well to remember, however, that the Spanish American always allows a liberal size to anything he may attempt to describe.

FRANCIS C. NICHOLAS

A TRIBUTE TO NESSMUK.

THE following letter expresses such a genuine appreciation of Nessmuk that, with the writer's consent, it is given here that others may share with Mr. Mather its reading:

PLYMOUTH, Mass., Sept. 26.—*Dear Mr. Mather:* I have just finished your article on Nessmuk, in FOREST AND STREAM, which has just reached me off here in the woods, and I roll over on my blankets to thank you for a new edition to the literature of that good and great man.

Good—Because he could enjoy nature in its own haunts, and alone, even though he got "took" by the "sparrow cop" for camping in Central Park. (I only wonder that any captain could have locked him up instead of taking him to his home and heart.)

I hold that no bad man could so live. He would have died of shame or fled to the thickets of sin, lost in some city.

Great—Because he has cheered many a man's heart in its sorrow (mine, among others), and caused the smile to wreath around the lips which had drawn into those lines which betoken inward tears; and anon he has caused the tears to start by the wonderful eloquence of those songs of the woods which only Nessmuk could write

I have known him these many years, and yet I never saw him. He was one of those whom you would picture as you hang upon and reread the words that flowed from his pen. And as I lay here on this quiet Sunday with the broad expanse of the lake stretching out before the open fly of my tent, I seemed to hear the "Da-whoop," and to see the shadowy form of the Major fleeing to the rescue of a shipwrecked brother of the wood and stream. It was a touch of nature in nature's home.

I do not know that you were ever here in this old colonial town, and if not, you cannot appreciate its wondrous charms. Though settled since 1620, when our Pilgrim forefathers set foot on the seaside boulder (also a pilgrim on the great ship Ice) a short journey of three or four miles puts you in the woods—not primeval forest, by a long shot, but still woods—which are dotted with lakes and ponds, most of which are framed in green boughs and sandy shores, where the bass doth love to jump and a few trout still live.

With my 16ft. Saranac canoe I can carry to the most of the ponds, for you know they will float in a heavy dew, and if I can't get bass I can pot-fish for perch, and more than that I can get health and vigor.

But I think you must be weary of my riff-raff, so I will shut up, and, as the after-dinner orator says, "Once more I thank you."

FRANK C. BATES.

SCHOOLING THE DOG.—XV.

BACKING, backsetting and backstanding are terms which denote the act of standing rigidly, as a properly trained dog does when he observes that his fellow is pointing. The backing dog assumes much the same attitude when backing that he does when pointing, though in most instances there is less rigidity and intensity in it. But however spirited and intense may be a dog's attitude when he has the enthusiasm of youth and the irrepressible fondness for pursuing birds, in time his backing attitude becomes less spirited and more perfunctory. He learns that its purposes, as enforced by the trainer, are to repress him; to keep him out of the way of the pointing dog; to set him apart, for the time being, as a useless factor in the sport. The act of backing, which the dog naturally began with a purpose, he persists in from education; but the spirit which he showed in it when he had a purpose to dash in and kill, is absent when he backs merely as a perfunctory act.

Many years ago the writer evoked a lengthy public discussion by publishing and maintaining that the act of backing was not instinctive, but was an act resulting from intelligent observation. It was maintained, as against the theory of intelligence, that the dog, first pointing the birds instinctively that a man might shoot them, also backed instinctively so that he would not interfere with the dog which was pointing. In support of this contention, the fact that young puppies would back each other in the kennel yard, when pointing and chasing sparrows and other small birds, was adduced as positive proof of the instinctive origin of the act of backing. In fact, so much was ascribed to instinct by way of explaining the dog's acts, that one had reason to wonder why the dog has brains at all, and having them, why he uses them so little.

There are many acts which young puppies learn very readily on opportunity. They have an instinctive impulse to pursue their prey, and in methods of successful pursuit they are astonishingly precocious. The puppy, seeing a sparrow on the ground hopping about, runs at full speed to seize it; it flies and he gives full chase, sometimes giving tongue merrily. He after a few failures soon learns, if he has any sense, that the bird can fly, and that in open pursuit of it, wherein he trusts solely to his heels, a capture is impossible. He soon learns further, that by sneaking quietly up on the birds his chances of getting within a better striking distance are many times increased.

In drawing on the little birds by sight, the puppy employs much the same strategic efforts that, in his more mature and serious efforts in seeking game birds, he employs in his efforts to capture by the use of his nose. The one is the crude effort of inexperience; the other is the skillful effort which comes from practice and knowledge, though both are from the original instinctive impulse to seek birds for food. In the pursuit of fur, the setter or pointer draws on, say the rabbit, in much the same manner that he does on birds, but with less caution. When the rabbit is jumped, the dog pursues hotly, giving tongue merrily the while. On birds he is silent, as he needs must be; on fur he gives tongue. In his individual attempts he has now been considered.

Let us consider him now as he works with his fellows. He prefers to work with one or more of his kind. He prefers to hunt in packs. The joint efforts are far more certain of success than are the efforts of the lone individual. Thus, dogs, wild or domestic, prefer to hunt with each other. They learn to coördinate their efforts in a masterly manner to accomplish the common purpose to capture. The timber wolf, hunting in twos or more, if need be, takes distinct parts in the struggle to capture. One or two will make a sham attack on a cow, while another one seizes and kills her momentarily unguarded calf. Coyotes will station themselves with excellent judgment in such a manner that as one pursues the running antelope it passes by the others in turn, and each in turn then relieves the pursuer in the running, so that the antelope is running constantly against a relay of wolves.

The greyhound in pursuing animals as swift or swifter than itself, prefers to run in company, and they invariably learn to "run cunning;" that is to say, when one goes forward at full speed to press the fleeing jack rabbit or antelope, etc., his fellow is running less swiftly behind; but the moment the prey is turned, the hindmost greyhound dashes forward at top speed across the angle thus formed, and, to effect another turn, he presses his prey to the utmost. Every time a turn is made, the prey runs on two sides of the triangle, while the hindmost dog runs on but one. This is a sufficient advantage in favor of the dogs to result in the end in their success.

The country dog, whenever it is possible, has some neighboring dog with which he is on friendly terms, and which he always takes with him on his prowling expeditions through the woods and fields. If they learn that such self-hunting is forbidden, they sneak away in the most silent manner, taking a time for their leaving when they are free from observation. If they approach a brush pile where there is a probability of springing a rabbit, do they go to it together? They never hunt that way after they become educated. One goes forward to jump the rabbit, while the other takes a position to seize it if he can; or, failing that, he may intercept or turn it with advantage toward his companion. At least, the rabbit does not escape unobserved, as sometimes happens when green dogs are in pursuit.

All the acts of dogs when hunting together have a direct reference to the common purpose, the capture. These acts are acquired by experience. That they are sometimes learned very quickly proves none the less that they are from experience, and that in no other way can they be acquired. Thus the pointer or setter puppies take distinct parts in pursuit for the common advantage in their effort at making a successful capture. Hence, when one puppy draws stealthily and closely on the birds, pointing them, and the other puppy stealthily draws behind or to one side, the latter is seeking for a position to make a more successful effort if his leader should fail when he makes his final spring to capture. "But," say those who hold that the act is instinctive, "we have seen puppies back each other in their warfare on sparrows the first time one of their number pointed." It does not follow that the first time the owner or others saw the point in the kennel yard, that such was the first point. There might have been dozens that they never saw. When the puppies surround a barnyard fowl, on an evil day for the latter, the success of backing and running cunning are palpably in evidence.

It should be kept in mind that birds are not the sole prey of the setter or pointer. Rabbits he pursues with greater delight and fierceness, and his unaided efforts to catch birds are similar to those he employs in catching rabbits. One dog goes forward to spring the game; the other uses his best judgment to secure a position where he can either seize the prey or turn it to his fellow. It is in method analogous to the running cunning of the greyhound, and yet none of these acts have any reference to a man with a gun, although it is still held by some writers that the act of pointing is instinctive and has reference to the success of a man with a gun, notwithstanding that the dog will point if there is no man present, or present with or without a gun.

That the act of backing has a direct reference to the capture of prey, is conclusively proven by the fact that an intelligent dog, even when most thoroughly trained, will refuse to back a dog which false points to an unreasonable extent. He learns that the acts which commonly indicate the presence and the pursuit of game are false, and as there is nothing to be pursued or captured so there is no need for preparation to seize or pursue.

The trainer, in perfecting the act, simply takes this natural inclination of the dog to assist his leader, and so disciplines it that the dog makes the stop, the back, when he sees his leader pointing. Thus the act which the hindmost dog naturally used for interfering to the best advantage, the trainer perverts and so cultivates that the dog is not permitted to interfere at all.

The dog theoretically is trained to stand wherever he may be at the moment he catches sight of the pointing dog, but in practice his natural impulse is so great to be in a commanding position when the game springs, that most dogs will gallop up to within a few yards of the pointing dog, and constant care is necessary to maintain the proper degree of stanchness, there being a constant tendency to break its requirements.

While there is a certain uniformity in the natural proclivity of dogs to point as a means of securing their prey with greater certainty, there is far from being the same uniformity in the proclivity to back. The point has a direct reference to the seizure of the prey, and the pointing dog, therefore, has a direct interest in the effort. The backing dog is suppressing his own inclination, and is taking a subordinate and less profitable position, for if the pointing dog be successful in his effort, he may eat the prey without a division of it with his companion.

In practical field work the only material advantage of backing is that it prevents interference with the pointing dog. In such instance as a man owns but one dog and shoots alone, it is not of the slightest importance whether his dog will back or not. But when his dog hunts with another, it is of great importance that he should back. Nothing will so thoroughly spoil all sport as a dog which, refusing to back, either goes ahead and steals the point or flushes the birds. Some good dogs behave very badly when working with a dog which will not back. They will not submit to have their points stolen, and either go ahead and flush to prevent any point at all, or behave so resentfully or jealously that the standard of work is seriously lowered. Backing well and stanchly is an accomplishment which puts a needed finish to the performance of a dog which works in company, and besides being pleasing to the eye adds to the pleasure of the shooter and the success of the gun. When a dog is pointing no other dog should be permitted to interfere with him. All efforts at capture then appertain to the shooter.

Until a dog has learned the purposes of pointing, he exhibits no inclination to back. He has but imperfect opportunities to learn its purposes. As in actual field work, the pointing dog is never voluntarily permitted to flush if the shooter can prevent it; there is not, to the unschooled dog, the ocular evidence of the pointing dog's intention that there would be if he were working alone with his fellow; nor is there the need of backing when dogs work to the gun that there is when they work alone, this, of course, from the dog's point of view. Out of a certain number of dogs, a few will learn to back readily, most of them will need to be taught, and others will refuse to back at all. It is an act which the dog cannot be forced to do if he refuses. The only substitute is to teach him to stop to order or signal promptly, so that when he goes toward the pointing dog he may be dropped; or if he is particularly self-willed, he may be whipped every time he runs in on a pointing dog, and in time he will learn that a pointing dog is something to be avoided. Thus, if he cannot be taught to back, he can be broken from running in. There are some things which he cannot be forced to do, but there is no act which he cannot be broken from doing.

If the dog have an intense inclination to steal the point it is better to work him with a check cord, and punish him with the whip every time that he runs in and flushes. If there are several opportunities to secure points on scattered birds, tie him to a tree where he can see his brace mate point. If he howls and struggles punish him till he desists. He must be disciplined to self-restraint, and it is a waste of time to trust to his sense of propriety to attain it. If the dog is timid and lacking in confidence, quite a different policy must be adopted. The dog must be treated kindly and induced into the accomplishment by plenty of opportunity and showing him kindly and gently. As the trainer goes forward to flush he discourages the dog from following, forcing him to remain back, giving his attention to the dogs specially, and not to the birds. At this stage a serious disadvantage to the amateur trainer is his irrepressible inclination to shoot first and train afterward, whereas properly it should be the reverse.

It is better to have an old, steady dog when schooling the puppies to back. When he points, attract the attention of the puppy with as little noise as may be, have him see the pointing dog, and then with exaggerated caution of movement impress on him how grave is the moment and the event. When the pointing dog engages his interest, walk forward to flush. If the puppy attempt to follow, caution him; do everything slowly and cautiously. The puppy will catch the seriousness of the matter. If he attempt to follow further, take him back. He must understand that he is not to go forward when his mate is pointing. After the birds are flushed and a kill is made, the puppy will observe the purpose of all the acts, and if he have any powers of discrimination, he will learn to take his proper part whether on point or back. It is necessary sometimes to repeat the lesson through many days or weeks. He may seem to have no interest in backing, and suddenly some day he will be astonished by unexpectedly coming upon his mate on point, and may instantly back well. It is a branch in which the trainer must use tact and patience. Nothing is gained by hurry, nor is anything gained by punishing a dog in an attempt to make him back. Punishment will deter him from running in on a pointing dog, but it will not make him back. However, by persistently attempting to enforce the act, the cases which will result in total failure will be few; on the other hand, the cases which will result in failure if but a half-hearted fitful attempt is made will be many. The only art in this is persistency, good common sense, patience and a knowledge of what is correct for the dog to do. Let the trainer always keep in mind that if the dog does not know what the trainer wants done, it is impossible that he should do it. If he does not understand his trainer the latter should endeavor to improve his methods of communicating knowledge.

The faults that the trainer should avoid in teaching retrieving are too much eagerness to shoot the birds, thus neglecting the backing dog; too much hurry and impatience; attempting to teach backing before the dog has had proper opportunities to learn the significance of a point; inattention to proper details or attending to them in a manner which results in slovenly performance, and trying to force an arbitrary method on all dogs alike.

A Trespassing Dog Case.

THE Appellate Division of the Rhode Island Supreme Court gives the following opinion in the case of Wm. M. Harris Jr., vs. W. D. Eaton:

May 5, 1897, ROGERS, J. The plaintiff demurs to defendant's plea of justification in an action of trespass for killing the plaintiff's dog while trespassing on the close of the defendant's master.

The following are substantially the allegations set out with great minuteness in the defendant's plea: For more than two years prior to the time of the killing the plaintiff's dog had been constantly and repeatedly in the habit of trespassing on the close of one A. M. Eaton, and had there chased and killed certain fowls and animals, and had been driven off said close while killing said fowls, and at other times while trespassing on said close being fired at by said A. M. Eaton or by others his servants or agents; yet, nevertheless, the said plaintiff, after having been so notified of the killing of said fowls and that his said dog had been fired at while so trespassing, and after having been requested and told by the said A. M. Eaton to keep his dog chained or shut up and off of the said close or he, the said dog, would be shot, refused and neglected so to do, but, on the contrary, continued and has continued down to the time when, etc., to allow his said dog to run at large and to trespass constantly on the close of the said A. M. Eaton. And when said dog was killed he was again trespassing upon the said close, with the knowledge of the said plaintiff, at the time and soon after eight rabbits had been killed on the said close of said A. M. Eaton, by some dog or dogs or other animal or animals to the defendant unknown, and the defendant had reason to believe and did believe that said plaintiff's dog had taken part in killing said rabbits, whereupon he, acting as the agent of said A. M. Eaton, and with knowledge of the premises, and with knowledge thereof by the plaintiff, who nevertheless was then and there allowing his said dog to run at large and to continue to trespass upon said close, fired at said dogs and other dogs then and there trespassing on said close, with a gun loaded with gunpowder and bird shot, not for the purpose or with the intent of killing said dog, but to frighten him and drive him off of said close, and by chance the said dog was struck in some vital spot and died in consequence thereof.

Analyzed and stripped of its verbiage, the plea resolves itself into this, that the plaintiff's dog was trespassing on the close of the defendant's master, under more or less aggravating circumstances, and that the defendant, as agent for his master, fired a shotgun, not with the intent of killing said dog but to scare him and to drive him off of said close, and by chance the said dog was struck by said defendant's shot in some vital spot and died in consequence thereof.

We fail to see how a voluntary act committed by the defendant, which he was under no obligation to do and which resulted in injury to the plaintiff, even if it produced effects not intended or foreseen, can justify such injury; though the lack of evil intent might mitigate the damages, if anything more than compensatory damages are claimed. Williams, C. J., in Vincent vs. Stinehour, 7 Vt., 62, 66, lays down the rule thus: "When a person is doing a voluntary act, which he is under no obligation to do, he is held answerable for any injury which may happen to another, either by carelessness or accident." See also Wright vs. Clark, 50 Vt. 130, 135; Underwood vs. Hewson, 1 Str. 596.

Though the plea alleges the dog was shot merely by chance, the purpose and intent being to frighten him away and not to kill him, yet, whatever the intent, did any of the circumstances set up in the plea, by way of inducement or otherwise, justify a killing? We think not. Pub. Laws R. I., cap. III, define the legal status of a licensed dog. An unlicensed dog going at large has no apparent protection under the law, and any person may kill him, Sec. 13. So a licensed dog, not having on a collar with the owner's or keeper's name distinctly marked thereon, may be killed any where outside of his owner's, or keeper's enclosure, Sec. 4, and any person may kill any dog that may suddenly assault him, or any person of his family or in his company, while the person so assaulted is out of the enclosure of the owner or keeper of the dog, Sec. 6. Spaight vs. McGovern, 16 R. I. 658. Any person likewise may kill any dog found out of the enclosure of its owner or keeper, worrying wounding or killing any neat cattle, sheep, lamb, horse, hog or fowl, not the property of the owner, Sec. 6, and any officer charged with the service of an execution in a suit against the owner of a dog for a second recovery of damages committed by such dog, shall kill the offending dog as commanded in such execution, Sec. 3. In Sec. 7 of said cap. III is a provision for making complaint to a justice or clerk of a district court wherein, after certain proceedings, authority may be obtained for killing objectionable dogs. Said cap. III makes a licensed dog property and the subject of larceny, and makes the owner of any dog liable for the damage he may do. Defendant's special plea nowhere brings the plaintiff's dog within the provisions of said cap. III authorizing any one other than his master to kill him.

Neither the fact that the plaintiff's dog was a trespasser on A. M. Eaton's close, nor that he had previously committed depredations to property there, would afford justification for killing him, for Mr. Eaton could recover reparation for such injuries. In Brent vs. Kimball, 60, 111, 211, 213, the court says: "Appellee does not pretend, in his evidence, that the dog, at the time of the killing, was doing any mischief to person or property, but claims, more, it seems, upon suspicion than knowledge, that the dog had previously destroyed his hens' nest or eggs. If the dog had a vicious habit, and appellant had previous notice of it, an action would lie against him for the damages done by his dog. But it does not follow that the party injured may justify the killing of the dog for that reason, any more than he could the killing of a breachy animal breaking into his corn." In this State no notice of the viciousness of his dog would have been necessary before bringing an action for damages done by the dog. Neither is it any justification that the plaintiff had been notified that his dog was in the habit of trespassing and had been shot at by Mr. Eaton or was going to be shot at by him if again found trespassing. Notice would be sufficient to justify under the statutes of some States, but not of this, for complaint to a justice or clerk of a district court should have been resorted to and the required proceedings had, to justify killing the dog.

There are decisions in various States that one may defend and protect his property from dogs, and, when necessary for that purpose, to kill the dog. Anderson vs. Smith, 7 Ill. App. 354; Lipe vs. Blackwelder, 25 Ill. Aps. 119; Ten Hopen vs. Walker, 96 Mich. 236, and Livermore vs. Bachelder, 141 Mass. 179. In the latter case, which was tort for killing the plaintiff's dog, it appeared that said dog came upon the defendant's premises and there killed and maimed hens of the defendant, which were in his henhouse or shed. The dogs were driven away, and, in about fifteen minutes afterward, came again upon the defendant's premises, and were running toward the same shed and henhouse of the defendant, when the defendant, having reasonable cause to believe that the dogs were proceeding to maim and kill other of his hens in said shed and henhouse, shot and killed the plaintiff's dog. The court held that killing the dog was not in law justifiable, for to justify the killing, the defendant should have shown, not only that he had reasonable cause to believe that the dog was proceeding to maim and kill his hens, but also that he had reasonable cause to believe that it was necessary to kill the dog in order to prevent him from killing the hens.

The plea nowhere shows that the plaintiff's dog when killed was worrying, wounding or killing any of the animals mentioned in said cap. III., Sec. 6, or that the defendant had reasonable cause to believe that it was necessary to kill the dog in order to protect his property other than the animals mentioned in said Sec. 6.

In our opinion the defendant's special plea in bar sets up no sufficient cause in justification of killing the plaintiff's dog, and demurrer thereto is sustained and case remitted to the Common Pleas Division for further proceedings.

Monongahela Valley Game and Fish Protective Association All-Age Entries.

PITTSBURG, Pa.—The entry list for the third annual All-Age Stake of the Monongahela Valley Game and Fish Protective Association closed with twenty-four nominations, fifteen English setters and nine pointers, being an increase of five over last year.

Full particulars containing directions for reaching the grounds will be forwarded for publication next week.

ENGLISH SETTERS.

SPOT CASH—H. K. Devereux's b., w. and t. dog (Vanguard—Georgia Belle).

LORETTA—H. K. Beattie's b., w. and t. bitch (Gladstone's Boy—Rill Ray).

ROD'S PELL—J. S. Robb, Jr.'s, b., w. and t. bitch (Rodfield—Opal).

BIRD—R. S. D. Hartrick's b., w. and t. bitch (Gath's Mark—Ruby's Girl).

LITTLE DORRIT—Beazell & Gladden's b., w. and t. bitch (Whyte B.—Dolly Varden).

WINKS—J. T. Crawford's b., w. and t. dog (Joe—Dot C.).

KLONDYKE—G. O. Smith's b., w. and t. dog (Gladstone's Boy—Speckle Gown).

TONY'S RUBY—Wm. Cummings's (agt.) o. and w. bitch (Antonio—Ruby's Girl).

CAROLINE—Fox & Blythe Kennels' l. and w. bitch (Count Gladstone IV.—Dan's Lady).

FORZANDO—Fox & Blythe Kennels' b., w. and t. dog (Gath's Mark—Countess Rush).

TEDDY M.—Albert Millaf's b., w. and t. dog (Gath's Mark—Countess Rush).

DAUPHIN—Albert Millar's b., w. and t. dog (Gath's Mark—Countess Rush).

ROD'S BOY—King Graphic Kennels' b., w. and t. dog (Roderigo—Lany Gladstone).

BARON CINCINNATUS—T. J. McCoy's b., w. and t. dog (Dow R.—Nattinatis).

POINTERS.

VIRGINIA—H. K. Devereux's l. and w. bitch (Little Ned—Pearl's Dot).

JINGO'S JOY—Monongahela Kennels' l. and w. bitch (Jingo—Pearl's Dot).

STRICTLY BUSINESS—J. L. Craven's b. and w. bitch (Kent's Priam—Belle Fansher).

SPECKLE LAD—H. L. Christy's b. and w. dog (Lad of Rush—Black Wonder's Pride).

NABOB—Charlottesville F. T. Kennels' b. and w. dog (Rip Rap—Dolly D.).

DON—Thomas Harriott's lem. and w. dog (Doc—Rachel).

SCOTT C.—G. A. Wilson's l. and w. dog (—— — ——).

PAT J.—Ganter & McDonald's l. and w. dog (Dash Ranger, Jr.—Patti M. II.).

RUSH—Frank Kruse's l. and w. dog (Rush of Lad—Spotty Ale).

ALBERT'S SHOT—S. W. Carey, Jr.'s, b., w. and t. dog (Beau Brummel—Albert's Phœbe).

S. B. CUMMINGS, Sec'y.

POINTS AND FLUSHES.

CAPT. A. C. WADDELL, Manager of the Del Monte Kennels, is making a stay of several weeks in the East. Owing to the quarantine regulations in Mississippi, his stay has been prolonged beyond his intention. He reports ill-luck in his kennel, a number of choice puppies dying and thereby reducing needed materials for Derby and field use. However, the kennels seem to have a plucky determination to try again.

Mr. H. B. Donovan, secretary-treasurer, informs us that as the result of the Canadian Kennel Club's ballot, the following list of officers has been elected: President, G. B. Sweetnam, Toronto; First Vice-President, R. McEwen, Byron; Sec'y-Treasurer, H. B. Donovan, Toronto. Vice Presidents: Leslie Gault, Montreal; Fred T. Miller, Trenton, Ont.; W. B. Wells, Chatham, Ont.; G. B. Bruce, Calgary, N. W. T. Executive Committee: C. A. Stone, Dr. A. F. Webster, A. Boultbee and J. G. Kent, Toronto; A. F. Gault and J. A. Pitt, Montreal; Rev. Thos. Geoghegan, Hamilton; T. A. Carson, Kingston; F. M. Gowans, Cobourg; Dr. J. S. Niven, London; R. G. Steacy, Brockville; H. P. Thomas, Belleville.

At a meeting of the New England Kennel Club held at the club house at Braintree Oct. 7, the following officers were elected: President, Samuel Hammond; Vice President, Oliver Ames; Secretary, James L. Little (re-elected); Treasurer, Andrew B. Cobb (re-elected).

The Metropolitan Kennel Club's second annual dog show will be held in the old 13th Regiment Armory, Brooklyn, Nov. 24 to 27 Thanksgiving Day week.

Premium lists are now in the printer's hands and will be ready for distribution in a few days.

An office will be secured in Brooklyn and announced as early as possible. For the present, applications for premium lists and other communications can be addressed to James Mortimer, Superintendent, Hempstead, L. I.

Yachting.

THE following, printed in the New York dailies of Oct. 12, marks the formal opening of the silly season in yachting. There is no "President of the Defender Syndicate" and no "French Yacht Club," and even if it were proposed to race Defender abroad next season it is extremely unlikely that official notice would be given long in advance:

CANNES, Monday.—It is announced here that the president of the Defender syndicate has notified the French Yacht Club that the American yacht Defender, which defeated Lord Dunraven's Valkyrie III. in the last series of races for the America's cup, will take part in the next Cannes regatta—that of the early part of 1898.

THERE is something decidedly un American in the idea of any wholesome restrictions in yachting. The prevailing sentiment from the earliest days of the sport has been in favor of "plain and simple rules," such as would encourage the production of racing machines with immense sail plans, manned by unlimited crews, and held up by shifting ballast. Every movement for salutary limitations to sail area, crews or ballast has been opposed by the great body of American yachtsmen, and its supporters have been derided as cranks, Anglomaniacs, rocking-chair sailors and mischievous characters in general. No matter what intrinsic merit it might have, a proposal for the restriction of extreme features has always been met with a storm of patriotic objections and abuse of its advocates. The Seawanhaka rule, of length and sail area, is a notable instance; but others are found long before the Seawanhaka C. Y. C. was in existence, and the same spirit is alive to-day, though fortunately it has lost much of its old-time strength.

The result of this national policy of letting everything go, with no attempt at judicious and timely legislation to meet developments in design and construction, and alterations in the conditions of yachting, are only too plainly visible to-day in the total extinction of the racing yacht, as seen in the 90ft. schooner class, with Colonia sailing alone; in the 90ft. cutter class, with Defender rusting at her moorings and Vigilant and Navahoe under cruising rigs, and in the smaller cutter classes, in which Queen Mab, Wasp and Syce have no competitors.

The necessity for timely restrictions on extreme draft, on light and costly construction, and on the cutting down of displacement have been plainly pointed out year by year, and many proposals have been made for remedying existing and growing evils, but all without avail up to the present time.

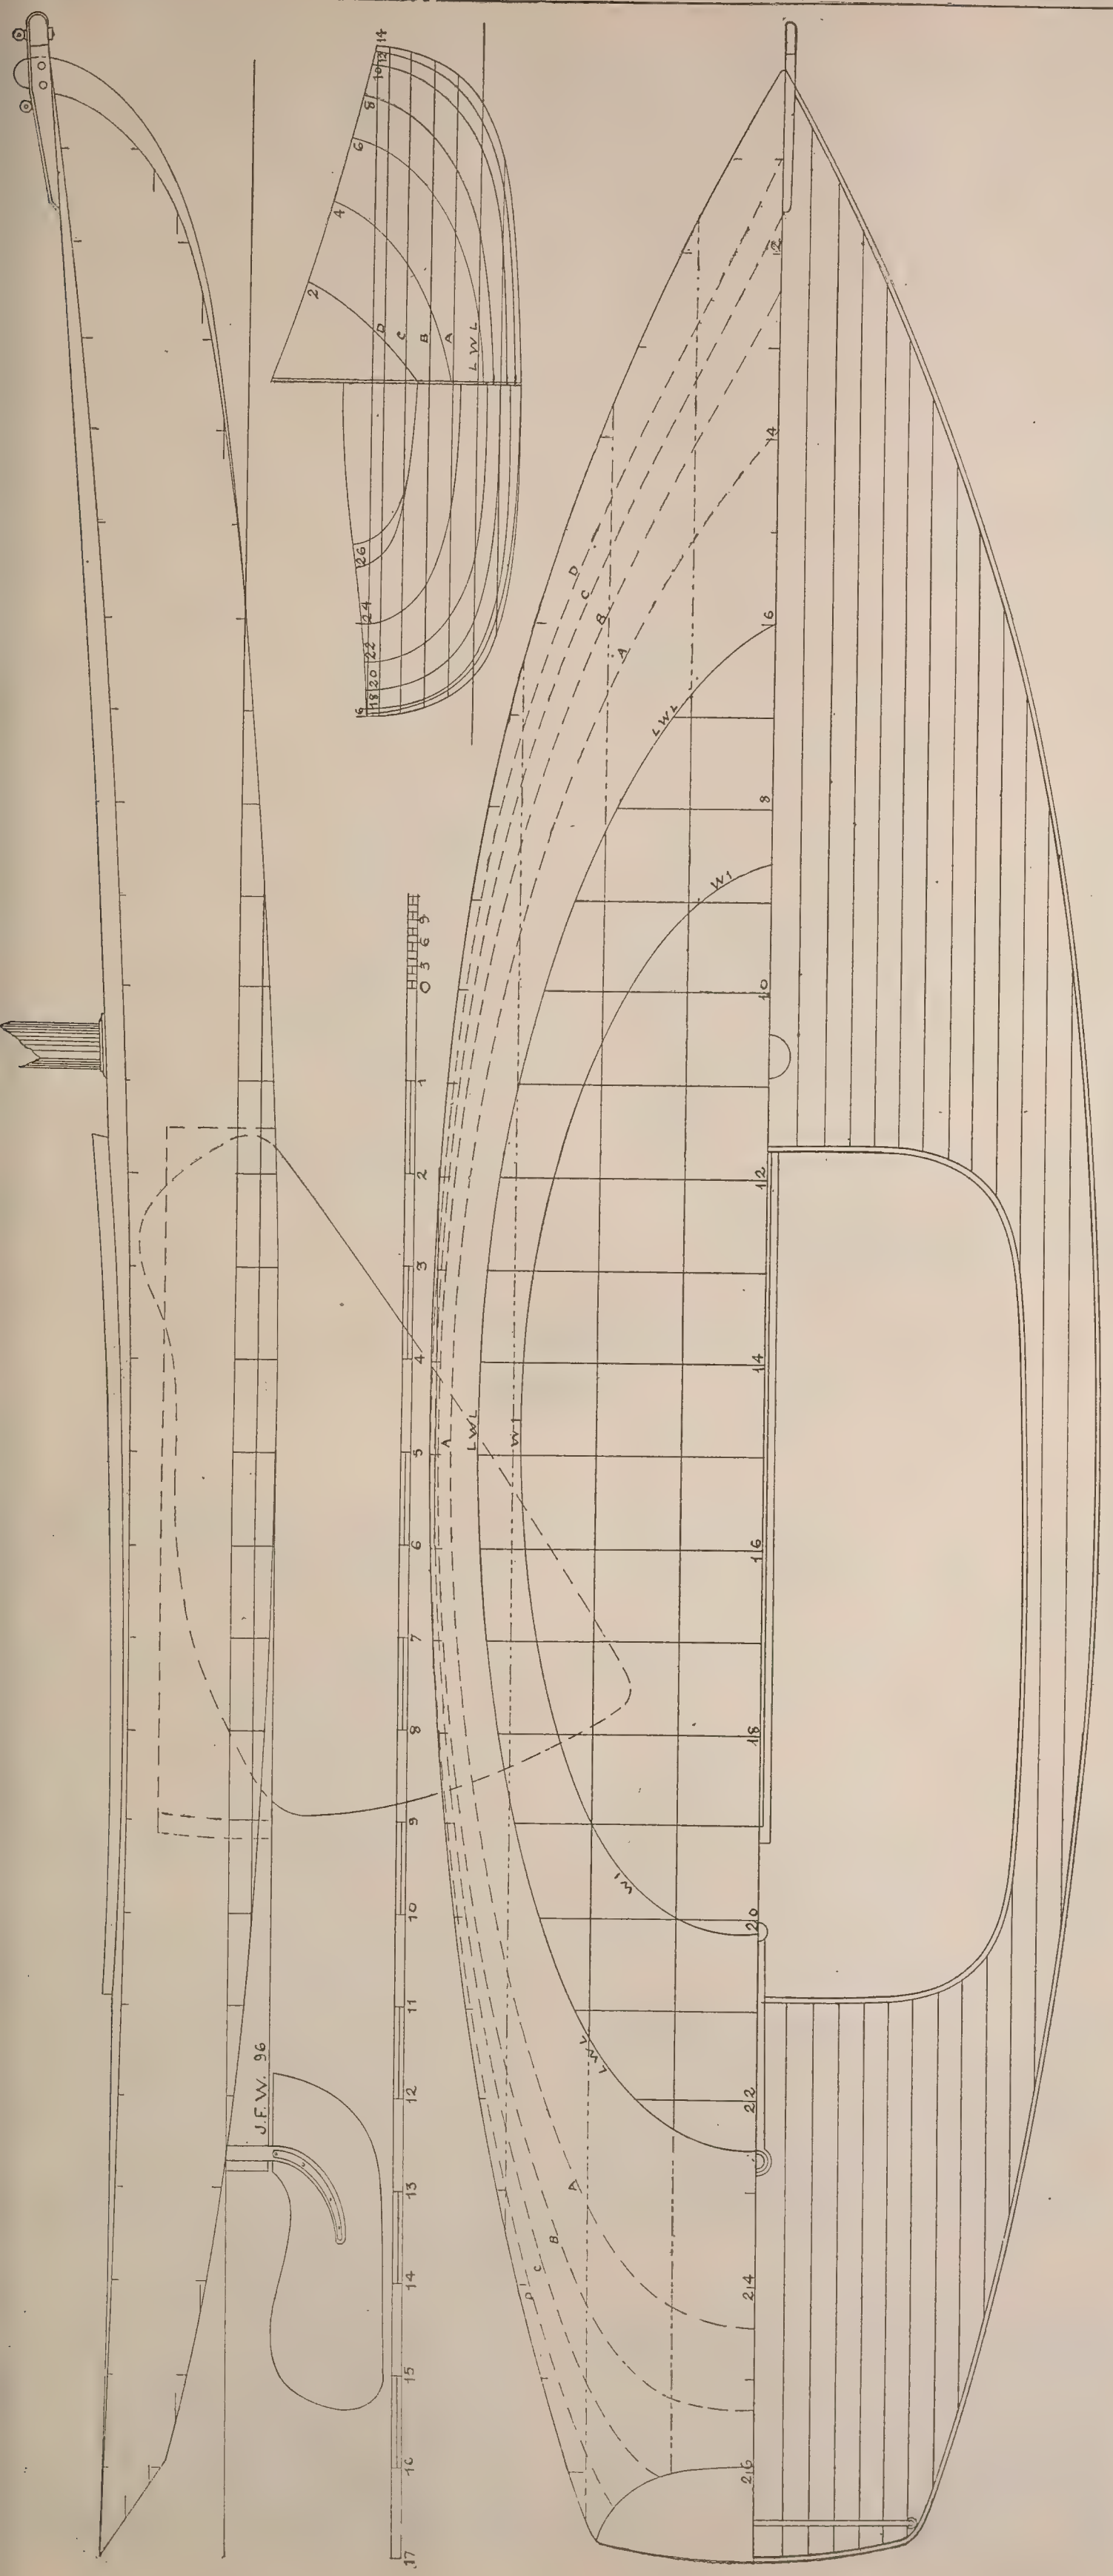
It is evident, however, that public opinion in yachting is now swinging to the other extreme, and that restricted classes will be the order of the day for some time at least. The 30ft. restricted class having proved successful, and the 51ft. unlimited class the reverse, a new 51ft. restricted class is now under way for next season, under limitations which promise to give what yachtsmen have long professed to want, but which they have taken no action whatever to obtain by the judicious amendment of the regular measurement rules. Now the work is to be done by means of special legislation.

The 21ft. knockabout class in Boston having proved successful alongside of other unlimited classes, a 25ft. class under similar restrictions is promised for next season. The new Seawanhaka restricted class, of 21ft. l.w.l., has already taken definite shape, with twenty-five yachts ordered and applications for ten more refused; and now some neighboring clubs are working on a similar idea.

The American Y. C., of Milton Point, has invited designs for a yacht of moderate proportions, of about 25ft. l.w.l., 38ft. over all, 8 to 9ft. beam, 5ft. or so of draft, and 800sq. ft. of sail in mainsail and jib. A head room of 6ft. is insisted on, with a fairly large cabin and a cockpit about 7ft. long. While the class may not be restricted to a single design, it is probable that one design will be selected and a number of yachts built from it at once, such restrictions being adopted as will prevent the outbuilding of this standard design by later designers. The class will give a larger yacht than the Seawanhaka, but at nearly double the cost.

The one-design idea is finding equal favor in other parts of the country, in all sizes from 15ft upward, and it is probable that classes of this kind, under some stringent restrictions even if not limited to a standard design, will be plentiful next year, with material benefit to yacht racing and yachting in general.

There is much to be thankful for in this new turn of affairs; in the first place, it offers to men of moderate means, and even to those who can afford to spend liberally in first cost, but cannot build a Syce or a Wasp every year, a chance to race at a comparatively moderate expense, and in yachts that are useful for other purposes than racing and salable at a fair price after their first season. In this way it is likely to work to the immediate benefit of yachting in providing good sport throughout the whole of 1898 and for several successive seasons at least.



What is of even more importance, however, is the value of the experiment as a much-needed demonstration of the absolute necessity for thorough restrictive legislation to govern all the regular classes. It is greatly to be regretted that the new restricted classes have no relation to each other or to existing classes, and only tend to increase the customary chaos of yachting. The 51ft. class will probably fall in with established limits, but the 30ft. class conflicts with two regular classes and the new Seawanhaka and American classes will do the same. As the regular classes now stand, it is impossible to adapt restricted classes to their limits, and for a time at least there must be more or less confusion and clashing.

Had the clubs and yachtsmen at large been awake in time to the necessity of restrictions on design and construction in the regular class rules, it would have been possible long before this to have adopted a new formula and some supplementary restrictions to which the new restricted classes might comply; or which would even have made the creation of restricted special classes unnecessary.

The best that can be hoped now is that the lesson may not be lost, and that in the near future a radically new rule may be adopted, one designed to produce not merely the fastest possible yacht, but a fast yacht of general good qualities in place of the present racing machine.

THE *Yachtsman* has made a very liberal and sportsmanlike offer of prizes for trial races and also for subsequent races of the class if Mr. Brand's challenge should be endorsed by his club and accepted by the Canadians. It is only by the construction and thorough trial of a fleet that one yacht good enough for international racing can be produced.

THE Seawanhaka C. Y. C. has met with extraordinary suc-

cess thus far in its new one-design class. The contract has been closed with Mr. Stearns for twenty-five yachts, the price being $775 each; and the committee has declined ten more requests to join the class.

The Seawanhaka Cup.

In spite of some positive statements that the Royal St. St. Lawrence Y. C. has accepted the challenge of the Seawanhaka C. Y. C. for next year, such is not the case, nothing having yet been decided. The Minima Y. C. has cabled to Montreal an indorsement of Mr. Brand's notice of challenge, but no letter has been received, and no action taken by the holders of the cup. A statement that is apparently untrue and very unfair to Mr. Brand has been in circulation in the Canadian papers, to the effect that the Minima Y. C. has refused to indorse him as a challenger on account of his numerous frivolous protests in 1895. The *Yachting World* is quoted by the papers in question as their authority, but it has said nothing of the kind.

The *Yachtsman* of Sept. 30, just to hand, discusses the matter as follows:

The courtesy of the Royal St. Lawrence and Seawanhaka yacht clubs in giving an opportunity to English yachtsmen to challenge for the Seawanhaka International Cup has met with a response from Mr. J. A. Brand, who telegraphed a challenge at the eleventh hour. Mr. Brand was invited through Mr. H. King Sturdee (his representative in the last races that he sailed for the cup) to send a challenge, and, there being no time to waste in making arrangements, he wired as follows: "Secretary, St. Lawrence Y. C., Canada. —Challenge Seawanhaka cup, subject Minima backing with syndicate.—Brand." Nothing so far has been settled with regard to backing the challenge, but we feel sure that the Minima Y. C. will sustain its sporting reputation by going into the affair in no half-hearted way.

It must be remembered that the challenging boat will meet a defender of the very first water, and that the Royal St. Lawrence Y. C. will probably build another fleet of "Duggan" boats, of which the best will be selected to defend the cup. Therefore, if Mr. Brand is to have a fair chance of success, a fleet should be built here from which a champion may be selected.

But our measurement rule is by no means adapted to the type of craft suitable to these races, and so it will be necessary to provide special inducements for the building of as large a number as possible.

As we have said, the Minima Y. C. has not yet taken any action in the matter, and Mr. Brand is busily engaged in trying to form a syndicate, but if the club will take the matter up, so that a fair number of boats will be built, we are prepared to offer valuable prizes, not only for the trial races, but for subsequent racing among the rejected boats. This is only a suggestion at the moment, subject to modification at the wish of the club. Of this we are certain, that Mr. Brand will go out on a wild goose chase unless he has very strong support at home; and, even given that support, his task will not be easy, for our Canadian friends have conclusively proved their merits alike as sailors, builders and designers, and they have the advantage also of thoroughly knowing their own waters.

Provided things go smoothly with the challenge, there remains the very important question of size. Mr. Brand would like to challenge with a 15-footer, Seawanhaka measurement, but this may not meet with the approval of the Royal St. Lawrence Y. C. At the same time, although the size seems disproportionate to the interest attaching to such a contest, the Canadians will no doubt bear in mind that our rule is so opposed to the type of craft required that a larger size would prove a very severe tax on the challenger.

The *Yachting World* of Oct. 1 states that Mr. Brand was awaiting a reply from the R. St. L. Y. C. and would not lay the matter before the Minima Y. C. until such a reply was received. As far as the telegram from Mr. Brand is concerned it hardly demands a reply, and probably none will be sent by the R. St. L. Y. C.; in the natural order of things the club would await a formal confirmation of the telegraphic challenge from Mr. Brand or his club. The same paper states that Mr. Brand wished to build either a 24-footer or a 30-footer by the linear rating rule.

Problem.

The sloop Problem was designed for his own use by Com. John F. Wright, of the Indiana Yacht and Boating Club, of Wawasee, Ind., who has sailed her successfully for the past two seasons. She has proved not only fast in racing, but particularly able and comfortable for so small a craft in general pleasure sailing. Her dimensions are: 27ft. over all, 17ft. 6in. l.w.l. with crew of four; beam 7ft. 3in., draft 7½in., sail area 404sq. ft. She is strongly built, with keel of yellow poplar, stem of red elm, frames, bent, of red elm, ⅝×⅞in., spaced 6in., planking 7-16in. white oak.

The centerboard is of ¼in. steel plate, weighing 244lbs. It is lifted by a detached lever, working on the upper edge of the trunk, which is shod with ⅛in. strap iron to take the wear. Holes ½in. diameter and 6in. apart are drilled in the plate and two pins are used, shifted from hole to hole and one serving as the fulcrum for the lever. The board may be raised or lowered from 6 to 12 at a time by one hand alone. The rudder is of 3-16in. steel plate, weighing 60lbs. No ballast is carried, but the yacht has proved very stiff.

Beverly Y. C. Sail-Off.

The sail-off for the second class of the Beverly Y. C., which race on Sept. 4 did not finish within the time limit, and for the cruising class, to decide the awarding of the championship pennant, was sailed at the club house on Sept. 18. There was almost a calm at the start, all the boats being handicapped. The wind was then light and fluky until near the close, when a light S.W. breeze set in, which enabled the boats to finish within the time limit. The times were as follows:

SECOND CLASS.

	Actual.	Corrected.
Thordis, J. B. Wales	3 44 15	3 32 04
May King, D. L. Whittemore	3 44 55	3 32 44
Anonyma, F. L. Dabney	Did not finish.	

CRUISING CLASS.

Royal Blue, C. S. Dennison	3 50 17	. . . .
Robin Hood, R. S. Hardy	3 54 24	. . . .

Judge, A. H. Hardy. Thordis wins in second class and Royal Blue wins pennant in cruising class.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

SAIL PLAN—RACING SLOOP PROBLEM.

Cruising on the West Coast.

HAVING spent a part of the past winter cruising along the west coast of Florida with varied experiences, a few items relative to that locality as a cruising ground, may be of interest to would-be cruisers and fishermen.

Beginning with the Anclote Keys on the north, there is, with one or two exceptions, an almost unbroken chain of small islands extending parallel to the coast, almost to Cape Sable, a distance of some 250 miles.

Inside of this natural breakwater is an ideal cruising ground for small craft, the equal of which cannot be found anywhere else in America.

Here the smallest mosquito boat can cruise in perfect safety, and each winter finds a goodly number of enthusiastic yachtsmen from the North, with their tiny craft, ever ready to try conclusions with any newcomer who may turn up.

These inside waters are very shoal, and centerboard boats under 20ft. are the rule. Craft drawing more than 2ft. of water are placed at a great disadvantage, and a keel or fin-keel would be wholly impractical.

Scattered along this coast are numerous winter-resort towns, many of which boast thriving yacht clubs, and numerous regattas are held through the winter season, each town sending its fastest boats to contest for the handsome trophies offered. In addition to these regattas, some of the clubs hold weekly races, the score being kept, and at the end of the season the yacht having the greatest number of points takes the prize.

Among others, the Tarpon Springs Y. C. may be said to be the most enterprising, and to have the largest membership of any club on the coast, and, without exception, the fastest yachts on the Gulf coast.

Some phenomenal records were made by boats of this club during the past winter; in one case a 15-footer entered the 30ft. class in the Tampa Bay races and took the hundred-dollar prize.

But it was about cruising that I started to write, not to boom local yacht clubs.

For "inside" cruising on this coast, a 25 or 30ft. yawl-rigged cabin sharpie, drawing about 18in. of water, is the proper thing for a party of two or three.

Such a craft can be chartered at most any of the larger coast towns at very reasonable figures.

In fact a party can get such a craft, with or without skipper, at Tampa, Punta Gorda or Fort Meyers, for a month's cruise, that will give a man such a vacation and sea appetite as he will remember (with longings for its repetition) ever after.

If he wants to try his hand at tarpon fishing, with some deer and turkey hunting and plenty of sailing thrown in, he cannot do better than to engage the services of Bill Rue, Fort Meyers, Fla., with his 30ft. cabin Jigger; a more genial, jolly and thoroughly competent fisherman, boatman and hunter it has never been my fortune to meet.

He understands tarpon fishing from A to Z, and probably no one knows the game region bordering on the Everglades better than he.

To secure him, however, it would be necessary to make the engagement months in advance.

For an exclusive water trip, with no side trips inland for game, a light double gun for beach-birds will be all that is necessary.

As to fishing tackle; much has already been written regarding Florida tackle. I will only add: take plenty of good long 18-thread tarpon lines, as sharks, jewfish, etc., often take more than their share.

For stores, among other things a liberal supply of canned goods, including condensed milk, are indispensable, the facilities for getting fresh meat, vegetables, milk, etc., being very inadequate. An awning for shelter from the noonday sun, and if a trip south of Charlotte Harbor is contemplated,

A FLORIDA CRUISER.

individual cheesecloth mosquito bars will be appreciated. We find it best in this latitude to do all cooking aboard the boat, and two or three small oil stoves of the Florence pattern, which with a can of kerosene exactly fit into their special box, answer every purpose.

If a party of two or three wish to go it alone, the nature of the coast is such that, if they understand boat sailing and are provided with a set of coast charts and a fair amount of horse sense, they can cruise the length of the Gulf Coast without any trouble or danger of mishap whatsoever. In regard to fishing grounds, there is nothing very tempting north of Tampa Bay. Supposing that the cruiser starts from Tampa, a half-day's sail brings him to Big Sarasota Bay. Excellent sport can be had at the passes leading into Big and Little Sarasota bays—particularly Little Sarasota Pass, where redfish, grouper, jack, sea-trout, lady-fish, mango-snappers, pompano, sheephead and numerous other kinds, may be taken in large numbers most any day, and a more beautiful and homelike stopping place than Webb's, on Little Sarasota Bay, we have yet to find on the whole Florida coast.

Leaving Little Sarasota Bay with its oysters, fishing and charming scenery behind, a short run brings us to Casey's Pass, and now for an outside run of seventeen miles down the beach to Stump Pass. A pleasant day and fair wind should be chosen for the little yawl to make this run, and sailing in at Stump Pass we are again on inside waters, not to leave them for nearly 100 miles.

The run down Lemon Bay and Gasparilla Sound finds us at Boca Grande and in Charlotte Harbor, home of the silver king and the best fishing ground on the Florida coast. Crossing Boca Grande, we are among a group of islands, the largest of which, Useppa, Mondongo and Patricio, were in years gone by rendezvous of Spanish pirates who infested the West Indies. These islands, with their high and thickly wooded promontories, seen from the water, are lovely beyond description.

Leaving these beauty spots, where one might linger a week, we next come to Pine Island Sound, which is that portion of Charlotte Harbor lying west of Pine Island, and we are in the heart of the tarpon grounds. Many were taken here at Captiva Pass the past winter, Captiva and the Caloosahatchie being the favorite grounds this season. Passing St. James City, on the south end of Pine Island, we turn to the southwest and running down San Carlos Bay, through Matanzas Pass, and we are in Estero Bay, a network of mangrove islands, the home of the mosquito, but we are prepared for him. Very pleasant cruising is this, in and out among these green islands, until Big Hickory Pass is reached. Here the cruiser, if he cares to collect sea shells, can get his fill of Panamas, moss-rosebuds, Chinese alphabets, angel-wings and hundreds of other varieties.

We must now make another outside run, past Naples to Little Marco Pass, and we are in the Ten Thousand Islands—once the home of prehistoric lake dwellers, whose shell mounds and fortifications are visible everywhere; now the dwelling place of the mosquito and old John Gomez, who this year celebrated his 116th birthday.

From Marco southward the country is uninteresting, being an endless succession of mangrove islands; and the average cruiser, unless he be of an exploring turn of mind, will probably turn back, lingering as long as time will allow at the various fishing grounds along the way, not neglecting to procure a sawfish's saw and the open jaw of a shark, with its double row of glistening teeth, as souvenirs; to say nothing of photographs of his first tarpon and a quantity of its silvery scales to distribute among friends in the frozen North.

November and December seem to be the best months for cruising, every day being perfect, and storms of rare occurrence. April is also a good month, and a much better time for tarpon fishing. Later than the middle of May the weather gets uncomfortably warm, insect pests omnipresent, and the cruiser had best pack his dunnage and get himself back to "God's country."

CAMERAMBLER.

A Successful "One-Design" Class.

How much may be accomplished in the way of keen racing and lively sport by a comparatively inexpensive restricted class is shown by the success which has attended the Cohasset Y. C. in the past two seasons. In the winter of 1895-6 this club established a one-design class, and over a dozen boats were built by James McIntyre. The design was that of Scarecrow, by W. P. Stephens, as published in the Forest and Stream, adapted to 15ft. racing length, rigged with mainsail and jib, but no bowsprit. For two seasons the class has provided regular racing every week, a club series of fifteen races being sailed this year. Incidentally, it has provided a very acceptable substitute for the previous mixed fleet of larger boats, of such varying sizes and rigs that no fair racing was possible. It has also served to open the way for a new fleet, of either one-design yachts or of uniform measurement, and of larger size. There are clubs by the dozen throughout the country which could well profit by a similar experiment. The Boston *Globe* gives the following summary of the class:

No more interesting racing for those participating in it, or for those interested in the performance of boats in the "one-design" classes, has been furnished than by the Cohasset "half-raters." These little 15-footers have been raced in all sorts of weather, and with a persistency which speaks volumes for the enthusiasm of their owners, as well as being in itself a proof of the sport which a "one-design" class can furnish. The wins have also been well split up, and the racing so close as to make the winning of the championship a matter of doubt until well toward the end of the season.

Fifteen championship races were sailed, and six of the ten boats in the class competed in fourteen of them. Another boat had eleven starts, two had six each and one had five. There were two races with nine starters, seven with eight starters, four with seven starters, one with six and one with four, an average of seven out of the ten boats right through the season. The times show that in many of the races the wins and places were a matter of seconds.

For the winning of the championship, the Y. R. A. system of percentage—100 for first place, 50 for second and 25 for third—was adopted by the association which has controlled the racing, and the result has been satisfactory. The *Globe* presents the tables of the racing in the class, by both the Y. R. A. and the "cross" tables. The rank of the three leading boats is the same by both tables. In the second table, Mermaid, Hoodoo and Jap tie on series lost and won, and also in their series with each other, so that it is a case of "even up" in that respect between them, and they are therefore ranked on their standing in the first table. In table No. 1, no boat is credited with a place unless she defeated a competitor. In table No. 2, read across for wins and down for losses.

Swallow's championship has been fairly won by any method of ranking, and her win for the second time is due largely to the fact that her owner has raced her for all she was worth, and that he was in earnest to win in every race sailed. She won all of her series with the other boats, and also won the race on Sept. 18, the last race of the season, for a cup offered by Ralph B. Williams, owner of Delta.

Her closest competitor has been Blink, which was only eight seconds behind in the race for the Williams cup. Blink has won all her series save that with Mermaid, and is close up in the matter of percentage.

Delta is a good third, losing only to Swallow and Blink.

What will be the future of the class is now a bit uncertain for some of the owners are talking 21ft. knockabouts, and will probably build them. They will wait, however, until it is seen whether or not the Knockabout Association is to make any change in its restrictions, and will then decide either for keel boats for that class or for centerboards much after the Buzzards Bay style.

COHASSET 15FT. CLASS—RECORD 1897—TABLE 1.

	Starts.	1st.	2d.	3d.	4th.	5th.	6th.	Av.
Swallow	14	5	1	2	2	1	1	.439
Blink	14	2	7	1	2	1	..	.410
Delta	14	3	1	2	1	4	..	.286
Mermaid	14	2	2	3	2	..	1	.268
Jap	14	2	..	2	3	4	2	.178
Hoodoo	14	..	3	2	3	3	2	.143
Bee	11	1	..	2	1	1	2	.136
Mungo	6	..	1	..	..	..	2	.050
Honey	5	..	..	1	..	..	1	.025
Sea Gull	6	..	..	..	..	..	..	....

Mermaid, Jap, Bee, Mungo and Sea Gull each have one seventh place; Delta has one eighth place.

Western Yachts.

Chicago, Ill., Oct. 9.—There will be a meeting this ensuing week at either St. Paul or Minneapolis of the members of the local yachting clubs, both of Minnetonka and White Bear waters. The attempt will be made to organize the proposed Interstate Yachting Association, uniting in one body the yacht clubs more especially of Minnesota and Wisconsin, and perhaps including one or two other Western States. There is a very large yachting interest in the two States above named, and the races sailed each season would number high up in the hundreds. Much interest is taken in the latest things in design and rig, and in every way these Western yachtsmen are quite abreast with the times. They form a large body numerically, and it is thought that by bringing together the races of the many different inland lakes which cover this country a greater and more systematic advancement can be made by the followers of the sport. At the recent interlake races on White Bear, when the boats of the latter lakes defeated those from Minnetonka side, this question of an interstate body was taken up, but no decisive action was had. The White Bear (St. Paul) men favor it, but the Minnetonka (Minneapolis) sailors rather hold aloof, thinking that their own waters are wide enough for the season's sport. As a consolidation of the interests of the scattered Western racing interests, it would seem to be desirable that the organization should be formed. E. Hough.

1206 Boyce Building, Chicago.

Beverly Y. C.—260th Race.

Sept. 18.

Thordis wins first prize and pennant.

YACHTING NEWS NOTES.

Lasca, schooner, J. S. Watson, arrived at New York on Oct. 7 from Southampton, whence she sailed on Sept. 10. Lasca sailed from New York with Capt. Shelldrake in command, on Feb. 17, going first to Gibraltar, then to Algiers, Tunis, Malta, and other Mediterranean ports. She left Gibraltar late in June for England, and the next two months were spent about the English coast. This is Lasca's second trip abroad, her original owner, John E. Brooks, having made an extended European cruise in her.

Our attention has been called to the fact that the 20-footer Mary, the handsome Western boat that took part in the Seawanhaka trial races, was built by the Racine Yacht and Boat Works, of Racine Junction, Wis., and not by the builders mentioned in our reports of the races. We are glad to make this correction, as the yacht was a very creditable piece of work.

Eleanor, steam yacht, under charter to Col. Oliver H. Payne, arrived at New York on Oct. 5, after leaving Havre on Sept. 19 and Madeira on Sept. 24. She sailed from New York for Norway and European waters on June 19. Capt. W. G. Scott, who has had charge of the yacht since her construction was begun, is still in command. Very bad weather was encountered off the coast, and she was hove to for ten hours.

Nymph, the fastest of the centerboard 40-footers, designed by Mr. Burgess for F. W. Flint, and built by the Lawleys in 1888, has recently been sold through Manning's Agency to T. C. Zerega. Her racing spars have been reduced, and she has been thoroughly refitted. On Sept. 30 she sailed from New York for the Chesapeake for a cruise of a couple of months.

Nahma, steam yacht, Robert Goelet, has been delivered by the builders, G. L. Watson & Co., to her owner, and will shortly sail for America. Capt. Churchill will command her.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

Commodore, F. L. Dunnell, Brooklyn, N. Y.
Sec'y-Treas., C. V. Schuyler, 309 Sixth avenue, Brooklyn, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Wm. Carpenter, Sing Sing, N. Y.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Edgar C. Woolsey, 37 Charles St., Ottawa, Can.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

The annual meeting of the executive committee of the American Canoe Association will be held at the Clarendon Hotel (Fulton, Washington and Johnson streets), Brooklyn, N. Y., on Saturday, Oct. 16. Com. Dunnell will call the meeting to order at 10 A. M. A dinner will be given in honor of the visiting canoeists in the evening.

The Sliding Gunter Rig.

New York, Oct. 3.—*Editor Forest and Stream:* The exchange of ideas on all matters relating to sport, which goes on continually through your "weekly," even to the mechanical department of sport, is most useful and interesting, and I desire to add my small portion in regard to the sliding gunter rig for canoes.

The sliding gunter rig does not seem to be in favor in this country, largely because of the simplicity and serviceableness of the present bat's wing rig, which possesses many of the advantages of the sliding gunter, in that it gives a large sail area for the length of its spars, and also permits the lowering of all of its upper spars, thus reducing the weight of its top hamper.

Nevertheless, the sliding gunter may have some advantages. The only objection I ever saw against it being that when the topmast was hoisted it tended to sag to leeward unless, and possibly even if, made so tight that it did not run easily.

These defects I have overcome absolutely by having the topmast made to travel up and down the mast on a traveler consisting of a strip of wood of a T-shaped section screwed along the after length of the lower mast.

Of course, the base of the T is laid along the mast; in fact, sunk in part way, leaving the upper part or cross-piece flaring out, to be clasped by two pair of arms shaped like a C, which are attached to the topmast near its base. These replace the old traveling irons.

I believe some French yachts use something similar, but do not apply it to the complete sliding gunter.

This device never jams, holds the upper and lower masts as rigid as of one piece, and runs freely.

The weight of the traveler is trifling, and the traveler adds strength to the mast.

If any of your readers are interested in new canoe rigs, and have considered the sliding gunter, I recommend the use of this device. G. S.

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

Rifle Range and Gallery.

Cincinnati Rifle Association.

Cincinnati, O., Oct. 3.—The following scores were made by members of the Cincinnati Rifle Association, range to day. Conditions: 200yds., off-hand, at the German ring target, Payne was high again on the King target with a score of 217. On the honor target Payne led with a score of 69. This was the day set for the 50-shot match between Old Santone, of San Antonio, Tex., and E D. Payne, of Cincinnati Mr. Drube refereed for Payne, whose scores are appended. A tricky wind blew all day and taxed the efforts of the boys to their utmost:

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Oct. 19-20.—Cherokee, Ia.—First annual tournament of the Cherokee Gun Club. For amateurs only. Added money. A. W. Luehrs, Sec'y.

Oct. 19-21.—Dayton, Ia.—Second annual tournament of the Dayton Gun Club. First two days, targets; last day, live birds. "Cannot divide with professionals or manufacturers' agents."

Oct. 19-22.—Baltimore, Md.—Four days' tournament of the Baltimore Shooting Association. First two days, targets; last two days, live birds. $500 added money. Geo. L Harrison, Sec'y.

Oct. 22-23.—Huntington, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 26-28.—Council Bluffs, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett. $300 added. Programmes later.

Oct. 27-29.—Des Moines, Ia.—Amateur tournament at the Des Moines Gun Club's park. $300 added W. R Milner, Manager.

Oct. 29-30.—Grand Rapids, Minn.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

1898.

March 22-24.—Elkwood Park, Long Branch, N. J.—Sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

About the meanest and most unwarranted remark in the line of newspaper criticism is contained in the following, clipped from the report of the New Jersey State shoot, published in *Shooting and Fishing* of Oct. 7: "The four days' meeting of this organization is now a thing of the past. The affair was not the success it should have been. Possibly the selection of the place where the meeting was held had something to do with it. The arrangements which led to the selection of the old racing track at Clifton, midway between Passaic and Paterson, had something to do with the outcome. It was a capital spot for those residing on the line of the Erie R. R; for all others, anything but good. Let me illustrate: Several members of the Midway Gun Club, of Matawan, a station on the Long Branch and Pennsylvania railroads, desired to take part in the big event of the meeting—the Jersey Handicap, this a live bird event and scheduled for the fourth day. They had to go to Newark; there take trolley, and the time of going from that city to Clifton occupied just two hours. This, with the hour and a half rail trip to Newark, made a journey three hours and a half. The selection was an unfortunate one, especially as other places on not so remote lines of travel could have been secured. As another illustration, I would mention that Maj J. M. Taylor and myself, having missed one day the 11 o'clock train, took the trolley line from Hoboken. It caused us regret, for it took us an hour and three quarters to reach our destination. We had on that ride to change cars four times, and pay a fare at each change. Possibly the fact that Sec'y W. H. Huck, of the Association, is an employee of the Erie R. R. had something to do with the choice made." The person who wrote that statement has long been identified with the shooting interests in and around New York, and has written many thousands of words during his career as a sporting reporter, but he never previously wrote anything much meaner than this attack upon the energetic secretary of the State Association. Its very meanness forbids one's laughing at its childishness.

H. S. Lippack, proprietor of Dexter Park, L. I., announces the "Dexter Park annual live-bird tournament." The date chosen for the tournament is Wednesday, Oct. 27. The shoot will be "open to amateurs only." Event No. 1 is at 5 birds, $3, birds extra at 25 cents each. No. 2 is at 5 birds, then miss-and-out, $3, birds extra at 25 cents each. No. 3 is at 15 birds, $10, birds included at 60 cents per pair. If ten entries, $15 added to the purse: if fifteen entries, $22 added; if twenty entries, $30 added; if twenty-five entries or more, $37 added. Handicap rise, with a limit of 25yds. Money divided, class shooting, as follows: Under twelve entries, three moneys—50, 30 and 20; twelve entries up to nineteen, four moneys—40, 30, 20 and 10; twenty entries or more, five moneys—30, 25, 20, 15 and 10 The Dexter Park boundary will be used: this is a wire net, 18in. high, making a 50yds. boundary. Entries will close at the end of the first round in any event. A lot of specially selected strong birds will be provided for the occasion, according to the programme received. Mr. Lippack can furnish excellent birds, so it looks as if some good sport was in prospect for amateurs on Oct. 27.

Mr. J. E. Overholt, treasurer of the Hamilton, Can., Gun Club, writes us under date of Oct. 6 as follows: "At the annual meeting of the Hamilton Gun Club held last evening in the club's headquarters, the list of officers elected were as follows: President, James Crooks, vice-president, Dr. D T. Baxter; secretary, H. Graham; treasurer, J. E. Overholt; field captain, W. Langhorn; executive committee, Wm. Stroud, E. D. H. Mundell, John Smythe, M. E. Fletcher, E B. Wingate, Thomas Crooks, H Dynes, Capt. E V. Spencer. The club generally was never in a better financial condition. The members were unanimously in favor of holding a Grand Canadian Handicap at live birds, open to the world, $1,000 in prizes guaranteed, in January, 1898. Seven of the most successful tournaments ever held in Canada have taken place in Hamilton, and this fact assures us that we may expect an increased entry list when following in the footsteps of the Grand American Handicap. Full particulars will be given in our programmes, which will be issued without delay. For all further information address H. Graham, secretary, American Hotel, Hamilton, Ont."

Some time ago we received a letter from the northern part of one of the New England States, touching upon the condition of trap-shooting and the evil wrought the best interests of the sport by the paid experts. Such at least was the idea of our correspondent. For reasons that are not material just now, we returned the letter to our correspondent for him to reread, and to alter, if he saw fit, certain passages that seemed rather vague. We have not received the letter since returning it, so conclude that the writer of it was not sorry that it had been returned. There was one passage in it, however, that is too good to be lost, and we feel sure that our correspondent will forgive us for quoting it: "The paid experts are a set of men who have mistaken their vocation They should have been shoemakers; then, when they wanted a bristle, they would only have to reach around to their backs and pull one out!" As a joke, the idea is a rich one. But the richest part of all is this: If the amateur could shoot as well as the paid expert, he'd have just as many bristles on his back as the best of them.

Rolla Heikes is doing some wonderful shooting just now. During the two days at Warwick, N. Y., Oct. 4-5, he broke a total of 390 out of 410 shot at in the programme events. At Newburgh, N. Y., on the two following days, he broke 361 out of 370 shot at. This makes a grand total of 780 shot at, and 751 broken, a loss of just 29 targets. His average for the 780 targets was 96.2. This is a most remarkable record, for the targets at Newburgh were none of the easiest, the trappers lining them up and down the screen in great style. The background, however, is one of the best, and that makes a lot of difference, no matter how hard the targets are thrown. Rolla is shooting a new model '97 Winchester repeating shotgun, with 42 grains of E. C. powder in a Leader shell; Winchester factory-loaded ammunition.

George McAlpin is shooting in better form than ever. On Wednesday last, Oct. 6, he took part in the regular Wednesday afternoon's shoot at the Carteret Club's new grounds, Garden City, L I. He scored something like 75 or 80 straight on single birds, never losing a bird during the afternoon, save in the race at 3 pairs, when he lost the first bird of his first pair. He is shooting a gun recently built for him by Parker Bros , of Meriden, Conn., a gun that has taken the fancy of so many, and particularly of Capt. Money and Noel Money. Both the Captain and Noel have ordered facsimiles of McAlpin's gun McAlpin's load was Schultze powder in a Winchester V. L. & D. shell; the shells were loaded by Von Lengerke & Detmold.

We have challenged W. H. Wolstencroft, of Philadelphia, for the 147 trophy, and have deposited our forfeit with *Sporting Life*. We learn from Will Park that the date chosen by Mr. Wolstencroft is Oct. 23, a week from next Saturday. The conditions governing this trophy are as follows: "100 targets per man, unknown traps, known angles, one man up, open to the world; five traps with or without screens, as decided by holder, otherwise American Shooting Association rules; holder subject to challenge every thirty days; holder to name grounds, $10 to accompany challenge. Each man to put up a stake of $25 on grounds, and winner to take stake and trophy. Challenges must be accepted within fifteen days, and match shot within the thirty days. The trophy to become personal property of the one holding it one year against all comers."

Among the scores, we publish the complete records made this season by the Palmetto Gun Club, of Charleston, S. C., and the Forest City Gun Club, of Savannah, Ga , in the series of seven team races shot between these two clubs for the handsome trophy donated by the American E. C. & Schultze Powder Company, Limited. The records show that after some very close and interesting matches, the Savannah boys now hold the trophy by virtue of four wins to three. The victory was due to the unusually even shooting of the Forest City Club's members. Barney Worthen, of Charleston, however, is easily ahead with a great average in the individual records made in the seven matches.

Oscar Hesse, president of the Walsrode Co. in this country, is shooting his powder as well as ever, and that means more than some people might suppose, for Mr. Hesse has always been a first-rate shot on targets. He is at present one of the main stand-bys of the Riverside Gun Club, of Red Bank, N. J., a club that can also boast another excellent shot in the person of W. Watts. Mr. Watts has broken 47 and 46 out of 50 in each of the last two matches shot between the above club and the Bergen County Gun Club, of Hackensack, N J.

The Winchester Repeating Arms Co. are putting on the market a "brush gun" of their '97 model repeating shotgun. The gun has 26in. barrels and weight 6¾lbs. The magazine is constructed to hold four cartridges instead of five; this gives a total of five shots at the disposal of the shooters. Some people might need all five if they happened to fall in with a New Jersey cock grouse of mature age during the month of November! The gun handles very nicely indeed, the grip being small and easily grasped by the hand. The gun is 1⅝ at the comb, and 2½ at the heel; a rubber butt plate gives the stock a good finish.

On the second day of the Warwick (N. Y.) tournament, Oct. 5, the following wonderful bit of squad shooting was done by Squad No. 1. Heikes, Fulford, Hallowell, Leroy and Fanning constituted the squad. Events Nos. 7 and 8 were at 25 targets each, unknown angles, making practically one event of 50 targets, shot in series of 25 targets. The scores made for the 50 targets were: Heikes 49, Fulford 50, Hallowell 49, Leroy 46, Fanning 47, or a total of 241 out of 250—a squad average of 96 4 for the 250 targets. So far as we are aware of, this is about a world's record for the number of targets. If anybody knows of a better record, will he kindly give us all the facts connected with it?

On Thursday and Friday of this week, Oct. 14-15, the Fort Dodge (Iowa?—no State mentioned in the programme) Gun Club will hold a tournament at targets and live birds. The tournament is "open to the world; no man on earth barred." An interesting item in the programme is the following: "No dropping for place will be tolerated. Any one suspected of it will be placed in the first squad." The targets will be thrown from a magautrap, and will be charged for at the rate of 2 cents each.

Two familiar faces were much missed at the New Jersey State shoot two weeks ago. They belong to Milt and Wanda. It seems to us that the manufacture of King's Smokeless might have been delayed, rather than that we should have been deprived of the pleasure of meeting Mr. and Mrs. Lindsley, both of whom have been identified with New Jersey trap-shooting for so many years. During the four days of the tournament we heard very many expressions of regret at the absence of Milt and Wanda.

Leroy Woodward has opened his career with the Remington Arms Company in the most auspicious style. He took a Remington gun out of stock on Saturday afternoon, Oct. 2, and shot it during the four days at Warwick, and Newburgh, N. Y At Warwick he broke 263 out of 410, an average of 88.5; at Newburgh he ran up to 346 out of 370, an average of 93 5. At times he shot in his most brilliant style, making some capital runs. He shoots E. C. in a U. M. C. Smokeless, factory-loaded.

Fulford is another Remington man who has been doing some good work during the last two weeks. At Clifton, N. J., on the second day he made a good record, and finished at Warwick with 380 out of 410 (tying Rolla Heikes for first average on the second day with 199 out of 205); at Newburgh, N. Y., he broke 348 out of 370; this made his average for the four days (780 targets) 93 3 per cent., or 728 breaks. Fulford shoots Schultze in U. M. C. factory-loaded Trap shells.

Justus von Lengerke pulled an 8-bore on us the other day when we entered his store. He had provocation enough. In our report of the New Jersey State shoot, open events, Sept. 28, we did him an injustice. His scores really show a total of 83 breaks out of 95 shot at, an average of 87.3 per cent. We credited him with 83 out of 115, 72.1 per cent.

John L. 147 Winston is going home shortly to his residence at Washington, Ind. Jack says that he is going home to take it out of the quail, and to get some well-earned rest from trap-shooting. Later in the year, or perhaps early in '98, he says he is coming back to the city of New York with blood in his eye and Austin powder in his shells. As a matter of fact, 147 is track-sore and needs a rest.

Tom Keller says that it's all very fine acting as ballast in a St. Lawrence skiff on Orange Lake, providing everything else is O K.; but when there's a man from Tucson, Ariz., a spot where they never see or take water, in the other boat, it's too big a handicap for Mr. O'Brien, no matter who his crew may be.

Fred Gilbert ought to be satisfied now. He has won the E. C. cup, emblematic of the championship of the United States at targets, and now holds the Kansas City *Star* cup, emblematic of one of the championships of the world at live birds. What more does he want? The cast-iron badge? Hardly! That belongs to Iowa, anyway.

Chris Wright and A. Doty, the two Paterson, N. J., men, who divided with Rolla Heikes the $500 guaranteed in the Jersey Handicap at the New Jersey State shoot on Oct. 1, shot Smith and Parker guns, respectively. Each man used 3¾drs. of American E. C. in Trap shells. Wright's shells were loaded by a local firm in Paterson, while Doty's were factory-loaded.

W. F. Parker, of the firm of Parker Bros., Meriden, Conn., was at the Newburgh shoot last week. Mr. Parker's tired-egg-colored sombrero, with its cabalistic signs, covers a head that isn't a bit swelled, notwithstanding the rapid strides to the front rank made by its wearer during the past six montes. Mr. Parker is getting to be real bad medicine.

John J. Hallowell, of Bethayres, Pa., who may be termed "the find of '97," shot in splendid form on the second day at Newburgh, Oct. 7; he broke 174 out of 185 shot at, and on the first day broke 166 out of the same total. This made his grand total 340 out of 370, an average of 91.8 per cent. At Warwick he made an average of 88.5 for 410 targets shot at. Hallowell's load is Hazard's Blue Ribbon in U. M. C. Smokeless, factory-loaded. We believe he shoots a Smith gun, but are not sure on this point. Whatever gun it is, he points it right, and that's the main thing after all. Remember his 154 straight at the Portsmouth, N. H., interstate shoot, Sept. 16.

Sim Glover is another of the crackerjacks who made a good showing last week. Sim was shooting at his best, and that means a lot, for he can shoot in first-rate form when he is all right At Warwick he broke 286 out of 410, an average of 94.1. At Newburgh he broke 352 out of 370, an average of 95.1. This made his grand total for the 780 targets shot at, an average of 94.6. Sim shoots a Parker, with Schultze in U. M. C. shells.

This is a problem for those who go upon public form. If Fred Gilbert can beat Jim Elliott by one bird, and if Fred Gilbert can beat Charlie Grimm by one bird, what are the odds in favor of the cast-iron medal remaining in the State of Iowa? In asking this problem, we desire guessers to put aside all corn-husking, bass-fishing, stock-raising, or other similar occupations.

Ferd Van Dyke missed his train on Oct. 6 and failed to make connections in time for the first day at Newburgh. He came up on the second day and broke 175 out of 185 shot at, an average of 94.5. This average landed him in third place for the day. He shoots a new model '97 Winchester shotgun, W-A powder, in W. R. A. factory-loaded Leader shells.

On Tuesday and Wednesday of this week, Oct. 12-13, the management of the Reedhurst Shooting Park, Erie, Pa., holds a tournament at targets, sparrows and pigeons, open to amateurs only. So far as we are aware, these grounds are new ones in the tournament line, but according to the programme, they are well equipped for the purpose.

J. S. S. Remsen, of Brooklyn, N. Y., one of the best target shots that has grown up in this section during the past two years, is now busily engaged trying his hand at live birds on the Carteret Club's grounds. His début has been a most successful one, and Mr. Remsen bids fair to be a big factor in New York's crack pigeon-shooting circles before many months are gone.

W. H. Wolstencroft will act as coach for the University of Pennsylvania's team this season. What our friend Bill can't teach the U. P. boys isn't worth knowing. The team ought to make a good showing in the intercollegiate match this season. The grounds used by the University men are located at Fernwood, Pa.

S. A. Tucker has fled once more to Illinois and Iowa. He is at present engaged in visiting cities in those States, carrying with him his corduroy shooting jacket, and, of course, the Parker gun he is representing.

The Bison Gun Club, of Buffalo, N. Y., will hold an all-day merchandise and sweepstake shoot on Thanksgiving Day, Nov. 25. Mr. Chas. H. Werlin, secretary of the club, tells us that his club will issue a programme shortly.

We have received no particulars from Kansas City, but we learn that Fred Gilbert defeated Jim Elliott for the Kansas City *Star* cup by 95 to 94. Evidently there was not much margin to go upon.

Oct. 11. Edward Banks.

Elliott and Gilbert.

THE "STAR" CUP.

In the race for the Kansas City *Star* cup, shot at Kansas City, Mo., Oct. 8, Gilbert defeated Elliott by one bird, scoring 95 to 94. We understand from private sources that Elliott actually killed 99 out of his 100, but lost five dead out of bounds. These two men will probably shoot again for the same trophy at Chicago on Nov. 30, Elliott apparently having challenged Gilbert immediately after the result of the above match.

THE DU PONT TROPHY.

Gilbert has challenged Elliott for the Du Pont trophy. The match will be shot at Kansas City, Oct. 22.

KANSAS CITY VS. CHICAGO.

Plans are being perfected for an intercity team race, ten or twenty men on a side, between Kansas City and Chicago. This race will probably be shot some time in December, the match taking place in Chicago. Elliott and Gilbert will also probably shoot another 100-bird match, $100 a side, at the same time and place.

Pigeon Shooting in Europe.

THE INTERNATIONAL TOURNAMENT AT ILIDZE.

The international meeting of Bosnia and Herzegovina began on Thursday, Sept. 23, at Ilidze. There was not a large number of shooters on hand, but the quality was very warm. Among the number were: Signor Guidicini, winner of the Grand Prix at Monte Carlo on three occasions; M Journu, also winner of the Grand Prix Monte Carlo; Mr Harding Cox, who took the Grand International Cup at the Gun Club, and winner of many prizes; Colonel Boswall-Preston, a good winner at Monte Carlo and elsewhere; Baron Raoul de Vriéres, who, among other prizes, took the Grand Prix de Paris this year; Sigs. Calari and Galetti, winner of the Championship at Monte Carlo, etc

The main event on the first day (Sept. 23) was the Inauguration du Stand, Grande Poule D'Essai; £40 and a trophy, added to a sweep of 20 francs. Signor Guidicini won first money and the trophy on 10 straight. A Turkish gentleman, Muhalisch by name, won second money with 9 out of 10; third money went to Baron de Vriéres with 8 out of 9.

On Friday, Sept. 24, the chief event was the following: Prix D'Ouverture. 3,000fr. and objet d'art, added to a sweepstakes of 50fr.; second, 750fr. and 25 per cent. of the entries; third, 500fr. and 20 per cent.; fourth, 250fr and 15 per cent.; six pigeons, two at 25, two at 26, two at 27 meters; ties at 28 meters.

The first prize in this event also went to Italy, Signor Randi winning the trophy and £120 with a run of 21 straight. Herr Yull missed his 21st bird, and took second money, £51; M. Journu lost his 20th bird, and had to be contented with third money, £26. Signor Galetti took fourth money, £15, with 14 out of 15, his 15th bird getting away from him. There were fifteen entries in this event.

Sept. 25 was the day set for the Prix Supplementaire. The story of this day's shooting is best told in the following extract from the London *Field* of Oct. 2:

"Saturday, Sept. 25.—This morning was devoted to a visit to the bazaars and workshops of Sarajevo, which are most picturesque and interesting. After lunch the competitions for the day commenced with the Prix Supplementaire, of 400 francs and a trophy comprising a handsome piece of Sarajevo inlaid metal work. The conditions of the prize were altered by the committee, who rearranged them on the basis of the 'class' pool; *i. e.*, the competitors are divided into three classes; the first class shoots standing at 29 meters, second class at 27 meters, and the third class at 25 meters. The prize was divided as follows: 200 francs, the trophy and 60 per cent of entries to the winner of the whole competition; the winners in the other two classes took 100 francs each, and 25 per cent. and 15 per cent, respectively, of the entrance fees, according to the number of birds killed by each. Col. Boswall-Preston, who was shooting very steadily, won the whole competition, and took 200 francs, the trophy and 60 per cent. of the entries. He used a gun by W. W. Greener. Sig. Ugo Gregorini was first in his class with 9 kills, and Sig. Galletti, with 6 kills, took premier honors in the first class. Other pools were won by Sigs. Guidicini and Pagha and Herr Yull."

Scores:

Prix supplementaire of 400fr. and trophy, added to a sweepstakes of 20fr.

M. First Class.

29..Signor Galletti (£6).....1111110 — 6

Signor Guidicini killed 5, M. Journu 4, Signor Calari 3 and Signor Raudi missed.

M. Second Class.

27..Col. Boswall-Preston (£15 and trophy).....1111111111—10

Signor Paglia killed 8, Baron de Vriéres and Baron Lünden 4, Beeirbeg and Gaoren 2, and MM. Harding Cox and Yuli missed.

M. Third Class.

25..Signor Gregorini (£7).....1111111110— 9

Grf. Török killed 2 and M. Jay 1.

The Prix de Mostar handicap was the chief feature of the card for Monday, Sept. 27. This event had a trophy and 3,000 francs added to the sweepstake. Italy once more, in the person of Signor Calari, came off victorious. The second, third and fourth moneys were divided between Baron de Lünden, Herr Yull and Herr Marsch.

Of the big event of the meeting, the Grand Prix d'Ilidze, the London *Field* has this to say:

"Wednesday, Sept. 29.—This was the opening day of the Grand Prix d Ilidze, and the following, at the close of the day's shooting, had killed all their birds: Mr. Harding Cox, Col. Boswall-Preston, Baron de Lünden, M Journu, Sigs. Guidicini, Calari and Gregorini, Counts Leiderkerke and Keglevich. The birds, which were a capital lot, were trapped by Roberts.

"Thursday, Sept. 31.—The Grand Prix d'Ilidze was concluded to-day. At the end of the twelfth round Baron de Lünden, Sigs. Guidicini, Calari and Gregorini, and Count Leiderkerke were the survivors. At this stage it was mutually agreed to divide the money, amounting to 1,125 sovs., and shoot off for the trophy, each of the five shooters receiving 225 sovs The ownership of the trophy was eventually left to Baron de Lünden and Sig. Guidicini, of whom the latter failed at the nineteenth bird, while his opponent killed, and Baron de Lünden thus secured the honors. There are seven days more shooting, and the meeting comes to a close on Thursday, the 7th inst."

Philadelphia Trap-Shooters' League.

Philadelphia, Pa., Oct. 2.—The sixth monthly contest of the Philadelphia Trap-Shooters' League was held to-day on the grounds of the Roxborough Gun Club, at Roxborough, Philadelphia. Eight teams were entered in the team race, notwithstanding the unfavorable outlook as regards weather at an early hour this morning. The Frankford team were high again this month with 152 to Roxborough's 145. The scores given below tell how the teams stood at the end of the match. This event is a handicap affair, each team being allowed a handicap of extra targets to shoot at. The number of extras allowed each team is shown in brackets after the name of the club. Scores:

Frankford Gun Club (194).

A Pleasant Shoot at Sedalia.

Sedalia, Mo., Sept. 30.—The second annual tournament of the Sedalia Gun Club was held to-day. There was a nice attendance of shooters, and a pleasant shoot was the result. Cornett and Dr. Clapp divided first honors with an average of 93.5 each. Eaton was right after them with 91.6, Linn being in fourth place with 88.3. The club added $20; viz., $5 to the purses in Nos. 2, 6, 9 and 11. No. 11 was at 10 singles and 5 pairs, Cornett breaking straight, with Eaton and Clapp with 19 and 18 respectively. No. 7 was a merchandise shoot for three prizes. The purses were divided both under the Rose system and under the Jack Rabbit system, the latter system being used in Nos. 5 and 8. Scores were:

In a $1 miss-and-out, known angles, the scores were: Clapp 12, Eaton 11, Raymond 9, Tindall 6, Walker 5, Gould and Jackson 3, Linn 2, Roe 1, Allen, Cornett, Lindberg and Walker 0.

W. J. Letts, Sec'y.

Cobweb Gun Club.

New York, Oct. 7.—The opening monthly shoot of the Cobweb Gun Club was held to-day at Baychester. The day was beautiful and the attendance large. Instead of shooting in classes as we have been in the habit of doing, we decided to have one grand handicap of all classes from 26 to 30yds., and the winner to receive a valuable present from the club in honor of the occasion. The conditions were 5 birds per man, all ties to shoot at 3 extra birds, in case of tie on the 3 birds then miss-and-out to decide.

The principal feature of the handicap to-day was the shooting of Messrs. Cashau and Kerker, two men of class B, who downed all class A men, with Cashau the winner. Below is the score:

Club handicap, ties at 3 birds, then miss-and-out.

Wm Cashau (28)	22211	112	0111	J Regan (26)	20101	... .
Fred Kerker (28)	11122	221	0220	Charles Zorn (30)	20120	... .

Geo. W. Thompson, Jr., Sec'y.

The Newburgh Tournament.

LIKE all its predecessors, the Newburgh tournament of Oct. 6-8, 1897, was another pleasant gathering. Somehow or another there is always an enjoyable time in store for those who attend the Newburgh semi-annuals. We missed the familiar features of John T. Mascrott and V. D. Kenerson, of Worcester, Mass., while the Peekskill delegation was not on hand during the target days. Otherwise the crowd was much as usual, being chiefly composed of experts in the employ of some company or other. There were Rolla Heikes and Ferd. Van Dyke, of the Winchester Repeating Arms Co.; E. D. Fulford and B. Leroy Woodward, of the Remington Arms Co.; J. S. Fanning, of the U. S. Gold Dust Powder Co.; T. H. Keller, King's Smokeless and Peters Cartridges being his specialties; Sim Glover, shooting a Parker gun and Schultze powder; J. 147 L. Winston, shooting his firm's "Load 147," loaded with Austin powder.

Among the others were John J. Hallowell, of Bethayres, Pa., who holds the record for 1897 of 154 straight made in a tournament; H. H. Levengston, of Saratoga, N. Y., a rattling good shot and one who loves to shoot; Neaf Apgar, now out of the sporting goods business, being proprietor of the Pine Point Club Hotel, Orange Lake, near Newburgh; C. C. Beveridge, Newark, N. J., an enthusiastic trap-shooter; John B. Rogers, of the Warwick Gun Club, etc. W. F. Parker, a member of the firm of Parker Bros., Meriden, Conn., was another shooter who arrived late, but got close to the top all the same. Messrs. Andrews, Rose and Davidson were also on hand from Hampden; Count Lenone came from Passaic, N. J.; Perkins from Troy, Jack Halsted from Peekskill, while the Hutchings brothers were on hand both days, shooting in the majority of the programme events.

A continuance of the fine weather of the past two weeks was all in favor of the club. In fact it has gotten to be a sure thing that the days on which the Newburgh Gun Club holds its semi-annual tournaments will be fine. The woods and the mountains looked very beautiful indeed, when viewed from the club's grounds; the maples near the hotel showed up most brilliantly, particularly when the afternoon sun shone full upon them. The view from the grounds is always a lovely one, but on the two days of target shooting at this tournament we think it seemed even more beautiful than ever before.

The background at Newburgh is a good one, being practically all sky. This makes it easier to get on to the targets, even though Gil and his help in the pit do throw the targets all over the place. Straightaways at Newburgh are very scarce indeed, and the method of changing the angles adopted by the trappers is most confusing; angles are not changed every time and all the time; sometimes there will be three extreme right quarterers from one part, and then, just when one thinks the boy is never going to change the angle, the next target flies down the screen to the left; this makes it unknown angles in the truest sense of the word. Notwithstanding this system of throwing targets, some most extraordinary work was done by some of the experts present. Before giving the figures it must be thoroughly understood that the traps threw a hard bird, and threw them up to the 50yds. mark. Heikes went through the entire target programme on Oct 6-7, 370 targets in all, with only 9 lost targets; in addition to this he ran 25 straight in an extra event—New York State against "the World"—and 14 out of 15 in another extra. This made a total of 10 losses for 410 shot at; or putting it the other way, gave him a total of 400 breaks out of 410 shot at! If that isn't championship form we'd like to know what is!

The club donated $50 as average money, to go to the six high guns, $13, $11, $8, $7, $6 and $5 respectively. Heikes won first with 361 out of 370, 97.5 per cent.; Glover was second with 95.1; Fulford third with 94; Leroy fourth, with 93.5; Hallowell fifth, with 91 8, and Levengston sixth, with 90.5.

With so many experts present it was not to be wondered at that the number of entries "for birds only" grew rapidly as the target-shooting progressed. The only event in which everybody went straight, and where everybody met everybody else upon an equal footing, was in the dinner event, furnished by Jake Gedney at his hotel, 50 cents entrance, nobody barred. This event was most popular, and deservedly so, for Jake has a well-earned reputation for hospitality in this line that may be equaled, but which can never be beaten.

The story of the shoot and the results in the side matches are left to the scores given below to tell.

GENERAL AVERAGES.

	1st day.	2d day.	Shot at.	Broke.	Av.

The following team races were shot this afternoon; No. 1, "The World against New York State:"

The World.

Heikes	1111111111111111111111111—25
Hallowell	1011111111111111111111111—24
Fanning	1101001111111111011111111—21
Leroy	1111101111110110011111011—20—90

New York State.

Banks	1111111111111110111111111—24
Fulford	1111111111101111101011111—22
Glover	1111111111101111011111011—22
Apgar	1111111101101111011110111—21—89

No. 2, Glover and Fulford vs. Hallowell and Banks; 25 targets, expert rules, one man up:

Fulford	11111	11111	01111	11111	11111—24
Glover	11011	11111	01111	11111	11111—23—47
Hallowell	11111	11111	11111	11011	11101—23
Banks	11111	11111	11101	10111	11111—23—46

Third Day, Oct. 8.

After the live-bird programme had been disposed of to-day, a couple of matches, expert rules, were decided. The scores in both the live-bird events and in the target matches are given below:

	No. 1.	No. 2.	No. 3.
Hallowell (28)	11221-5	2112221—7	2210221112— 9
G B Hutchings (28)	20222—4	1201022-5	2101101212— 8
J H Hutchings (25)	22201—4	0222012—5	2201202212— 8
Van Dyke (30)	22224—5	2222222—7	2122222022— 9
Heikes (30)	20221—4	2022202—5	2222222022— 9
Keller (28)	22220—4	2212222—7	2222222222—10
Fanning (29)	22222—5	2222220—6	.....
Perkins (28)	02222—4	2111221—7	1121111211—10
Count (28)	10201—3	1200010—3	0020111200— 5
Dickson (28)	.....	1102222—6	1121221111—10
H C H	.....	.....	2222002022— 7

No. 4, miss-and-out: Hallowell and Heikes 8, Fanning 7, Taylor 6 H. C. H. 5.

No. 5, miss-and-out: Taylor and Fanning 8, Heikes 7, Hallowell 6, Stebbins 4, H. C. H. 2, Rhodes and Keller 1.

No. 6, match, Stebbins and Hallowell vs. H. C. H. and Keller: Stebbins 9, Hallowell 9; total 18. H. C. H. 7, Keller 10; total 17.

Two matches at expert rules, 25 targets per man, were shot, Heikes and Van Dyke vs. Fanning and Hallowell.

No. 1: Heikes 20, Van Dyke 20; total 40. Hallowell 23, Fanning 18; total 41.

No. 2: Heikes 24, Van Dyke 23; total 47. Hallowell 22, Fanning 21; total 43.

EDWARD BANKS.

Tournament at Warwick, N. Y.

WARWICK, N. Y., Oct. 5.—The two days' tournament which took place here yesterday and to-day was not largely attended. The company was very warm, indeed, making up in quali y what it lacked in quantity. The weather was delightfully fine; in fact, pleasanter weather for target-shooting could not be had at this time of the year.

Some big records were made, the crackerjacks being in the best of trim, particularly on the last afternoon. A reference to the scores of Oct. 5 will show the following remarkable squad totals for the 50 targets shot at in Nos. 7 and 8. The squad ran thus: Heikes 49, Fulford 50, Hallowell 49, Leroy 46, Fanning 47. This shows a total of only 9 targets lost out of 250 shot at.

On the first day Glover led Heikes for high average by 6 targets, scoring 197 out of 205 shot at to Heikes's 191. On the second day Heikes wore Glover down, finishing with a run of something like 100 straight (including extras), and landed in first place for the two days by 4 targets. Fulford tied Heikes for first place on the day with 199 breaks out of 205 shot at, each man only letting 6 targets get away from him. Such work is remarkable under any conditions, no matter how easy the targets may be.

The results of each day's scores are given in the tables below:

SCORES OF OCT. 4.

Events:	1	2	3	4	5	6	7	8	9	10			
Angles:	U	K	U	U	U	K	U	U	K	U

J J Hallowell	178	185	410	263	88.5
147	170	179	410	349	85.1
W S Lines	179	164	410	343	83.6

Audubons Won Again.

BUFFALO, Oct. 6.—The sixth contest of the series for the championship of Buffalo, between teams of five men from the local clubs, took place at the Cazenovia grounds to-day. The Audubons won again, giving them five wins out of six. The scores were as follows:

Audubon Team.	Cazenovia Team.	Bison Team.
C S Burkhardt..23	Beck.....18	Cooper.....16
L G Northrup ..17	R Stacy.....19	Seigrist.....14
C J B.....22	F N Alderman..23	Wheeler.....15
Noris.....21	Heinold,.....18	C Werlin.....17
McCarney .....16—99	McCarty.....15—93	E Bauman.....21—83

A number of sweeps were shot after the team contest, in which Messrs. C. S. Burkhardt and F. N. Alderman carried away the honors and the money.

E. W. SMITH, Sec'y.

Western Traps.

BREAKS MINNEAPOLIS RECORD.

CHICAGO, Ill., Oct. 9.—At the shoot of the Minneapolis (Minn.) Gun Club this week, Mrs. W. P. Shattuck made a run of 55 straight singles and scored 76 out of 80, a performance said to have broken the local club record for the past five years. In the shooting 20 birds were unknown angles, and in all the events the targets were thrown hard and far. The grounds were not thought easy for long runs, but the day was perfect for the performance—bright and calm, with no wind. Mrs. Shattuck uses an L. C. Smith gun, made according to her order to Harvey McMurchy, and shoots Du Pont powder in Leader shells. Among the fine records of the Northwestern ladies who have recently come to the front in shooting matters, this run of Mrs. Shattuck's is thought to be quite the best to date.

TRAP AT NEWTON, IOWA.

Below are the scores of a match race shot at Newton, Ia., Oct. 1, between the Palo Alto Gun Club, of Jasper county, and the Du Pont Gun Club, of Newton, the latter winning very handily. Considerable interest is springing up in this neighborhood in trap matters, and the scores are rapidly improving, so that a stiff little club is in immediate prospect. Scores:

Du Pont Team.

INDIANA LEAGUE.

The Trap-Shooters' League, of Indiana, has out a pleasing programme for the second annual tournament, which will be held at Huntington, Ind., Oct. 21-22, under the management of the Erie Gun Club. Experts, professionals and manufacturers' agents barred, except for price of birds.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

ON LONG ISLAND.

CARTERET CLUB.

Oct. 6.—To-day's shooting at the Carteret Club was marked by most wonderful shooting on the part of George McAlpin, who scored every bird he shot at during the day when shooting singles. In a race at 3 pairs he did lose one bird, the first of his first pair. Below are the scores:

No. 1, handicap, 5 birds, $5:

G Work (21).....110	WAHStafford (28)2222122222220—12
F P Magoun (25)..21222220	G S McAlpin (31)..2222222222222—13

West Chester vs. Florists.

WEST CHESTER, Pa., Oct. 7.—Below are the scores made to-day in the team race between the West Chester Gun Club and the Florists' Gun Club, of Philadelphia, on the grounds of the former club. The home team won by 19 breaks, with 243 to 224. The first match was shot in Philadelphia, eleven men on a side, on Sept. 11. This match also resulted in a win for the Westchester men by 210 to 208. The Florists are the pleasantest set of men we have met on our grounds this year, and they have the best wishes of our club. Scores:

Charleston versus Savannah.

INTERESTING SERIES OF TEAM RACES FOR THE E. C. CUP.

CHARLESTON, S. C., Oct. 5.—Below are given the summaries of the seven matches shot this summer between the Palmetto Gun Club, of this city, and the Forest City Gun Club, of Savannah, Ga. The trophy competed for was donated by the American E. C. & Schultze Powder Co., Ltd. This trophy is now held by the Savannah team, the Forest City men having won the deciding shoot after each club had three heats to its credit. Some of the races were exceedingly close, as will be seen by a reference to the scores. The conditions under which this series of races was held were as follows:

CONDITIONS.

First—Seven specified men to constitute a team; each and every man must be a *bona fide* member of the club he shoots for.

Second—In case that said specified men are not on the grounds when team shoot commences, then captain of team may substitute a man, but substitute must be a member of the club.

Third—The cup shall be shot for seven different times, on different dates.

Fourth—The club winning the highest number of contests shall be the absolute holder of the cup for that year.

Fifth—The team winning the cup shall put it up as a club championship cup to be shot for by its members, subject to challenge at all times.

Sixth—This cup to be contested for once a year by the Forest City Gun Club, of Savannah, Ga., and the Palmetto Gun Club, of Charleston, S. C

Seventh—The club winning the cup this year shall next year put up the cup; the contesting team to put up its value in money.

Eighth—In the team contests each man shall shoot at 50 targets, known traps and unknown angles.

Ninth—In the shoots for the club championship after the cup is won by one club the contest shall be at 100 targets each, known traps and unknown angles.

First match—Charleston, S. C., June 6:

Charleston.		Savannah.	
Worthen	49	Jaugstetter	41
Whilden	47	Ulmer	40
Swan	43	J Rocker	38
Petermann	42	Ebberwine	37
Bicaise	41	La Motte	35
Costello	37	H Rocker	35
Post	33	Reidimann	30
Wohltmann	29—321	Lemcke	31—287

Second match, Savannah, Ga., June 13:

Charleston.		Savannah.

PALMETTO.

Keystone Shooting League.

PHILADELPHIA, Pa., Oct. 9.—The first of a series of five shoots to decide the live-bird championship of Philadelphia county, and also the target championship of the same county, was held to-day on the Keystone Shooting League's grounds, Holmesburg Junction. John Rothaker won a heat for the live-bird cup, Ross scoring a win for the target championship. The other five shoots will be held Oct. 16, 23, 30 and Nov. 9. Scores in to-day's events were:

	No 1.	No. 2.	No. 3.	No. 4.
J Rothaker	2212222222—10	20122—4	01222—4	22102—4

J Buck	.....	•111•—3	2112•—4	.....
Pierce	.....	.....	20221—4	12220—4

Three target sweeps were shot, as follows:

No. 1, cup contest, 25 targets, unknown angles: Ross 20, Hack and Henry, 19; W. N. Stevenson and J. H. Wolstencroft, 17; C. Fitzgerald 11.

No. 2, 15 targets: Foster, Ross and W. N. Stevenson, 13, Buck and I. W. Budd, 11; Vandergrift 10.

No. 3, same: Smith 15, W. N. Stevenson 14, Foster 12, Hack 11, Dart 8, Pack and Fitzgerald, 7.

IN NEW JERSEY.

BERGEN COUNTY TEAM WINS AT RED BANK.

Oct. 8.—The Bergen County Gun Club, of Hackensack, could not get together more than seven men for its team in to-day's match with the Riverside Gun Club at Red Bank. With such a large membership roll as it possesses, it seems strange that the full number of ten men could not be secured. The day was very favorable for shooting targets. There was very little breeze, except occasional strong puffs while the team race was being shot. The sun was warm and bright; in fact, it was an ideal fall day. The background, however, was not by any means as good as we have seen. Too many trees in fall plumage hid the sky line, making the targets hard to locate, still scores ruled very fair, the targets not being thrown over 45yds.

The lack of a full team on the part of the visiting club was the more to be regretted since the home team had done everything to make the day an enjoyable one. A good lunch was provided free of charge, and every preparation had been made for a full day's sport. A change in the schedule of trains on the N. Y. & Long Branch R. R. (a change that only took place on Monday last, Oct. 5), caused lots of trouble to the visitors. It had been given out that the team would leave on the 10 A. M. train over the P. R. R., but when the members of the team attempted to make connections with that train at its supposed touching points, the attempt ended in a rank failure, the train having been taken off the schedule last Monday. The seven men representing the club, however, managed to get together at the Riverside Gun Club's grounds at about 2 P. M. Fogarty went around by way of Atlantic Highlands, using a steamboat, a train, a stage and a trolley car to cover the distance between New York and Red Bank. Beveridge and Sinnock joined the 11:30 train over the C. R. R. of N. J. at Elizabethport, while Capt. Money, Ed Taylor and the remaining member of the team, made connections with the 12:10 train over the P. R. R.

The team race was shot in squads of six men, 50 targets per man, three men from each team on a squad. The first squad was Phil Daly, Jr., Beveridge, Price, Billings, Mapps and Fogarty; No. 2 squad was: Oscar Hesse, Capt. Money, Ivins, Taylor, E. M. Cooper and Sinnock. Watts and Banks brought up the rear, four others shooting along to fill up the squad.

Watts was high man on either team, his 46 being made up of two 23s. The favorite total was 44, five men out of the fourteen on the two teams scoring that number of breaks—Taylor, Fogarty, Sinnock and Banks for the Bergen County team, and Oscar Hesse for the Riversides. Beveride broke 43 after getting a good start with a 23 in the first 25. The result of the race was a win for the Bergen County team by 16 targets, the scores standing 294 out of 350 to 278. The winning team's average was 84 per cent.; the Riverside's average was 79.4.

Of those who shot along with the last squad to fill up, Jas. Cooper and Marryott scored respectively 40 and 29 In the first half Capt. Money ran 25 straight, and added 23 to it in the last half, scoring 48 out of 50—but not for his team! Hank White tried 25 targets in the first half and broke 16, Beveridge taking his place in the last half and breaking 21.

W. D. KENYON, Sec'y.

Penn Gun Club, of Morristown.

MORRISTOWN, Pa., Oct. 9.—The fifth annual tournament of the Penn Gun Club, of Morristown, Pa., was held to-day on the grounds of the club at Oakview Park. The attendance of shooters at these tournaments has always been very large, but this time, for some unknown reason, there was a noticeable absence of visiting marksmen. Arthur Jenkins, the inventor of the magautrap, was present and kept the trap in good order all day. For the events at known angles a set of experts were used.

147 Winston was among the visitors, and while he did not break all his targets, he got orders for several thousand shells. Twenty events were on the programme, sixteen of which were shot off. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

J. K.

Rosedale Gun Club.

TORONTO, Can., Oct. 6.—The annual meeting of the Rosedale Gun Club was held at the Granite Club on Friday evening, the 1st inst., when the appointment of officers for the ensuing season took place, resulting in the unanimous re election of the following gentlemen:

H. M. Pellatt, President; D. S. Barclay, Vice-President; D. L. Van Vlack, Captain; A. R Stell, Secretary. Mr. J. B. Miller having resigned the position of treasurer, Mr. W. H. Gooderham was elected to fill that office.

The meeting was very largely attended, all the members present feeling that in the establishment of the Rosedale Gun Club an opportunity is at last afforded men who are admirers of this class of sport, and who are opposed to shooting for cash prizes and sweepstakes, for enjoying a Saturday afternoon's recreation in a sociable and agreeable manner. The ensuing season is looked forward to with pleasant anticipation by the members, the captain having arranged for a number of friendly matches with outside clubs in Canada and the United States. There will also be club handicap matches for gold medals, three medals to be presented to each class.

The magautrap for artificial bird shooting, which the club has just purchased, is the only one of the kind in Canada, and serves to indicate that the equipment of the club will at all times be of the most modern style obtainable.

A. R. STEEL, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

W. G. F.—The regulations do not forbid hunting on the Government forest reserves.

W. S. B., New York.—Can you tell me the amount and name of powder and the shells used by Heikes and Van Dyke when shooting clay pigeons? Ans. Heikes uses 44grs. of American E. C.; Van Dyke uses 54grs. of Laflin & Rand's W-A. Both use the Leader shell.

A. K., Baltimore, Md.—Kindly let me know through the columns of your paper what were the scores in the Elliott and Budd match for the Du Pont trophy. Also please give date and place. Ans. The match took place Aug. 28 at Eau Claire, Wis. Scores were: Elliott 99 (losing his seventh bird), Budd 94.

HUGH LEADY, Montclair, N. J.—In a pigeon match, under Long Island rules, A bets B that a bird shot at and gathered is a dead bird. B says that it must show shot marks. Which is right? Ans. Under the rules governing the match, a bird that is gathered must, if challenged, show shot marks to be scored a dead bird.

H. A. B., Hamilton, Can.—1. Who holds the clay-pigeon championship of America at the present time? 2. Also, who holds the Schmelzer cup? Ans. 1. Fred Gilbert, of Spirit Lake, Ia. 2. Heikes, Van Dyke and Charlie Young (the latter of Springfield, O.), tied for the Schmelzer cup last January at the San Antonio midwinter tournament. This tie has never been shot off.

TWO AMATEURS, Albany, N. Y.—A and B are shooting a match at live birds. A is at the score and calls "Pull!" with first asking, "Are you ready?" The puller is rattled and does not pull immediately. When the trap is opened and the bird flies out, A refuses to shoot on the ground that the trap was not pulled immediately after he had called "Pull!" How should the referee decide? Ans. We should say it was a no-bird.

NITRO, Lebanon, N. H.—For the benefit of the uninitiated, will you kindly state in the next issue of FOREST AND STREAM which are the so-called dense powders, and which are those measuring bulk for bulk with black powder? Ans. Walsrode, W-A and Rifleite are some of the best known dense powders; Schultze, E. C., Du Pont, Hazard, King's Smokeless and Austin are all practically bulk for bulk with black powder. Gold Dust is a semi-dense powder.

PUBLISHERS' DEPARTMENT.

They Read "Forest and Stream."

REFERRING to the notice in the FOREST AND STREAM of the shooting party that was to leave here Sept. 25 in our palace car Yellowstone for a month's trip to Minnesota and Dakota for goose, duck and prairie chicken, etc, we did not care to take but twelve, but were compelled to take sixteen, and were obliged to positively refuse eight more whom we should have been very glad to have taken. I only mention this to show you that people who are interested in the best of sports read the best sportsman's paper published.

A. B. F. KINNEY.

Domesticated Trout.

THE merits of Mr. Livingston Stone's book on "Domesticated Trout" are indicated by a remark recently made by Mr. Ravenel, of the United States Fish Commission, in reference to passing the Civil Service examination in fishculture, that "if one learned all there was in 'Domesticated Trout,' he would pass the examination."

California Excursions.

PERSONALLY CONDUCTED.

Leave Chicago every Wednesday.

BURLINGTON ROUTE to Denver, thence *via* Denver & Rio Grande Ry. (the scenic line of the world). Parties travel in Pullman tourist sleeping cars fitted with every convenience, which go through to California and are in charge of special agents of long experience. For particulars address T. A. Grady, Excursion Mgr. C., B. & Q. R. R., 211 Clark street, Chicago, Ill.—*Adv.*

DURING the hunting season (Oct. 1, 1897, to March 31, 1898), the Norfolk & Western Ry. Co. will take free and at owner's risk in baggage cars, the dogs of sportsmen or hunting parties, not exceeding one dog to each man. Owners must accompany dogs, and show tickets to agent or baggage agent that dogs may be properly way-billed to train baggageman. They must furnish chain, so that dogs may be securely fastened in baggage cars.—*Adv.*

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 23, 1897.

VOL. XLVIX.—No. 17. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

Writers upon ethics have sometimes discussed what they hold to be a paradox. The end of fox-hunting, they say, is presumably to catch the fox. Now, no one would risk his neck to catch a perfectly useless animal, and his real motive must, of course, be the exhilaration of the gallop. Yet it is equally true that the pleasure somehow vanishes if you suppose the fox to be absent. The riding across country would lose all its charm, if there were not a real animal and a bona fide attempt to catch him. The scientific results attainable in Nansen's case—the mapping of an utterly useless region—the incidental discovery of new forms, which may help to illustrate some points of natural history, have the same kind of value as the catching of the fox. In that sense, I admit a certain importance in providing one's self with a pretext, which takes the pursuit out of the category of mere amusement. Without it even so grand a sport as a journey to the North Pole would tend to lose its charm. Leslie Stephen.

SNAP SHOTS.

SENATOR TELLER'S bill to regulate interstate traffic in game contemplates action by Congress to prevent the shipment of elk, antelope, bison or mountain sheep out of Colorado, Wyoming or Utah, except in such quantities as may be permitted by the laws of those States. The measure is admirable in purpose, but is based upon an unsubstantial assumption respecting the jurisdiction of Congress in the matter. The preamble reads:

"*Whereas* By reason of the exclusive power of Congress to regulate interstate traffic the States are powerless to regulate or prohibit the transportation of said articles to other States, and the enactment of the following provisions will enable each State, by legislation, to protect the wild game within its own borders."

But Congress does not possess the exclusive power to regulate interstate traffic in game, nor are "the States powerless to prohibit the transportation of said articles to other States." Or, to put the first proposition more precisely, Congress has not the exclusive power to regulate the interstate traffic in game, since the State has the power to forbid its game becoming a subject of interstate traffic. Under the police power the State may limit or absolutely prohibit the export of game beyond its boundaries. This has been established by the United States Supreme Court in the case of Geer vs. State of Connecticut. Connecticut has a law forbidding the export of partridges. One Geer, a commission merchant, was prosecuted for violating the law. He set up as a defense that the statute was in conflict with that clause of the Constitution of the United States, which gives Congress the exclusive power to regulate interstate commerce; and he carried the case on appeal to Washington. The Supreme Court found against him in a decision which declared in most explicit language the right of the State to control the taking of game, and to prescribe the purposes for which it may be taken and the final disposition made of it. In particular, as the specific issue for determination, the court ruled that in the exercise of the police power, the State has ample authority to forbid the export of its game; and that where laws to this effect prevail the game cannot become legitimately a subject of interstate commerce, and therefore cannot come as an article of interstate commerce under the jurisdiction of Congress.

In short, in this decision, the Supreme Court has declared that Utah, Colorado and Wyoming have ample power to do, and that it is solely within their province to do, with respect to their game precisely what the preamble of Senator Teller's measure premises that they are powerless to do. More than this, if the regulation of the export game is, as the Supreme Court declares, a function of the individual States, it is not a function of Congress. This means that the problem of local game protection must be worked out at home by each State for itself, and not in Washington, however alluring may be the notion of Federal control.

It was our privilege to know a simple-hearted, ingenuous and kindly man, a sportsman who observed the golden rule in his daily life and not less scrupulously on the ducking marsh, a gentle man who knew no guile, whose life was placid, whose end was peace, and whose memory is blessed. For years this man harbored the hurt of a certain afternoon on Northern waters, when snugly ensconced in his blind for ducks, he saw another hunter take position near him, stealing his advantage, and wantonly and selfishly depriving him of any possible shot. The outrage rankled long afterward; it was the one blur in the pleasing retrospect of a sportsman's life. If the census-taker made note of these things, the statistics would show a thousand and one other men who are to-day cherishing a grudge against the fellow who stole their sport away in some such manner. It takes all sorts of men to make up the world, the rusher in ahead is one sort.

When a dog steals a point in a field trial he is penalized. What is justice for dog is justice for man; a Michigan genius—one of the Saginaw crowd, most likely—who has endured interference in duck shooting until patience has ceased to be a virtue, has had the wit to go to the Legislature for relief. Cheated of the ducks galore he has counted but has not gathered, this defender of the rights and liberties of duckers on their points has induced the People of the State of Michigan to enact, to wit:

That it shall be unlawful for any person or persons to willfully scare or drive wild ducks or other wild water fowl, or cause the same to be done, from any person lawfully hunting the same on the public waters of that part of Lake Erie within the State of Michigan, for the purpose of depriving or attempting to deprive such person of any or all of his opportunities of shooting or hunting such wild ducks or other wild water fowl; and every person so offending, upon conviction, shall pay a penalty of $20 and costs of suit, which penalty shall be recovered by action brought by the prosecuting attorney of the county where the penalty is incurred, in the name of the People of the State of Michigan.

This is the season of the year when every one may be his own Columbus, and discover, if he will, a new world. It lies all about us in the northern latitudes, flaming in scarlet and crimson and gold. The wondrous pageant of the autumnal foliage is again unfolded; and happy indeed is he who may find the time—or make the time—for an October outing, to look upon a landscape which, however familiar the contours, is in its brilliant hues as a new and unfamiliar world.

The Vermont deer hunters report a shrinkage of the supply. Before the season opened the game was reported in myriads, but actual pursuit by ambitious seekers revealed that the Green Mountain deer have a way of going single and solitary, and not in herds and droves. The central and southern portions of the State are most plentifully stocked, but taking the whole range at large, a well-informed correspondent tells us, probably not thirty deer have been killed in the entire State.

The season has supplied a normal quota of incident and material for quip and story. The largest deer reported was killed at Middlesex, Washington county; its weight is given as 341lbs. The proud slayer was somewhat taken aback, however, when he discovered that it was a tame deer which a farmer had harbored with his cattle. A curious complication has arisen in one case. The law, contemplating the killing of males only, provides that "deer having horns" are legitimate game, and a Barnard hunter having brought down what was thought to be a spike-buck, found that he had killed a horned doe. A St. Johnsbury man laid low a fat steer, and a Lincoln hunter killed a calf. As was to be expected, the excited hunter who thought it was a deer when it was a man has played his part in the campaign, and distressing fatalities have resulted. One victim, himself a hunter, was clad in a sheepskin coat, and thus in a way brought his fate upon himself.

The Jackson's Hole elk case has been discussed so fully in these columns and our position respecting it is so well known, that there is less necessity of commenting upon Mr. Whitehead's letter than of taking care lest the topic be pursued beyond patience. Under the circumstances, we refer to what we have said already about the point at issue. Reduced to its simplest statement, the specific question is whether the Wyoming statute which forbids the capture of live elk was intended by the Legislature to be enforced against one person and not against another, or whether it should be enforced impartially with all alike. The more general consideration, as to which our correspondent dissents from our position, is that laws are enacted for the purpose of being executed, and that executive officers are charged with the duty of executing them; and that an official may not, at his own sweet will, refuse to enforce the law when it is being violated and he knows that it is being violated.

As to these principles, we hold that the game law does not differ from other laws, in that no one is to be accorded the privilege of determining at his own option whether or not he will obey any given law, for if one may at his option elect to disregard one law which appears to him to be unjust, another has equal right to violate some other law which does not suit him, and thus in the end we have disregard and contempt of all law. Nor may one refuse obedience to the statute on the ground that it imposes upon him some personal hardship or loss. The statutes are made for the public good, in which the individual may, under certain circumstances, find personal hardship, but the rule that the greatest good to the greatest number must prevail makes obligatory upon every citizen compliance with all the laws. Otherwise we should have an end of society. Despite Mr. Whitehead's protest that arguments are not carried to their logical conclusions—which we do not admit—the logical conclusions of this case are such as we do not shrink from and he cannot avoid.

The plea of humanity, concerning which we have heard so much in this case, and upon which Mr. Whitehead naturally puts so much stress, should not be permitted to befog the real issue. No man can claim for his defense a humanity of that sort which helps itself to the proceeds no more than one may claim honesty when he returns so much of a lost sum of money as he decides he will not pay to himself for having found it. It then is simply a commercial proposition. The plain fact here is that Adams has violated a specific Wyoming law by shutting up a band of wild elk. His offense would not be greater were he the most brutal man in Wyoming, nor is it any the less because he claims to be humane.

Mr. Whitehead ignores entirely, or evades by specious argument, the fact that if the State of Wyoming is indebted to Mr. Adams for food given to the elk, the Jackson ranchman has the same recourse in law that all other creditors have. No creditor under the law is at liberty to help himself at his own pleasure to his debtor's property, and the property of the State is no exception.

A meeting of the executive committee of the New York State Association for the Protection of Fish and Game was held in Syracuse on Thursday of last week, for the purpose of making provision for a convention date earlier than the present one. Dec. 9 was determined upon, and a call will be issued for that date. The sentiment which has been growing for a long time, that the protective feature of the Association should be divorced in name, as well as in fact, from the trap tournament activities, found expression in a proposed change to that effect in the constitution, and in a new name, the New York State Fish, Game and Forest Protective League. These innovations will be submitted for approval at the December meeting. The earlier date of meeting will prove of distinct advantage, and there can be no actual loss in the change of name, even to one hardly less cumbersome than the old title. Perhaps it will be permissible to refer to the organization as the New York Fish and Game League.

The Sportsman Tourist.

THE NATIVE AMERICAN HUNTER.

III.—ANTELOPE CATCHING AMONG THE CHEYENNES.

As Told by White Bull.

When I was a young man more than forty years ago, my people had only a few guns. Then not many white men had come into the country, and we still took the animals on which we fed in the old ways that our people had always used. I have seen them catch the antelope in this old way, and now I will tell you how they did it.

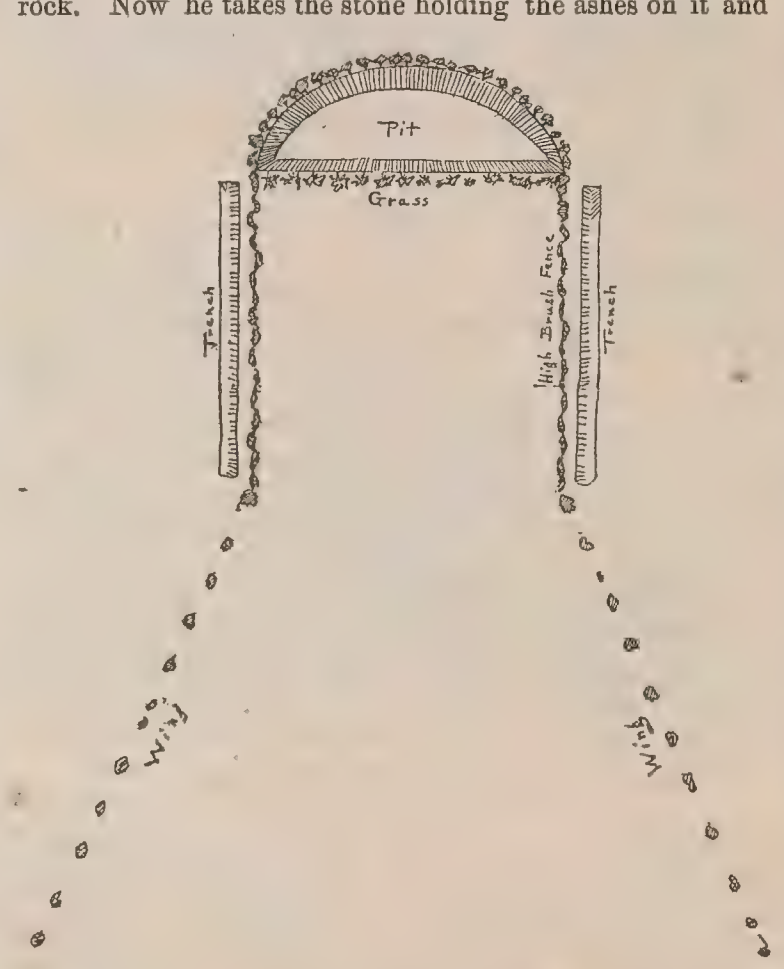
When they were going to catch antelope there was always some one medicine man who told the people what they must do, and watched them to see that they did it. The man whom I saw do this was named Red Lodge. He always had his lodges painted red, and this is why he had that name. When the people needed antelope to eat or needed their skins for war shirts, and when the medicine was good, then Red Lodge made up his mind that antelope must be taken, and so he told the people what they must do.

In a broad flat they began to build a tight brush pen 8 or 10ft. high. On one side it was open, and from this opening lines of brush heaps about five steps apart stretched away on to the flat for 400 or 500yds., constantly becoming further and further apart. This made two wings, thus, <, but each stopped when it reached the fence of the pen. On the side of this pen opposite the open side from which the wing extended, the people dug a big hole in the ground, reaching from the end of one fence to the end of the other. The side of this hole toward the opening in the pen was straight, stretching from the end of one fence to the end of the other, and the other side was rounding—a part of a circle. They dug this hole about 5ft. deep and with sides straight up and down. On the rounding side of this hole they drove stakes in the ground and tied low bushes to them, but on the straight side they stuck bunches of grass in the ground, some of it standing up straight and some hanging over the edge of the pit so as to hide it. Outside of both the straight fences of the pen they dug trenches, which were deep enough for men and women and children to get into and to be hidden when they were lying down. After all this had been done, they made a good many clubs, and when they had been made, these clubs were put on the ground at each end of the pit close to the end of the high fence.

When all this was nearly finished, Red Lodge had his lodge prepared and cleaned up. The beds were taken out, all the people moved out and slept somewhere else. Only Red Lodge remained in his lodge. If the camp was new and the ground was not yet worn bare, and there were still left some roots of grass and of weeds on the floor of the lodge, the women cleaned all these away, so as to leave the ground bare. Then they gathered white sage and the floor of the lodge next to the walls was covered with these stems, the tops of the stems pointing toward the fire. From one of his sacred bundles Red Lodge took a good many antelope feet, which had been cut off at the pastern joint, and bent and dried so that they would stand upright on the ground. One of these feet was the right forefoot of a buck, the foot with which he pawed the ground. This pawing foot Red Lodge put down on the floor of the lodge about 3ft. from the wall and to the left of the door and so to the right of the lodge man's bed. The other feet were placed on the ground, standing on their soles in circles all about the fire, but these circles did not meet in front of the door. An opening about 3ft. wide was left opposite the door. There were four circles of these feet about the fire, one inside the other.

After the lodge had been fixed up, he went into it alone and made his medicine. No one knows what he did while he was there. For one day and one night he ate nothing, and all night long he sat in the lodge and sang. After he had made his medicine and was ready to call the antelope, he painted himself like an antelope. He painted his mouth black, his back red, his belly, legs, rump and face white, and painted red streaks across his upper breast. On each temple, and running down on his cheeks, he painted an antelope horn—black. Then he was ready, and he came out of his lodge, naked except for his breech-clout and moccasins. In his hand he held his own medicine pipe, which was painted red over bowl and stem. Now he walked to the opening in the pen where the wings come together, and there he stopped and filled his pipe. After he had filled his pipe and lighted it, he walked between the wings out onto the prairie, and sung his sacred songs and held his pipe up to the Great Spirit, and then out toward the prairie where the antelope live. Then he walked back, still singing, between the wings and through the pen until he had reached the edge of the pit, and there he rested the bowl of the pipe upon the ground. Four times he went backward and forward and sung his antelope songs. The fourth time, after he had touched the ground with the pipe bowl, he went around to the back of the pit, and placed his pipe on the ground there. The bowl was toward the pit, and the stem was leaning against a support, so that it pointed diagonally upward.

When he had placed the pipe on the ground, two young men who had already been told what to do, started out toward the prairie, one on the right and one on the left, following out the wings so as to come in behind the antelope, and all the people hid themselves in the trenches that were dug outside the high walls.



Now, after this, Red Lodge walked about in the pen and outside of it, holding in his hand a feather which he waved in the air, and as he walked and as he waved the feather, he was singing his sacred song.

After a little while, the young men which had been sent out discovered antelope coming, and when they saw them they gave a loud, high-pitched call, which can be heard a long way. This was the signal to the people that the antelope were coming. And when the people heard it everyone was glad. After the antelope had passed these young men they turned in and ran along behind them, keeping up this calling until the antelope were close to the pen, and had come between the wings. After the young men themselves got within the wings they began to call differently, and imitate the hooting of an owl.

As soon as the antelope have come to the opening of the pen, all the people who have been hidden in the trenches rush to the open side of the pen and close the opening by crowding into it. They run toward the antelope, and these are so scared and are going so fast that they cannot stop themselves, and they rush on and fall into the pit. Men and women alike then grasp the clubs, jump down into the pit and knock the antelope on the head. After all are dead the people climb out of the pit again.

Now Red Lodge goes around behind the pit and takes his pipe and fills it, and after he has filled it he sprinkles on top of the tobacco a little powdered buffalo dung. Then he goes away thirty or forty steps from the semicircular side of the pit, strikes his fire and lights his pipe. He looks about on the ground until he finds a small flat stone. This he picks up and takes with him. He goes around the pen, and entering the opening, goes close to the edge of the pit, places this little flat stone on the ground, sits down, and, resting the bowl of his pipe on the stone, he smokes there alone. No one smokes with him.

As he smokes he points the stem of his pipe at the antelope, trying to point at each one, and to give to each one a smoke. Then he smokes to the little flat stone. Then he gives four smokes to the direction from which the antelope came. After he has done all this then he smokes his pipe out. When he is about to begin to clean the pipe, he first points it in the direction from which the antelope came. Then he knocks out some of the ashes on the flat stone and again points the pipe toward where the antelope came from. He knocks out more ashes and points again, and so until he has pointed four times and knocked out all the ashes on the rock. Now he takes the stone holding the ashes on it and

INDIAN ANTELOPE PEN.

goes down through and across the pit to the other side, where he climbs out, holding the stone carefully, and going slowly, so as not to spill the ashes, and walks away a few steps, pours the ashes off the stone on to the ground in four places, and puts the stone down and leaves it.

After this has been done the people get into the pit and begin to cut up the antelope. First they pick out a young, fat antelope—one about two years old—fat and tender. That is taken out on to some high hill where everything can see it, and without being skinned, it is cut up into small pieces, and left there as food for the birds and for the wolves. It is a sacrifice.

After the killing is over and these ceremonies have been performed and the meat has been divided, the medicine man lets his lodge remain as it is over the next night. That night he cooks and calls in his friends, and they sit around the lodge behind the circles of antelope feet and eat. When the medicine man puts away these antelope feet he does it all alone. No one knows what he does.

If after the antelope have entered the pen and before they reach the pit they should by any chance turn back and get away without falling into the hole, it is certain that some one of the medicine man's family or relations will die.

This is the way, my friend, in which we made our living in old times. Then the animals which we ate were plenty and our *mai yū'n* (mysterious power) was strong. Now there is nothing to eat on the prairie. Those were happy days.

Geo. Bird Grinnell.

A STRING OF BEADS.—II.

(*Continued from page 303.*)

About this time word came from Rice that he was ready for that hunt, and I went to Aitkin, where, together with Rice and the baggage agent, I took the train for Kimberly, twelve miles east, on our way to Rice Lake No. 2.

There was only an Indian pack-trail leading through the woods from Kimberly to the lake, and taking nothing but our guns and ammunition we started for the lake on foot, intending to stop with a half-breed who lived on the bank of the lake.

As we stumbled along over fallen timber and floating bogs and through swamps, George kept me in a fever of excitement (?) over the great number of ducks we were sure to find when we got to the lake.

He talked encouragingly of our getting to the lake in time for the three of us to kill a hundred ducks yet that night. Of course I knew his expectations were highly exaggerated, being based principally on what he had heard of others doing, but I said nothing to discourage him; the confiding innocence of inexperience always did have a charm for me, and these two men were as innocent of what it took to kill and gather a hundred ducks as a new-born babe. Their talk of our returning to the railroad with fifty mallards each reminded me of an account I once read in some sporting paper of a man starting out one afternoon with his boat and fifty decoys to hunt ducks. In the course of that one afternoon he set out those fifty decoys at least half a dozen times, carrying them from pond to pond, where the water was too shallow to run his boat, together with 300 shells, his gun and, presumably, what ducks he killed, which ranged from forty to sixty at each pond. In addition to this, he found time to attach long lines to his decoys, by means of which he pulled them under water at intervals, in imitation of diving ducks, empty 300 shells and gather up, say, half that many ducks, many of which must have been cripples and hard to gather, and get home, fresh as a daisy, in time for an early supper, entirely unconscious of the fact that he had been far beyond the point of probability. I made a mental estimate of the hard work he must have done that afternoon, and concluded it would take me from four days to a week, and I flatter myself on standing as much grief as most of them, too. This man was no stranger to ducks and duck shooting either, as his writings proved; and I could only account for his wonderful feats by supposing he found it easy to sling things about with ink, and thus unconsciously overworked himself.

Mr. Rice was doing the same thing in his imagination, little dreaming what an awful burden even a dozen ducks apiece would be to return with through that swamp and tangle.

But I was not worrying about any burden of ducks, for I knew the northern flight had not set in yet, and that, having no boat, we stood but little chance of getting even one duck apiece out of a great rice lake.

I cared little for ducks. What I was after was a ramble in the wild, wild woods, and I got it, too, to my heart's content.

It was nearly sundown when we got to the lake, and dusk when we had skirted the north shore two miles to the Indian's cabin. He was a bachelor Indian and lived alone. His cabin was located in a beautiful spot in the forest where the underbrush had been cleared away and the trees neatly trimmed. The ground was carpeted with something very near to blue grass, though I believe it was not the genuine Kentucky article, but resembled it very closely where it was much tramped or closely cropped. We found the Indian, or half-breed, which he really was, at home, and he bade us a hearty welcome, giving us the freedom of his house and ground, while he prepared supper.

Our host regretted very much not having any game for supper; said there were no ducks on the lakes, as there were dozens of canoes out every day gathering wild rice, it being the midst of the Indian rice harvest.

This was discouraging to Mr. Rice and his baggageman, but their hopes revived on our host's assurance that we would find plenty of ducks by returning to Kimberly, by the way of Rice River, on the morrow. This we elected to do, and our prospective bag was soon back in the three-figure column.

An ideal place for a hunter's cabin was our host's home in the woods. Surrounded on all sides by a forest dotted with lakes and ponds; open, deep water lakes where fish innumerable abounded, and shallow, rush and rice lakes where, during the month of October, ducks congregate in swarms, staying, with a persistence founded on an abundant food supply, until the lakes were solidly frozen and there was no further hope of their getting at the wild rice on the bottom.

This particular rice lake (there are three dozen of them in Minnesota) would average five miles long by two wide. This large scope was an unbroken field of wild rice, standing about as thick as wheat in an ordinary wheat field in a good crop year. Estimating the crop from what I saw of it along the lake shore, I placed the average yield at from twenty to thirty bushels per acre.

All this vast amount of grain (with the exception of a few bushels, less than a hundred, gathered by the Indians) falls into the lake at the first frost.

The ducks that feed in the rice lakes do not spend the day there, but are up and off by sunrise, scattering among the open lakes and small ponds.

If the weather is fair, they begin to reappear again about sundown, and from that until dark the flight is continuous, ducks dropping, seemingly, through the arch of sky, and multiplying rapidly until their babble is sometimes deafening. In stormy weather the ducks appear earlier at the feeding lakes, and if very stormy often spend the entire day wheeling and circling in the wind above the rice beds.

The Indians, who are very indifferent duck hunters, have two methods of hunting them: one is to seek them out in their day haunts and pot them as they sit strung along a log in the sun; and the other is to conceal themselves in the rice beds and wait for the ducks to come to them. This is not the ordinary flight shooting of the sportsman, but pot shooting of a different stripe.

In this style of hunting the Indian takes advantage of the habit of ducks of always alighting in the openings in rice or rushes; covering themselves and their canoes near some opening, or beating down the rice and making one, if no suitable opening offers, so effectually by weaving rice stems over and around them, that should ducks alight within 10ft. of them they would not be discovered, they lie in wait for hours waiting for a chance sufficiently tempting to draw their fire.

Singles, pairs or scattered flocks they pay no attention to, but wait patiently till the opening in front of them is a wriggling mass of ducks, and then discharge their musket, loaded with about 2½drs. of powder and a couple of dozen BB shot, into the midst of them. Of course, a gun loaded thus is not very destructive, yet I heard of one fellow who killed twenty-one mallard at a single shot, having laid in his canoe for several days waiting for the chance.

Our host had not neglected his opportunities, and the walls of his neatly kept log house were lined with trophies of the chase.

I think this place resembled more nearly my boyhood's ideal of a hunter's home than any I have ever visited.

Early in the morning we were on our way down Rice River. Coming out, we followed the Indian trail, a mere footpath, but better than nothing; going back, we picked our own route, and oh! the difference was frightful to contemplate.

We crossed several floating bogs on our way, where it seemed like walking on a blanket suspended by the four corners, the bog bending and swaying beneath us, while the water bubbled up round our feet through the matting of roots and grass at every step. I carried a stick some 6ft. long to steady myself with, and also to feel for dangerous places.

At one place I stopped and run the stick down to see how deep the water was below; when I had run the stick down the length of it without striking anything solid, the

bog meantime, slowly settling beneath me until I was half-knee deep in water, I moved on without pandering further to my curiosity.

How deer manage to cross these bogs with their sharp hoofs is a mystery; yet they do, for the bogs are all striped and checked by their trails running in every direction. We were constantly getting into thick tangles of bushes, through which it was almost impossible to move, but we worried along somehow. Rice River seemed to be as devoid of ducks as the lake, for we saw none until near noon, when we finally discovered a flock of mallards in a bend of the river.

There was a large flock of them extending round the bend from our point of observation, and how much further we knew not. Making a detour, we crept out on to them with one wing of the flock on our right and the other on our left. The undergrowth on the point was very dense, and as we moved stealthily along we could see nothing, though we could hear the ducks quacking and splashing the water. At length I caught the glimmer of water ahead and the faint outline of ducks swimming about in it.

Halting, I told my companions to proceed, and when they got ready to give the signal, as I was going to shoot from where I was. The baggageman, working down on the left, soon announced his readiness for the fray, while George turned his battery to the right and began to adjust it. At this I drew bead at the glimmer of water ahead and waited the signal. When it came I fired both barrels in rapid succession, and then there was a scrambling for the open to see the effect of the shots. When I got to the point there were six mallards struggling in the water, while a seventh was just disappearing in the grass on the opposite shore. It chanced that in their death struggles the ducks worked apart, three to the right and three to the left, until some 12 or 15ft. divided them. At this juncture George and the baggageman came up from opposite directions, and seeing the situation, shouted with one accord, "I got three!"

This left me without any, yet I was not greatly grieved. As we stood on the margin of the river, beneath the overhanging trees, a small flock returned and hovered over the dead ones. True to the hunter's instinct, at the whistle of wings my gun flew to my shoulder, and selecting two birds, I "let go." My two companions did the same, with the result of each of them getting a bird, while I got "nary a feather." When it came to a division of the spoils they elected to take three ducks, leaving me the other two. This I declined to do, saying as I had killed no ducks I would carry no duck. Thus it was when we resumed our journey, they two were heavily laden, while I tripped away light as a maiden's dream of love.

The rest of the trip to Kimberly was one dreary monotony of stumbling over logs and bogs, and tearing through bramble thickets, relieved in one place by my running into a bunch of jacksnipe and frightening my companions into thinking I was crazy by rushing wildly about and shooting at nothing, as they thought. And later, after I had explained to them what I was shooting at by doubling up three twisters in succession, and causing grave doubts to enter their minds as to whether I was thoroughly deceived by the duck episode or not.

Half a mile from Kimberly we came in sight of the first farmhouse, which promised us great joy in the way of fresh milk and bread, an' ham 'n' eggs; but we were disappointed on arriving there to find the folks "not at home."

In Kimberly the same state of affairs prevailed, and we were compelled to wait at the station till the train came along and took us to Aitkin to a late supper.

Soon after returning to Lamers the northern flight of ducks set in, and I had some good shooting on the little rice lake. Though sixteen mallards was my largest bag, I am satisfied there were days when I might have bagged a hundred had occasion demanded it.

The month of October was put in waiting for the opening of the deer season, though I found it very pleasurable suspense loafing about the lakes and woods, taking an occasional nip at the ducks and another at the fish; yet when Nov. 1 did roll around I was all excitement.

E. P. JAQUES.

[TO BE CONCLUDED].

A HUNT NOT GENERALLY CHRONICLED.

It was this summer—1897—there's
Nothing stale about this tale,
Its moral only old,
Repeated here because we fear
The lesson has grown cold.

FOR weeks we had talked and planned about this hunt—some of us for a year. Last fall our guide found a new pond (there are several in the Adirondacks yet) whose shores and vicinity promised abundant game—deer sure and possibly bear. This gem of the wilderness was to be our "preserve." It was deep in the woods, yet easily accessible from our accustomed camp. Why should we not have fun? We did—but not exactly as anticipated. Great preparations were made. "Duffle" and ammunition in quantity, five rifles and three shotguns for four men and a guide. Then we packed into a one-horse lumber wagon, took a photo of the outfit, to insure a memento of the trip, and started. A few miles and we left the stage road for an old Adirondack lumber road. Everybody knows what that means—we walked. "Tree across the road!" "Cut it out!" Done. Onward—past a former camp, "where we got the big buck." Then, with everything, including men, piled in one little boat, the guide paddled a mile across a pond that has yielded us venison for years. We could almost smell it broiling over the fire. Appetite grew in proportion, for were we not going to repeat the experience? A half mile's heavy packing took everything to camp. After dinner the guide took the Captain and Scribe to the "preserve" and left them to watch for "sundown" and "sunrise" shots. We heard them before sundown. The big guns were far away, but the shot fell thick around us. X rays and Gatling guns in the forest? No, but a thunderstorm, such as only the Adirondacks can afford. We were dry under rubber blankets, the deer under forest trees.

The sun comes out—will the deer? It is growing dusk. Bang! goes the Captain's rifle. "Did he get him?" The answer is another bang. Then another gives the double negative. I hurry over. "Did you get him?" "I don't know; I shot where he was, but it was too dark to be certain of anything." "Well, let's make camp while we can see to do it." At the head of a little bay on my side the point a ledge rose 25ft. above the water. On the top we spread our blankets and made a good fire behind a large log. Hark! Across the bay the unmistakable sounds of deer in the water. It is not over fifteen minutes since the dusky shots at nearly 200yds., and now two or three deer are within 100yds. or less, but we cannot see them. "Night her solemn mantle spreads," etc. Either nature is sarcastic or the deer know a great deal—perhaps both. We have no jack, for the law says we mustn't; if the moon would only come out—but she doesn't. Never mind, we are with Nature, and she is loving, though sometimes coquettish with the sportsman. We dry our clothes wet while gathering firewood, eat our supper, and crawl under the blankets.

Hark! There are more deer in the pond. The fire blazes fitfully, but does not frighten them. Several times we even hear them on the knoll back of us, but the spruces are thick and the sight is dark.

What's that? Only the rain gently dropping in our faces. Did we enjoy that night? Yes, more than tongue or pen can tell. Released from the care and confusion of city life, there was a sense of wild freedom and of joy too great for sleep, while the many voices of the night all spoke of that kindly Providence which

"Warms in the sun, refreshes in the breeze,
Glows in the stars and blossoms in the trees."

Daylight comes—the deer have gone—we follow—to camp. The others have had no better luck. That afternoon the guide takes the "cowboy," who has hunted all over the West, who has killed antelopes at long range, mountain lions with small calibers, and "silver-tips" with small shot, to whom in fact this trip is only a side issue, to the "preserve." A .45-70 Winchester is planted on "watch rock" and behind that they watch and wait. Promptly at 6:30 a noble deer stands broadside at 40yds. Twice the battery on Gibraltar salutes, and then, having been sufficiently honored, the deer raises its flag in response and leaves—leaves also cover it from view.

The light was good—the sight was good—the nerve wasn't—buckfever!—the Scribe went after more rations. Fun ruled the camp. The deer heard and stood aloof. Distance lent enchantment. The Scribe returned, and still no deer. Much rain was against us. Much noise was in favor of the deer. The hunt was not productive of game. Hence this chronicle. However, other trips yielded both trout and venison—the home ranch was supplied. And yet he is but a poor sportsman whose reward consists mainly in well-filled bag or creel, and

"Who finds not Providence all good and wise,
Alike in what it gives and what denies."

JUVENAL.

Natural History.

THE CANADIAN NORTHWEST.

FORT SASKATCHEWAN, N. W. T., Oct. 6.—*Editor Forest and Stream:* The above is the name of the most northerly post of the Canadian Northwest Mounted Police. An old friend, Major Triesbach, is in command, and on visiting him today, I was permitted to read the report of Inspector Jarvis, who had been sent by the Canadian Government to the far North for purposes which will be found in his instructions. The portion, however, relating to game and fish will only be *apropos* in the columns of FOREST AND STREAM, but which will show how alive the Canadian Government is to the preservation of game, even in what Eastern people imagine the inaccessible regions of the far North. He is instructed:

"You will get all possible information *re* the probable number of wood buffalo in the country, their location, and whether the act, *re* their preservation, is being strictly carried out. With this object in view, you will have to visit as many 'trading posts' as possible in the vicinity of the buffalo grounds. You will direct the attention of all traders and hunters you come across to the necessity of strictly obeying the game act, and you will explain to them the law on the subject. It is reported that beaver are decreasing rapidly, in a great measure owing to the indiscriminate killing of young and old. The number of skins of unborn musk-ox calves is rapidly increasing, and you will make full inquiries with a view to its prevention."

Inspector Jarvis left Fort Saskatchewan on Jan. 5, this year, with three dog trains of four dogs each, accompanied by Staff-Sergt. Hetherington, J. Tullion as guide and P. Lutit, Jr., as dog driver, for a long thousand-mile trip in the unsurveyed portion of the greater Northwest. This trip is interesting from the fact that it demonstrates that men can travel in the depth of winter over an area of country that many suppose to be as difficult as getting to the Klondyke via the Chilcoot Pass, and by the way, the route taken by Inspector Jarvis is the easy winter route to the Yukon gold fields, and, for that matter, the best and easiest summer route, too. Dawson City is only 1,370 miles from Edmonton, a town about twenty miles from Fort Saskatchewan. A railway is being built from Edmonton to Athabaska Landing, some ninety-six miles. When that is completed—and there is a good wagon road now—you can go in summer by water—all down stream—to the Yukon. The Government has sent out an expedition with a view of cutting a wagon road, so that this dreaded trip to the Yukon via mountain passes will in a short time have no terrors, for the reason that you need not take it, and in the very near future when you arrive at Edmonton you will see published: "Buy your tickets here by stage and rail route to the Klondyke!!!" or "This way for the steamer to the Klondyke!" And just let me say that if any readers of FOREST AND STREAM contemplate a trip that will afford good sport *en route*, and a grand possibility of their never going to the Yukon—for this reason—that the numerous streams on this route that flow into the Peace River from the rich Omenica country contain gold. Anyone who has $250 and a ticket to Edmonton can be outfitted at that point for a year for that amount, and if at the end of a year he does not return with the wealth of a Vanderbilt—yet this is among the possibilities—it is certain that he can make more money—if he will work—than he could in ten years in any Eastern portion of this continent. I am, however, rambling from my intention of telling your readers what Inspector Jarvis reported he saw and did when in the far North. That portion of his report concerning game reads:

Buffalo.

I have taken great pains in making as thorough inquiries as possible in connection with the buffalo, their habits, number and range. The range of a scattered band of about 300 is from Peace Point to Salt River, and from Salt River to within twenty miles of Fort Resolution, on Great Slave Lake. I met a Mr. Handbury, an English sportsman, who is on a hunting expedition. He had just returned from an unsuccessful buffalo hunt, but he saw fresh tracks and beds of about sixty buffalo. Mr. Handbury returns this year, but the fear of a $200 fine will hardly prevent his hunt. On Feb. 12 near the Great Slave River we found a poisoned coyote. We traced the tracks to the poisoned bait. We were also enabled to discover the party who had laid out the poison. At my first interview with the offender, John Trindle, he not knowing I was a police official, and mistook me for Mr. Warburton Pike, who had been hunting buffalo and musk-ox. He was much surprised on my return to find that I had laid information against him and would try him at Fort Smith. If it be the intention of the Government to protect these nearly (buffalo) extinct animals, it can only be done by placing officials on the spot. I have in the case of buffalo and other game impressed on all hunters and other interested persons the necessity of obeying the game act, and have left printed notices where practicable.

Bear.

I find that on the upper part of Peace River over 300 bears are killed annually for food, but being out of season their fur is of little or no value.

Beaver.

Beaver is decreasing all over the Northwest, but at Vermillion and Great Slave Lake this is said to be reversed, as the supply of skins is on the increase. I could find no truth in the report that kit beaver were sold at the same price as full grown ones, though hunters kill for food some young ones.

Water Fowl.

We camped at Lesser Slave Lake, which is well known from its excellent fishing and shooting. At the Hudson Bay post they kill for their employees every year at least 1,500 ducks, 500 geese, and 130,000 fish, which includes whitefish, lake trout, pike, pickerel, etc.

Musk-Ox.

Musk-ox range in the barren grounds north and east of the country I visited. They are quite numerous, but their range being so extensive it is impossible to estimate their numbers. Cows have been killed, and their skins, as well as the skins of their unborn offspring, sold at Fort McRae and along the Mackenzie at Providence, Good Hope and other places. The unborn fur being very handsome is in great demand, but the protection of musk-ox and other game in this district requires a resident guardian.

Inspector Jarvis gives besides an exhaustive report of the immense natural resources of the country. He tells of the different Indian tribes he visited: "Dogribs," "Slavies," "Salteauxs," "Caribou Eaters," "Chippeweyans," "Crees," "Yellow Knives," etc., and describes their peculiar habits. He mentions finding at a river near Fort Smith a fish, called there "l'incomme," resembling a large red salmon, but so strong in taste and smell and so oily that their dogs would not eat them, but the Chippeweyan Indians lived solely on this fish during the winter months. These Indians have no ambition and little knowledge of the outside world. As long as they have enough to fill themselves with they are happy. It was impossible to enter their houses in consequence of the stench caused by their eating the fish alluded to. They evidently like it, as moose and other game abound in the vicinity, which they hardly ever kill.

Fish.

He also gives an estimate of the quantity of fish put up for winter use, giving the different lakes they were taken from, the total being nearly 500,000.

Jarvis and his party got back to Fort Saskatchewan on April 15, after having traveled upward of 2,000 miles, and stopped and fined a number of people at different places for infringement of the laws of the country. This report dispels many illusions regarding this magnificent territory, so little known and understood, especially in the East. The illusion labored under is that it is a barren area, with about two months of spring, two months of fall and eight months of winter. I was in this district last May when vegetation and trees were in full leaf. I was also at Metaskewni on Oct. 4, this year, and saw children picking the second growth of wild strawberries on the prairies. Metaskewin is forty miles from Edmonton. There is no portion of the American continent—not excepting prolific Manitoba—that has bigger crops of wheat and other cereals than have been gathered this year in Edmonton district. I prognosticate that in a few years you will see this part of the world peopled with farmers, their market being the towns and cities that will spring up further north when its immense timber and mineral wealth begins to be developed. W. Cullen Bryant only anticipated time a few years, and had such a fertile country in his mind when he wrote:

"I hear the tread of pioneers
Of nations yet to be;
The first low wash of waves,
Where yet shall roll a human sea.
The rudiments of empire here
Are plastic yet, and warm;
The chaos of a mighty world
Is rounding into form."

THOS. JOHNSON.

Snakes Oviparous and Ovoviviparous.

Editor Forest and Stream:

Permit me to refute a statement made by Jack Hildigo on page 283 of FOREST AND STREAM. He says: "Our non-venomous snakes are all oviparous," they is, they lay eggs, from which after a certain period the young emerge.

On the contrary, all of the many species of garter snakes (*Thamnophis*), the common water snakes (*Natrix*), and the small brown snakes (*Storeria*), are ovoviviparous, and bring forth living young, in the same manner as the venomous rattlesnake, copperhead and moccasin. That is, the young just before birth are covered merely with a delicate, slightly opaque membrane (not a tough, leathery skin), which is torn

open at the moment of oviposition, and the young are thus born alive, and not hatched from eggs.

I once had a large, common garter snake (*Thamnophis sirtalis*) in captivity, which in one night gave birth to twenty-seven active little baby snakes about 7½in. in length, colored and marked like their mother, only more brilliant. Another smaller individual produced thirteen snakelets at a birth. A water snake (*Natrix sipedon*) gave birth to thirty five young in one night, and a striped watersnake (*N. leberis*) became the happy mother of nine infant snakes.

The young of the blacksnake (*Bascanion constrictor*) hog-nosed snake, or spreading adder (*Heterodon*), and the king-snake and (so-called) milksnake (*Ophibolus*), are hatched from eggs. The eggs are laid in the ground or sand, or under heaps of dead and rotting leaves; and it requires days or weeks for them to hatch. The little snakes cut through the tough eggshell by means of an egg-tooth, which is afterward shed and lost.

As to snakes swallowing their young for protection, I have strong doubts. My late friend, Prof. Ed D. Cope, the keenest herpetologist of America, laughed at the idea, and said to me: "If the young snakes were swallowed by their mother they would be well protected, but would never see daylight again!" C. Few Seiss.

Philadelphia, Pa.

Georgia Bird Protection.

Editor Forest and Stream:

In classifying and enumerating his list of birds of Georgia on legal protection, N. F. Willet, with the help of his ornithological friend, Dr. Truitland Cleckley, has listed the catbird, shrikes, fly-catchers, especially mentioning the kingbird, sap-suckers, owls and hawks as detrimental to the public good, and further states they should not be included in protective laws. Such birds as the catbird, shrikes, fly-catchers, sap-suckers, and some owls and hawks, should occupy their full share of protection in his list of birds, which he says should be protected through all the months of the year.

Through the careful examinations of our leading ornithologists, it has been demonstrated that the said birds are beneficial in relation to agriculture, and do more good than harm. The public good owe equal share in the protection of these, as well as other birds listed useful.

He states: "I should like to put in a good word in this list for the catbird, for his quiet, subdued songs are very sweet; but he is under the ban in more ways than one." Would not the words, "he ought to be under legal protection in more ways than one," sound more congenial and more to the credit of the catbird, for his credit we can hardly repay in the good he has honestly done and is doing.

He also says: "No one expects that a law could put a total stop to the killing of insectivorous birds." Would not some protective law do good in time, and could not the enthusiastic ornithologists of Georgia co-operate in forming a society, such as the Audubon Society, to work in harmony with the protective law, in the distribution of circulars and making appeals to them who know not the story of the birds.

Patience and good work with such would be rewarded in noticing the increasing number of insect birds, together with the decreasing number of noxious insects, as well as the total stop in the killing of insectivorous birds, while crops would yield much. Bird Student.

Squirrel Migration.

Charlottesville, Va., Oct. 7.—This item in regard to squirrels migrating was clipped from a late paper published at New Bloomfield, Perry county, Pa., in southern Pennsylvania, and I thought it might be of some interest to your readers:

"Evidently the squirrels are migrating in large numbers. Where did they come from? They were scarce in this region last fall. Now they are seen almost any hour of the day along the public highways in many parts of this county. The nut and acorn crop is not plentiful, but they find the corn abundant, and are availing themselves of this means of subsistence. They are frequently found in the field, on the fences, about the barns and dwellings of our farmers, and seem to have lost much of their natural shyness. It is said that many have been drowned in attempting to swim the Susquehanna. Where are they going to? How do they know that food is plentier in other and distant woods? How are they mobilized, scattered as they were a few weeks ago? These are questions of interest to students of natural history."

J. H. F.

Game Bag and Gun.

The "Brief's" Pictures.

There are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

NEBRASKA GAME INTERESTS.

Wymore, Neb., Oct. 12.—*Editor Forest and Stream:* I have made a casual examination of the Nebraska game law passed by our Legislature last winter, and am of the opinion that Senator Gondring, who introduced the bill, was imposed upon by some one. The senator is a first-class lawyer and an honorable gentleman, but not a sportsman. The law has some of the ear marks of the market hunter. But if I am wrong in my first proposition I have no doubt that the law will be a dead letter, as all former laws on this subject have been, for the following reasons:

Take the subject of geese and ducks. The killing of geese and ducks is prohibited between the 1st day of May and the 1st day of September in each year. But the geese and ducks are not here between those dates, they come North early in March and do not come back until the middle of October. They have all passed on to the North before the 1st of May, and do not return until after the 1st day of September; so that this law is no protection to the ducks and geese while they are in Nebraska. I would suggest that we want a law that will prohibit the shooting of ducks and geese between the 1st day of January and the 1st day of October in each year. This would protect them in the spring, when they ought to be protected, and allow them to be killed in the fall when they are good for food.

There is another provision in regard to blinds, that provides, "And it shall also be unlawful for any person at any time of year to dig, build or construct any blind, hiding place or structure in the bed of any river, stream or lake with intent," etc. This is mere clap-trap. No person ever builds a blind in the bed of a river. They build them on sandbars and along the shore; and in a prosecution for a violation of this section the strict rules of the criminal procedure apply, and no person could be convicted under this section for digging a blind on a sandbar.

The chicken and quail law amounts to nothing. It provides a fine of $5 for each bird killed, but provides no adequate or systematic way of enforcing it. It is true that it makes it the duty of county attorneys, sheriffs, deputies and constables to enforce the law, but these are all elective officers. Any of these officers will serve a warrant, but they will not file complaints.

I would suggest that the only way that a game law can be enforced is to have a game warden for each county; and he must be appointed to the position.

Suppose we had this officer in each county and the law authorized him to have cards printed, and to furnish them to all the farmers, to post up on their farms, showing when the law did not permit the killing of game, and forbidding the killing of game on that farm. You have accomplished something; you have put the farmer in possession of a knowledge of the law; you have made him your ally; he wants to keep hunters off his farm. The farmer as a class are law-abiding and will help to enforce any good law. They would report any violation to the warden. The warden could then hunt up the evidence and prosecute the case, or the law might authorize the farmer to make arrests, and hunters would begin to have a little respect for him. He would not be "an old gray" in the eyes of the average pot-hunter, as he is now, but an officer of the law, and then the sportsman, when the open season came, could go out to the farmer and get his permission to hunt on his farm, and thus get his share of the game. Now it is all killed before the sportsman can go out, *i. e.*, before the open season.

The killing of prairie chickens began here on Sunday, the 11th day of July, this year. One hunter on that day found six coveys, and out of the largest of them killed six half-grown chickens. And the result was, that when the season opened on Sept. 1 there were no chickens left for the law-abiding sportsman to shoot.

The new law shortens the open season on quail to two months, viz., November and December; but no attention is paid to it, and it is in the months of January, February and March that the quail are killed. During the first half of the winter the cover is so high and dense that it protects the quail much better than the law. And the birds are generally found nearer the farmer's house, around the orchard and hedges, and he protects them. I believe we will never have adequate game protection in Nebraska until we post up the farmers and put them in position to enforce the law. And they, acting under the direction of an intelligent game warden, can do it.

Another bad feature of the new law is that it provides that "the corporate authorities of any county, city or village, within whose territorial jurisdiction such fine was recovered, and (when) collected shall pay to the complaining witness in such prosecution, out of the general fund of such county receiving such fine an amount equal to one-half of the fine actually collected," etc. Here we have that obnoxious feature of paid informers, which makes it almost impossible to convict for any violation of the law, and I believe that our courts would hold this section to be against public policy, unconstitutional and void. Besides, it gives city and village authorities the power to pay money out of the general fund of the county, which is certainly beyond the power of any Legislature. A. D. McCandless.

SPORTSMANSHIP MADE EASY.

Or the Cut and Dried of Good Manners Afield and Afloat.

Editor Forest and Stream:

In essaying a code of ethics for sportsmen, a free degree of candor is essential, independent of mincings, literary simpers, ornate aphorisms and wholesale laudations, to the end that I may have due credit conceded for my knowledge and philantrophy on the one hand, and on the other, that those who may be the beneficiaries will thereby have a code of ethics set before them in plain and simple directness, so that they may learn it as well as they may be able. I feel equal to the task, else I had never attempted it, though it is fitting, according to custom, to invite attention to one's own superlative modesty and coy unfitness for a literary venture, be the same great or small; but such remarks are never to be taken too seriously; if they are, they prove nothing against the author, though they do argue grave dullness in the reader. The fact that an author makes the plunge is proof of his own estimate of himself.

The sage rules which I unfold, amplifying and elucidating the etiquette of sportsmanship, are not addressed to the gentle reader; on the contrary, they are for the other fellow, whom we all so well know. We—you and I—have had our eye on him these many years. We have many times met him. We fully appreciate his crudeness and his selfishness, and we have a full knowledge of his methods. We will welcome any hints which will set him right as to his own deportment and consideration of the pleasure of others. Our fervid interest in his improvement has a live cause, since he has many times obstructed or spoiled our sport, disturbed our peace of mind, marred our temper or lessened our substance. What fellow more needs a strict code of etiquette than that dreadful other fellow? Nor need that other fellow take to himself any offense because this beneficent code is constructed for him. He should be glad that his misdoings are set before his nose, for anything which is offensive to the majority must necessarily evoke a law to restrict or abate it sooner or later. Moreover, in the meantime, the offender who has flaws in his etiquette will suffer more or less loss from them, though he may not be conscious of it. The sooner he corrects his ill traits, the sooner will his life's sphere widen, both in its material aspect and in the esteem bestowed on him by his friends, so that an erstwhile hog may evolve into a passable companion. Or the lack of consideration for others may be from inexperience.

When the subject has not been studied, or there is not the common sense to govern it, rules are very good substitutes within certain limits. Common sense being missing, a code of rules affords an intellectual trolley for the guidance of those through life whose common sense is absent, at the same time giving them the appearance of an intelligent exterior, if they but have the judgment to follow the code prepared for them. It is but a summation of compromises which are essential when one associates with his fellows.

Still, on the boundary line of what is mine and what is the other fellow's, there are innumerable opportunities for much marauding, for therein is a broad zone, an ethical no-man's-land, in which much is left to personal tact and sense of equity, since no rules can be framed to govern all circumstances and the peculiarities of the parties directly concerned. Much, then, depends on the nature of the occasion and the discretion which comes from a personal knowledge of the situation. Nevertheless, as the other fellow deals with the circumstances well or ill, so is his breeding or his nature determined. And yet we—who are not the other fellow—should be charitable and not censure him too severely for his shortcomings. Few of us gained our knowledge by intuition. Much of our knowledge came from the accident of opportunity. Much that we have yet to gain is absent because the opportunity to acquire it has not yet presented itself. Let us be charitable when it is so inexpensive.

General Principles.

As a general and permanent principle which is constant, the groundwork of the whole code is to look out for number one. Such is the colloquial manner of expressing a simple truth, which, when treated by the ethical scientist, is likely to be lost sight of in a fog of words. The code is in a manner a lubricant. In general it teaches us how to present an innocent and engaging front while our purposes are concealed, and yet progress well in the details.

Host and Guest.

As a general rule, a man becomes a guest because of the bond of friendship existing between invitor and invitee. However, there are other ways of securing an invitation. Invitations may be divided into three classes: The first comes voluntarily from the host; the second comes from a crafty manipulation of favoring circumstances by the would-be guest; the third is where one invites one's self.

Whether the invitation came unsought, or through engineering, or by force of arms, one should never for a moment forget that the host has no use for his home other than the pleasure and convenience of his guest; therefore, when the guest receives an invitation to come and stay and shoot, let him bring four or eight dogs; let them have the run of the house and jump in the beds with their muddy feet, and steam before the fire as they dry their wet coats, and let them fill the carpets with burrs, and let them steal into the pantry and kitchen to pilfer; also, it is no trouble for the servants to walk around them at every turn; and if the guest sees a single sign of annoyance, let him laugh in a far away manner and say, "Love me, love my dog." That jargon is supposed to cure all of good-fellowship ills and to put to shame any one who might dislike one's dogs, though it is possible that many times, if the truth were told when both dogs and man were a nuisance, the sufferer from their annoyances does not love either.

One should take special care, when he is a guest enjoying the privileges of shooting, that he under no circumstances takes any dog biscuits along for his dogs or any food at all. He should leave that requisite entirely for the host to provide. It shows a still more touching confidence if the guest arrives without any ammunition. Let him leave guns and gun implements scattered about the house as best suits his convenience. Give the miss-fires to the children to play with. Kick the home dog if he gets in the way or shows too much assurance, though it is best performed when the host or the children are out of sight.

Etiquette of the Field.

In now advising on etiquette, I recommend that the sportsman blow and boast of the superior excellence of his dog. No matter how important other matters may be, always let the excellence of his dog be the dominant topic. Keep up the theme of the dog's excellence about ninety days and then when he can talk no more, let him write a few dozen letters on the same topic. If he is a sensible man he will talk on any other subject with a great deal of tact; at least when the subject is threshed out he will dismiss it, take up a new one; that is, any subject but his dog. On that he is an uncompromising and interminable bore. Sometimes his affection for his dog is genuine; there are times when his affection gleams out of one corner of his eye while a hungry look for dollars gleams from the other.

Game Preservation.

The sportsman sometimes seems to think that the true solution of game preservation is his own personal opinions on the matter, and that the whole situation was created to fit such opinions. Often when at home surrounded by his friends he is an ardent game protector, and theoretically a scourge of all law-breakers—alone in the woods with a gun in his hand he is another fellow. By some fatuity, however, his ideas of game protection are such that if they were enforced he would get the most out of them and others the least. He preaches moderation when he promulgates his doctrine in the close season; when in the woods or fields for game the amount that he kills is measured only by his skill and opportunities. Still there are a noble few who are sincere and unselfish in their efforts to protect the game. Hence there are two classes, those who wish to preserve the game in the interest of all concerned, and those who wish to preserve it with a view to their own personal profit. There are those who believe that spring shooting is wrong, in words, shockingly wrong, yet in deed they will go forth in the springtime and shoot just the same as do the ones who do not think it wrong to do so; the former preaches as he doesn't practice, the latter practice and don't preach, so that in the summing up both do exactly alike. The fellow who shoots in the spring because he thinks it right to do so can never be convinced of his error by the others who in practice do as he does, and whose ideas of what is right are expressed in a frazzle of words which, though seeming to have a meaning, have none in fact.

Nothing is cheaper to maintain than a high moral principle, which one strenuously maintains with words while demanding that others furnish the necessary deeds. One maintains that it is wrong to shoot in the springtime, and yet he goes forth on occasion and shoots in the springtime. I have been told that the proper way to maintain right is for one to do right, so that he will be an exemplar in himself, give vitality to the cause which he espouses, and put courage in the hearts of those who need moral support to remain steadfast to it. In time, enough would rally around the banner of right to make a power which would make the right prevail.

"But," says the pro-con spring-shooter (against spring shooting in theory, and for it in practice). "if I do not shoo in the spring I will not get my share." You are right, Mr

Spring-shooter. You are justified in doing wrong rather than suffer any loss or deprivation. You don't own any share. No one does. When you shoot ducks you own what you have reduced to possession, nothing more. There is no fixed and determinate ownership in a share, as you fallaciously set it forth to cover your wrong-doing, but it serves as a colorable pretext for you to do wrong and justify it. Of course, there is a certain ratio of moral cowardice in doing a thing you know to be wrong, and then justifying it by showing that some one else does the same thing. Of course, you could justify any wrong-doing on the same line of argument, if there was no statute law or strong public opinion to hold you in check. Nevertheless, the public does not know all this, so you can pose both as an evangelist and a sinner, the latter being so informal and so well-explained that it doesn't count.

As to the Gun and Dog.

Borrow your friend's gun; borrow his dog—when you can. I am now communicating direct with you. Your friend may refuse you—what matter? He may be pained to let either gun or dog go, since they are costly, have required his daily care to keep in order, and have dear associations. Above all, either one is easily injured. So dear do they become that they seem to be degraded if they pass into the hands of anyone who does not prize them as highly, care for them as tenderly, and use them as skillfully as they deserve. But the gun and dog being borrowed, feel free to retrain the dog as you think he should be trained. Thrash him when you feel out of sorts, or when you miss a bird. Try some new loads in the gun, and do not be a bit squeamish about overloading it. If it is strained the loss falls upon your friend, the lender. Return gun and dog with the information that they are no good, and that you hope your friend will have better ones to lend next time.

As to the Fishrod, Flies, etc.

It is always much less trouble to borrow than to buy. Also, it is cheaper. Rods and flies, etc., cost more money when one buys them one's self than when the lender buys them. Borrow fishing tackle on the same general principle governing the like matter concerning the dog and gun, and if you break a tip or strain a joint either conceal it as much as possible or aver that it was so when you got it. Under no circumstances part with any money, nor even admit that you have had much of a favor conferred.

As to Camping.

When you are invited to share the pleasures of your friends' camping trip, set forth with the belief that all the conditions of camp life are to be the same as in your home life, with the one exception that there is a change of scene. All the drudgery of the camp is to be done by the host, for instance. One of the chief pleasures of camp life is that it tests a man's manhood and brings to him some of the prowess of his savage ancestors, whose stamina was as the hardy endurance of the oak, whose speed was as that of the antelope, and whose bravery and fearlessness were as those of the lion. Then there is the contrast of the plainness and personal hard work to enhance the return to home and the comforts of it by the contrast. Ah! but who wants to work in camp? The others, of course. Therefore, shirk the building of fires, carrying of water, the cleaning of fish, the washing of dishes, the cooking of dinners. Leave it all to the host or his friends. Were you invited indeed to be a guest that you might work? You have performed quite fully your part by consenting to be present. And if you are out of sorts, you are privileged to grumble and complain and object and make the others heartily wish that you were in Jericho. If the weather is bad, or the fish don't bite, or the mosquitoes are biting, make your companions know that you are peevish and sulky, and that you hold each one to blame and each one responsible for your ill success and your disappointment. You may have noticed that the next year after your trip you had no invitation to go camping, but of course that had no significance.

As to Deportment Afield and Afloat.

When you are fishing and shooting, there is no better time than then to hold a conversation. When your friend is fishing or shooting, he is so entirely unoccupied that it is quite a relief to him to listen to twaddle or silly stories, and it is well worth his while to take his dog and gun, buy a railroad ticket, ride on a long journey, all to give a little attention to sport and a lot to listening.

I used to wonder much at the taciturnity of the old hunters as I read of them when I was a boy, but I now better understand it. I do not think that they were truly disinclined to talk on meeting a tenderfoot, but rather that they feared to make a beginning lest the beginning should never have an ending.

All shooters know that the human voice frightens wild game, causing it to take flight quickly and spoiling the opportunity to canture, as all fishermen similarly know that it has the same effect on game fishes.

Always keep your gun loaded when you cross a fence, when you are riding in a wagon and when you are in camp. When you then fall over the fence the cartridge may not be entirely wasted when the gun is discharged. Still better success may await you if you fall into or out of the wagon, or if you drop your gun, or if the horses should run away. Your chances then to kill a dog, a horse or a man are infinitely better.

Take every shot that you possibly can, whether it is yours or not If any one should object, immediately grow quarrelsome. Your companion will hardly care to carry the matter further.

If fishing in a boat, throw your line over into your friend's water. If he has a strike, be prompt to cast where you saw it. Do not hesitate to cross your line over that of your friend. Flounder around in the boat every two minutes. The best time to do this is when your friend is extended in making a cast. When the anchor has been thrown over and just touched bottom, proclaim that you see a much better place and insist on pulling up the anchor again. Do this about twelve times an hour. This is a very pretty and delectable way to fish and it puts a charming variety into the sport. Throw the anchor over with a thundering splash. When you heave the anchor, heave it a long way. When you raise it, slam it into the boat. All these help to catch fish and make sport.

When carrying your gun, always carry it on your shoulder pointing at anyone following behind; or carry it resting on your arm, muzzle pointing forward at any one who may be in the lead.

If your companion is polite and requests you to take the shot, take it. Never consider whether you took the last one or the two last. Some sportsmen will not take any more than they are justly entitled to and will let the shot go rather than to be a hog by courtesy. But that is not right. Let your eyes gleam and take the shot, even if you are ashamed of it the next moment. The rules which apply so well to people we know, apply most fittingly to us as they see us.

The same rules which require that each one should be gentle and considerate to others in the ordinary conditions of life, and require that each one should shoulder his share of the burdens cheerfully and do his share well, are equally applicable to all alike in sport on field or stream, or in the limits of the camp. There are no special rules for deportment in an outing which differ from the rules governing the deportment of gentlemen and ladies at all other times. The details of an outing may differ from the details of home life, but the difference is one of surroundings—the people remain the same.

There is this to add: that many people, through the favoring conditions of home life, succeed admirably in concealing their real nature, and by fixed and long-continued habit under certain fixed conditions they become known as having a certain fixed character. They are simply habituated to do certain things under certain circumstances. A life in a groove is not all of life. A while in camp brings out a man's true character, and his every-day life, by such test, is often proved to be fictitious. ALCIBIADES DRYNOODLE.

THE JACKSON HOLE ELK.

DENVER, Col., Oct. 8.—*Editor Forest and Stream:* After reading your editorial criticism on what you allege to be in my letter to Mr. Adams, and after reading the letter itself again, I think there is nothing in it I ought to take back or even modify. I think most fair-minded people will look at it in about the same way. You do not criticise what I really said, for the most part, as much as what you assume that I said. If you wish to set up a man of straw, label him with my name, and do battle with him, it is no more than is often done by disputants who have a weak case. I do not wish to be harsh, but I object to being criticised for saying palpably absurd things which I did not say.

If the facts were that these elk would have starved to death if Mr. Adams had not fed them, it seems to me the authorities of Wyoming did the sensible and right thing in refusing to prosecute the man who saved their lives, and afterward kept some of them as a partial return for his outlay in preserving all of them from destruction, even in so doing he committed a technical violation of the letter of the law. You have no right to say that, in taking this position, we ally ourselves with those who seek to palliate the murder of game wardens, or any others whose attitude tends to the disregard of law. On the contrary, we are favoring such a reasonable and fair enforcement of the law, in cases where its literal and rigorous enforcement would work injustice, as tends to create and maintain respect for it and confidence in its beneficence, which in turn will surely create law-abiding sentiment and conduct just as certainly as a contrary course will produce a contrary result. Human laws are all makeshifts, the best we can do under the circumstances, sweeping in their terms, because in framing them few exceptions can be explicitly made. Their object is to prevent the wrong and conserve the right, and they are made as far as possible to fit the largest number of cases. Only in laws of such supreme importance as those which relate to the taking of human life, is an attempt made by legislators to provide explicitly for such considerations as intent, provocation, mitigation, etc., whereby we have such legal distinctions as differentiate the degrees of murder and manslaughter. But these same considerations exist in all cases where law has been violated, and since the Legislature has not provided for their recognition, it is not only the right of officers of the law in whose hands its enforcement is placed, but it is their duty, to take notice of them to the end that justice be done, which is the end of law. There is not a sheriff, a district-attorney, a grand jury, a judge, or any other officer who does not habitually and necessarily conform to this unwritten rule. If he did not, he would not be fit to hold his office, or any other office, because he would be lacking in good sense.

Now, if Mr. Adams' claim is true, this is exactly a case in point. If he had not fed them they would all have died, and could never have themselves furnished a target for the sportsman or helped to perpetuate their kind. If he had converted them all to his own use the game supply of Wyoming would not have suffered at all, and that number of animals would have been utilized instead of going to wanton destruction. As a matter of fact he kept only a part, and the rest went back to their forests to replenish the stock of game. From the standpoint of anyone who believes that the game laws should be so enfored as to secure their greatest benefit, and not, by a foolish and slavish conformity to the letter of the law, to defeat their object in whole or in part, ought Mr. Adams to be prosecuted or commended?

This leaves out altogether the question of humanity, the absolute right of dumb animals to food on their own account, and the duty of mankind to supply it when possible. This right is recognized by the law as superior to the right of property in them held by human beings. The only higher right is that of human necessity. It is idle quibbling to say that this recognition was not intended to apply to wild animals, for if it was not so intended it ought to have been. Moreover, you do not and cannot know whether it was so intended or not; if it was not so intended, it is equally true of any law that not all the variations of its application can possibly be in the mind of the legislator; and since it is the animal's rights which are in question, ownership, wild or domestic condition, or any other incidental circumstance has nothing to do with the case and is excluded by the language of the law. Do you mean to say that a deer which comes to my stacks in a starving condition has no absolute right to be fed, if I can do it, while a hog, for instance, has?

But to return to this question of humanity Under this principle it was necessary for these elk to be in danger of actual starvation, as it is claimed they were, to justify Mr. Adams in feeding them and afterwards recompensing himself from them. If they were suffering for want of food and not in actual peril of death, it was his duty to supply their necessities if he could; having done so he had a moral right, if not a legal one, to their control until he was paid. The law which, for prudence sake, restricts the legal exercise of this right to officers of the Humane Society, does not change the principle at all, or the duty of officers to recognize it in the administration of other laws on which it has a bearing. When persons not specifically authorized, but in good faith and actuated by the same motives as the law presupposes in the case of officers of the Humane Society, relieve the distress of suffering dumb creatures, it is a matter which officers not only may, but ought to, consider when action is urged or contemplated.

You may say such doctrine is subversive of law and order. Is the doctrine any more subversive than the practice which, as I have already said, prevails everywhere? If your contention were true, it would seem to me that the law and order which common sense and humanity are subversive of cannot be subverted too soon. As a matter of fact, it is directly in the interest of law and order, as has been already said, that such considerations are urged. Improperly applied or carried too far, they would, undoubtedly, be mischievous. So would almost any other principle of human conduct. There is no greater bugaboo than your "logical conclusion." Nobody ever carries anything to its "logical conclusion" except for the sake of argument.

It remains only to be said that every case must be judged by itself; so should this. If the fact appeared to be that the claim of starvation was only a pretext or subterfuge, then what is here said does not apply to this case. If you had taken that position alone I should have no chance to argue with you; but, except by implication and incidentally, you do not allege that in criticising my letter.

It is a foolhardy thing to engage in a controvery with an editor. It is all right for us of the FOREST AND STREAM family to squabble among ourselves, but to beard the Editor, that is rashness indeed. However, as far as these columns are concerned, you began it. I do not think your editorial was nearly as fair as it should have been; and the tone of contemptuous sarcasm which pervades it might well be absent from a discussion in which both sides are supposed to be seeking only the truth. E. K. WHITEHEAD,
Sec. Colorado Humane Society.

DOWN IN MAINE.

BOSTON, Oct. 16.—The hunting season is progressing finely, with most remarkable weather for October. Parties that have been in the Maine woods for two weeks report fine weather every day; warm and not a touch of rain. The leaves are falling rapidly, and begin to trouble the big-game hunters with their noise and rustling. For a few days still-hunting will be difficult. Mr. N. G. Manson is out from Camp Leatherstocking, Richardson Lake, with his two deer. He went into camp late in September with a party of four—his brother, Mr. Drew and Mr. Howlett. Mr. Manson is the only hunter of the party. He quietly told the others that they would have a deer on the 1st of October, the legal opening day. They were inclined to chaff a little, but recommended that he do so. "Oh, yes, get a deer, by all means; we shall need it for steak." On the evening of Sept. 30 Mr. Manson casually remarked to Oscar, the guide, that they would be up early and get that deer. Still the others were inclined to doubt him a little; did not believe that a deer was to be had without hard hunting. Daylight saw the hunters off, while the others were snoring. As good luck would have it, the morning was still and frosty. They went quietly up the Richardson Pond trail. "Sh.," from Oscar, as he pointed ahead. There was a handsome yearling doe. Mr. Manson is an excellent shot. One crack and beautiful creature was down; shot squarely through the shoulders. They dressed the meat as quickly as possible and tugged it back to camp. The other hunters were just out of bed. They could not believe that a deer had been secured so early, but finally allowed that they heard the shot, though believing it to be sheer bluff. Mr. Manson's second deer, a handsome buck, was obtained about as easily. With Oscar he wended his way up an old lumber trail for a mile or so. Sitting down on a log they watched awhile. Something moving was discerned about 40yds. away. It proved to be a pair of ears and antlers. The deer was feeding, with his head in the underbrush. He turned slightly and gave an excellent chance for a side shot, at which he fell dead in his tracks. Mr. J. Parker Whitney, with Mrs. Whitney, is in camp, and enjoying the hunting on the same lake as Mr. Manson. He is to remain for some time; it being his first trip to camp this season.

Mr. G. C. Tyler is out of the Maine woods, with a buck deer to his score. With his son, of nineteen years, and a friend or two, he hunted at Long Pond, near Jackman, on the Canadian Pacific. The point is reached from Long Pond station and an easy tramp through the woods. The young man was full of enthusiasm to get his first deer. The guides did their best for him, giving him one or two snap shots, neither of which was effectual. The party saw a great many deer, but shooting on the bound is difficult.

A party of Watertown, Mass., hunters came out of the Maine woods on Thursday. Messrs. Otis, Evans, Philbrook and ex-Senator Niles made up the party. They hunted in Holeb township, northern Somerset county. The deer they found abundant and they brought back seven as trophies. They are satisfied; and well they may be.

A great many deer are actually coming toward civilization over the Bangor & Aroostook Railroad, notwithstanding the exaggeration of the facts put out by reports from those anxious to boom the railways. From reliable sources it seems that up to Oct. 12, 254 deer had been shipped over that road alone, with four caribou and three bears.

The Massachusetts open season on quail began Oct. 15. The weather was almost too hot, but the hunters were out in full force in many sections. It is almost too early for returns from them, but it is certain that in some sections quail are more abundant than usual. I have it from good authority that there are more quail in Essex county this season than ever before. Georgetown and Byfield are especially having a good many coveys of quail. But the local gunners are capable of taking care of about the whole of them, and they were out in full force Friday and Saturday. I saw a game warden yesterday from Plymouth county, and he says that quail are very plenty this year.

Partridges in Maine are reported to be most remarkably scarce. The deer hunters returned say that they have never seen so few. One party hunting deer in the vicinity of Richardson Lake saw but two partridges, though in the woods every day for two weeks. A year ago two or three a day was nothing unusual, hunting over the same ground. The extremely cold and rainy spring is believed to have destroyed the eggs and young birds. SPECIAL.

REMINISCENCES OF AN OLD SPORTSMAN.—II.

(*Continued from page 307.*)

One of my companions was presented with a rifle, long and unwieldly, but, as he said, an awful one to shoot. He was very proud of it and came over to show it to me, and proposed going out the next day, promising that he would not kill any game without my permission. The next morning he was on hand bright and early, and with Milo we started for the woods after squirrels or anything else that might show up. My companion was in the best of spirits, and boasted of the feats that he would perform in the way of knocking eyes out of squirrels, taking heads off of grouse, etc., until he had worked himself up to quite a state. The first game we flushed was a bluejay, and as she alighted on a limb some 50yds. away and presented a fair mark, I advised him to give her a try. Resting the rifle across a limb he took a long and deliberate aim and let go. The bird darted away uttering discordant squalls. When Joe turned to me with wide-open eyes exclaiming: "That beats all, did you hear that bird swear at Uncle Cale for giving me that gun?" "Yes, she certainly said Caleb, and her remarks sounded very much like swearing. You must have come very near her." "Yes; if she had not dodged just as I pulled I should have taken her head clean off." I did not gainsay this, as I was afraid that it might hurt his feelings if I told him that I had seen a twig fall at least 3ft. above the bird, and heard the thud of the ball as it struck a large tree some 4 or 5ft. to the left of the line. As this tree was in the direction in which we were going, I stopped near it to look for the mark of the ball, when greatly to our surprise we found a gray squirrel at its foot with a bullet hole squarely through the middle of its body and with the blood still trickling from the wound, so that there could be no question as to the manner of its death. Picking it up, I accused him of deliberately trying to deceive me by telling me that he was shooting at the jay when all the time he was drawing a bead on the squirrel, and then I soundly berated him for spoiling so much meat by shooting it through the loin, instead of knocking out the eye he had talked so much about. I said so much and in so serious a manner that he more than half believed that I was right, and when we got home he was completely converted, for he drew a bead on the squirrel at ten rods and killed him first fire and would have shot him through the head, but in the excitement he forgot to allow for the drop of the ball.

One day my companion shot a squirrel that lodged in the fork of the tree, nearly 50ft. from the ground. Although the tree was a very hard one to climb, he somehow shinned up it, and reaching the squirrel, was upon the point of dropping it to the ground when an inspiration seized him, and he took out his knife, and cutting off the tail, whittled a peg from a twig and pinned the tail fast in the fork, leaving 3 or 4in. of it in sight, and so natural did it look that I bade him hurry down for fear that I should give it a shot, and he might get hit. When we were some two miles from the place and nearly home, my companion discovered that he had lost his knife, and he remembered that he had stuck it in the tree when fixing that tail, and had forgotten to remove it when he came down, so we decided to go that way in a day or two and secure it, but it was nearly a week before we went.

When we arrived at the tree we noticed that the tail looked a little the worse for wear, and that there were quite a number of spots near it where the bark had been knocked off, which showed us that the joke had been a success. My companion went up the tree for his knife, but he did not find it, neither could we find it on the ground, so we came to the conclusion that some one in shooting at the tail had knocked the knife down and carried it off. But this was not the case, as I learned several weeks later.

It appeared that two hunters were in the vicinity when their dog ran a squirrel up this tree, and as they came up on the opposite side they did not see the tail, but one of them saw the squirrel and blazed away at it, knocking it off the limb; but, unseen by them, it caught on again, and slowly crawled almost to the top of the tree. In looking for him they discovered the tail, and thinking it to be their game lodged in the fork they gave it several shots; but as they could not dislodge it, one of them climbed up after it, and when he got there he found the knife, which he kept, and he also saw through the joke. But the worst of it was that this had happened just before we came upon the scene, and they had gone only a short distance when they saw us approaching the tree. They dodged behind a clump of brush to see us shoot at that tail; but when these heartless wretches saw what we were up to, instead of coming out and giving up the knife, they just lay there and watched the performance, and stuffed their handkerchiefs into their mouths so that we should not hear their ill-timed laughter. We never knew who they were, nor did anyone know who lost the knife; but we heard the tale and laughed at it with the rest, and the whole crowd, including ourselves, agreed that it was a first-class joke.

Once when hunting in this vicinity Milo called us to a tree, and as I saw the squirrel I pointed it out to my companion and bade him shoot it. Resting his gun against a tree, he took a good long aim and fired; but his nerves were not just right, as this was his first squirrel, and, as I expected, he missed him. But there was another one some 20ft. beyond this one, and the report of the gun, or perhaps the shot rattling around him, startled him, and he made a jump for another limb, and missing it, came tumbling down; but he never reached the ground, as Milo made a practice of catching every one that was shot over him, and this one shared the fate of many a brother that had gone before. I tried my best to convince my companion that he had killed his squirrel, but he grinned and shook his head. Then with a furtive glance into the tree, where he could see the one he had shot at still curled up in the fork of the limb, he continued to load his gun, and when all was ready tried again, and succeeded in bringing it down. "There," said he, "I've got him; but I made a bad miss the first time, and you can't load a fool squirrel that commits suicide on to me, for I know that I didn't touch him." I have always honored my companion for his behavior on this occasion, and I never see any one claim a shot that does not belong to him without thinking that he would feel much better, as well as retain the respect of his companions, would he but emulate the behavior of my friend!

I may as well take this opportunity to tell of a squirrel scrape that bothered me not a little at the time, and has always sat heavy on my conscience. I had quite a reputation as a squirrel hunter, and Milo and I had frequent invitations to go out after them with someone who loved the sport. One evening a stranger from the city came to my house and asked me to go with him the next day, and I promised to do so. The next morning we were in the woods before sunrise and had gone but a short distance when I saw a squirrel running on a limb. I blazed away at him and killed him, and was greatly surprised to see my companion throw up his gun and shoot after the squirrel had fallen at least 4ft., and was still more surprised to hear him claim the shot; but this was not all. Looking me squarely in the face with a patronizing smile, he said that, as I was a boy, of course I would naturally feel that I had also hit the squirrel, and in order that I should be perfectly satisfied we would flip a cent to see who should have it. This was entirely new to me. I had never witnessed quite so barefaced a transaction as the shooting and subsequent claim, and was at first dumbfounded; but by the time that he had finished his very fair proposition, astonishment had given way to amusement and I began to enjoy the situation, and readily agreed to the proposed arbitration.

The dispute as to who should have the game was also entirely new to me, as heretofore the only quarrels on this score that I had ever had were when I tried to make my companion take more than he thought was his proper share; in fact, squirrels were a drug with me—that is to say, dead ones were, and I could not comprehend why a man should demean himself in such a manner when he could have had for the asking the entire proceeds of the day's hunt, or he could have gone to the market and bought all the stock on hand for five cents a piece. These thoughts flashed through my mind, and then an inspiration seized me. I had for some time been possessed of one of the old-fashioned cents then in use that had a head on both sides. This I had occasionally used to beat the boys, but I am now pleased to know I never had recourse to this unless I thought the conduct of my antagonist justified the use of the double-header. As this was most emphatically a flagrant case of this nature, when he took a cent from his pocket I was ready for him, and as was the usual method in such cases, each flipped his cent in the air with heads to win. Of course I won, and I could plainly see he did not like it for a cent, but I put the game in my pocket, and we moved on.

Meantime I had been thinking it over, and I began to get mad, and just as Milo opened on one that he had treed an inspiration seized me. Now when this happens I am powerless except to obey the promptings of the inspiration, so you see that I am entirely blameless, let what will happen. Well, the genii that had me in their toils bade me pay this man off in his own coin, and as I had of my own free will wrung in a cold cent on him, I thought that if such things were sinful perhaps the whole business would go on record as only one item, and the chances were that the aforesaid genii would catch it instead of me, so I gave in without further struggle.

When we came to the tree where Milo was barking, instead of looking for the squirrel, I kept my eye on my companion, and when he raised his gun I brought mine into position, pointing it as nearly as I could guess in the same direction and blazed away as soon as he did, and then I claimed the shot. I could see that he was both surprised and disgusted, but the spell I was under rendered me callous to this. He again proposed an appeal to the Goddess of Liberty to arbitrate between us, and she was soon spinning in the air, and, it is perhaps needless to say, coming down right side up for me every time.

This performance was repeated, with slight variations, until I had five tails hanging out of my pockets, while he had not the ghost of a hair to show. He then said that he disliked hunting with a dog, and that he would try still-hunting; then he turned and soon disappeared, and I have never seen him since. Soon after he left me the "power" departed from me and I was in my normal condition, and found myself deeply regretting the whole business. Not that I was sorry for him or gave a thought to his feelings; his punishment was all right, but I grieved and still regret that his conduct should have inspired the aforesaid genii to force me to do such unsportsmanlike deeds.

There was one squirrel that knew more than I did, at least he always came out ahead when we met, and after this had happened several times I began to get interested, and resolved that I would have that tail if he ever showed up again. He lived at the corner of some heavy timber where there were hollow trees, one of which he would make before I could draw a bead on him.

I had for a companion one day a young fellow fully my equal in nearly all that pertains to the science of squirrel hunting, and on a few points he was ahead of me; but as squirrels were plentiful and we had quite a diversified experience, I flattered myself when our day was ended that I knew as much about the art as he did. There was one wrinkle that he showed me that I took to at once. Milo barked at a butternut tree, and just as we came up we saw a tail disappear in a hole in the tree some 15ft. from the ground. My companion said never a word, but leaning his gun against a tree took out his knife and, cutting a sapling the proper length, took from his pocket about a foot of fuse, such as is used when blasting rock, and tied it fast to the tip, then touching a match to it he stuck it in the hole, telling me to "give it to him" when he came out. Sure enough, in about five seconds he came out with a rush, and as he was getting away from there as fast he could scramble I "gave it to him" and brought him down. Of course, I did not let my companion know that this was my first experience with this method of operation, but at the same time I was deeply interested, and at once saw that my big corkscrew that was used to draw the game from the hollow trees could now take a rest, for here was something that would do the job much better, and I determined to test the new device upon the veteran previously mentioned, that had escaped me so many times by taking refuge where I could not reach him with the corkscrew.

The next morning I invested in a couple yards of fuse, and started out to interview the veteran in his home at the corner of the wood lot. Milo was soon calling to me, and as I hastened to him, I caught a glimpse of the old fellow as he whipped into a hole in the tree some 30ft. from the ground. Now, I had decided to take this squirrel alive, and carry him home to occupy a cage that had been vacant for some time; and for the purpose of capture and transportation, I had made and brought with me a stout bag about 2ft. long by 1ft. in width, with a puckering string at the open end to make all secure when I had bagged my game. I took this and the fuse and shinned up the tree until I came to the hole, when I cut off a piece of fuse, and lighting it, dropped it into the hole, for I had been there before, and knew that the hole went down instead of up; then, placing the open end of the bag over the hole, as calmly as I could I awaited events. I had not long to wait. There was soon a scratching down in the hollow, which rapidly came my way, then a struggle in the bag, a quick drawing of the strings and my captive was safe, and I put him in my pocket and began to descend the tree; but I had not gone 4ft. before there was more scratching and scrambling in the hole, and as I glanced up I saw the big old fellow that I thought was so safe in my pocket come out of that hole with a rush, and almost flying up to the top, he took a desperate leap for another tree and ran along the limb, and disappeared in the hole that was just above where the limb joined the tree. This was discouraging, and as I descended to the ground I felt anything but pleased at the result; but I soon braced up and resolved that I would have him, regardless of time, trouble or fuse; so I started for the tree with renewed hopes and courage, and was soon astride the limb just under the hole. As this one ran up instead of down, I had brought with me a long slender twig to which I tied a piece of fuse, and setting fire to it I ran it up as far as I could, then placing the bag in position I again calmly awaited events and listened for the scratching and scrambling of my victim. But not a sound did I hear except the sputtering and hissing of the fuse. I was getting impatient, when suddenly the bag was twitched from my grasp with a jerk and went sailing to the ground with the prospective tenant of my empty cage enveloped in its folds. No sooner did they strike the ground than the old fellow cleared himself from the bag, and springing up a nearby tree with a derisive wave of his tail he disappeared around the trunk, and I never saw him again; for he shook the dust of his long-time home from his feet and took his departure for more congenial quarters. Let us draw the curtain here, as I had nothing to say that would interest or edify the reader.

Shadow.

[To be continued.]

NOTES FROM NEW BRUNSWICK.

Nearly all the American sportsmen who have been seeking the moose and caribou in New Brunswick this fall, and of whom any information has been received, have been very successful.

E F. Coburn and Dr. George B. Elliott, of Lawrence, Mass., who have been hunting on the upper waters of Little River, with W. H. Allen and Ed. Church, of Shirley, Maine, as guides, brought out two fine moose last week. One head measured 52in., the other 46. Mr. Allen has concluded to hunt altogether in New Brunswick henceforth. He is certainly a very reliable, energetic guide, whom I can recommend without reserve.

Mr. Allen seems also to be endowed with more than the ordinary amount of that mysterious quality known as luck. While on his way back to Little River last Monday, for the purpose of bringing out some moose meat which had been left behind, he came upon a large bull moose at Rideout Lake, only four miles from Mount Hope settlement. Mr. Allen succeeded in bringing down the moose and taking the entire carcass to St. John. The head of this moose measured 50in.

Messrs. W. F. Fowle and Gordon Parker, of Boston, who have been hunting in the region of the Crooked Deadwater with the veteran guide, Henry Braithwaite, emerged from the primeval last Wednesday. They shot three moose, one of them having a 55in. spread of antlers. Bronson Rumsey and George Blestein, of Buffalo, met Henry at Boiestown on the 8th, and have gone into the wilds for a trip of five weeks. The well-known hunter and trapper Jim Logan, is also with the party.

Mr. George F. Durgin, of Concord, N. H., had excellent luck on the Nepisiguit. He shot a moose, a bear and three caribou, besides missing a very large moose which came up in the darkness. Mr. Durgin says that there is no doubt about the Provinces being the coming place for good sport. The heads are being mounted by Mr. Crosby, of Bangor.

All the American hunters who have tried the Restigouche this fall speak very highly of the country. I have not received any details, further than that, Mr. G. A. Worth got a fine caribou, Mr. Rosengarten a moose, and General Hill two of the largest moose heads ever taken in that region. Most, if not all, of these heads were also shipped to Bangor.

Mr. Crosby writes me as follows: "I hear from the Tobique that a head spreading 69in. has been killed, and that it is coming to us. I believe the owners are Messrs. Bryant & Decatur, of Boston. Will give you exact measurements when I see the head. I am glad to say that at last everything in the shipping line has been fixed O. K., and we are receiving heads from the Provinces on every express. Many of my friends are having the best sport of their lives there. As I recommended them to New Brunswick, I am much pleased to have them so successful. If New Brunswick continues her policy, she will enrich herself many thousands of dollars annually from American sportsmen. I think your laws are framed about right."

Alonzo Davis, of McAdam Junction, invested in a new Winchester the other day. On the following day he surprised two bears in a beech tree and bagged them both.

While on a three days' partridge hunt at Bear Brook last week, your correspondent, finding signs of moose quite numerous, "called" one evening at Burpee Lake, with the result of bringing up a very large moose, but though the animal remained for nearly an hour grunting and prowling around us within easy shooting range, he refused to be coaxed out of the alder thicket in which he was concealed, and is still roaming the forest wilds. Such is life.

A letter has been received from Mr. John Bodkin, of Fredericton, who is hunting on the Nepisiguit, stating that on the afternoon of the 8th he shot a monster moose with a spread of horns of 66in. If this measurement is correct (and Mr. Bodkin is a gentleman whose statements can be fully relied upon), the record heretofore existing for Maine, New Brunswick and Nova Scotia has been surpassed by at least 3in. Mr. Bodkin has the additional satisfaction of having called up this moose himself. Mr. B uses for moose hunting a double-barreled "composite" gun, such as are now made by several of the leading English manufacturers. It is a shotgun to all intents and purposes, but is rifled at the

muzzle for a distance of about 2in. It throws a heavy conical ball with accuracy up to a range of about 150yds., and, having 5drs. of powder behind the bullet, is a most formidable weapon for big game. Mr. Bodkin states that when he fired at the big moose the animal at once charged him, but was brought down with the second barrel. As soon as the head arrives in Fredericton the full particulars of measurement will be sent to FOREST AND STREAM. A pair of moose antlers passed through Venceboro the other day measuring 62½in. They came from the Restigouche region, but I could not learn the name of the owner.

Your correspondent had the pleasure to-day of gazing on the profile of the moose that fooled him at Burpee Lake last week. When coming out of the woods, I told Harry Allen of my experience with the animal. Mr. Allen and his hunting partner, Ed Church, promptly repaired to the spot, and bagged the moose two days later. The head, which measured 42in., would have been much wider, but one of the antlers had been greatly worn at the exterior points while in the velvet.

A hunting party consisting of George Jones, Cliff Price and Humphrey Davidson, returned last Thursday from the Canaan River. They brought out the carcass of a large bull moose, and also some sixty partridges. These birds are much less plentiful this year throughout the province than usual, which is attributed to the cold and wet spring having interfered with the hatching industry.

John Bruce, of Chicago, has concluded his hunting trip to the Bathurst Lakes. He had one Indian guide, and was encamped on the lakes twenty-four days. He shot a moose, a bear and three caribou.

E. S. White and brother, of Boston, reached Fredericton Saturday, Oct. 15, after a three weeks' cruise on the Nor'west. They had Arthur Pringle as guide, and brought out heads of four caribou and one fine moose, latter measuring 53in., and all its twenty five points perfect.

FRANK H. RISTEEN.

CHICAGO AND THE WEST.

Are Goats Good to Eat?

CHICAGO, Ill., Oct. 16.—Mr. Ezra E. Howard, of Edgar, Neb., writes me interestingly on the subject of the edibility of the flesh of the mountain goat. I confess that I never tried to eat goat meat on my trip after goats, excepting a taste or two which I took of raw goat. I did not like it that way, and as all the other men said it was not fit to eat, we passed verdict on it without a fair trial, although we were very hungry at the time. Mr. Howard has the following to say of his experiences with Western big game:

"I have been much interested in reading your account of "Sheep and Snowshoes" and also of your trip after goats, as I have hunted the goats some in British Columbia, and in my opinion you made a big mistake when you did not try eating the goat meat.

"When I first hunted them I had heard the same stories about the flesh being strong and unfit to eat, but having tried all kinds, including the billies and nannies, I have found the meat good and sweet, with no bad taste, unless it has lain too long after killing.

"We packed a hindquarter down out of the mountains to the camp, where some of our party were who had not been out with us, and had not eaten any goat meat, and it passed readily for venison, and all enjoyed some good steaks of goat meat. I think that like our party, at first, most people have taken it for granted that the meat of the goat was bad, anyway, and never gave the goat a chance to redeem himself. Of course the goats that we killed were subjects of her Majesty the Queen, and may feed on a little different diet from a plain goat of the Republic, but I think they are about the same. We found them in all from the water's edge up to above timber line, and had no trouble to get close to them by moving slowly; they did not pay any attention to the sound of a gun unless they could see the flash, nor to a person moving unless he made a quick motion, when they were off like a flash.

"One day when turning around the corner of a large rock near a water pool, I came upon an old billy quietly chewing his cud not over 30ft. distant, and he looked at me, but never moved until I shot him. Again, I passed within a few yards of a nannie and her kid on a rock, and they did not seem to fear us, but remained there as long as we were in sight.

"A bunch of them will play like sheep when undisturbed, and I have watched them frequently from a distance, and one could almost be sure that they were a band of common sheep quietly feeding in some farmer's pasture

"One trip we had a dog with us that would sometimes, in spite of us, get after them, and they would show him a clean pair of heels, and I think never stopped to show fight, and so I am of the opinion that their fighting qualities that we have all heard so much about are a myth, as I have seen them under varying conditions, and singly and in bunches of eight or ten, and when feeding, playing, resting and travelling.

"They can climb, too, I want to tell you. Several of our party saw an old billy go up the steep face of a rock one day (and the rock was wet at that) where it hardly seemed possible that a squirrel could go, but he made it safely to the top, several hundred feet.

"What I have written is, as near as I can figure it, different from what I have read about the white goat, but it is just as I have seen it. Though it may be different from the observations of others, I am inclined to believe that some writers have taken the 'traditions of the elders' instead of their own experience, and if that is the case it will not be the first story about wild animals that I have found to fall down when out in the homes of these people of the forest and mountain.

"The more that I hunt and go among wild game the more I like the platform of FOREST AND STREAM, 'Prohibit the sale of game,' and add to it, 'probibit the game hog.' Not saying it boastingly, yet I do say that the last hunting trip I took to the far West in British Columbia I did not kill a single animal of any kind, as I had killed some of all the game that we saw, and so let the killing out to the men who had never killed any goats.

"Business has kept me pretty close at home for several years, but I expect to take a trip next year, Providence permitting."

The Duck Season.

The duck season in this part of the West will draw to a close within the next two or three weeks. It has thus far been reported as an unusually good one, although the extremely hot weather of the last few days in this part of the country has not been strictly consistent with good wildfowl shooting. The Northern birds are not down in this part of the country yet to any extent, although in Minnesota and Dakota the migration has already begun. On the Kankakee country, where most of our snipe shooting is done, but few snipe are yet reported. A cold wave is now on hand, and there may be a heavy flight of snipe in almost any day now.

The Big Game Season.

The big game season in Wisconsin and Minnesota is now nearly at hand, and the local papers over the country are beginning to take up the mooted questions of resident and non-resident licenses. State Warden Ellarson, of Wisconsin, has sent to the County Clerk of each county a form of application for resident deer hunting license. Some resident hunters have thought they could take out licenses in several counties, but Mr. Ellarson appends to his form of application an affidavit to the effect that the applicant has not and will not make application to any other County Clerk in the State of Wisconsin during the period governed by his application. Two coupons authorizing the transportation of two deer are attached to each license. The killing and handling of deer in Wisconsin will this fall be more carefully hedged about than ever before in the history of the State.

Minnesota Moose.

The opening of the close term in Minnesota will be an event of great importance to hundreds of hunters in the West and in the East. It is likely that Wisconsin will be passed over by many non-resident hunters who would be glad to kill a moose as well as to evade a license. The five days open season on moose in Minnesota will be a busy time. The woods dwellers of Upper Minnesota have not been so slow as to lose sight of the profitable occupation of guiding non-resident hunting parties. They have been sending out letters to such sportsmen as they could reach, and have generally given it out that moose and caribou are more abundant in Minnesota than ever were known before. This assertion is hardly accurate, although it is true that there are moose enough in Minnesota to certify its claim of being one of the greatest big game countries open to the sportsmen of the United States. The Duluth *News-Tribune* last month looked into this moose question, and in its comment deprecates too great an enthusiasm over the moose supply, which it thinks has been much cut down by illegal shooting. It goes on to say:

"The real facts are that owing to the close there are probably as many moose and other big game to be found as there were before the close went in effect If there had been no close on such game, it is probable that it would have been practically extinct now. All the same, the close has not been observed, either by the Indians that overrun the country, or by the white residents that are scattered through it. The only benefit that has been gained by the close of shooting on moose and caribou consist in the fact that city sportsmen have been deterred from hunting during the five years now at end.

"Some of the oldest hunters believe that the close on big game in this State ought to have been extended indefinitely, and that more rigorous measures than have been inaugurated to prevent the annual slaughter by Indians and whites in the country inhabited by such game. To be sure, the season is only five days long, and each hunter may kill only one moose, but if every hunter arranging to go in the woods this autumn with the expressed intention of killing a moose, should be successful in his mission, there would be mighty few of the big fellows left to furnish sport for next year."

Where to go for Moose.

I am advised by those who should know, that Warroad, Minn., will be a good point to keep in mind for a moose trip next month. The town is at the mouth of the Warroad River, on Lake of the Woods. It can be reached by stage from Stephen, Minn., or by boat from Rat Portage, Ont.

There are still a few moose left in the Roseau Swamp country on the line between Minnesota and Manitoba. East of there, and in fact over a great strip of country in upper Minnesota, there is moose ground of greater or less excellence. Out of Grand Rapids, Minn., at no great distance there is good country, and a number of moose will no doubt be killed. All through the Itasca country the moose have been known to be fairly abundant this year. Near Kabbekona Camp two moose were killed—illegally, of course—this month by Indians. The Indians have, of course, killed moose all over Minnesota regardless of game laws, whenever they liked to do so.

Where to go for Caribou.

I have a hot tip on caribou from a man who knows what he is talking about. He advises that one take boat by one of the Booth fishing steamers which ply along the north shore of Lake Superior, going into camp at Reservation River, hunting that country and the Pigeon River country. He would need a guide, of course, and would have to camp out. I am very sorry, but I do not know just now of any caribou or moose country where one can go hunting with all the comforts of home.

Michigan Deer.

At Alger, Mich., preparations are being made for a big lot of deer hunters from lower down in the State, and from outside of the State. It is said that although contrary to law, the use of dogs is very common in that neighborhood. Indeed, it is common over a great part of the deer country in Wisconsin and Michigan.

A Sporting Governor.

Governor John R. Tanner, of Illinois, arrived home this week from a camping and outing trip at DeBeque, Colo., much pleased with a successful hunt. Several deer were killed by the party, among whom were Messrs. J. W. Gates, President of the Illinois Steel Co., I. L. Elwood and John A. Drake.

Fox Hunt Barred.

One of the attractions proposed for the coming horse show at Chicago was a fox hunt, in which a live fox was to figure. The officers of the Illinois Humane Society have announced through their president, Mr. John G. Shortall, that no hunt after a live fox will be allowed to take place in the Coliseum. It is announced that if the gentlemen concerned in the horse show care to pursue an aniseed bag they may do so, but the line is drawn at a live fox.

Lion Kittens.

At Lincoln Park this week, three African lion kittens were born, all of which, at last accounts, were living and doing well. The mother, Nellie, is five years of age, and this is the second time she has been the mother of triplets, the family in each case proving one of the attractions of the park.

Ohio Quail.

The Ironton Gun Club, of Ironton, O., offers $5 for information leading to conviction of any party for illegal shooting of game. Quail are reported abundant around Ironton, and there has been some sooner shooting, the season not being open until Nov. 10. Austin Miller, of Caldwell, O., was fined $25 for shooting two quail out of season, and was sent to jail for non-payment.

Arkansas Club.

Mr. Joseph Irwin, of Little Rock, Ark., has the following news about a little club recently formed in his city. The preserve is on country where I have shot, and where Mr. Irwin always takes Harvey McMurchy when he goes to Little Rock. I can testify it is good mallard ground. He remarks regarding this:

"The Prothro Hunting Club has been formed here at Little Rock. John M. Rose, President; J. W. Irwin, Vice-President; Dr. J. H. Lenow, Secretary and Treasurer. Capital stock, $2 500. We have leased the shooting on the Neimyer Marsh, part of which is 'Hough's Inferno.' It is now being rapidly fenced, and within ten days will be inclosed and posted. It is easy of access, being only four miles from town, and under proper protection will give our members fine mallard shooting next month, provided it rains before that time. Water is getting very scarce. Lakes were never lower than now. Quail and turkeys are reported plentiful, but are being killed at the water holes where they go to drink. Few deer have been killed so far this fall, it being too dry to hunt them. Forest fires are raging in many of the best grounds near us, which will drive them out."

Canada Game.

Mr. W. B. Wells, of Chatham, Ont., has a word about the game prospect of his neighborhood, where the International field trials are held each year:

"Everything looks well for the trials; thirteen out of the fifteen entries to the Derby paid second forfeit and I think they will all start. The cup race will be interesting, I fancy. Birds are more plentiful than last year, I think. The weather has been very dry, but it looks like rain. Ducks are coming in, and I saw several wisps of from twelve to twenty snipe the other day; but unfortunately our snipe grounds are mostly dry. The water has gone down in Lake St. Clair over a foot in the last three weeks."

Pelicans In Wisconsin.

Mr. John E. Dafter, of Marinette, Wis., tells me about the recent killing in his vicinity of a pair of pelicans, a bird very rare in this latitude, though I have known of their being killed in Minnesota and Dakota. The pelican is not a pretty bird, nor does its countenance indicate any very great amount of intellect. Probably these birds wandered off into this far northern country because they got lost or forgot what they wanted to do. Mr. Dafter thus describes the incident:

"A week ago Saturday two of our younger sportsmen (Curtis Merryman and Ralph Van Clare) were loafing along the shore of Green Bay with their guns, about two miles south of this city. They were out after ducks, and while keeping their eyes peeled for some sure shot they took to be a flock of eight wild geese drop into the water about half a mile from shore. Securing a boat they started out, but after going some distance found that the birds were further away than they supposed, and returning got a sailboat and started again. Getting to windward of the flock they let the boat drift, and coming within range fired four barrels of No. 6 shot just as the birds rose. Two fell and the others flew by the boys, and to their astonishment they saw they were a species they had never seen. On picking up their game they found they had secured two very fine specimens of pelicans. The birds were exactly alike, pure white, tipped with black, a narrow V-shaped yellowish line about a ½in. wide extending across their back from wing to wing. The spread of their wings was 8ft. 4in. The boys are very jubilant over their prizes, and one of them has been mounted and placed in the high school museum. I have noticed in your paper of pelicans having been killed in this State before, but as far as I know none have ever been seen in this vicinity before."

Base Calumny.

By the way, hearing from Mr. Wells, who is a Canadian, reminds me of a base calumny upon his people which was recently perpetrated by Frank Butler, manager of Annie Oakley, who told me this when he was out here this summer with the Wild West. I am sure Frank will swear to it, and I leave it to Mr. Wells to refute and punish the refuted. Of course, in her rapid shooting during her exhibition work, Miss Oakley's guns occasionally get out of order and need attention by a good gunsmith. On one occasion, I think it was in Toronto, Mr. Butler took the guns to a gunsmith to get some repairing done to them, but he was told that it would be impossible for the gunsmith to do it just yet, as he "had three pairs of shoes to mend first!" At another town he came near having a bad time of it, for the gunsmith got the guns to pieces, but could not get them back together again. The time for the afternoon performance drew alarmingly near, and the workman sweated—not nearly so much as Mr. Butler did—and it was nearly 2 o'clock when he at last got the arms put together so they could be fired. He said he didn't want to do any more work on them, because he didn't think they were scientifically constructed. But yet a worse trouble occurred, in still another Canadian town (according to Mr. Butler). He took a gun, of course a hammerless, such as Miss Oakley uses altogether, to the local gun repairer, who looked it over carefully, and at last remarked: "Where's the hammers, have you lost them?" This is only hearsay, and I do not vouch for it, but is a good story, and if there is going to be any international complications over it, I submit it should be referred to Mr. Wells and Mr. Butler.

The Sale of Game.

The following postal card message was sent to a gentleman of this city by a resident of Pontiac, Ill., at which place, as I stated earlier in these columns, our friend, Col. C. E. Felton, of Chicago, planned to make his fall hunt, with the purpose of laying in his winter supply of meat:

"Oct. 6.—Friend P.: You wanted me to write and let you know when Col. C. E. Felton came to Pontiac to shoot chickens. He was here Monday, Oct. 4, and went out chicken shooting with Mr. Stroud and Mr. Morris. They were out all day and only got two chickens and one quail. I was out the day before they were and killed twenty-one chickens and twelve quail. Col. Felton did not kill a bird. Mr. Stroud got all."

Col. Felton has never been disposed to come out flat-footed

in favor of the FOREST AND STREAM platform: "Stop the sale of game." The reason for this now becomes quite obvious. Incidentally I would like to ask the Colonel if he knows of any reason why I should not at once challenge him for that 1,000-bird race about which we have been talking? E. HOUGH.

1206 BOYCE BUILDING, Chicago.

CONGRESS AND GAME EXPORT.

FOLLOWING is the text of the measure introduced in the Senate, during the last session, by Senator Teller, of Colorado. It was referred to the Committee on Forest Reservations and the Protection of Game.

Senate 2329.—A Bill to Regulate Interstate Traffic in Wild Game.

Whereas it is necessary to the preservation of wild game in the States hereinafter named that the interstate traffic in the hides and meat of the wild animals hereinafter mentioned be regulated and prohibited; and

Whereas by reason of the exclusive power of Congress to regulate interstate traffic the States are powerless to regulate or prohibit the transportation of said articles to other States, and the enactment of the following provisions will enable each State, by legislation, to protect the wild game within its own borders: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any railroad company, express company, or other common carrier, or any of its agents, officers, or servants, to receive for shipment or to transport, or for any person or corporation to ship or to offer to any common carrier for shipment, from any place within the State of Colorado, the State of Wyoming, or the State of Utah, to any place without the same State, for market or for storage, any carcass, meat, hides, or horns of any deer, elk, antelope, bison, or Rocky Mountain sheep: *Provided*, That nothing herein contained shall prohibit the shipment of any such of the said articles and in such quantities as may be expressly authorized and permitted by the laws of the State in and from which the shipment is made, or the transportation of any of the said articles through any of the said States from one place to another without said States.

SEC. 2. That every person or corporation guilty of violating this Act shall, upon conviction, be fined in a sum not less than one hundred dollars nor more than one thousand dollars for each offense, or punished by imprisonment not less than one month nor more than one year, or by both such fine and imprisonment.

THE VIRGINIA LAW.

THE agent of the Southern Railway at Chase City, Va., reports that there are more birds in that section than have ever been known before, also that there are very good accommodations for sportsmen in the way of hotel, livery, dogs and guns.

Mr. W. D. Paxton, proprietor of the Mineral Hotel, is always ready to give any information, and expects to entertain a great many sportsmen this season in view of the fact that game is so plentiful. Chase City is in Mecklenburg county, where the two-year close term on quail has been declared void. It is one of the leading health resorts in Virginia, being crowded from May until the middle of October, and during the winter season has a very fair contingent of Northern people, who come here for the delightful climate and medicinal waters. It is on the Southern Railway, about ninety miles out from Richmond, on the Keysville branch.

W. H. L. NELME.

Our correspondent sends the text of the opinion rendered by Judge Homes in the partridge shooting case. The action was brought in a friendly way to test the constitutionality of the law.

Commonwealth of Virginia vs. G. H. Finch.

The defendant was convicted before a justice of the peace for having shot a partridge on — day of September, 1897.

The evidence proved beyond question that he did the act, but that it was done, as admitted, on his own premises. He appealed, and the case is here for decision, and the only question raised, is the act of assembly under which he was convicted constitutional? If not, the act is null and void.

The act is as follows: "1. Be it enacted by the General Assembly of Virginia. That it shall be unlawful for any person to kill or capture any partridges (or quail) in the State of Virginia for the period of two years, or to offer for sale or buy any partridges (or quail) so unlawfully killed or captured in said State, within the aforesaid period."

"2. Any person violating this act shall be deemed guilty of a misdemeanor, and fined $10 for each offense, and imprisoned in jail until the fine be paid, but not exceeding thirty days.

"3. In the prosecution of a person for a violation of this act, proof of the possession of any such birds shall be prima facie evidence of guilt."

It is elementary law that the owner of the soil has a qualified property in the game upon his own land, which becomes absolutely his property, provided he will capture the same. It is not denied that the State can, under the police regulations, enact laws to preserve the game, so as to allow it to propagate, and to prevent the killing of game during certain seasons of the year, so as to give time for propagation. This is necessary and for the good of all, but can the State prohibit the owner of soil from killing game on his own land altogether, say for a period of two years, as provided by act above? If it can do so for two, why not ten or even fifty years, or take away from the owner of the soil the right altogether, to kill game, though on his own land, in which he has property rights, and that without due process of law or compensation made?

Now the United States Courts have held that an act need not be in direct violation of any part of the constitution to be unconstitutional, but that an act of assembly, which imposes an unreasonable, unnecessary and arbitrary restraint, is null and void, because unconstitutional. Such being the case, the question is, does the act above impose an unreasonable, unnecessary, and arbitrary restraint upon the owner in regard to his own property? (See Cooley Con. Line. 6th Edition, pages 206–7).

I think it does for the reason that it absolutely prohibits a man from taking game on his land for a period of two years, notwithstanding the fact that the said period is not necessary for the preservation and propagation of game, because the evidence discloses the fact that partridges are more abundant than they have been for years. If the act had provided that they should not be killed or captured during certain seasons of the year, so as to provide for the propagation and preservation of partridges. I should hold that the act was constitutional, but, inasmuch as it absolutely prohibits the killing of partridges for a period of two years, notwithstanding the fact that they are plentiful and abundant, I hold that the restraint imposed by said act, is unnecessary, unreasonable and arbitary, and, therefore, null and void.

Such being my opinion, I reverse the judgment of the justice of the peace. W. E. HOMES,

Judge County Court of Mecklenburg county.

[As stated last week, this decision applies only to Mecklenburg county. Elsewhere the close term is in force.]

Dough Birds and Pot-Pie.

WYMORE, Neb., Oct. 2.—*Editor Forest and Stream:* No doubt you discovered from my letter in regard to grouse that I possess no scientific or natural history knowledge of game birds, except what little I have picked up in the field. I, therefore, make bold to ask you to tell me just what the birds described below are. And perhaps some of the readers of FOREST AND STREAM can tell us what has become of them.

When I came to Nebraska, many years ago, I found, each spring and fall, great flocks of a migratory game bird called, by the natives, dough birds; they were also called prairie pigeons, and by some they were called jack curlew and gray curlew. I do not think they were an aquatic, or wading, bird; they were considerably larger than a jacksnipe or a plover, and larger and plumper than any curlew that I ever saw.

Their meat was light in color, and when skinned (the common way of dressing them) the meat was covered with a roll of fat that looked like dough, but in color resembled clean, fresh lard.

They were always in large flocks and frequented the high lands, and especially the newly-sown fields of grain, and they made the finest pot-pie in the world.

Speaking of pot-pie, I remember one day in the spring of 1882, when in company with my old friend and life-long companion in the field, Dr. H. A. Given, I had been out after dough birds, and we brought in thirty-two nice fat ones. We debated the question of whose wife could make the best pot-pie, and finally decided by drawing straws that the doctor's wife should make that particular pot-pie.

The next day at noon the pie was ready, and my wife and I repaired to the doctor's house to help eat it. The doctor's children have always called my wife Aunty Mac, and on that particular day Aunty Mac was complaining of not feeling very well, but the pot-pie was very tempting, and as she progressed with her dinner she felt much better, and the doctor's children have never ceased to wonder how much pot-pie Aunty Mac could eat when in good health.

The dough birds are all gone. I have not seen one in ten years. Aunty Mac still retains her appetite intact. Fred and Pearl, the doctor's children, are young folks now. The doctor's wife is the same good cook she always was. The doctor is old and fat. He still hunts some, and he told me confidentially just the other day that he could shoot just as well as he could twenty years ago. I had to turn my face away so he would not see me smile. It is wonderful how conceited a man gets when he gets old. Now, I am not a bit that way, and yet I can shoot just as good as I ever could, and only yesterday I knocked a squirrel out of a high tree with a .22cal. target rifle, and if there had been a half dozen of them I could have knocked them all out the same way.

A. D. MCCANDLESS.

[The dough bird, or doe-bird, is the Eskimo curlew (*Numenius borealis*), an upland species very fond of berries and grasshoppers, and frequently is found in the company of golden plover, migrating from the north at about the same time (see Trumbull's "Names and Portraits of Birds"). It is also called little curlew, and fute, names given by Mr. Hapgood in "Shore Birds." Dr. Carver records that the Bartram's sandpiper is commonly called prairie pigeon. We presume that the shooters of Nebraska were and are like those elsewhere in that they apply names loosely.]

Pennsylvania Small Game.

OSCEOLA MILLS, Pa., Oct. 3.—Small game of all kinds is going to be very plentiful this season. Gray and black squirrels are coming into town and running over our shade trees. Pheasants are seen every morning in town, and I know the woods are full of them, for I have had my puppy out several times and I see more pheasants this fall than I have for years, and good reports are coming from all over the several counties.

We are having some trouble keeping some "hogs" from killing game until Oct. 15, at which time all our game comes in except rabbits and deer. We (the Osceola Gun Club) have two good men hired to patrol the woods near town to prevent illegal hunting. We have a great many foreigners working in our mines, and they do not regard our laws very much. We are going to try to teach them a lesson. With three other members of our club, I am making ready to go for squirrels on the 15th, and we are building pretty high on what we expect. I will let the readers of the grand old paper know what luck we had, good or bad, as I enjoy reading what others have done. I will be slightly handicapped this fall, as my old setter was poisoned this summer, and all I have is a four-months-old puppy. Wishing all Pennsylvania sportsman success on the 15th inst., PLUMBER.

The Connecticut Season.

HAMDEN, Conn., Oct. 17.—*Editor Forest and Stream:* The shooting season opened here under unusually favorable conditions on the 15th. The woods were filled with ambitious sportsmen, and the continuous cracking of guns from daylight until dark sounded like a very noisy Fourth of July.

Partridges are not over plentiful, but quail are more numerous than they have been for years. While woodcock seem to be scarcer than usual, still, the experts prophesy that these birds will be found in greater numbers as the season advances.

I send inclosed clipping from the New Haven *Morning News:*

"The open season for field shooting commenced yesterday, and many city sportsmen were seen driving out to their favorite places for the quail, woodcock and partridge, which are said to be plentiful this year. Fair Haveners were well represented in the field, and among the good bags brought in were those of Dr. Hall and H. B. Ives. Dr. Hall's favorite ground is out North Guilford, and his bag consisted of three partridges and several gray squirrels. Mr. Ives drove out to North Haven quite early, but was back home in time for his 1 o'clock lunch. His bag contained fifteen grown quail and his entire shots made during the day were only five. His first three shots at three single birds were successful. The remaining two shots were directed at a bevy of thirteen quail. Eleven were bagged with the right barrel, while with the left the twelfth was secured. This unusual good shot was, of course, while the birds were clustered in the field ahead of the dog. Mr. Ives thinks this will answer for a marker for the boys this season."

While the manner in which Mr. Ives is reported to have secured his eleven quail may be perfectly legitimate, according to law, still, it seems to me (and I have heard the same opinion freely expressed by others), that, when viewed from the "true sportsman" standpoint, it was a rather unsportsmanlike way in which to secure a bag of game; especially by one who shoots over a well-broken dog.

WM. H. AVIS.

A South Carolina Resort.

SUMMERVILLE, S. C., noted as a popular resort for Northern tourists, offers to those who seek game and forest sports many advantages. Summerville is surrounded by historic grounds, where are recorded by Simms many revolutionary exploits, and it is just in these interesting swamps and woodlands that we find an abundance of game. On the banks of the Ashley, around the ruins of the old Dorchester church, and in every branch and swamp, are numbers of deer; and the distance from the Pine Forest Inn to these famous hunting grounds is only a matter of six to ten miles.

It sometimes happens that the slayer has never before killed a deer, and in such an instance the ceremony of initiation is very interesting. It is known as "bloodying," and the candidate is brought up and usually the youngest hunter in the party officiates. With the blood of the deer he makes on one check the letter D, and on the other the letter H, which signifies Deer Hunter. Across them follow the horizontal lines, which are traced across the forehead, while the perpendicular extends from the roots of the hair to the end of the nose.

Wild turkeys are plentiful in the sections where the deer abound, and very often while on a deer hunt a fine gobbler presents himself as a target. The country around Summerville is also full of foxes, and whenever the moon shines sufficiently bright, moonlight fox hunts are enjoyed. When the nights are dark, however, Reynard finds many inquisitive people, who delight at break of day to investigate his tracks and see where he has been perambulating, and end by bringing him to close account. What can be sweeter to the true sportsman on a brisk, frosty morning, than the echoing notes of the huntsman's horn among the pines?

The bird shooting in the neighborhood is also excellent. Partridges, doves and woodcock are in good numbers, and many fine bags are made during the season. Bird dogs and hounds are kept in Summerville, and can always be had by those who wish to enjoy the shooting.

Indiana Fishing and Shooting Points.

BLOOMFIELD.—Good fishing and shooting. Plenty of birds, squirrels and cottontails. Hotels good, $1 and $2 per day.

CEDAR LAKE.—Plenty of bass, perch and croppies. Bass are caught daily as heavy as 4 and 5lbs., and have been caught this season 6lbs. and over. Black mallards, teal and snipe abound. Hotel, Sigler House, $2 per day, including use of boat.

GOSPORT.—Abundance of catfish, bass, perch and German carp. Catfish have been caught weighing from 50 to 73lbs. by net, and as heavy as 25lbs. by line.

Quail more plentiful than for several years. A good hotel. Rates $1 and $2 per day. Dogs may be hired.

GREENCASTLE —Plenty of quail, rabbits and squirrels. Commercial Hotel, $1 and $1.50 per day.

IDAVILLE.—Good bass fishing in the Tippecanoe. Quail more plenty than ever before. Mr. Moorman, editor *Observer*, will give full information, find dogs, etc. Hotel, rates low.

PAOLI.—Good bass fishing; fish as heavy as 5lbs. have been taken. Streams were stocked a few years ago by the Government Fish Commission. Good shooting of quail, rabbits and squirrels.

Mineral Springs and other hotels, $2 to $1 per day. Guides and dogs can be supplied. Inquire of Agent Ham, at station.

REMINGTON.—Good shooting; quail, plover, chickens and rabbits.

SHELBY.—Good bass, pickerel and salmon (wall-eyed pike) fishing in the Kankakee at Water Valley, where boats are to let. Birds scarce owing to swamp being dry.

WEST BADEN AND FRENCH LICK.—Some bass fishing in Lost River and Lick Creek. Abundance of quail, rabbits and squirrels in the fields and woods. Hotels $2 per day.

All these points may be reached via the Monon Route.

Deer in Massachusetts.

GARDNER, Mass, Oct. 17.—*Editor Forest and Stream:* Yesterday three deer were seen within a half mile of the center of the town. When first seen, the deer, a buck and two does, were feeding on a little knoll near the road. The report no sooner reached town than men with dogs and guns were after them. But although they were seen again, they were not shot.

For the past five years or more, deer have been seen every fall in this and the surrounding towns. Last fall, the carcass of a deer was reported to have been found which had been shot.

As I understand the law, it does not protect deer in this State except in Barnstable and Plymouth counties. It seems a pity that the law could not cover the whole State, as I understand it formerly did. H. E. R.

In the Adirondacks.

Editor Forest and Stream:

Visiting accustomed haunts in Hamilton county during August and September I was impressed with the apparent increase of deer in that section of the Adirondacks. Their paths are deep-worn and show proof of frequent use. Feed is also abundant. The trout season was also good. But the hotels of that section had a poor season. Some of them lost money. Many guides were unemployed and compelled to seek work outside their calling. Some are for the new law, others against it. The practical effect of it is yet problematical. One thing grows more and more apparent each year: the State should hasten to acquire and to guard those forests; not alone the question of water supply but other sanitary considerations urge it. JUVENAL.

IN PIONEER DAYS.

THESE passages, from the private diary of a resident of Cleveland, O , have never before been printed. They have a doubled interest now as showing the wilderness conditions of Ohio and Michigan a half-century ago, when there were elk and wild turkeys and wolves:

Dec. 11, 1838.—Started to-day on the steamboat Gen. Anthony Wayne, in company with G. and a Canadian, on an elk hunt to Michigan. We arrived at Port Huron, situated at the junction of Black and St. Clair rivers, one mile below Lake Huron. The night of Oct. 13, after providing ourselves with a barrel of hard bread, 25lbs. of pork, an axe, frying-pan, three tin cups and a wooden pail, we engaged a team to take us and our baggage to the forks of the Black River, seventeen miles from its mouth. We stayed at the forks over night with one Mr. Waddam, a large landowner along the river and engaged in the lumber business; he took us to the edge of his woods, not far from the house, where he showed us five acres of heavy timber land inclosed by a high and strong rail fence, in which inclosure was a fine buck elk, given him by the Indians, also several deer of various ages. The elk was very fierce and continually tried to reach us by forcing the fence with his horns. He was a fine animal, and the largest buck deer looked like a fawn beside him.

The next day we had the man take our camp baggage on an ox sled, made of a crotched tree, one day's drive into the woods, as the way went over logs and through swales and swamps we found slow and tedious traveling, and were glad when night came, when we prepared for the night by making a good fire of dry pine wood and prepared our supper. It rained hard in the night, but fortunately our ammunition was found safe and dry in the morning, owing to unusual care taken.

The next day being clear and pleasant, we prepared for a permanent camp, choosing a pine grove near a swale. From pine trees we cut down we were three days in perfecting as snug a home as any hunter could desire. On the fourth day we commenced blazing our lines. When the rest of our party suggested that in the meantime I should go out and kill a deer; after hunting some time and seeing deer without getting a shot, I started back for camp. When traveling till evening and not finding it, I built a fire, made a kind of shelter of spruce brush and camped out for the night. The night was very cold, and from the novelty of my situation, prevented me from sleeping. I started early in the morning and soon came to a creek, which I followed down till noon, when, getting fatigued, I laid in an old Indian camp to rest myself. In a short time I heard some brush crack, when, getting up carefully and looking out of the camp, I discovered a doe elk feeding some four rods off among the thick bushes. I immediately put down another ball in my rifle, and resting it across the side pole of the camp, was just on the point of shooting when a motion in the bushes attracted my attention, and looking, I discovered a buck elk right in front of me and only some two rods off; my heart beat terribly and my body shook violently, but, steadying my nerves as much as possible, I took aim and fired at his head. He immediately fell, but before I could get to him he got up and was off. From the noise the elk made as they crashed off through the underbrush, I think there must have been quite a drove of them.

I did not follow them, but pursued my course down the creek till night, when I built a fire and camped. During the day I had seen several deer and many bear signs; partridges in numbers, and several deserted Indian camps, and in some of the camps I found birch bark mococks all with the bottoms burned out. Many elk horns hung up in them, and elk hair was all around where they had been dressing the skins. I opened a number of bags, hanging in the camp, containing several kinds of seeds, unknown to me. This, my second night, was colder than the first, and I suffered much; but by nestling close to the fire I managed to keep warm, though the sparks burned numerous holes through my clothes.

The next morning I started very early on my way down the creek. About 10 A. M. I saw some ducks, and succeeded in killing one, and shortly after killed two partridges, when, feeling I should have something to eat that night, I felt in quite good spirits. At 2 P. M. I came to where some trees had been cut down, and looking around I found a deadfall baited with a dead horse for wolves. I followed a kind of trail that led from it and soon came to a log house. The folks received me kindly, and gave me a good supper. They told me the nearest house was some ten miles off on the Black River. On giving them an account of where we were camped, they said it must be near the great Indian trail, and not more than three miles off. Next day one of them started with me, and I reached our camp at noon, when I found G. and the Canadian making preparations to leave, as they supposed I was killed.

Although game was plenty, the woods were so dry and thick we had poor success. With pork, hard bread, tea and game we fared well. But few Indians were in the neighborhood, most of them hunting on the Canada side. Occasionally a band passed by. One day two fine elk were killed within a mile of our camp by one of their hunters. Bear signs were numerous on all sides. One night a huge fellow passed within five rods of the camp as we marked by his track in the morning. Wolves were also plenty. I found one day the remains of an elk freshly killed by them; the antlers, among the largest I ever saw, I brought home to Cleveland. We found also in the woods and brought them into camp a pair of deer's horns that were fastened together, evidently when fighting. Four miles west of our camp was the great trail of the Saginaw and Chippewa Indians. It passes near a cranberry marsh of several thousand acres. Here the Indians go every season, make mococks of bark and take the berries down the Black River to Port Huron, where they sell them at $1 a bushel. Having very nearly eaten up our groceries and feeling quite satisfied with our expedition we packed up and started for Port Huron.

On our way down the river we stopped at Mr. Waddam's for the night. On inquiring after the old buck elk, his housekeeper said that a few days after we left, going up the river, it broke out of the inclosure, and seeing her through the window it dashed right through it after her, she barely escaping up the ladder to the garret of the log house. While there she screamed most lustily for Mr. Waddam, who got his rifle and shot the elk while in the house. Leaving the Canadian at Port Huron, I arrived at Cleveland by steamboat in restored health, with rifle, blankets, and the huge elk antlers killed by the wolves of Michigan.

Jan. 20, 1839.—Some hunters who had gone to Russia, Loraine county, O., deer hunting, wrote that deer were plenty and hunting never better. By stage, in twenty-four hours I was with them; but a crust coming on the snow that night, we devoted our time trapping turkeys. We made a number of pens, and made trails all through the woods leading to them. The squirrels and bluejays sprung our traps so often that we caught none, but I had the good luck to shoot eight very fine ones. The rest of the party getting discouraged, returned to Cleveland. The day they left I took one of the natives with me to make a visit to the old camp where we spent such a jolly good time two winters before. The day was cold and crust on the snow very hard, so we expected to see little, if any, game on the way. But in this we were mistaken, as we started several deer; had a number of shots, but secured none.

On reaching the old camp we found the puncheons and poles that helped to make it, all down, the deep snow well covering them as well as the brands of our camp fire, just as we left them. The tracks of wild turkeys were plenty in the snow right over the puncheons. Sad and gloomy thoughts came into my mind as I reviewed the well-known trees and other objects, and witnessed the wild desolation where a deep and solemn silence reigned. Here a happy party of us, in the springtime of our existence, spent a portion of the most pleasant period of our lives. All was life and animation; the noise of singing, laughing, talking and hooting made the woods resound. But now how different! The great change a short time had brought about of that merry company, a part were scattered over the earth, while one of them was gazing in melancholy silence on the ruins of the old deserted camp before him.

Returning next day, we went three miles into the woods near the Henrietta road, and made a large turkey pen, carried straw and corn to make trails to it. The next day, after going to our trap, we found a drove of turkeys, fifteen in all, had struck one of the trails and entered it. The door was down, but the birds had flown. The fact was the poles over the top of the pen being rather light, the turkeys, by constantly jumping against them, had finally parted them and escaped. On our way to the house crossed the tracks of seven deer; followed them till night; got two shots, but without hair, blood, or much less a deer. I left them, and when within a mile of the clearing saw two coons walking around the foot of a large tree; before I could shoot they crawled into a hole in the tree. On entering the house I informed my host, who, with axe and dogs, started immediately in pursuit. About midnight he returned with seven good coon skins, having captured them all in this single large tree; a good night's work, as they would average 30 cents each. Five coons is the most I have ever known to be cut from a tree before, and that was later in the season.

The next day A. visited our turkey pen. There being crust on the snow and it being really too late in the season for deer, I concluded to go for smaller game, squirrels and partridges being very abundant and in good condition. This having been a good year for shacks, by aid of one of the coon dogs, that was good at treeing, I managed to return at night with thirty squirrels and four partridges. I found A. returned before me with five fine turkeys. He in one of the turkey pens had found twelve birds, but on seeing him they fluttered around so that they commenced breaking out, when he began shooting at them in the pen, and succeeded in killing the five before the rest escaped. The snow leaving rapidly, we settled the next morning with Mr. A. for board and started for home on foot; the snow being out of the road, the horse was only able to draw the cutter and game.

WHERE'S MA-MA?

Drawn from a life photograph by Frank Farnsworth.

"Uncle Lisha's Outing,"

By Rowland E. Robinson, is now ready in an attractively bound volume of 308 pages, the twenty four chapters recounting the homely adventures of those Danvis Folks with whom FOREST AND STREAM readers are so well acquainted. Sent postpaid on receipt of price, $1.25, by the Forest and Stream Pub. Co.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable,*

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

The "Game Laws in Brief."

The current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

ANGLING NOTES.

A Correction.

In Forest and Stream of Oct. 2 I made note of the fact that the first landlocked salmon, or as I believe it should be called, ouananiche, had been caught in Lake George, and the gentleman entitled to the credit of being the first to catch one of these fish which have been planted in the lake only three years was Col. W. D. Mann, of New York city. About the time Forest and Stream appeared containing my note the Fisheries, Game and Forest Commission received a letter from Judge Joseph M. Deuel, of New York city, announcing that he had caught a 6lbs. salmon in Lake George, and it was the first to be captured from the lake. The judge asked for a history of the planting of salmon in the lake, and as the correspondence came into my hands I replied, and asked if it was another fish from the one I had credited Col. Mann with catching.

I have just received a letter from Col. Mann from which I quote: "My friend Judge Deuel has shown me your letter of Oct. 6, which I have read with the greatest interest. It seems to me that if you can produce such fish in Lake George as the one caught people need not go to Canada for good sport, but will make our lake so popular that there will not be accommodations for the sportsmen who will go there. I do not know how the story got out that I caught the fish, but presume it was because Judge Deuel was my guest fishing with me from my launch. The judge is an ardent fisherman and will make big efforts next year, as I shall myself, to get another one of these salmon. I have killed a good many sea salmon in my time and other game fish. I never saw a fish altogether as beautiful as that one. He measured exactly 25in. in length and was exactly 6lbs. in weight. A sea salmon of that length would have weighed considerably more as you know. In other words, this salmon was to a sea salmon as a yacht to a freight ship. He was so strong as to jump twice out of the water with 3lbs. of lead. I hope you will be able to put many more of these fish into the lake this year. I doubt if there is any water on this continent better adapted to their culture than Lake George."

I was first notified by one of the State game protectors of the capture of the 6lb. salmon, and afterward he called upon me and confirmed his letter. The game protector and a Lake George newspaper gave credit for the capture to Col. Mann, and I am very glad to make the correction and credit Judge Deuel with taking the first salmon from the lake. The U. S. Fish Commissioner writes me that the salmon fingerlings for Lake George will be ready to start on their journey from Maine about Nov. 1.

"By One Man In One Day."

The words I have quoted for this sub-head are written under a half-tone cut, reproduced evidently from a photograph, which a friend sends to me. The picture itself is rather remarkable. From a pole, held up at either end by crossed oars, are suspended a lot of black bass, how many I cannot count accurately, but it is safe to say something over 100. At first glance it might seem to be the picture of a net fisherman's catch, but there is an air of prosperity about the two figures in the picture, apparently the man who committed the slaughter and his oarsman, which upon further reflection precludes this thought, and besides, net fishermen do not as a rule arrange their catches before the camera. There are three crossed fishing rods with reels in the middle ground, and this with the comfortable-looking building in the background, leads me to suppose that the picture is intended to be that of a real sportsman who with hook and line has in one day taken more black bass than he should have taken in a week's fishing, including Sunday. It is to be hoped that the prosperous-looking gentleman did not waste his fish, even if he had to sell them to dispose of them. It is because men who consider themselves sportsmen will catch and kill more black bass and other fish in one day than they have any moral right to kill, that I have been and am in favor of a law limiting the number of fish that can be killed in one day. There is always a howl about the doings of poachers who kill fish to fill an empty stomach or to procure the necessities of life, but when a well-to-do sportsman catches more fish in one day than some poachers would kill in ten days, it is a matter to be proud of apparently, and to be paraded before the public in a newspaper cut. Somewhere there are mounted, probably, four big speckled trout, or perhaps only the skins preserved. I do not know where the man lives, nor do I know his name for a certainty, though I hope to obtain it. I wonder if when this man exhibits the skins or stuffed fish he explains to his admiring friends that he caught the fish when he knew he could make no good use of them, and skinned them, taking the skins only away with him, and leaving the flesh to rot in a camp that I afterward occupied. He did not even have the decency to bury the evidence of his having violated the rules of the club whose preserves he was fishing. It is said that in camp a man will show exactly how he is constituted and what is in his composition, but perhaps this man, being alone, thought he could do as he pleased and no one would be the wiser. The desire to exhibit one's catch or to have it photographed is, I believe, responsible for the destruction of many splendid fish, and the sooner the States and Canada have a law regulating the number to be taken in one day by one man the better it will be for the future of fish supply. It is a good rule to observe: When you see a photograph of a lot of fish caught apparently to skin the water for exhibition purposes, avoid the place where the fish were caught when you desire to go fishing and get fish.

The Claret-Parson.

A correspondent asks me to give him the dressing of the claret-parson, and from his reference to trout fishing in the same connection, I assume that he means a trout fly. I know of no trout fly of that name. There is a salmon fly called the claret-parson, but I imagine it is not a standard fly, as I do not find it in the lists of English fly-dressers. It is, however, in Kelson's list, and he describes it as follows:

Tag—Gold twist and dark yellow silk.
Tail—A topping.
Butt—Black hare.
Body—Claret silk.
Ribs—Gold tinsel.
Hackle—A claret hackle.
Throat—A medium blue hackle.
Wings—Golden pheasant tail, swan dyed yellow, scarlet and blue gallina, widgeon, mallard and a topping.
Horns—Blue macaw.
Cheeks—Chatterer.
Head—Black wool.

It will be seen that this is a very elaborate fly in its dressing, and if one tries to tie it in ordinary trout fly sizes it will prove a difficult operation to get all the feathers in place.

"The Candlestick-Maker"

Some weeks ago, a gentleman asked me if there was a fly called the "candlestick-maker," and I told him that there was a salmon fly so called; but he did not ask for the dressing, and I did not give it, as I was away from my bureau of information. I will give it now from Kelson's list, as I noticed it when looking up the Parson:

Tag—Silver tinsel (oral)
Tail—Ibis and summer duck.
Body—Three layers of black silk, followed by black seal's fur.
Ribs—Silver tinsel.
Hackle—A dark, fiery brown from seal's fur.
Wings—Double jungle and two toppings.
Head—Black wool.

This is, Kelson says, one of the oldest standard salmon flies. Mrs. Marbury, in "Favorite Flies and their Histories," says: "The baker is one of three celebrated salmon flies, viz., the butcher, baker and candlestick-maker. The butcher is more used and better known than the other two."

Albino Bullhead.

An albino bullhead was captured in Lake Champlain a few days ago with hook and line, and was exhibited in a store in Port Henry, where it attracted considerable attention, as it was the only albino fish ever seen in that section of the country.

Perhaps the most curious albino that I ever saw among the fishes was a small-mouth black bass, and it was a partial albino. One side of its head only was white, and it made it a striking-looking fish and served a good turn besides. I was watching black bass at spawning time, and this particular bass had a brood of young, so it was an easy matter to keep track of it and determine the time that that particular fish watched over and brooded its young.

Trout and Salmon.

Dr. John D. Quackenbos, writing me from Sunapee Lake, N. H., says: "The Wentworth boys have already taken fifty-four brook trout and twenty-three ouananiche. Nets spread only two nights. The trout run from 1 to 5lbs. each, and are nearly all females. The ouananiche run from 6 to 14lbs. each, and are nearly all males."

At first glance it might seem that this would indicate that female trout and male salmon preceded the other sex of their respective species to prepare the spawning beds; but this does not follow, for male trout have been known to precede the females from a pond to the spawning stream more frequently than the reverse. The nets mentioned are set in the lake at the mouth of Pike Brook, on which the State hatchery is situated, and the fish were making their way into and up the stream some week or two before the actual spawning season, when they were stopped by the net and the hatchery men.

Recently I read the conclusions of a Scotch fish breeder after twenty-five years' experience, and he says that he believes that at least 75 per cent. of all salmon and trout eggs deposited naturally are destroyed at once. As an average of 95 per cent. or more of all eggs taken artificially are hatched into healthy fry, it can be seen what an improvement artificial methods are over nature's methods at the outset.

Fish Food.

Last May I quoted from a letter of Mr. Thomas Ford, a fish breeder in Lincolnshire, England, whose establishment, Manor Fishery, has been favorably known for many years on the other side of the water. In a more recent letter from Mr. Ford, he says: "I have tried rainbow trout for the first time this season, and have so far obtained almost perfect results. I put down 6,000 fry only in a pond about 15yds. by 5yds., and with rather an inadequate flow of water. The water is clear as crystal and the fish now (September) run from 2½ to 6in. in length. They would be larger, but the pond is overstocked. So far as I know, I have not lost fifty fish. I feed them twice a day only, and inclose a specimen of the food I am giving them. It is all meat and they eat it ravenously, and it seems to suit them better than it does *fario*. I will later write you more on the feeding question."

The specimen of food (marked No. 2, as it comes in various sizes from No. 0 up to No. 10, for fish from the fry stage when first taking food through the mouth, up to adults), has scarcely any odor, and is of a light brown color, and in particles looking for all the world like fine, granulated smoking tobacco. Mr. Ford says that it largely floats on the water, and it appears to be a most desirable form of fish food if the cost is not a bar to using it in large quantities.

Mr. Senior in Canada.

My friend, Mr. Wm. Senior, angling editor of the London *Field*, made a visit to Canada during the past season, made it so quietly that I was about to say a surreptitious visit, and disappointed a number of friends, who did not even know he was on this side of the water until he had returned.

Returning from the Restigouche, where I had been salmon fishing, Dr. Drummond told me in Montreal that Senior was over here. I told him that he was in error, for Senior had written me that he did not know whether it would be his good fortune to attend the British Association meeting, but if he did it would go hard with him if he did not meet me at my home and have some fishing with me.

Then Chambers wrote me from Quebec that the papers had announced that Senior was in Toronto, but I told Chambers that he was dreaming. Now I have convicted Red Spinner by the evidence of his own pen, for he writes in the *Field* of catching his first mascalonge in Canada. (A few words as to the spelling of the name of this fish, for I have been asked a score of times why I did not spell it some other way. I do not know how many years ago it was, but there was a time when the spelling of the name of the fish was agitated in the angling newspapers, for there are half a dozen different ways of spelling it; but Dr. Bean, speaking as the editor of U. S. Fish Commission publications, or as the icthyologist of the Commission, or both, said mascalonge, and I have adhered to it from that day to this, and propose to adhere to it as long as I write it, although the printer does not always let it stand as I write it.) I am very glad that he has had this experience, even if he sorely disappointed me by not advising me of his visit in advance. Having caught his first mascalonge, he is in a position to do me a great service. Mr. Alfred Jardine, who is the great pike fisherman of Great Britian, said in the *Gazette* (London) that when I wrote of the mascalonge, pike and pickerel, I evidently meant the same fish at different stages of growth. Now, if any other English angler should say that the pike and mascalonge are the same, I have only to say, ask Senior.

Without going into details, Mr. Senior says in his very interesting description of his fishing in the Province of Ontario: "The fish (mascalonge) is, in a word, the great pike (*Esox nobilion*), and it is to all intents and purposes possessed of the general characteristics of the Esocidax family. Our old friend *Esox lucius* occurs in Ontario waters, and the Indians call it Kenosha. While the pike proper is, however, common to both sides of the Atlantic, the mascalonge is confined to the basin of the St. Lawrence." In this latter statement Mr. Senior has been misinformed, for the mascalonge is found elsewhere, particularly in Wisconsin, generally called the Great Lakes region, and in New York and Kentucky, where it is called Kentucky pike. Its distribution is comparatively limited when the distribution of the pike is considered. Mr. Senior caught several mascalonge and departed from the usual method employed in their capture when he used a phantom minnow for a lure with light rod and line. I say usual method, for he says he found the use of the trolling spoon universal. While in Canada he learned of a mascalonge of 140lbs. in weight, the head of which was taken to England by a steamship line (who furnished the information) in a whisky cask. For years I have been on the trail of all the big fish I could hear about, but here is a bigger fellow than any I have been able to discover that sailed under the name of mascalonge. It is intimated in the article that Mr. Senior has had a try at our black bass, and I shall be curious to know how our fighting fish appealed to such an eminent and all around angler as Red Spinner.

Tadpoles as Bass Bait.

Driving in Columbia county a few days ago with a gentleman who is a devoted black bass fisherman, he said that if he could find twelve tadpoles he would be cock sure of catching twelve black bass with them, for of all the bass baits, minnows, frogs, crickets, crayfish, dobsons, grasshoppers, larvæ of darning needle, etc., etc., the tadpole was the surest bait all season where they could be obtained. This was a new black bass bait to me, and I wonder if it is used in other sections to any great extent, and with what success. I have mentioned in this paper that I found the best bait in the Delaware River to be young lamprey eels. In West Virginia, an old fisherman told me the bait for big black bass was a black lizard, and he procured some for me to my disgust. In the Potomac, a young bullhead is the best bass bait, and in other portions of this big country perhaps something else is the best bait; but if the tadpole should prove to be the universal best bait, thanks would be due to my Columbia county friend for the information.

A. N. Cheney.

CHICAGO AND THE WEST.

The Biggest Trout.

Chicago, Ill., Oct. 6.—Mr. W. E. Warren, of Fox Lake, Wis., just back from a good trip to Colorado, left at this office a magnificent photograph of the record mountain trout, caught by Mr. Brown in the Gunnis n. This fish weighed 12lbs. even, and was a monster, though showing to be of symmetry and power. The photograph is one of the best fish pictures seen for a long time.

Where the Bass Don't Hide.

Messrs. C. E Anthony and Chas. Jernagin, of Chicago, are back from a two weebs' trip in Wisconsin, some twenty-five miles west of State Line. They did their fishing in Roche Lake, keeping only such fish as they needed to eat. In all the two caught over 1,000 bass. In four hours they caught 205 bass. and in two hours they took 137, according to the story. The fish ran about 1½lbs. average, and as the above figures mean that each fisherman must have landed a little more than one bass each two minutes for the two hours, I submit that the story is not at all a bad one. The sport, however, was hardly to be called good.

A party of Chicago gentlemen, including Messrs. John Branch, James Gormley, Charles Jenks, A. C. Paterson, Messrs. Taylor and Thompson, all of Chicago, are just back from Tomahawk Lake, Wis., where they had fair sport at muscallonge. The largest fish was taken by Mr. Branch, of the C. & N. W. Ry., a 'lunge weighing 21½lbs. Mr. Gormley had one weighing 18¾lbs., and a number of less weight—6½, 12½, 11, 13½lbs., etc.—were taken by others of the party. A good many black bass were found in a little inland lake near by, and in one of the thoroughfares Messrs. Taylor and Thompson caught ten striped bass one day.

Curiosities at the Minnesota Hatchery.

There are a number of interesting sights to be seen out at the State fish hatchery near St. Paul, Minn., and I enjoyed very much a little trip I had out there a while ago with the State executive agent, Mr. Sam F. Fullerton. One of the sights of the hatchery is the penfull of albino trout, something not to be seen in any other part of the world, in all probability. These trout, at first appearance, seem to be a school of goldfish, as one walks up to the edge of the compartment and looks in at them. They are over a foot long, and make a good big school of peculiar-looking creatures. The skin is a delicate pale color, but upon it may be seen clearly the red spots of the brook trout, the effect being that of a brilliant silvery fish, with decorations of carmine. All these albinoes are descended from one albino mother, whose offspring reproduce her coloration. When the eggs of this trout are fertilized by the melt of the brown trout, the result is a fish which is apparently a brown trout and which shows no albinism. There are few odder things in fishculture than these Minnesota albinoes.

Another pen at the hatchery contains a lot of hybrids of the brook trout and lake trout, weighing as high as 4½lbs.

and a very handsome fish. At one time the pen containing these trout was struck by lightning and twenty-seven of the fish, mostly large and fine specimens, were killed. I never before heard of the necessity of putting up a lightning rod to protect trout, but maybe these are not quite as quick as most wild trout are.

One of the pets of the hatchery is a big brook trout, 6½lbs. in weight, which is quite blind, and which allows its back to be scratched by persons properly introduced. The big lake trout are handsome fellows and are also obliging, allowing their backs to be scratched like so many contented pigs. The brown trout are very large, and we had a lot of fun feeding them. They know very well the hour at which they are to be fed, and about that time become as uneasy as the animals in a menagerie. When the food was thrown in to them they fell all over each other, dashing the water up into a spray, and going half out of water in their rush one over the other. There were brown trout in there which looked to weigh 8 or 10lbs. I never would tire watching the show of trout in these many pools at the hatchery, for even in captivity these brilliant and active fish appear spectacular, retaining much of their shyness and cleverness at hiding. We saw pen after pen full almost to overflowing, the grandest spectacle of live trout it was ever my fortune to witness. The fish are all in fine condition, as is indeed every variety of fish at the hatchery. The superintendent of the hatchery, Mr. W. H. Morgan, is a very skillful man at his business, having had many years of experience in the United States hatcheries. One of his discoveries for the treatment of fungus on the fish was that a salt bath is nearly always efficacious. Now, when a fish is observed to be dull, and to show the customary white growth which afflicts so many specimens in confinement, it is at once removed to the salt tanks and given a pickle which makes it gasp for the time, but feel good afterward. We saw many young fish which had been thus doctored or were in process of doctoring.

The Minnesota pike hatchery is said to be one of the very finest, perhaps absolutely the best, in the United States. It is a glass jar hatchery, such as that shown at the World's Fair, and has a capacity of 100,000,000 eggs! It grinds out a pile of wall-eyes in a year. Then we saw tanks and troughs and sluices and boxes full of millions of little perch and croppies, looking like wriggling silver when shoveled up in the hand net for our inspection. These are partly the salvage of the sloughs, where the very sensible work of seining out drying water holes has saved them for another day. No bass are now hatched at this hatchery, the room being devoted to other fishes, the young bass seined from the bayous being handled into other and better waters as taken. If the Commission ever is able to devote a steamer to this work, the salvage of small-mouth black bass can be made something enormous along the upper Mississippi River.

This year the Minnesota Commission has hatched out 750,000 trout, and next year it expects to put out twice as many. Its output for 1898 will probably embrace 1,500,000 trout, 100,000,000 wall-eyed pike, 500,000 black bass, 1,000,000 croppies, 1,000,000 perch. The work is progressing nobly, and the people of the State should realize their indebtedness to the enterprise.

The site of the Minnesota hatchery is one of the loveliest and most suitable that can be imagined. Along the Father of Waters, from some distance out from St. Paul, runs the majestic bluff which bounds the great river, this bluff at one point, Mound Park, being surmounted by the ancient graveyards of the former owners of the soil, whose burial mounds have been preserved and are now inclosed against further sacrilege. Following this grand bluff out a little further, one reaches a summit from which a splendid panorama of the river valley can be seen, far below and reaching far away. At the edge of this wide, green valley, and running back into the front of the high bluff and sheltered by its arm, runs a narrower valley or cove, across which flows a spring-fed stream which has been forced by the hand of man to expand and deploy into a myriad pools and reaches. The stream heads back right at the foot of the bluff. Here some moist ground was noted at points not actually marked by springs, and repeated borings at such points developed magnificent flowing springs. Iron pipes were sunk at the bottom of the pits made in clearing out the natural springs, and from each of these pipes an unfailing rush of cold water pours forth. It is apparently practicable to increase the water supply in this way to any desired extent, though the flow is now all that is wanted. From the springs the water is led down and into the meadow-like little valley through long flumes, then is expanded into the series of ponds needful in the hatchery. The people of the State of Minnesota have a treasure in this hatchery—a treasure of great natural beauty, to say nothing of its utility. A more charming corner of the world is rarely seen, and to visit it and peer over from the green edges of the pools at the myriad darting forms in the clear water is much like experiencing a dream of a trouting heaven.

The Minnesota State Game and Fish Commissioners received from the last Legislature an appropriation of $25,000, and during the past year turned in fines amounting to about $5,000. At the last statement of expenses, for the term ending Sept. 10, the Commission had expended this year $5,166.38. This covers wardens' salaries and legal expenses. It is very likely that the State has no bureau in its service which is on a better paying or more valuable footing.

Muscallonge Shed Their Teeth.

CHICAGO, Ill., Oct. 9.—It is odd how little we sometimes know about things which are near about us, or odd how we sometimes think we know more than we do. I do not believe it will be needful to classify under the latter head the piece of information which has just come to hand in regard to some of the personal habits of the muscallonge. It has always been known by anglers for this big fish, that during a part of the summer it will not bite very freely. This time of laxness is commonly noted to be at the time of the "bloom" which appears on the waters, making them turgid and milky. It has always been supposed that this "bloom" was what kept the fish from biting. Now, is this really the case? Such is the question arising in the mind of my friend H. L. Stanton, of this city, and in the minds of several of his friends, and I may add also in my own.

The facts of this story are thus: Mr. Stanton, Mr. Frank Willard and their wives were in the week of Sept. 22 up at Squirrel Lake, Wis., on a muscallonge trip. The season was late, and the bloom, which is usually over by late July or August, was still on the water, so that they did not expect to get much 'lunge fishing, though they picked up a number of the fish now and then throughout the week. One day they were resting along shore, when they were approached by a canoe bearing a lumberman and a half-breed, bound across the lake. The two parties passed the time of day with each other, and the traveler asked them what luck they had had. When they told him that the fishing was poor, he said that he was not surprised, for that "over in Canada, we never used to think of fishing for 'lunge until after they were done shedding their teeth." At this the two anglers laughed heartily, thinking it a very good joke, and they laughed so much that the Canadian got angry and went away from them in some dudgeon. "Maybe you think a horse don't shed its hair, or a moose its horns, or a snake its skin," he said. "They all do, just the same, and so does a muscallonge shed its teeth, regularly every year, and while it is doing it it won't bite, of course, any more than a deer in the velvet will run, or a moulting bird move about much. If you don't believe it, I'll bet you $100 I can prove it right now, with the first 'lunge you take."

The lumberman went on across the lake and disappeared, and no one knows who he was. His words set Mr. Stanton and Mr. Willard to thinking. They had a few 'lunge up on the ice at their camp, and one by one they examined these. In every case the jaws were found to be red and much inflamed. The teeth were in no case all present, and in some cases were nearly all absent. The whole row of teeth along the side of the jaw could be rubbed out free from the jaw with a rake of the thumb-nail. The ends of the teeth were softened, as though about to decay or disintegrate, so that the tooth could be crumbled. The large teeth were loose in the sockets when found still in place, and very often the sockets were empty. One fish, weighing 17½lbs., was taken afterward. The guide said he would "try that tooth racket," and taking up the fish was able to scrape every remaining tooth out of its jaw by means of his thumb-nail. (This cannot be done with a 'lunge in the spring season, I know.) It was further noted that all the fish taken on this trip were very gaunt, having nothing at all in their stomachs. Yet these fish spawn very early in the spring, at the first breaking up of the ice. The big 'lunge mentioned was very thin, and was long and deep enough to have weighed 25lbs. had it been in fair condition. The same experiments were made with the pickerel that were caught, and it was discovered that they, too, had shed or partly shed their teeth, or had them loosened so that they could be scraped out of the mouth. It was noticed a great many times on the trip that 'lunge would be seen following the spoon along for some distance, but not striking, a practice quite contrary to their savage rush when in the biting season of spring or fall.

Mr. Stanton and his friends became very fully persuaded that their strange lumberman had known perfectly well what he was talking about, and they concluded that they had discovered, so far as their own earlier knowledge was concerned, a new fact in natural history. Neither of them, nor any angler I ever met, has ever heard anything about the muscallonge shedding its teeth, but it would be very hard to convince them now that the fish does not do so. Mr. Stanton sent over for me, and related the above tales at considerable length. There is no doubting their authenticity. Will Mr. Cheney or some other savant tell us how old this new discovery is, or if it is new, why no other man has ever learned of it? If this be ancient history, why have none of our anglers told us of it before? In this party were Mr. Stanton, Mr. Willard, Mr. McManus, three guides and two cooks, and none of them had ever guessed any such thing before. They all know it now.

Texas Tarpon.

Mr. Irwin sends me from Little Rock still further information about the fine tarpon fishing on the Texas Gulf Coast, his letter reading in part as below:

"W. D. Jenkins, the Government engineer of the work of getting deep water at Aransas Pass, is an expert tarpon fisherman, and whenever he finds, after landing a silver king, that his gills have not been injured, he punches a hole through the covering of the gills and attaches a silver tag to the fish, and turns him loose again. If the gills are injured, as the lungs of a man, the fish, even if liberated, would soon die or be caught and devoured by sharks.

"I had a very pleasant visit this morning from June Ingram, the champion of all the tarpon fishermen, who for this season has 102 tarpon to his credit, all landed with rod and reel. The last fifty he landed all but two upon the beach without the aid of gaff hook, which certainly is a great feat, as it gives the fish additional chances to get away, as many of them are brought to the beach but escape by the failure of the boatman to gaff them."

The Buffalo Will Bite.

In our early fishing days out in Iowa we never used to think of fishing for the buffalo fish with hook and line, and indeed had a large contempt for it as a fish in any capacity. I do not think I ever personally heard of its taking bait, until receiving to-day the advice from J. B. H., who has been out fishing along our old river, the Skunk, out in central Iowa. It seems that this once prolific stream has been netted and dynamited to death, so that it offers very little sport, but J. B. H. managed to get enough fish for camp use. He says: "I caught buffalo fish for the first time in my life with the hook. I got one of 3lbs., and for real game fighting and endurance, and for quick and long runs, it was fully the equal of any bass I have ever caught. I used angle-worms, but the funny way the buffalo had of biting was new to me. We fished in the deepest water in the middle of the day. They are slow biters like the suckers, but are a regular tornado when they feel the prick of the hook. This opens a new sport for me, I guess." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Oct. 16.—The prevailing westerly winds the past fews days have greatly improved surf fishing. Bluefish and weakfish are again biting at all points, but the best catches of the week have been at Manasquan Inlet, where plaice and bluefish appear to be particularly abundant, the latter taking the squid freely.

Each season demonstrates that there is much to learn in relation to fish life. Never before have the bluefish been taken from the beach and piers at night in any quantity; this season that condition prevails, and the best catches have been made during the early evening, and occasional ones the entire night through. While the weakfish are not nearly as abundant as two weeks ago, still enough are being taken to hold the attention of the angler and keep the lines active.

Striped bass appear to have given us the "marble shoulder" entirely. While they are in the surf in abundance, as the net men make good catches whenever the sea is in good condition, none will take the hook. Why is this? Will some brother angler rise and explain? One evening recently when conditions seemed perfect, I fished faithfully for two hours and took nothing save an occasional weakfish at a point where bass were known to be, using every bait which experience suggested as being particularly good, and yet a small net was laid around the point and the first haul yielded seven good ones, the second one sixteen. They apparently require a trolling bait, something we are unable to offer except on rare occasions.

The New England whiting, or what is commonly termed the "frostfish," have put in appearance, although but few in number as yet; still we have the promise of them with us during the winter months, and they are a very agreeable acquisition, breaking the monotony of our usual long winter wait, as they take the hook freely until along in February, and are really a game fish. They never nibble, but take the hook with a rush, and make a most determined resistance; fully equaling, weight considered, the kingfish, whose praises as a game fighter has been sung for ages. I took several hundreds of them during the past winter, and I cheerfully recommend them as being entirely worthy of the angler's attention. A 3 or 4lb. fish puts up a most gallant fight, and with light tackle tests the angler's skill, as in the cold, fingers are apt to be numb and the hold on tackle more or less uncertain. LEONARD HULIT.

American Fisheries Society Proceedings.

DETROIT, Mich., Oct. 11.—*Editor Forest and Stream:* My attention has been called to an item on the first page of your issue of Oct. 9, stating you had failed to receive a report of the proceedings of the American Fisheries Society, and commenting on the action of the society in restricting the distribution of the report to its members. While the society did so restrict the distribution, I knew it was not its intention to exclude the sporting press, and, therefore, immediately on its issue I had mailed to FOREST AND STREAM and other kindred publications a copy. If your copy was not received, it must have been through some fault of the mails. I know the copies mailed to some of the other papers were received, and I presumed you had received yours. There was no intention of denying FOREST AND STREAM a copy. I wish you would give this letter publication in order that neither the society or myself may be misunderstood in this matter. HERSCHEL WHITAKER.

Raritan River Fish and Game.

PERTH AMBOY, N. J., Oct. 15.—Striped bass and perch are biting nicely at bloodworm in the Raritan River anywhere from one to five miles above the Central Railroad bridge. Some yellow legs about yet, and a flock of teal was seen this week. K.

"SPORT" FROM THE STANDPOINT OF HUMANITY.

Editor Forest and Stream:

May I point out to Mr. Louis Benson Akin (vide your issue of Oct. 9) that in deprecating the pleasure men derive from the killing of game, or the "fun" of seeing a pack of hounds, fight, chase, catch, fight or kill a wild animal, he proceeds entirely on sentimental grounds (I use the word in no invidious sense) and ignores practical observations and indisputable facts. Thus, I do not see how any killing of any animal, on any but strictly utilitarian grounds, can be anything but cruel, considered entirely in the abstract, and it should follow that any enjoying of any such killing can be nothing but an aggravation of cruelty. But strictly abstract considerations never have, and never will, govern society; compensations, or call them either contradictions or compromises if you prefer, invariably play most important parts, and logic stands a poor chance when human nature is arrayed against it.

Now, surely Mr. Akin knows many most humane men who are ardent sportsmen. I know men so tender-hearted that they will walk up a steep hill on a very hot day to spare the horse, who delight in "going out shooting." There is no man in America that I honor more for his exalted humanity than the Hon. Felix R. Brunot, a man who stayed in the extreme front at Gaines's Mills caring for the wounded, risking his life a hundred times, and who was finally taken prisoner while in pursuit of his duty, and who subsequently ventured into the camp of Capt. Jack (just after that scoundrel had murdered Gen. Canby) in his attempt to save the Modoc tribe from extinction by the United States forces. Such a man *must* be humane, there is no possibility of believing him anything else. Yet he was a most devoted sportsman, and lost his health (which has now resulted in his mental decay) in pursuit of "sport." There is no race on earth more humane than the English, yet they are the most ardent of sportsmen. Now, it is out of the question to say that the delights of such men are cruel. Logic may say so, abstractions may prove it; but their lives rise superior to mountains of other proofs.

And to be more specific, there certainly is "fun" (meaning enjoyment) in witnessing the gallant fight between a bob cat (wildcats we call them) and a pack of hounds. I have seen

but one, but I know that that one stirs my old blood yet when I remember it, and I don't think I am a cruel person either. Of course, after the fight is over and the cat killed, endless sympathy and pity is bestowed on Flute, Alf or Pick, for their lacerated ears, sides, legs, or bellies, but nobody pities the cat.

The explanation of this apparent contradiction of needless killing being enjoyed by the kindest-hearted of men, would seem to lie in the exhilaration sports give, the matching of wild cunning, speed or power, against the intelligence of man, whether that intelligence be displayed by man himself directly, or through his training of animals to assist him in his sports. Thus, as man's advantages grow, "sportsmanship" accords the game more chances. When I was a boy it was quite the proper thing to shoot birds sitting on a tree, our old muskets or even shotguns were slow affairs, loading was a long job, powder was costly, and altogether we had far less advantages over the birds than our successors with their muzzleloaders and prepared ammunition now have, and with these advantages the obligations seem to have been laid on the sportsmen of to-day to give the game a better chance; hence, as I understand it, birds must not be shot except on the wing, and squirrels must be shot through the head only (if a rifle is used).

Unquestionably Mr. Akin's appeal to us to "be gentle" is touching, and even proper, but those of us who, for many different reasons, are not sportsmen, must not "measure others' corn in our half bushel," and it is no less a duty to be tolerant of the pleasures enjoyed by others, regardless of whether we share or detest those enjoyments, than it is to be gentle, and in fact, that very gentleness imposes on those who would truly manifest it, the duty of extreme toleration of views and likes differing from our own. It is curious to observe in this connection how love of "sport" has grown with the advance of mankind. The savage hunts entirely for food or other utilitarian purposes, only the civilized man hunting for sport, and the more civilized man becomes, the more sportsmen follow sport for its own sake, for "fun."

Perhaps I ought to say, lest Mr. Akin misjudge me, that I am not a "sportsman" in the least degree. W. WADE.

OAKMONT, Pa., Oct. 11.

SCHOOLING THE DOG.—XVI.

NOT the least of the obstructive troubles which embarrass the novice in his first training attempts is gun-shyness, as the dog's fear of the gun is commonly termed. The dog's fear of the gun is often the fault of the trainer. He proceeds to accustom the dog to the gun on a wrong theory. His own knowledge of the uses of it and the pursuit of birds is unconsciously made the standard by which to measure the puppy's knowledge. If the trainer would but think over the matter seriously, he would recall to mind that far back in the years when he was a boy he had much ignorance and many silly fears, knowing nothing of the manner of hunting birds, as, in fact, he knew but little about anything else. A gun he looked upon as an awesome engine, and when the day came in which his courage was somewhat uncertainly brought up to the point whereat he resolved on the desperate adventure of firing the gun, he took aim with a beating heart, closed his eyes, turned his head aside, and, a ghastly grin settling on his face, he pulled the trigger. The deed done, it was the boast of days to his less favored or less brave companions. And yet, keen as is the spirit of rivalry or emulation among boys in deeds of daring, there are some of them who have not the courage to use firearms. But the boys who shoot are generally taught the use of firearms and are gradually accustomed to their practice by sympathetic tutors. However, let us suppose that a boy has reached the age of seven or eight years without ever having seen or heard of a gun. Let us suppose further that his father suddenly resolves to accustom the boy to the report of the gun, so, with that purpose in view, he takes him into an open field; then, while the boy is 4 or 5yds. away chasing a butterfly, the father fires. The boy, as a matter of course, is terrorized and runs for home. The father shouts at him, runs after and catches him, jerks him back by his collar and whips him. He reloads, looks sternly at the boy and fires again. He sees a fierce flash, hears a frightful report and smells offensive gases. Absurd as such a method would be when applied to the boy, it is often the one pursued when giving a puppy his first lesson with the gun. Of course, everyone can readily perceive that such a method is absurd when it is pointed out, because everyone can understand how it would seem if applied to one's self; but this faulty method, absurd as it is, seems to find much favor, and its faults are overlooked till much harm is done. Most amateur trainers fail to consider that the puppy is absolutely ignorant as to the purposes of a gun, and that the same causes which terrorize the boy, and also some men, may have a similar effect in respect to the puppy. If the trainer would keep in mind that the puppy can learn only from experience, and keep also in mind that his own boyhood, with all its timidity, ignorance and immaturity, is the true standard by which to sympathetically understand the puppy, he would have few cases of gun-shyness, and would beside train much more intelligently and better. However, the harsh and inappropriate standard of mature knowledge and skill is commonly used instead of the foregoing.

Therefore, in most instances gun-shyness is the result of the trainer's own stupidity or thoughtlessness or lamentable lack of knowledge, and this without any reference to his mental capabilities. It is not necessary that a trainer or shooter be densely ignorant to make a gun-shy dog. Men of excellent sense concerning other matters, seem to think that a dog and gun were naturally made to be associated together, and that the dog should quite as readily take to an acquaintance with the gun as the man does to shooting it over the dog. Any shortcoming in the application of this faulty theory is ascribed in most instances to the dog's dereliction. It is rare, indeed, that the trainer considers himself the one to be blamed in the matter, though his impatience may be so dominant that he is wholly inconsiderate as to whether the dog has any comprehension of what he is required to do or whether he even has had any experience in it; if the dog fails in the required performance, anger and violence too often come in play instead of kindness and instruction.

Fear causes all kinds of shyness—gun-shyness, whip-shyness, handler-shyness and bird-shyness, the latter commonly called blinking. Whichever it may be, he avoids the one or the other because he is afraid. To punish a dog for his fears in no wise restores his confidence; on the contrary, it adds to his fears and confirms him in them. The fact that so many dogs are cured of gun-shyness is positive proof that they never would have been gun-shy had they been properly accustomed to the gun in the beginning, for it is a self-evident fact that if the dog can have his fears allayed and become accustomed to the gun after he once has acquired a fear of it, he could have become accustomed to it much more readily under proper management at the time when he had no fears at all. However, the trainer will have to face the problem some time either as the result of his own mistake, or through the mistake of others, and it is necessary that he should know the best method to effect a cure.

There is no arbitrary method by which a cure can be effected, nor is the intensity or mildness of the shyness any criterion to estimate the length of time required to effect a cure. Some apparently mild cases persist to a discouraging degree, while some very bad cases—under the right combination of circumstances—are cured readily.

Highly nervous and timid dogs are easily made gun-shy, and particularly so if the trainer has caused them to be shy of himself by punishment. When the dog is shy of his trainer any unusual acts of the latter are viewed with apprehension, and ones which otherwise would be passed unnoticed are considered alarming when the dog already is afraid.

Dogs manifest distinctly different ways of avoiding the gun; some run away entirely, either returning home or taking the opportunity to self hunt; some run to the first place which offers concealment, and tremblingly hide; some will lie down and curl up apathetically; others will go with the handler, but maintain a safe distance from him. Some will show terror at the mere sight of a gun and will frantically run away; others show alarm only when it is put to the shoulder as if to fire it, and others again fear only its report.

There are three prime requisites in the attempts to cure gun-shyness—the dog should not be permitted to run away; he should not be given to understand that the gun has any reference to him at all, and both of these the novice generally ignores, and every effort should be made to secure the dog's affection. No training which is accompanied by punishment can be practiced on the gun-shy dog. Let the trainer feed the dog, praise him and make a companion of him; when he has a deep love for his master and confidence in him, they will go far toward helping him to a cure.

To prevent the dog from running away, if he is so inclined, he should be taken into an inclosed yard from which he cannot escape. The precaution is unnecessary if he will not bolt. If he is afraid of the sight of a gun, a pistol of the old-fashioned kind, firing caps, and small enough to carry in the pocket, is best. The dog cannot see it, and is not anticipating trouble, as he does when the gun is in sight. The trainer should assume his careless air. The serious, portentious demeanor, such as the trainer assumes when he gives the puppy a thrashing, should be avoided. The puppy soon learns to interpret such demeanor correctly, and he becomes afraid in anticipation. Whether in field or yard, the lesson should not begin immediately. Make the whole affair as commonplace an incident as possible. To the end that it be an event more of pleasure than of pain, let the trainer have some pieces of meat to give him betimes; and a few gentle pats on the head and some kind words will not be amiss. After a time, when he is not too close by, and when he is not anticipating it, the trainer may snap a cap. Let me repeat that the trainer should not look at the dog at this juncture. He can note what the dog is doing without looking directly at him. If the dog, when he hears the report, scrutinizes the trainer closely and detects no purpose refering to himself, he may pass it by as of no importance. If he runs to a corner and curls up in it, he must be brought back kindly and deliberately, and the same course pursued as before.

If he will lie down, curling up closely, and so remaining in an apathetic state, it is better to put a check-cord and spike-collar on him, then when he lies down, give a few light jerks to disturb him and make him observant. The trainer can sit in a chair and snap caps for an hour or more every day till the dog becomes indifferent to the reports, when powder charges may be used. It is a peculiarity of animal nature, whether in man or dog, that he cannot remain in a state of perpetual fright. Let the cause of fright remain, the fright gradually decreases. Men become habituated to dangers, and indifference supersedes alarm. If the trainer have the time and patience, he can persist in the shooting day after day till the dog's fright has its natural decline and he becomes habituated to the noise.

If the dog is a bolter, he must be prevented from running away. Again the check-cord and spike-collar come into play. These do not allay his fears, nor do they possess any inherent property toward effecting a cure. They simply prevent or deter him from running away, and prevented he must be before a cure can be begun. Kindness, rewards and an unconcerned manner will gradually effect a cure.

If the dog have ordinary courage and sense, with some ardor for hunting, a cure is sometimes made in a moment. Lead him out on a long cord in a field where there are birds, and if one attracts his attention, shoot it, and let him capture it. If it is winged and will flutter he is all the more interested. If he can in any way be induced to chase a rabbit, and if the trainer then can shoot it ahead of him when he is in close pursuit, the cure nine times out of ten is affected then and there. The company of an old steady dog is more or less reassuring, whether he be a rabbit or squirrel dog. Indeed, if so all the better. Nothing so excites the spirit of the chase in a dog as to see or hear another dog in full cry pursuing a rabbit. If he has any fire in him, he is sure to join in the chase. When his mind is fully occupied with other things, the report of a gun has little effect upon him. However, a gun-shy dog should never be worked on game birds before he is thoroughly cured. If worked on them sooner, the chances are about ten to one that he becomes bird-shy and a blinker, in which event the time and labor necessary to correct the double fault is worth more than is the dog.

A method which is very successful is to place the dog's food in its regular place, then to shoot when he begins to eat. If he bolts into his kennel, the food is quietly removed and none given till the next meal time. The lesson is then repeated, and again the food is taken away if he bolts. In time his hunger will become so importunate that no danger will deter him from appeasing it. If this method is persisted in, he learns to associate the report with his meals, and looks forward to it with eager pleasure.

Again, dogs have been taken to grounds where a trap-shooting tournament was in progress, and being tied in a safe place nearby, have come to be heedless of the gun. This, in a way, is merely wearing out the dog's fright, as has already been treated upon.

There have been many bottles of ink consumed in writing on the heredity of gun-shyness, but most of the writers succeeded better in proving that they were not quite familiar with what constitutes heredity than that the dog's gun shyness was transmitted to him by his ancestors. That there are many dogs predisposed to gun-shyness I freely admit, but that one is born with the fault I do not believe. Dogs of a highly nervous and excitable temperament, with a mentality tending toward silliness, show alarm at any strange noises, whether they be from the gun or anything else. I have in mind a litter of fashionably bred idiots, with narrow skulls and sharp noses, which were about the most nervous and cowardly brutes that I ever saw. Anything unusual to their eyes or ears was sufficient to cause a panic and flight. I remember in particular one curled up in peaceful slumber on the carpet taking a rest by daylight. The clock on the mantel began to strike the hour, when the dog instantly bounded up and out of the window with extraordinary agility and quickness. The clock had hardly struck the second note before the dog had vanished. Such dogs are predisposed to gun-shyness just as they are predisposed to shyness of anything unusual which excites their fears. Inherited cowardice and nervousness would be the better terms for it.

BERNARD WATERS.

A Missing Rochester Dog.

ROCHESTER, N. Y., Oct. 12.—*Editor Forest and Stream:* Believing that all true sportsmen who love the dog, gun and field will be interested, I desire to say through the columns of FOREST AND STREAM that on Sept. 14 a black and white pointer dog belonging to John R. Fanning, of this city, was stolen, and after diligent inquiry in the city no trace of him has been found. The dog was a family pet aside from being well trained and well bred. Was eight and one-half years old, quite fat and rather loggy, and his head, which was formerly solid black, had grown quite gray about the face and eyes.

On account of his age and appearance, it is not at all probable in the judgment of myself and others that he was stolen by a fancier, but was evidently picked up by some one who knew his qualities, and has doubtless been shipped to some other place.

No response has been made to a number of advertisements offering a reward for his return, through the local papers, and I therefore believe that if the above facts are made known through your paper to sportsmen of this State and others, that it may serve to bring the thief to punishment, as I believe all true sportsmen will take an interest in aiding in the recovery of this valuable animal. Our local sportsmen, many of whom have used Bob, are greatly interested in the matter, and ask the aid of all to whose notice this matter may come. THOS. R. GRIFFITH

Western Massachusetts Fox Club.

WESTFIELD, Mass., Oct. 14.—*Editor Forest and Stream:* The committee having in charge the arrangements for the tenth annual hunt of the Western Massachusetts Fox Club have decided upon Wednesday and Thursday, Nov. 10 and 11, as the dates for the meet to be held in Westfield—as in the past six years.

The grounds selected for the hunt this season will practically be the same as last year's successful hunt—in and about the neighborhood of the upper and lower reservoirs in the northwestern section of this town and in town of Montgomery. The full details of this hunt have not as yet been decided upon, but will be no doubt the same as in former years. The first day will be devoted to hunting, followed in the evening by the usual banquet at the Gun Opera House. The second day will be enjoyed by hunting—probably in the same or adjoining neighborhood of the first day's hunt.

That this neighborhood is a rich field for sport of this nature, is acknowledged by all hunters who have participated in previous meets. This season many foxes have been reported by our local nimrods.

As is well known, the members of the Western Massachusetts Fox Club are always ready to welcome and extend the courtesies of the club to visiting members of the guild, and it is expected that an unusual number of fox-hunters will be present with us this season to enjoy this rare sport.

WORONOCO.

National Beagle Club.

A FIELD trial committee meeting of the National Beagle Club of America was held at the rooms of the A. K. C., 55 Liberty street, New York, Monday, Oct. 11. Members present: J. W. Appleton, chairman; H. F. Schellhass, John Bateman, James L. Kernochan, Geo. B. Post, Jr., A. Wright Post and Geo. W. Rogers.

The entries for the coming field trials, to be held at Hempstead, L. I., during the week beginning Oct. 25, are as follows:

Open Class A—For dogs and bitches, all ages, 15in. and under, that have not been placed first in any open class at any recognized field trials held in America: Wharton Beagles' Harkaway, H. S. Joslin's Trick, Franklin Field Trial Kennels' Belle Summers, Summers' Fly, and Sailor, William Saxby's Drive, Summerset Kennels' Garnet and Juno, A. J. Purrinton's Millard R., Hempstead Beagles' Pilgrim, Tyrant and Messinger.

Open Class B—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any open class at any recognized field trials held in America: S. N. A. Baldwin's Another, H. S Joslin's Cora J., Franklin Field Trial Kennels' Pinnie and Stump, Wm. Saxby's Bessie, E. C. Cook's Dixie R., Hempstead Beagles' Prudence and Tragedy, Waldingfield Beagles' Blue Belle.

Derby Class C—For dogs and bitches, 15in. and under, whelped on or after Jan. 1, 1896: Warton Beagles' Harkaway, N. A. Baldwin's Another and Lancer, H. S. Joslin's Cora J., Franklin Field Trial Kennels' Sailor and Maggie S., Wm. Saxby's Doubtful, Summerset Kennels' Hilma, Hempstead Beagles' Starlight and Tragedy.

The number of litter entries in the 1897 Futurity number thirteen, of which a large majority will fill at the trials.

An executive meeting of the club was held at the rooms of the American Kennel Club, Oct. 1. The members present were H. F. Schellhass, J. W. Appleton, George B. Post, Jr., John Bateman, G. Mifflin Wharton and Geo. W. Rogers. The following were placed in nomination, and to hold office during the year 1898: First Ticket: President, Geo. B. Post, Jr.; First Vice-President, Hermann F. Schellhass; Second Vice-President, Geo. W. Rogers; Third Vice-President, Jas. L. Kernochan; Secretary, G. Mifflin Wharton; Treasurer, G. Mifflin Wharton; Executive Committee: John Bateman, H. L. Kreuder, A. Wright Post; Judges: Geo. B. Post, Jr., W. S. Clark, Hermann F. Schellhass, Jas. W. Appleton, George F. Reed, Bradford S. Turpin; Delegate, Hermann F. Schellhass.

Second Ticket: President, Geo. B. Post, Jr.; First Vice-President, Hermann F. Schellhass; Second Vice-President, Jas. W. Appleton; Third Vice-President, Jas. L. Kernochan; Secretary, G. Mifflin Wharton; Treasurer, G. Mifflin Wharton; Executive Committee: A. Wright Post, Geo. W. Rogers, John Bateman; Delegate, Hermann F. Schellhass; Judges: George F. Reed, W. S. Clark, Hermann F. Schellhass, Geo. B. Post, Jr., Jas. W. Appleton, Bradford S. Turpin.

GEO. W. ROGERS, Sec'y.

The Metropolitan Kennel Club.

BROOKLYN, Oct. 18.—*Editor Forest and Stream:* The following gentlemen have consented to judge at the coming Brooklyn show:

Robert H. Burrows, St. Bernards; J. Blackburn Miller, Great Danes; H. W. Huntington, deerhounds, wolfhounds and greyhounds; Charles Heath, pointers; Dr. H. Clay Glover, English, Irish and Gordon setters; James L. Kernochan, English foxhounds and French bull dogs; Dr. S. J. Bradbury, field, cocker, clumber and Irish water spaniels; Winthrop Rutherford, fox terriers; J. W. Appleton, beagles; Charles D. Bernheimer, poodles; James Watson, collies, old English sheep dogs, Airedale, skye, Welsh, Bedlington, Dandie Dinmont and black and tan terriers.

Other specialty judges are yet to be heard from.

An excellent list of special prizes has already been liberally offered by the Fox Terrier Club, the Spaniel Club, the Pointer Club, Irish Setter Club, Gordon Setter Club, the Collie Club, National Greyhound Club, the Dachshund

Club, and the newly-organized Bull Terrier Club, which will be increased as soon as the secretaries of the other specialty clubs have been heard from.

These have been supplemented by offers from private sources: Jas. A. Caldwell, Jr., offers a silver cup, value $25, for the best American-bred wire-haired fox terrier exhibited by a member of the American Fox Terrier Club. G. W. H. Ritchie offers a loving cup, value $25, for the best American-bred wire-haired fox terrier owned and exhibited by a member of the Metropolitan Kennel Club. H. T. Foote offers a cup, value $25, for the best black and tan terrier. The American Fox Terrier Club Yankee stakes and Tomboy stakes of 1897 will be decided at this show.

Premium lists are now ready for distribution, and can be obtained by addressing James Mortimer, Superintendent, Room 48, Arbuckle Building, 367-373 Fulton street, Brooklyn. Entries close Friday, Nov. 12.

Central Beagle Club.

SHARPSBURG, Pa., Oct. 15.—*Editor Forest and Stream:* The Central Beagle Club's field trial will be run at Rice's Landing, near the Monongahela River, beginning Tuesday, Nov. 9. The Monongahela Valley G. and F. P. Association has kindly allowed us the privilege of running our trials on its preserved grounds, which are well adapted to hold trials on.

The Fadas Hotel, at Rice's Landing, will be the headquarters. It is one mile from the trial grounds. Good livery accommodation to and from the ground can be had at a nominal cost. The Morgantown packet leaves the Pittsburg wharf at 3 o'clock every afternoon (except Sunday), reaching Rice's Landing about 6 o'clock next morning. Returning, the boat leaves Rice's Landing about 6 o'clock every evening.

The measuring and drawing of the dogs for the several classes will be done on the boat on the evening of Nov. 8, on the way to the trial grounds, and it is necessary that you and your dog be on this boat that all necessary arrangements shall be completed when the boat reaches headquarters. As the trials will be run on preserved ground, no shooting or hunting of any kind will be permitted (except to test the dogs for gun-shyness).

Rates from Pittsburg to Rice's Landing, with berth good for thirty days, $1.50; meals 40 cents extra. Dogs will be carried free on the boat. Hotel rates $1 per day.

The field trial committee has left nothing undone to make the trial one of the best ever run in this country. A good time may be expected by all who will attend these trials.

L. O. SEIDEL, Sec'y.

POINTS AND FLUSHES.

Mr. George W. Rogers, secretary of the National Beagle Club of America, writes us that the club's trials promise to be very successful, and that the number of entries are greater than those of last year. Also that rabbits are reported plentiful around Hempstead, but to make the matter a certainty Mr. J. L. Kernochan will turn out twenty-five rabbits in the most favorable places. The good support accorded the club's stakes and the energy displayed will undoubtedly insure the success of the trials. It is a relatively inexpensive sport, the hunting of rabbits with beagles, and is more commonly available than is sport with the game birds, all of which should insure to it a permanency and constant growth. Premium lists and all necessary information may be obtained of the secretary, Mr. Geo. W. Rogers, 171 Broadway, New York.

There seems to be a belief, prevalent with a certain class of owners and breeders of dogs, that all purchasers which can be reached through advertising are professional in character, or at least have a business purpose in view. The fact that by far the greater number of purchasers buy dogs for their own personal gratification—the gratification of owning a well bred, handsome, companionable dog—seems to be forgotten or ignored. Every week, from parties who desire to purchase dogs, we have inquiries in respect to the name of parties who are breeders or owners of this or that breed. In our replies to such queries our advertisers are mentioned. The owners of such breeds as do not advertise inferentially do not breed dogs to sell, and it would be officious to send purchasers to them when they do not seek such notice. This week we have an inquiry from Mobile in respect to the name and address of some one who deals in all breeds of dogs From Rhode Island is another query for the address of some one who breeds harriers Not long since we had an inquiry concerning a breeder of Dalmatians; and concerning the breeders and owners of the more popular breeds we have constant inquiries. The man who advertises, and so informs the public of his wares, has the attention of the purchasing public; the man who has something to sell and who does not advertise, is unknown to purchasers.

Mr. Wm. H. Hammond, Thomasville, N. C., in our business columns, offers to train dogs. Fred Bassitt, Dracut, Mass., offers squirrel dog. Dr. Wm C. Johnson, Frederick, Md., offers Irish terriers. W. S. Lambert, New York, offers St. Bernard. Dr. John J Mills, Poughkeepsie, N. Y., wants squirrel dog. Bedford Kennels, New York, offers setters. J. G. Norris, Easton, Md., offers Chesapeake Bay dogs.

The Metropolitan Kennel Club offers an excellent premium list; by far the greater number of classes have $10, $5 and $3. Other clasees. $5 and $3

Wheeling.

PNEUMATIC TIRES AND HUBS.

THE pneumatic tire, while admirably fulfilling the purposes for which it is used, has some defects which count heavily against it, chief of which is that a sharp point or edge, whether of rock, glass or metal will puncture it and render it entirely useless until such time as the injury is mended. It also is liable to injury on block pavements by twisting or turning when it is in the recesses between the blocks, such twisting loosening it from the rim. A punctured tire, whether at a distance of one mile or fifty from home is a sore affliction to its owner. He generally has to face the problem of securing a means of transportation for a wheel where transportation is not to be had, or if had it is charged for according to the emergency and the possibilities of extortion. Mending the tire, as done by the amateur, is imperfect work and generally it lasts but a short time, and even when properly mended, the same dangers of a recurrence is ever present as before. On the other hand, a good pneumatic tire is the most perfect of mechanism whether considered from the standpoint of the rider who, riding smoothly and at ease, with a freedom from concussion or vibration, feels a happy exhilaration, or from the standpoint of the tax-payers, whose good roads are made better by the broad pneumatic tire, which adjusts itself with a nicety to the road's inequalities. With all these circumstances to consider, the makers would be very unwise to remove the guarantees which in the past have helped so much toward the rapid and universal adoption of the pneumatic tire. While there is no doubt but what the guarantee has been many times abused by unscrupulous persons on the one hand, there is no doubt but what it has contributed to the general popularity and use of the pneumatic tire beyond computation. The removal of the guarantee will freely open the way for the adoption of other and perhaps less meritorious mechanisms, which are designed to have all the merits of the pneumatic tire and none of its imperfections.

Already three or four inventions have come conspicuously into public notice, the purpose of whose inventions is to incorporate in the hub the pneumatic effects of the tire, substituting a solid rubber, non-puncturable tire for the latter, which, instead of being cemented to the rim, is held firmly in place by tongues and grooves, that the claim is made for it that it cannot slip, tear off or work loose, and its life ends only when it is materially worn out. A collateral mechanism is a pneumatic hub, a tube, the rubber part of which is well protected by steel thimbles, and a nickle steel frame is attached to it for the spokes. For it the claim is made that there is the least possible jarring or jolting, and that in running against serious obstructions, as a curbstone or ditch, as was done in a test of the mechanism, the pressure on the frame is equally divided on both pneumatic hubs, which spring and yield instead of jolting as do the pneumatic tires when the shock is so great that their resistance is overcome and the rim itself strikes the obstruction. It is claimed that besides making easier riding, by preventing severe shocks, it saves the frame and wheel from breakage.

Hands and Larger Hands.

Even physicians are not agreed as whether or not bicycling tends to enlarge the hands. It is claimed that two eminent English physicians aver that it does not do so. Dr. E B. Turner, one of them, is credited with saying that "any distortion of the kind would be impossible, unless in the case of a very delicate girl, under twenty, whose muscles were entirely deficient in tone." And he further says that he has himself ridden a wheel for fourteen years, and his hands are as small or smaller than they ever were. What inane trash! First of all the development of the hands from proper exercise is not "distortion." Second, the only method known to the athletic world, in respect to developing the body, is exercise. By exercise, the hands become larger, stronger and more useful. In bicycling, not only the hands but the feet, the legs, the arms grow larger from the work. The slavish toadying to a vain sentiment is unworthy any man, much more one who is supposed to have a higher manhood from culture and association.

The Records.

Michaels, the phenomenal little Welshman, has still further designs upon the records. His latest offer is to attempt to break the record of Cordang, the champion long-distance rider of Holland, whose recent record of 616 miles and 340yds. in twenty-four hours is a formidable mark to compete against. It is said that Cordang's pace makers had canvas shields so adjusted to the wheels that, following behind them, Cordang was protected from the wind.

Uneven Chains.

Says the L. A. W. *Bulletin:* "It sometimes happens that a bicycle chain does not run evenly, *i. e.*, it will be tight at one point and loose at others. This indicates that either the chain or sprocket wheels were improperly made or have worn unevenly. If the tightness occurs always at a certain part of each crank revolution, that would indicate that the fault is in the sprocket wheel rather than in the chain. If the chain is to blame, it will 'set up' whenever a certain part of it runs on to the teeth of the sprocket." All this evil can be brought on chain or sprocket wheel of a good machine by riding with the chain too tight, a not uncommon fault with riders whose experience should teach them better. With a tight chain, the irregular strain, a strain which is greatly intensified in hill-climbing, which comes from the irregular force applied first with one foot, then the other, strains a chain which is cramped in its action by being too tight. A chain, properly loose, will play evenly and freely. A neglected chain, worked with all the noise and friction of a dry-wood saw at work, will soon become impaired in the same manner. Care and common sense will save a wheel from many of the mystic ills to which it is subject.

Relative Speeds.

The man who figures and makes his facts because "figures will not lie" (when left to themselves), has shown that the bicycle is one of the swiftest of modern vehicles, and the swiftest one of all which is available for common, personal use. On the wheel, man is swifter than the horse at his highest speed, and for long distances over good roads, the horse is no competitor. The swimmer is the tortoise of the human species. In three minutes he swims 251yds. A man rowing would go about 834yds. in the same time A runner would cover about 1,270yds. Trotting horses would go about twice as fast as the runner, though some of the swiftest might cover 2,250yds. in three minutes One of the fastest bicyclers has covered about 2,840yds in three minutes. A running horse would cover about 3,080yds in the same time. The New York express once covered five miles in three minutes.

AMERICAN CANOE ASSOCIATION.

Annual Meeting of the Executive Committee.

BROOKLYN, N. Y., OCT. 16.

THE fifteenth annual meeting of the executive committee of the American Canoe Association was held at the Clarendon Hotel, Brooklyn, N. Y., on Oct. 16, in weather that would have done credit to August. Last year's meeting, in Toronto, held five weeks later, was greeted by a snowstorm, and the meeting of 1895, in Rome, N. Y., was held in cold weather; but this year the day was uncomfortably hot and oppressive, and the continuous session, from 10:30 to 5:30, was very tiresome. The room in which the meeting was held was situated on the second floor, facing Fulton street, with the elevated railway close in front of the windows, the noise of passing trains and of the street traffic making it difficult to hear the speakers. In spite of these drawbacks, however, a great deal of business was transacted and the objects of the meeting very fully accomplished. The attendance, as will be noticed, was unusually large, there being but three absentees. The Northern Division, in particular, was better represented than it usually is at the meetings in the States.

The meeting was called to order by Com. Dunnell at 10:30 A. M., and the roll was called by Sec'y-Treas. Schuyler, as follows:

Commodore, F. L. Dunnell; Secretary-Treasurer, C. V. Schuyler; Librarian, W. P. Stephens.

Atlantic Division: Vice-Com. Thos. Hale, Jr., Rear-Com. F. M. Pinkney, Purser W. M. Carpenter, Executive Committee, F. C. Moore, G. P. Douglas.

Eastern Division: Vice-Com. L. S. Drake, Rear Com. R. H. Hammond, Purser F. J. Burrage, Executive Committee, P. C. Wiggins, Butler Ames, A. W. Dodd.

Central Division: Vice-Com. J. R. Stewart, Rear-Com. A. H. McNabb, Purser L. C. Woodworth, Executive Committee, H. C. Morse, F. G. Mather, T. H. Stryker.

Northern Division: Vice-Com. D'Arcy Scott, Rear-Com. G. A. Howell, Purser E. C. Woolsey, Executive Committee, J. McD. Mowatt.

All answered to their name except Rear-Com. Hammond, represented by L A. Hall, proxy; Butler Ames, no proxy; A. W. Dodd, per Raymond Appolonio, proxy; T. H. Stryker, no proxy; Rear-Com. Howell, per J. W. Sparrow, proxy; J McD. Mowat, no proxy. With but three absentees, this is, we believe, the largest attendance ever recorded at a meeting. The Board of Governors was also present: R. J. Wilkin, president; C. V. Winne, recorder; Paul Butler, J. N. McKendrick.

Com. Dunnell announced that the board of governors had decided that the number of representatives to which a division is entitled, one for each extra 100 or fraction thereof above the first 100, should be based upon the annual Division reports as published in the Year Book. We are not cognizant of when and how this decision was made, we have no recollection of it in the past, and it seems to us open to question on two grounds. In the first place, there appears to be no authority accorded to the board of governors to construe the constitution, unless a question is officially referred to the board by the executive committee. In the second place, the ruling itself is in error; by it the representatives of a division for 1898, for instance, are determined on the basis of the membership in September, 1896; or at least a year back. This certainly is not in accord with common sense. In the present case, as it unfortunately happens, no harm is done; instead of increasing, the membership has slightly fallen off within the past year, as shown by the division reports, so that under this ruling two of the divisions are each allowed one more member of the executive committee than would otherwise be the case. This is an advantage, as the total number on the Association executive committee—twenty-three—is none too large. Even if all were present—which is never the case—twenty-three men are none too many to represent properly the extensive and varied interests of the Association, to discuss thoroughly and apart from purely local considerations the many questions which arise at the meetings, and to poll an impartial vote.

Unless there should be a decided increase of membership in the near future, it may be advisable to increase the number of representatives allowed to each division. Under the ruling of the board, as above quoted, the representation for 1899 must be upon the basis of the membership in September, 1897, so that the executive committee will be reduced to nineteen. It is fairly safe to assume that there will be a moderate increase of membership next year; the present low figures are due in part to a general overhauling of the rolls, and the dropping of delinquents of long standing, the roll in each division being at the present time well cleared of such dead wood. With a prospect of better times throughout the country, and, if anything, of a slight reaction from the destructive competition of newer sports, canoeing should make a better showing than of late. As the membership stands on Oct. 1, 1897, an addition of eleven men to the Atlantic Division will entitle it to two in place of one representative on the executive committee; but one more member in the Central Division will entitle it to two, its present legal allowance being but one; with twelve more men the Eastern Division will be entitled to retain its present number of three, instead of dropping to two; and the Northern Division, which for several years has not been legally entitled to any representative other than its three officers, will, by the addition of two new members, become entitled to one member on the executive committee.

This matter of representatives has always been loosely and carelessly managed; divisions are allowed to elect members of the executive committee in excess of the legal allowance, "one member for each hundred or fraction thereof *beyond the first one hundred;*" and these illegally elected members have been recognized at the meetings both of the Association and the Division. There is no question that the basis of representation is too large rather than too small; as a matter of business the Division board might well number from five to seven instead of, as now, but three to five; this, however, is no excuse for the disregard of the plain provision of the constitution. This should be strictly lived up to, and if wrong amended at the earliest opportunity.

After the roll was called and the proxies presented and accepted, the minutes of the meeting held at camp on Aug. 18 were read and approved, also the minutes of the informal meeting of the members in camp in August, at which the announcement of the new officers was made. The report of the board of governors was then read by President Wilkin. Ex Com. McKendrick spoke in regard to the unfavorable financial showing of the year, asking whether the board had appropriated specific sums for the use of each committee. Mr. Winne raised the point that the board was not empowered to consider the reserve fund held by it in trust, but only to say what proportion of the estimated income for the year might be expended by the officers. President Wilkin stated that the board merely designated a certain percentage of the gross receipts of the year to be available for the officers in defraying the expenses of the Association, and that in view of the surplus already accumulated since the establishment of the board, it had just determined to allow the expenditure of 90 per cent., instead of 80 per cent., as thus far. Mr. McKendrick stated that at present no fixed sum was appointed for each committee, and that the experience of this year had been that though very careful estimates of the income had been made and the amounts apportioned thereby, that the income had finally proved to be less than estimated and the expenditures greater. He suggested that in the future the board of governors should make a specific appropriation for each committee. Mr. Winne again spoke, to the effect that the officers and the committees of each year had no right to count in any way upon the trust fund held

by the board, or to look for advances from it, as made this year; that the trust fund was separate and apart from the current funds at the disposal of the officers. He stated that the incoming Secretary-Treasurer should look to his own division for any small sum needed at the outset, provided that no balance were turned over from the preceding administration. Sec'y-Treas. Schuyler suggested that no money was due from the divisions before August, and at least none could be asked before January, when the new annual dues were collectible; also that some money might be needed for immediate expenses. President Wilkin urged that greater care was necessary on the part of the officers in making early and accurate estimates of receipts, and governing the expenditures; he also pointed out the need of better business management than had been the case at times in the past. He also spoke of the necessity of the Secretary-Treasurer managing his finances from the current funds, without relying on the trust fund to help him out.

Mr. Winne asked permission, on account of the heat (of the room), to remove his coat, which was granted.

The report of the retiring Secretary-Treasurer was then read, as follows:

Secretary-Treasurer's Report, 1896-7.

Receipts.

Board of Governors, advanced	$250 00
Atlantic Division	68 10
Central Division	83 10
Eastern Division	94 20
Northern Division	140 00
Postage on Year Book	50 93
Camp site committee	301 45
Year Book	386 50
Camp dues	169 00
Office expenses account	10 00
Camp site committee, 1896	11 04
Transportation account	163 48
	$1,727 77

Expenditures.

Year Book	385 05
Postage on Year Book	56 68
Cruiser's guide	14 50
Camp site committee	509 75
Regatta committee	147 78
Transportation committee	384 50
Librarian, insurance on property	2 60
New flags	13 07
New membership book	5 40
Membership certificates, 500	16 50
Accounts, 1896	6 17
Balance	79
	$1,727 77

There are, to the best of my knowledge, no unpaid debts of the Association. There has been turned over to the Association the property stated in the camp site committee report, and also West Shore R. R. transportation of 1896, to the amount of $40. Uncollected Year Book postage, $5.75. Uncollected Year Book advertisements, $30. In looking through the membership and address books, I notice that the entries have not been kept up. I would suggest that the Association employ some one to do this work. I would also suggest that in replacing books from time to time, new books of sufficient size to obviate the need of microscopic penmanship be purchased.

All of which is respectfully submitted,

(Signed) JOHN R. BLAKE, Sec'y-Treas., 1896-7.

The financial statement in this report, the same as that in the report of the board of governors, shows an actual deficit for the year of $250, the amount advanced by the board of governors at the beginning of the year. Mr. McKendrick, the retiring commodore, asked permission to explain the report, stating that the officers and committees had acted to the best of their abilities in making estimates and regulating expenses, but had been disappointed in the attendance. He called attention to the Year Book, the best yet issued, and also to the excellent transportation, beginning the day before the meet opened, and at a considerable loss then and at the end of the meet, when the steamer was hired by parties for special trips, thus depriving the Association of an income that was fairly to be counted on in carrying them back from camp.

Owing to a misunderstanding, the report was not audited, but a motion was made by Vice-Com. Scott to accept the report subject to proper audit, seconded by Purser Burrage, and carried. A motion was made by Vice-Com. Drake and seconded by Vice-Com. Scott, to accept and place on file the report of the board of governors, previously read.

Though the condition of the finances as displayed by these two reports evoked considerable discussion, it was entirely of an amicable nature.

The report of the Librarian was then read, as follows, and accepted.

Librarian's Report.

To the Commodore and Executive Committee of the American Canoe Association.—Gentlemen: As the librarian of the Association, I have to report that the property intrusted to me has been properly cared for during the year. The flags were put in good repair and forwarded to the camp in August, as usual. It will be necessary to spend a small sum on their further repair after the wear and tear of this season, and I would suggest that authorization be given for this work so that it may be done during the winter. No additions have been made to the A. C. A. library during the past year. Respectfully submitted,

(Signed) W. P. STEPHENS, Librarian, A. C. A.

BAYONNE, N. J., Oct. 1.

Mr. McKendrick asked whether the Librarian had in his possession a complete set of the Association Year Books. Mr. Stephens stated that he had not, and that no provision had ever been made for a collection of any books by the Librarian, but that he would gladly attend to such a collection if members would send in books. Sec'y-Treas. Schuyler moved that the Librarian be authorized to have necessary repairs made to the A. C. A. flags. Seconded and carried.

The Division reports, as follows, were then read and formally accepted and placed on file, that of the Northern Division subject to official audit:

Expenditures in excess of receipts	207.90
	$509.35

In view of the probability that the meet for 1898 will be held upon Grindstone Island or in that vicinity, the following property of the Association was stored with J. J. Delany for future use—see exhibit F: One commodore's tent, fly and poles; 1 secretary-treasurer's tent, fly and poles; 1 camp site committee's tent, fly and poles; 1 surgeon's tent, fly and poles; 8 floors for headquarters tents, 1 mess tent floor, 1 dock, 1896; 1 dock, 1897; 2 square tables, 1 long table, 1 post-office, 1 signal flag rack, 1 signal gun platform, 2 "Private Grounds" signs, 5 benches, 5 flag-poles and blocks, 3 barrel buoys, 2 megaphones, 1 carpenter's bench (without screw), 2 tournament wands, 1 bundle ⅝in. rope for buoys, 1 bundle No. 12 annealed wire, 4 boxes candles, 2 boxes tent pegs, 1 barber's chair, 57 lantern globes assorted colors, 72 lantern frames, 5 w. c. fixtures, 4 rolls toilet paper, ½ barrel copperas.

In addition to the Association property all of the tent floors belonging to the individual members (unless in charge of Mr. Delany by special arrangement) were brought to headquarters, snugly and securely piled up, subject to the owner's order and at his risk. All of which is respectfully submitted.

HENRY C. MORSE,
Chairman Camp Site Committee.

Mr. Stephens moved to accept the report with a vote of thanks to Mr. Morse, the chairman of the committee, for the very complete and detailed report of receipts and expenditures. Only the condensed report is here given, but a long supplementary report detailing every item accompanied it. The motion was seconded by Purser Carpenter and carried.

Pres. Wilkin spoke at length concerning the property reported by the committee as stored on Grindstone Island, asking how it was acquired, etc., and protesting against the Association owning any property. Mr. Morse and others explained that it in part included the old tent floors belonging to members personally, and that the portion belonging to the Association had practically no sale value on Grindstone Island, but might be of considerable use in the event of a meet next year in the same vicinity, that provision had been made for its storage and preservation at a very small sum, and for its removal to Stave Island if that site were selected, also that it could be sold to as good advantage in the spring as at the termination of the meet. Pres. Wilkin again objected to the Association owning any property, and a good deal of time was wasted to no particular purpose.

The report of the transportation committee was then read and accepted, as follows:

Transportation Committee Report—1897.

Receipts.

Passengers and duffle	$163 48
Balance	221 02
	$384 50

Expenditures.

Advertisement for steamer	$ 1 50
Scows for duffle, two days	9 00
Pastime, steamer, charter, seventeen days	374 00
	$384 50

In addition to the above receipts, there were further boat earnings, amounting to about $25, collected by the camp-site committee. The steamer was chartered for one day before the opening of the camp, and one day after the close. The first day, while being of considerable use to the management, was not a financial success, but the last day netted considerable profit to the Association. The receipts were reduced considerably through members chartering the steamer for trips later than the regular schedule time, and thus depriving the Association of earnings anticipated in carrying them to and from camp.

We believe that a less frequent service would be found satisfactory on all days except those when the members arrive in considerable numbers, and would suggest to our successors that, if it is found necessary to charter a steamer during the meet, the time schedule be so arranged that the A. C. A. steamer may be placed at the disposal of the regatta committee for certain portions of each day during the last week, and for charters for short trips of members of the Association in camp.

The details of the receipts from the steamer are as follows, for each day from Aug. 5 to 21 inclusive: $7, $10.30, $12.02, $3 45, $7.37, $5.95, $9.55, $12.35, $11.45, $6.60; $6.55, $16.60, $4.70, $25.15, $24.44. Respectfully submitted,

(Signed) R. EASTON BURNS, Chairman.
J. G. FRASER,
J. K. HAND.

Owing to the arrangements possible through the selection of Stave Island, it will probably be unnecessary to charter a special steamer next year, but it may not be out of place to discuss the transportation question now in direct connection with this report. It is certainly the case that the service was very good, all that could possibly be asked. In regard to the first day, the management was misled by notices from a number of members to the effect that they would need the steamer on that day, these members failing to materialize. The price paid for the steamer was high, $20 per day, with $2 extra for another hand; but after advertising and trying in every way, the committee and Com. McKendrick were able to find no suitable boat at less money. Considering the facilities afforded, if the expense of transportation cannot be materially reduced by securing a suitable steamer at a lower figure, then the price of passage should be increased. The fare this year was but 25 cents for the trip one way, of five miles, with a small charge for trunks and duffle. For good service under such exceptional conditions, and for a limited period, a higher price might well be charged, as this is no more than the fare on the various small steamers among the islands. A fare of 50 cents, or a dollar in all, for the trip to camp and return, would add little to the expense to each man, and no objection could be made to it. It has been proved by long and sad experience, that in default of such service as was given this year and last it usually costs from $3 to $6 and some loss of time to charter an outside boat for the trip each way. A fare of even $1 per trip is not too much for adequate service to and from camp, the average cost has been very much more. If men want a boat service that is both prompt and reliable, they must—and we believe most of them are willing to—pay a reasonable sum for it.

The experience of last year, as per report of the transportation committee, showed just such a deficit as has again been realized, and in view of it we consider that the executive would have been fully justified in advancing the fare from 25 cents to at least 50 cents.

It is plain that the steamer chartered at a comparatively high figure by the Association should be under its exclusive control, so that any money derived from special charters, etc., should go to the Association, instead of acting to decrease the normal revenue. A boat of the right kind could be kept in constant use, so far as she could be spared from the regular route, for carrying parties about the islands at night and for similar special service of the camp.

As to the reduction of the service from the basis of this and last year, as recommended, this would probably have little effect in reducing the cost of charter, as the boat could not be used to advantage for any outside service; when not running to camp she would be idle at her dock. It would probably be most economical to charter her for the fixed time for the exclusive use of the Association, under control of the transportation committee; and, when it appeared that she could be spared from regular trips, to use her for the regatta committee, to carry passengers for fare in following the races, or for short picnic trips. There are always plenty in camp who are ready to go for a trip in a steamer or launch, and some income might be derived in this way, when otherwise the boat would be running empty between town and camp.

Before adjourning for recess, at 12:30, Com. Dunnell announced the new committees, as follows: Regatta committee, Percy F. Hogan, Chairman; Raymond Appolonio, C. H. Williams; camp site committee, H. L. Quick, H. C. Morse; transportation committee, W. E. Barlow, C. V. Winne; auditing committee for report of board of governors, J. C. Mowbray, N. S. Hyatt.

Luncheon was served in the room and the meeting reconvened at 2 P. M. The following report of the regatta committee was read; on motion of Mr. Stephens, seconded by Mr. Morse, the official record of races being omitted in the reading:

Regatta Committee, Financial Report, 1897.

Expenses.

Launch, charter	$6 00
Prizes	137 50
Prizes, express	1 00
Rope for buoys	2 50
Cloth for buoys	78
	$147 78

After recording in detail the races of the meet, the report concluded: "In order to correct misstatements regarding the trophy race, the regatta committee beg to state that on the evening of Aug. 17 the trophy race was posted, to take place the next afternoon. At the stated time a strong puffy wind from the west was blowing, with a moderate sea running, and the weather was not considered by the regatta committee as unsuitable for moderately canvased canoes. But as only one contestant appeared at the starting line, the race was postponed to the next day, with the result as given above.

No protests were entered against the various rulings of the regatta committee. We wish to thank Commodore F. L. Dunnell for acting as clerk of the course.

The regatta committee beg to submit the following recommendations:

First—That the executive committee supply a suitable book in which all entries for the various races shall be made by the members; and the last half of the same book be ruled and headed suitably for the entry of the results of the various races.

Second—That the executive committee provide a small steam launch to be placed at the disposal of the regatta committee during the last week of the meet, in order to properly carry out the races and render assistance to contestants if necessary.

Third—That the unclassified sailing race be dropped from the programme.

Fourth—That open canoe sailing races be encouraged in future programmes, and that the regulations as to sail area and leeboards be made.

Fifth—That all the paddling races except the trophy race be made with a turn on account of the increased interest in the contests and the convenience of the contestants and officials.

Sixth—That the regulations regarding the paddling canoes be remodeled; and beg to submit the inclosed reports on the question, which have been published in the official organ. Respectfully submitted,

J. W. SPARROW, Chairman.
C. V. SCHUYLER.
H. D. MCVEAN.

The members of the committee reported verbally that they had not been able to agree among themselves as to the recommendation or condemnation of any of the proposals. On motion of Mr. Douglas, seconded by Purser Burrage, the report was accepted and filed.

The election of associate members was then taken up, and the following proposals considered: Mrs. M. T. Bennett, Mrs. C. W. Lansing, Mrs. E. S. Towne, Mrs. C. V. Schuyler, Mrs. J. W. Sparrow, Mrs. L. S. Drake and Miss Libbie Pearsall. In the case of two or three names there was no record of the formal seconding by a member of the executive committee, as required by the constitution, and a lengthy discussion followed. It was finally decided that all of the names were properly before the meeting, and as no objection was made to any, on motion of Mr. Morse, seconded by Mr. Mather, the Secretary-Treasurer was empowered to cast one ballot for all, and they were declared elected.

The question of a camp site for 1898 was then taken up and suggestions asked for. Vice-Com. Drake mentioned the wish of some of the Eastern Division for a meet on the Maine lakes, and suggested Moosehead Lake in particular; but the suggestion was not discussed. Lake Champlain and Lake George were each suggested, and Bow Arrow Point, the site of the 1887 camp, was discussed in detail. A letter was read from the proprietor of the Sagamore Hotel on Green Island, Lake George, commending the site and offering special inducements. A general discussion ensued as to the desirability of one of the two lakes on the one hand, and the St. Lawrence River on the other. The Eastern Division strongly favored Lake Champlain, with Lake George as the second choice; but the discussion disclosed a very strong feeling against both lakes and in favor of the St. Lawrence above all other named locations.

Mr. Mather stated that he had ascertained positively that the Forestry Commission of the State of New York had not purchased Grindstone Island, as reported during the summer. Mr. McKendrick read a long letter from Mr. Chaffee, of Stave Island, making a very liberal offer of the site and of special services in return for exclusive privileges of camp store, etc. The offer included the moving of the property stored on Grindstone Island, and special arrangements for removing the caterer's property so that he could conduct the mess as before. Mr. McKendrick spoke in glowing colors of the many advantages of the island. Mr. Stephens suggested that as the meet was under the management of the Atlantic Division this year, it might be well to hear from those who favored a site within the Division. Quite a number of Atlantic Division men were present by this time, but no suggestions were offered.

A motion was made by Mr. Douglas, seconded by Mr. Mather, that the meet be held on Stave Island or Grindstone. Mr. Hall moved to amend by substituting "Lake George" and Vice-Com. Drake seconded the motion. Com. Dunnell resigned the chair to Vice-Com. Hale, and spoke in favor of the St. Lawrence. The vote on the amendment had but five in the affirmative, and was lost. Mr. Douglas's motion was then voted on and carried by a large majority, thus deciding the matter in favor of Stave Island.

A contract was read, between the officers on one hand and G. O. Shields, publisher of Recreation, on the other, by which Mr. Shields agreed to publish the Year Book free of cost, Recreation being named as an official organ. The officers were authorized to sign the contract.

A motion was made by Sec'y-Treas. Schuyler, seconded by Mr. Hall, that the Division pursers be instructed to forward to the Secretary-Treasurer the complete list of new Division officers as soon as they were elected; carried.

The report of the regatta committee was then taken up. It was by this time quite late in the afternoon, and everyone was tired out by the heat and the continual noise. The report of the regatta committee, with the recommendations, was not offered for publication two weeks in advance, as it should have been, and the recommendations of the committee were heard for the first time when the report was read. The proposed changes of the rules, covering a number of conflicting suggestions, were merely read as printed in the FOREST AND STREAM at different times, the regatta committee declining to approve or condemn any of them. After all of the proposed changes were read by the Secretary, Mr. Stephens asked permission to speak on the amendment to Rule I, proposed by him in the FOREST AND STREAM of Sept. 18, and explained that it was practically but a re-arrangement of the existing rule, putting it in a simpler and more perfect form, with the addition of some provisions to govern canoes in paddling races. He read the proposed rule, explaining that it was in four parts, the first defining a canoe, the second describing the method of measurement for all canoes, the third limiting canoes in the sailing races, the fourth limiting canoes in the paddling races. He suggested, as tending to prevent confusion and to expedite business, that the first three heads should be taken up and discussed and voted upon, after which the fourth head, embodying the new features covered by different proposals, should be discussed. A motion to adopt this portion of the amended rule was made by Mr. Mowbray and seconded by Mr. Douglas, being unanimously carried.

The fourth portion was then taken up, Mr. Stephens explaining that he was only responsible for the general form of the proposal, which was framed to embody the general intention of the various recommendations of the Northern Division special committee and others, and that as there was a difference in the dimensions proposed by different parties, the figures mentioned by him should be carefully discussed by those directly interested, the paddling men.

The portion of the rule relating to single and tandem canoes was first taken up, and a lively discussion ensued. Although the proposal was published a month in advance, it was quite evident that one or two who opposed it and threatened to overthrow the entire amendment were not familiar with it, and had no understanding of its intent and effect.

A motion was made that the amendment be not adopted, but was declared out of order. A further discussion disclosed that the objection to the section was based largely on desire to allow the use of racing shell canoes in the trophy paddling race.

Mr. Stephens stated that this was a totally separate question from that of the limitation of canoes in the regular paddling races, and suggested that the amendment be discussed and voted on as applying to all canoes but those in the trophy race, and that the latter question be discussed separately and on its merits later. This was agreed to, and the single and tandem section was again taken up. Vice-Com. Drake objected to the minimum limit of depth, 12in., as too great for a paddling canoe, stating that many of the canoes in the Eastern Division were but 10in. deep. Mr. Mowbray objected on behalf of the sailing canoes. Mr. Stephens stated that the figure was that proposed by the Northern Division, and the representatives of this division present spoke in favor of it as the standard depth of the Canadian open canoe. Vice-Com. Drake moved to amend by inserting 10in. for 12in., seconded by Purser Burrage; and after further discussion Mr. Stephens suggested a compromise on 11in. as originally proposed by Mr. Douglas, which was agreed to.

Mr. Douglas then pointed out that Mr. Stephens's proposals left no margin for slight discrepancies in measurement such as were necessary where 30in. beam was the maximum in the sailing races and the minimum in the paddling races, it being impossible to build to the exact 30in. Mr. Stephens accepted this suggestion, and it was agreed that it should be incorporated in the rule.

Vice-Com. Scott brought up the question of limit of weight, and suggested that as 50lbs, proposed by Mr. Stephens, was an average between the old limit of 55lbs. and the proposed one of 45lbs., it should be accepted; but with the proviso that a deficiency of weight to the extent of not over 5lbs. might be made up by ballast. This was agreed to without discussion, and on motion of Mr. Mowbray, seconded by Mr. Douglas, the section was finally adopted.

The next section, relating to canoes for crews of four, was quickly adopted, on Mr. Douglas's motion, without discussion.

The final section, relating to war canoes, brought forth combatants in battle array. Vice-Com. Drake objected to the proposed limits of size, especially to the length limit of 35ft., suggesting 30ft. as the approved length in the Eastern Division, where war canoe racing is very popular; and also objected to the limit of crew of fifteen men. Mr. Stephens explained that the amendment as framed by him merely incorporated the suggestions of the Northern Division, the only ones made, except that he himself had suggested the establishment of limits of beam, depth and weight as in harmony with the limits in the other classes and desirable to regulate building; that the amendment had been published for a full month in the FOREST AND STREAM, and that he had made special efforts to obtain criticism and suggestions from all interested parties, in order that the final discussion at the meeting might be as brief and concise as possible. The ensuing discussion between the representatives of the Eastern Division on the one hand and the Northern on the other became quite interesting; the former stood out for the 30ft. canoe, with a crew of nine, as the most practicable size for transportation to meets and regattas; and the latter upheld the 35ft. canoe, with a crew of fifteen, as representing extensive vested interests in the Northern Division. As the discussion progressed, abstract figures were dropped and the matter threatened to resolve itself into a very animated argument as to which party won the war canoe honors at the late meet. Even with this disturbing issue ruled out by the Commodore, the matter seemed at a deadlock between 30 and 35ft., as each side advanced excellent arguments and was not disposed to surrender. Vice-Com. Drake moved to amend the limits to 30ft. maximum length, 36in. minimum beam, 17in. minimum depth and 150lbs. minimum weight, maximum crew, nine men. After the deadlock had continued for some time, Mr. Douglas suggested that these limits be adopted, to apply to all new canoes, but that existing canoes be exempt. This solution of the difficulty was accepted and the amendment carried.

The question of the trophy paddling race was now taken up, and Vice-Com. Scott offered a motion that the rules as already adopted should govern canoes in the race for the paddling trophy, Mr. Douglas seconding. The discussion was very brief; on behalf of the racing shell, the following letters, sent to all of the committee, were presented:

DETROIT, Mich., Oct. 8—Dear Sir.—According to the FOREST AND STREAM, our Canadian friends have again proposed penalizing the paddling canoe. Permit me to enter a protest against any such action. I think it is a great mistake they are making, for by limiting weight of canoe to not under 45lbs., they severely handicap the light weight paddler. For you well know that the heavier the paddler the heavier his canoe ought to be. And the heavier the paddler, the more brute strength he usually possesses. And the lighter the paddler, the less supply of brute strength is his usually. Why then penalize the light weight? For what advantage he has in weight he loses in brute strength. As well might one prescribe to bicycle racers that they shall ride racing wheels to weigh not less than 45lbs.; or to oarsmen and scullers that their racing shells shall not weigh less than 45lbs.; or in horse races that all sulkies shall not weigh less than 45lbs.; or that sprinters shall wear shoes on their feet to weigh not less than 45lbs.; or—but enough, I might go on *ad infinitum*.

By all means leave the question of weight of canoes alone. Prescribe length and width, but go no further. If a paddler has the stuff in him to systematically train and prepare himself for the trophy, he will also be enterprising enough to provide himself (or his club will) with the canoe best suited to his weight and purpose.

And as the dimensions of 16×30 have become the standard, why change them and necessitate every paddler procuring a new canoe? It would almost appear as if the change were suggested by and in the interest of canoe-builders.

The National Association of Amateur Oarsmen has no rule regarding weight of racing shells; neither has the Amateur Athletic Union rules as to weight of shoes of sprinters; nor has the League of American Wheelmen a rule regarding weight of racing wheels. And these organizations are, it must be admitted, purely amateur—especially the first two. And these same organizations, which have been in existence for years, and governed by men of brains and standing, have seen fit not to penalize any competitor as to weight of racing shoes, shells or wheels; why, then, should the American Canoe Association permit itself to be bamboozled in the interest (to all appearance) of canoe-builders?

It must be admitted, should these innovations be adopted, it will become mandatory for every racing paddler to procure a new canoe, the expense of which will make a grand total not to be sneezed at, and a very welcome addition to the income of the canoe builders; and the average paddler hasn't any more of this world's goods than he can conveniently take care of. In consequence, it would seem that the action to be taken in the premises should be that which will benefit the largest number of canoeists and not the canoe builders. And to benefit the largest number of canoeists the wisest course to pursue, it would seem to me, would be to leave the dimensions (which have become a standard, to wit: 16×30, with no limit of weight) severely alone. For, as stated above, no two paddlers weigh the same, and what will in weight benefit one will handicap the other; therefore, if I may be permitted to make a suggestion, would most emphatically suggest: Hands off! and leave well enough alone.

As this matter comes before the executive board, of which body you are a member, I believe, I would ask your good offices in the direction that no action be taken, and that the suggestions of our Canadian friends be given a quietus.

As you well know, paddling is not on too firm a basis, and ought to be fostered instead of being handicapped.

Our Canadian friends do not advocate a weight limit on the sailing canoe. Why do they discriminate? Why should the sailing canoe be exempt?

If it is a good thing for the paddler, why is it not equally as good for the sailing canoeist to limit his weight?

I do not write this from personal considerations, for I have retired from racing, and, in consequence, will not be affected financially, but in the interest of the sport in general.

W. C. NOACK.

DETROIT, Oct. 13.—Dear Sir—The question of placing weight limit upon the paddling canoes that will come before the meeting of your board of governors on Oct. 16, I think should be considered very thoroughly. I know of no amateur sport where any class of man is handicapped. It certainly is a handicap for a light man to go into a boat weighing 50lbs. when he can have one built that will fill every requirement weighing 25lbs. While a heavy man cannot make quite as good time in a heavy boat as he can in a light one, he is not handicapped to any such degree as a lightweight man. If a paddling canoe should be limited to 50lbs., why not limit a sailing canoe to 200lbs. or more, either weight being twice what is necessary. I can imagine the stir it would make if the executive committee of the National Association of Amateur Oarsmen were to consider a rule making shells weigh twice the weight that they can be built. If a man enters for contestant he goes in training and gives up many pleasures; I cannot see why any handicap whatever should be placed upon them, and trust that when this matter comes up you will give it the attention it deserves, and believe that the best interests of the sport demand that a man should be allowed to build his boat within the restrictions for length and beam, and build as light as possible, as they are allowed to in all other sports. Why not bar silk sails and hollow spars? So many questions and comparisons might be made that it would be a waste of time to write them now. Trusting that this will be received favorably, I remain

WM. C. JUPP.

A little was said in the line of similar argument, but the opinion of the majority was clearly in favor of limiting the trophy race to service canoes. Vice-Com. Scott, who has several times contested for the trophy and who holds it now for the second time, spoke very strongly in favor of confining the racing, as far as possible, to such canoes as were owned and used by the great majority of paddlers. Mr. Stephens spoke of the practical experience of many years, which has failed to produce good competition and has brought to the meets many canoes of light and flimsy construction and calculated only to harm canoeing. Mr. Mowbray and others spoke in favor of the further encouragement of the racing shell and of the highest possible speed. The discussion was much less keen than on some of the previous questions, and Mr. Scott's motion was carried by a large majority.

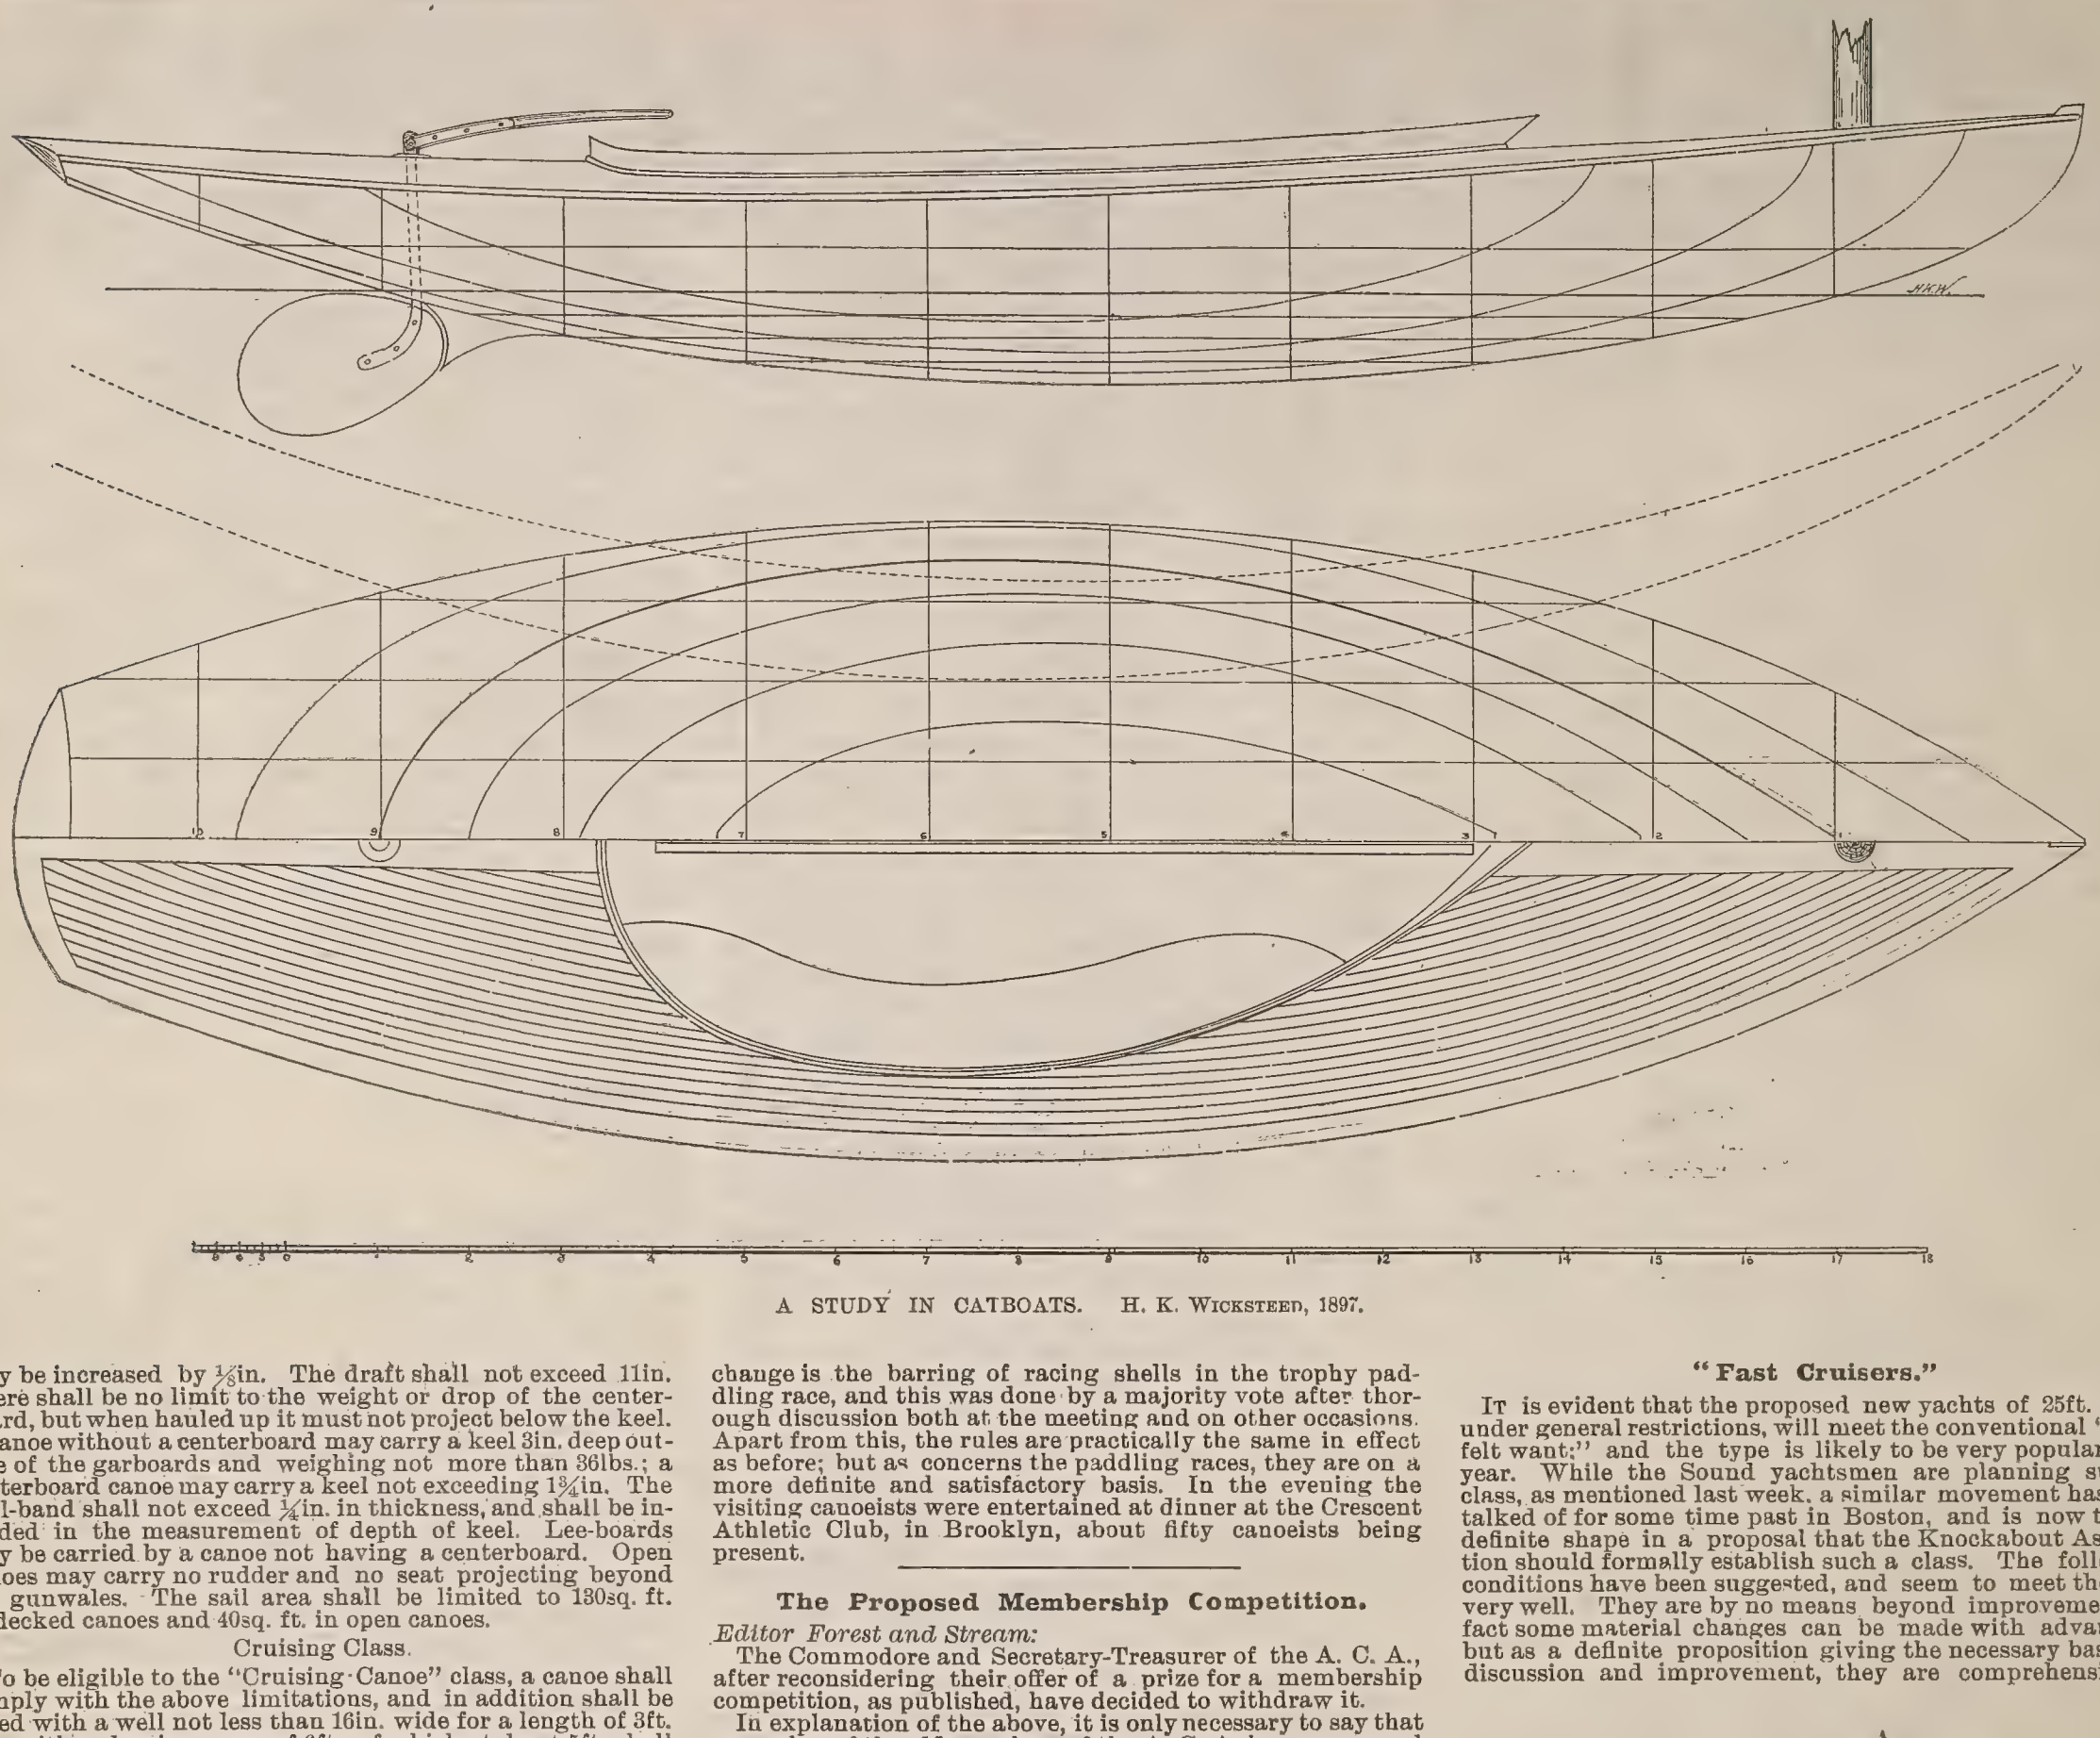
Mr. Stephens called attention to the desirability of some official recognition of the steering fin now used on some canoes, and pointed out that as the rules will stand this is not affected by the limitations of keel in sailing canoes. He suggested, as the question of the admissibility of this device must come up sooner or later in a race, possibly leading to dispute and protest, it might be well to deal with it as far as possible in advance, and suggested the following resolution, which was moved by Vice-Com. Scott and seconded by Mr. Douglas: It is the sense of the executive committee that the use of a steering fin on a paddling canoe shall not be permitted. The resolution was carried. After Mr. Douglas's amendment concerning the board of governors was passed, his proposal to limit the sail area in open canoes to 40sq. ft., with no seat to project beyond the side of the canoe, and no rudder, was adopted.

The first of the racing regulations, as finally amended, reads as follows:

Rule I.

DEFINITION.

A canoe to compete in any race in the American Canoe Association must be sharp at both ends, with no counter-stern or transom, and must come within the limits prescribed for its class.



MEASUREMENT.

The length shall be taken between perpendiculars at the foreside of the stem and the after side of the stern. The beam shall be taken at the widest part, wherever found, and shall not include the beading, provided that it does not exceed 1½in. in depth; if the beading exceeds this depth, it shall be measured as part of the beam. The word "beam" shall mean the breadth formed by the fair lines of the boat; and the beam at and near the waterline shall bear a reasonable proportion to the beam at the gunwale. A variation of not over ½in. shall be allowed in excess of the maximum beam in canoes in sailing races, and the same amount in deficiency of minimum beam in canoes in paddling races. The draft shall be measured at the deepest point, wherever found. The depth shall be measured from the inside of the garboard next the keel to the lower side of a straight-edge laid across the gunwales, or to a similar height in a decked canoe. The sail area shall be measured by dividing into triangles in the usual manner, the sail being stretched taut and flat on a level surface.

DIMENSIONS AND LIMITATIONS.

Sailing.

To be eligible to sailing races a canoe must comply with the following limitations: The length shall be limited to a maximum of 16ft., with an accompanying maximum beam of 30in. For each full inch of decrease in length the beam

A STUDY IN CATBOATS. H. K. Wicksteed, 1897.

may be increased by ⅛in. The draft shall not exceed 11in. There shall be no limit to the weight or drop of the centerboard, but when hauled up it must not project below the keel. A canoe without a centerboard may carry a keel 3in. deep outside of the garboards and weighing not more than 36lbs.; a centerboard canoe may carry a keel not exceeding 1¾in. The keel-band shall not exceed ¼in. in thickness, and shall be included in the measurement of depth of keel. Lee-boards may be carried by a canoe not having a centerboard. Open canoes may carry no rudder and no seat projecting beyond the gunwales. The sail area shall be limited to 130sq. ft. in decked canoes and 40sq. ft. in open canoes.

Cruising Class.

To be eligible to the "Cruising Canoe" class, a canoe shall comply with the above limitations, and in addition shall be fitted with a well not less than 16in. wide for a length of 3ft. 6in.; with a sleeping space of 6ft., of which at least 5ft. shall be clear; and the sails shall be fitted to lower and furl. The regatta committee shall have power to rule out any canoe which, in their opinion, does not conform to the spirit of these restrictions.

Paddling.

To be eligible to the paddling races, canoes must be within the following limits:

One and Two Men (Single and Tandem)—Maximum length, 16ft.; minimum beam, 30in.; minimum depth, 11in; minimum weight, 50lbs. A deficiency of weight to an amount not exceeding 5lbs. may be made up by ballast.

Four Men—Maximum length, 20ft.; minimum beam, 30in.; minimum depth, 12in.; minimum weight, 70lbs.

War Canoes—Maximum length, 30ft.; minimum beam, 36in.; minimum depth, 17in.; minimum weight, 120lbs; maximum crew, 9 men.

These limits shall not apply to war canoes built prior to Oct. 1, 1897.

The following amendment to the constitution, offered by Mr. Douglas and seconded by Mr. Stephens, was unanimously adopted: Article VI., Section 4—Board of Governors.—Each Division, in its proper turn at its annual meeting, shall elect, in the same manner as its regular officers, one member of that Division to serve on the board of governors of the Association for a term of four years, or until his successor is elected. The Commodore shall be a member *ex officio*. Also to insert in Section 5, same article, after "Board of Governors," the words "to have general control of the funds and finances of the Association." This amendment is merely clerical; the original amendment provided for the future establishment of a board of governors, the order of retiring for the first four years, etc. The new amendment provides for the perpetuation of the board by the election of a member each year.

The question of the date of the meet had been deferred until a calendar for 1898 could be obtained. It was now taken up, and after discussion Vice-Com. Hale moved that the meet of 1898 should begin on Friday, Aug. 5, and close on Friday, Aug. 19. It was finally decided that this date should stand unless a change should be recommended by the commodore.

Purser Burrage asked for definite instructions as to the sending of names of candidates for membership to the official organs, and it was decided that the names and official notices should be sent as usual to the Forest and Stream and also to Recreation. On motion of Mr. Douglas, seconded by Purser Burrage, the meeting adjourned subject to the call of the Commodore.

During the day the board of governors was in session. There were present at times during the meeting Messrs. Palmer, Hand, Hogan, Smythe, McVean, Thorne, Lansing, Dater, Quick, Shields, Dorland, Moser, Lawson.

The very full attendance on the part of the officers and representatives was gratifying and encouraging, showing a continued interest in the affairs of the Association. The business of the meeting was carried out successfully and all the work presented to the meeting was completed. As usual, the amendment of the racing rules was the most important and complicated part of the work; and, also as usual, there was a failure to present all the proposals in final working shape, and on the part of some members to familiarize themselves with the numerous points involved. There were, in consequence, delays and hitches while simple points were being explained or argued over; but in the end a very satisfactory result was attained. The only radical change is the barring of racing shells in the trophy paddling race, and this was done by a majority vote after thorough discussion both at the meeting and on other occasions. Apart from this, the rules are practically the same in effect as before; but as concerns the paddling races, they are on a more definite and satisfactory basis. In the evening the visiting canoeists were entertained at dinner at the Crescent Athletic Club, in Brooklyn, about fifty canoeists being present.

The Proposed Membership Competition.

Editor Forest and Stream:

The Commodore and Secretary-Treasurer of the A. C. A., after reconsidering their offer of a prize for a membership competition, as published, have decided to withdraw it.

In explanation of the above, it is only necessary to say that a number of the old members of the A. C. A. have expressed their disapproval of the competition; so they have decided to withdraw their offer.

They trust this will not prevent all members of the A. C. A. from trying to induce all good canoeists and those interested in canoeing to join the A. C. A.

Frank L. Dunnell, Commodore.
C. V. Schuyler, Sec'y-Treas.

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

Yachting.

A Handy Catboat.

Cobourg, Oct. 7.—*Editor Forest and Stream:* I have never been in love with any of the genus *felix*, but the general interest in catboats has led me to my first attempt at a catboat design. The result seems to me at least symmetrical, and the modern overhanging bow serves to mitigate the innate cussedness of the type and gives a chance to brace the step and partners and to set a forestay; the latter

would probably be further improved by a strut near the jaws of the gaff. The dimensions are:

Length over all	23ft.
L.W.L.	16ft.
Beam	7ft.
Draft	1ft.
Freeboard	1ft.
Displacement	2,194lbs.
Sail area	336sq. ft.

H. K. Wicksteed.

[This little boat is very well adapted to the requirements of amateur builders. The construction of small craft of this class is very fully described in "Supplement to Small Yachts."]

"Fast Cruisers."

It is evident that the proposed new yachts of 25ft. l.w.l., under general restrictions, will meet the conventional "long-felt want;" and the type is likely to be very popular next year. While the Sound yachtsmen are planning such a class, as mentioned last week, a similar movement has been talked of for some time past in Boston, and is now taking definite shape in a proposal that the Knockabout Association should formally establish such a class. The following conditions have been suggested, and seem to meet the case very well. They are by no means beyond improvement; in fact some material changes can be made with advantage; but as a definite proposition giving the necessary basis for discussion and improvement, they are comprehensive in

scope and in a general way correct in detail. The limits of space do not permit of a detailed discussion this week, but we hope to go over the proposal later on. We shall be glad to have any comments from both Boston and New York yachtsmen who are interested in the proposed class.

Proposed rules and restrictions governing special 25ft. cruising knockabout class:

Definition.—The boats of this class are intended to be comfortable cruising vessels, of good accommodation and moderate sail area, the aim being to encourage racing in a seaworthy type of boat of moderate cost.

Length L.W.L.—The length on the l.w.l. not to exceed 25ft., to be measured with all fixtures and equipments, as specified, on board and in position, but without crew.

Beam L.W.L.—The greatest beam at l.w.l. to be not less than 8ft. nor more than 10ft. The measurer to mark the position of this point, by a small copper nail or other mark, 3in. above l.w.l.

Freeboard.—The freeboard not to be less than 26in. at lowest point.

Ballast.—Outside ballast to weigh not less than 5,500lbs. The measurer to be furnished with certificates from the designer and from the builder to this effect.

Centerboard.—The centerboard, if any, must be of wood, and not weighted more heavily than is necessary to sink it readily. The board must not come above the cabin floor.

Draft.—The draft for keel boat shall not exceed 6ft. For a centerboard boat the draft, exclusive of board, shall not be more than 4ft. 9in., nor less than 4ft. 3in., and board must be entirely housed when up.

Mast.—Forward side of mast at deck shall not be less than 6ft. from the forward end of waterline.

Deck.—To be wholly decked, except the space taken up by trunk, cockpit and hatches. The cockpit, if any, to be watertight, with scuppers draining outboard.

Cabin House.—The cabin house or trunk and fittings must be permanent, its inside length shall not be less than 10½ft. aft of mast, and inside width not less than 5ft. The cabin house shall not be less than 10in. high at the side and 6in. at the mast, unless the freeboard exceeds the requirements of the class, in which case such excess may be deducted from the height.

Cabin Floor.—The cabin floor shall be continuous for the length of cabin, with greatest width of at least 2ft. 4in. between opposite frames. The top of floor to be not less than 4f. in a keel boat, and 3½ft. in a centerboard boat, below the level of the underside of planksheer at any cross section.

Headroom.—The least vertical height, from any point on cabin floor to the underside of house beams, to be not less than 5ft. 9in. in a keel boat, and 5ft. 3in. in a centerboard boat, in the clear.

Fixtures.—The cabin to be at least 8ft. in length, and at each end to have substantial bulkheads of wood. To be furnished with lockers and permanent transoms or berths for the accommodation of two persons. The forecastle to have at least one folding berth. Each boat to have a suitable water closet, water tank, refrigerator and dish-locker.

Rudder.—The rudder shall extend below the water line to a point within 6in. of the greatest draft of the boat, and shall be hung against the sternpost the entire depth of the rudder.

Scantlings.—Frames not less than 1¼ × 1½in. to be spaced not more than 12in. on centers. Deck beams not less than 2sq. in., finished, to be spaced not more than 12in. on centers.

Beams of cabin house 1½sq. in., finished, to be spaced not more than 12in. on centers. Otherwise, the construction to have sufficient strength to insure seaworthiness.

Planking.—The planking to be single thickness, deck and hull 1in. finished. Planking of top of house to be not less than ¾in. thick finished. The outside of hull shall be planked with Southern long leaf pine; if planked with soft pine, mahogany, cedar or other soft wood, the finished thickness shall not be less than 1⅛in.

Sails.—The rig to be restricted to lower sails of not more than 800 sq. ft. of actual sail area, of which not more than 640 sq. ft. shall be in the mainsail. Storm sails may be substituted for working sails, and either a balloon jib or spinaker may be used.

Any unnecessary rounding or roaching of the edges of any sail, for the purpose of gaining said area, not to be allowed.

Spinaker Boom.—The length of spinaker boom, from outhaul attachment to center line of boat, in position in its gooseneck, as in use and swung out square, must not exceed 20ft.

Sail Area.—The sail area to be the area of the mainsail plus the area of forward triangle. No bowsprit or other device shall be allowed.

Equipment.—In addition to the fixtures, etc., before specified, the cruising equipment of each boat shall include the following, all of which must be on board when the boat is measured, and shall not be removed or used to change the trim for racing.

Two anchors, the total weight of which shall not be less than 100lbs.

Thirty fathoms of 1½in. cable, to be kept in the regular locker forward, and suitable windlass or capstan. Also 50 fathoms of 2½in. cable.

Water tanks of at least 30gal. capacity.

Stove and utensils for cooking for four persons.

Boathook, bucket, compass and binnacle, side and anchor lights, foghorn, pump properly rigged for immediate use.

One serviceable life preserver.

The cabin transoms or berths to be provided with cushions or mattresses and four pairs of blankets.

Crew.—The crew is limited to four persons, including the helmsman, who must be an amateur. Not more than two shall be professionals.

Time allowance.—There will be no time allowance.

The limits of freeboard, beam, planking, frames, dead wood, rudder, position of mast and amount of outside ballast shall not exclude any existing knockabout boats which otherwise come under the restrictions.

Hobe Sound Y. C.

HOBE SOUND, Fla.—The sixth of the H. S. Y. C. prize series of races was sailed last Saturday. The start was made in a strong northeaster, Wenonah and Sprogie carrying two reefs, and Frances three. The beat to the north buoy was a very even thing, but on the run south Wenonah shook both her reefs and was 3m. 10s. ahead at the buoy. The wind kept dropping, and Sprogie shook out her reefs just after jibing. Frances kept hers in, however, and steadily lost ground. The first round was:

Wenonah	0 32 26	Frances	0 43 55
Sprogie	0 33 15		

On the second round the wind settled down to a 12-mile breeze, and Sprogie made a good gain, finishing first, but going back to second place on time allowance. Second round:

Wenonah	0 30 10	Frances	0 36 55
Sprogie	0 28 45		

Two rounds:

	Elapsed.	Corrected.	Pts.
Wenonah	1 02 36	0 55 10	3
Sprogie	1 00 00	1 00 00	2
Frances	1 20 50	1 01 10	1

The points in the series now stand:

Gull	3	2	4	0	0—9
Frances	2	1	3	1	1—8
Wenonah	1	5	2	3	3—14
Sprogie	0	3	0	2	2—7
Wanda	0	4	1	0	0—5

As there are but three more races, only an accident can keep Wenonah from winning the series. Gull will be in all the rest of the races, and she and Frances still have a chance to win out.

In the second class, Juanita and Mary B. had a hard scrap for honors, but Juanita won out. Her skipper found "the line" this time.

	1st Round.	Pts
Juanita	0 45 30	2
Mary	0 46 50	1

H. D. MCVEAN, Sec'y.

Massachusetts Y. R. A.

THE October meeting of the Yacht Racing Association of Massachusetts will be held at the American House, on Thursday evening next, Oct. 21, at 7 o'clock. Proposed amendments to the laws and racing rules will be acted upon, and such other business as may be presented. The suggested changes in the by-laws are:

Article II. Objects.—Amend to read: "Yachts not over 36ft. racing length." The reading now is 30ft. sailing length.

Article XIII. Measurers.—Section 4. Amend to read: "He shall inspect at the request of any competing yacht, and may inspect, measure, or re-measure at his own discretion, any entered racing yacht, either previous to, or after any race, or by appointment, and should he find any infringement on the rules, he shall report the same to the judges."

Among the suggested changes in the racing rules are:

Rule VI. Racing Length.—Section 8. Amend by substituting the following: "Any racing yacht whose owner refuses or avoids an inspection or measurement of his yacht when so ordered by the judges or official measurer, shall be disqualified."

Rule VII. Classification.—Section 1 is amended by creating a 36ft. class, yachts not over 36ft. and over 30ft. R. L.

Rule X. Crew.—Section 1 sets the total number of persons allowed on board a yacht in the new 36ft. class at eight.

Corinthian Y. C., of Philadelphia.

SINCE its larger yachts have been laid up, the members of the Corinthian Y. C., of Philadelphia, have been enjoying some good sport in the racing of small craft at the club station, Essington. The club has already some yachts of 15 to 20ft. racing length, and this year the steam yachts May, Mrs. Sarah Drexel Fell, and Enterprise, A. J. Cassatt, have each carried a new racing boat at their davits. Both boats were built by the Spalding-St. Lawrence Boat Co., the little May being designed by C. H. Crane, and Enterprise by W. P. Stephens. After several previous meetings, a special match was sailed on Oct. 7, May winning by 46s. Mr. E. P. Baugh, Jr., has offered a silver cup for a series of three races, this to count as one. The 15-footers Mae and So Long will also race.

Rifle Range and Gallery.

Iroquois Rifle Club.

PITTSBURG, Oct. 16.—The tenth annual tournament of Iroquois Rifle Club, held Oct. 11–14, was a decided success. All rifle shooting took place at the club's gallery range, any .22cal. rifle being permitted. The winners and scores made by them in the various matches follow:

Members' match: Each contestant fired 50 shots in 10 targets of 5 shots on the reduced Standard American target. The gold medal was won by Robt. F. Phillips (Old Rip) with a score of 457 out of a possible 500. The other scores made were: Al Hofmeister 438, Henry Sperling 433, A. Goldstrom 420, H. B Pierce 410, H L. Born 407, Wm. Langhorst 405, F. G. Broadhead 378, R. R. Bennett 374, Jno. Pifer 368, W. Riebling 360, B. Kestner 360, C. L. Gist 359, I Wood 344, D. Benjamin 338

In the All Comers' matches the results were as follows: Continuous Prize match, universal gallery target, 3 shots per target, the best 3 targets of each shooter to count; $100 in eighteen cash prizes, ranging from $30 to $1. Possible score 135.

L P Ittel	45 45 45—135	F C Mayer	45 42 41—128
R F Phillips	45 45 45—135	R Hoffman	44 42 41—127
Al Hofmeister	45 44 44—133	Aug Hofmeister	44 43 40—127
C P Mayer	44 44 44—132	Old Hoss No 2	43 41 41—125
A O Goldstrom	41 44 44—132	H L Born	42 41 41—124
H B Pierce	45 44 43—132	S W Hill	42 41 40—123
J Whiting	45 44 42—131	R Rham	42 41 40—123
H Sperling	44 43 42—129	J Bergmann	41 41 40—122
T H Ewing	45 43 41—129	I Wood	41 41 40—122

Expert Medal match, 5 shots each at the universal gallery and standard American targets, no re-entries, the winner receiving a handsome gold medal. The scores of the five leaders follow:

	Universal Target.	S. A. Target.	T'l.		Universal Target.	S. A. Target.	T'l.
A O Goldstrom	71	48	119	R F Phillips	68	44	112
L P Ittel	71	47	118	H Sperling	68	33	101
Al Hofmeister	71	46	117				

Hofmeister trophy match, 3 shots on a 3in. bullseye target, no re-entries, the best shot by machine measurement to count. A handsome trophy was presented to the winner of this match, Mr. C. P. Mayer, of the Bridgeville Rifle Club, by Mr. Al. Hofmeister. The leading scores made were: C P. Mayer, 8½ degrees; H. Sperling, 9 degrees; H. B. Pierce, 12 degrees; H. L. Born, 12½ degrees; J. Whiting, 14 degrees; L. P. Ittel, 18½ degrees; Aug. Hofmeister, 22 degrees.

A. C. L. HOFMEISTER, Sec'y.

Columbia Pistol and Rifle Club.

SAN FRANCISCO Oct 10.—The Columbia Club turned out in force today at Shell Mound Range for the October medal shoot. The weather was favorable. The hot fight for the possession of the military rifle continues. E. Jacobsen, however, made a spurt, gaining 3 points. He now has 480 in his best ten scores, Creedmoor count. He uses Sharp's regulation military rifle, .45cal.

The president, Dr. Rodgers, who has been high on the 10-shot record medal, improved his score 2 points, making 44 on the Columbia target.

J. E Gorman made a fine spurt in the revolver contest. He now has 263 points in ten 6 shot scores, Columbia target

Rifle, 200yds., Columbia target, class medals for members only, one 10-shot score:

Champion class—F O. Young 59.

First class—Ole Bremer 61, A. B. Dorrell 88.

Second class—J E. Gorman 81, G. M. Barley 106, M. J. White 118.

Third class—A. Hinterman 111, A. H. Cady 115, B. Jonas 121, Mrs. M. J White 178.

Rifle, re-entry matches, open to all comers. 200yds., Columbia target; F H. Bushnell rifle medal and cash prizes, 3 shot scores—A. H. Pape 9, O. A Bremer 10, F. O Young 15, A. B. Dorrell 15

William Glinderman military medal and cash prizes, 10 shots, Creedmoor count: F. O. Young 40, 48, 47; E. Jacobsen 49, 48, F. H. Bushnell 46, 46.

F. O. Young rifle medal and cash prizes, 10-shot scores: Dr. L. O. Rodgers 44, A. H. Pape 48, 49.

Pistol, 50yds., Columbia target, class medals, for members only, one 10-shot score:

Champion class—Dr. L. O. Rogers 42; F. O. Young 49, C. M. Daiss 54

First class—M. J. White 52, F. E. Mason 56.

Second class—Mrs. M. J. White 63, F. H. Bushnell 63, G. M, Barley 80.

Third class—A. Hinterman 64, C. Roberts 92, A. H. Cady 103, Mrs. C. F. Waltham 121.

Pistol re-entry matches, open to all comers, 50yds., Columbia target, Gordon Blanding pistol medal and cash prizes, three-shot scores: F. O Young, 8, 9, 12; C. M. Daiss, 8, 9; J. E. Gorman, 8, 13; F. H. Bushnell, 14.

Diamond pistol record medal and cash prizes, ten-shot scores: F. O. Young, 40, 44.

Howard Carr (any revolver) medal and cash prizes, six shot scores. J. E. Gorman. 23, 28, 28, 28; A. B. Dorrell, 25, 31, 32.

Achille Roos .22 rifle medal, ladies' trophies and cash prizes, five-shot scores: E. Jacobsen, 10; A. H. Cady, 11, 14; Mrs. C. F. Waltham, 13; A. B. Dorrell, 13, 15.

ROEEL.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Oct. 26-27.—ROCHESTER, N. Y.—Fall tournament of the Rochester Rod and Gun Club. Targets. $75 added money. Committee: L. V Byer, L. McCord and Lyman Davis.

Oct. 26-28.—COUNCIL BLUFFS, Ia.—Tournament under the auspices of W. D. Hardin, F. S. Crabill and C. B. Randlett. $300 added. Programmes later.

Oct. 27-29.—DES MOINES, Ia.—Amateur tournament at the Des Moines Gun Club's park. $300 added. W. R Milner, Manager.

Oct. 29-30.—GRAND RAPIDS, Minn.—Tournament of the Itasca Gun Club. Dr. W. P Brown, Sec'y.

Nov. 16-19.—DES MOINES, Ia.—Tournament under the management of Mr. W. E. Kessler. First two days, open to amateurs only; last two days, open to the world. Added prizes each day. Live birds on the afternoons of Nov. 17 and 19. For programmes address W. E. Kessler, 1105 Maple street, Des Moines, Ia.

Nov 25.—BUFFALO, N. Y.—Thanksgiving Day tournament of the Bison Gun Club. Sweepstakes and merchandise events. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo, N. Y.

1898.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The departure of U. M. C. Thomas for a trip across the North Atlantic was marked by a very pleasant little episode on Friday night last, Oct. 15. On that evening Mr Thomas was tendered a dinner at Morello's, Twenty-ninth street, near Broadway, by a few of his friends. Among the number were Capt. J. A. H. Dressel, of the U. M. C Company; Capt. A. W. Money and H. Hawkins, of the American E. C. and Schultze Powder Company (Limited); John L. Lequin and B. H Norton, of the Hazard Powder Company; E S. Lentilhon and H. Barry, of the Du Pont Powder Company; Secretary Higgins and Ed Taylor of the Laflin & Rand Powder Company, and another. Mr. Thomas was accompanied by his son, U. M. C., Jr., a true chip of the old block. The party just numbered twelve, the unavoidable absence of Noel E. Money, being somewhat in the nature of a blessing for, had he been present, there would have been thirteen at table! The center of the table was graced by a magnificent mound of American Beauty roses, presented by Mr Thomas's friends. After the dinner had been disposed of, it turned out that everybody had some little memento for the guest of honor. The gifts were all extremely appropriate; at least Mr. Thomas was kind enough to say so. The following is a partial list: A meerschaum cigar-holder, an amber cigar-holder, some boxes of cigars, a briar pipe in a case, a silver cigarette case, a rabbit's foot mounted as a paper cutter with a mother of pearl blade, sample bottles of Mountain Dew and Bass's ale a corkscrew of unique design, a few cures for seasickness, and a thermometer with which to take his own temperature whenever he felt hot under the collar. The entire party then escorted him to the boat, the Campania. In his stateroom Mr. Thomas found another surprise awaiting him. Reclining on the lower berth was a beautiful floral baby, its head made of yellow chrysanthemums and its body of scarlet geraniums. Across its bosom were the letters "U. M. C." Taken all in all, it was a great send-off, and showed more plainly than mere words how real were the good wishes for a pleasant trip and a safe return that were showered upon U. M. C. on this occasion.

Tom Morfey is shooting in capital form just now. He seems to have regained the skill that won him so many matches in 1894 and '95. Up to Saturday last he had killed every bird he had shot at in the last 120 or so, losing only two or three of them dead out of bounds. On Wednesday, Oct. 13, at the New Utrecht Gun Club's grounds at Woodlawn, L. I., he scored 49 out of 50, with 1 dead out, besides running 10 straight in two 5-bird races. At Elkwood Park on the next day he scored every pigeon he shot at save in the sweeps at 3 pairs after the sun was down. In the blackbird sweeps he scored 48 out of 50 on really fast little birds, standing at the 25yd. mark. There is some talk of a match at 25 pairs between Morfey and Hank White, of Little Silver, N. J. This ought to make a very pretty race indeed, as Hank White is quite *au fait* at this style of shooting. Talking of matches at pairs: when pairs are shot at the Elkwood Park grounds, an opportunity is given the spectators of seeing some remarkably pretty work by the retrievers. Two dogs are used, and each takes his own bird without any dispute. This neat retrieving is due chiefly, we must say, to the wonderful sagacity of Milo, an Irish setter, who is under the most complete control, and who seems to know more about gathering pigeons than either the shooter, the dog handler or any of the spectators. There is something almost uncanny about the ease with which Milo understands exactly what is said to him.

Twenty-two years ago Louis Schortemeier was not quite so large as he is now. He had, however, as strong a liking for a gun as that he now possesses. It was no ejector, nor was it a hammerless gun that he caressed in 1875; it was not even a breechloader. It was just an old muzzleloader that never grumbled, although it kicked occasionally at the varying amounts of shot and powder it had to swallow sometimes. The above preamble leads us naturally to the following story: Schorty learned one day in 1875 that there was to be a shooting match somewhere in the vicinity of Red Bank, Little Silver, or some place near there; so he reached for his gun and went out with the intention of securing a potpie by knocking down a few of the escaping birds; in short, he became a bushwhacker. He placed himself favorably down wind, and laid as low as he could, for he was a husky lad even twenty-two years ago. For two mortal hours he waited, listening to the frequent bang! bang! of the guns at the shooting grounds; but never a bird came his way. Being sure that something was wrong, or that they were killing them all, he crept nearer and nearer, until he could see what was going on. It was the first shoot of the local gun club at Ligowski clay pigeons that had just been put upon the market!

Harvey McMurchy was in the city last week. He was looking as well as ever, and attributed his youthful appearance to the soft snap he has had for years, viz: the placing of the L. C. Smith gun on the market. McMurchy told us that he would be on hand at Baltimore this week, so we are looking forward to another meeting with Chief High Ball. And, by the way, when speaking with McMurchy, we touched upon the "Charlie and Mac" interview that appeared in the columns of our Western cotemporary, and which caused a little flutter in the trap-shooting experts' dovecote. It seems that this interview first saw light in a paper in Cincinnati, and purported to be an interview between a reporter of that paper and Messrs. C. E. Willard and Harvey McMurchy. Our Western cotemporary took the interview to be *bona fide*, as we understand it, and ran it in full. The funny thing about the matter is this: Harvey had not been in Cincinnati for some months prior to the publishing of the interview—in fact, he never was interviewed at all upon the subject.

All the shooters of Ohio, and a number from outside that State, know Mr R. S. Dupuy, of Ironton. The following item, therefore, from the Ironton (O.) *Daily Republican* of Oct. 6 will be of interest: "Mr. R. S Dupuy discovered this morning that a valuable gun had been stolen from the office of the tannery. It was taken some time between Saturday night and Tuesday night by a thief who broke through a window, then apparently got into the office by the use of a key. The gun is one of a design quite rare in this vicinity, and is worth $35. It is a Daly three-barreled gun, two shot barrels being of 12-gauge and a rifle barrel of 32-gauge. They are 28in barrels, with clover-leaf rear sight and a Rocky Mountain front sight of pure silver. The stock is considerably marred and scratched with usage and handling. The gun weighs 7lbs. 14oz. It was a highly-prized piece, and Mr. Dupuy will make considerable effort to recover it."

We learn from Secretary Huck, of the New Jersey State Association, that the protest against the Lyndhurst Shooting Association, winners of the championship cup for three men teams at live birds at the recent New Jersey State shoot, has been sustained; and that, further, the name of the Lyndhurst Shooting Association has been erased from the State Association's books. The matter, we understand, is not going to be allowed to rest here, the Lyndhurst Club stating that it will take the matter into the courts, and will ask for an injunction restraining the State Association from awarding the cup to either of the two teams (Boiling Springs No. 1 and the East Side of Newark) that were tied for second place.

The final contest for the Recreation cup at Hackensack, N. J. which will take place early in December, will be fraught with much interest to at least three persons: F. E. Sinnock, of Newark, N. J.; J. S. S Remsen, of Greater New York, and Banks, of the same city. Each of the three have now two wins to their credit; should either win the seventh and last contest the cup will become his property. But should any other shooter score a win for the cup, there ought to be an interesting shoot-off between the three above-named for final ownership of the trophy. The conditions are: 50 known angles and 50 unknown angles, seven contests, greatest number of wins to decide final ownership.

In speaking of the winner in the Riverton Gun Club's 60 bird rac on Saturday last, Oct. 16, the New York *Journal* says: "* * * an unknown, D. A. Wilson by name, surprised all by winning the event from the 29yds. mark, with a score of 59 out of a possible 60." Dennis A. Upson, of Cleveland, O., made his mark at Riverton at the last big shoot held by the Riverton Gun Club: if we remember aright, he was then shooting under the name of D. A. Williams. At the opening shoot of the Carteret Club at Garden City, L. I., on Oct. 2, just two weeks ago last Saturday, shooting under his own name, he divided the main event with George Work, each scoring 23 out of 25 on as fast and hard birds as ever left a trap. On that occasion Upson stood at the 31yds. mark, Work at the 30yds. mark. With such a recent record, it is hard to see how Upson could be classed as an unknown. No doubt his score of 59 out of a possible 60 was a surprise, but if anybody can do the trick at 29yds. it is Upson. And yet he says he can't shoot live birds. In our opinion, Mr Upson is a most decidedly dangerous man at either targets or live birds.

The Rochester (N. Y.) Rod and Gun Club announces a tournament at targets for Oct. 26-27. Tuesday and Wednesday of next week. Seventy five dollars will be added to the purses. In all the purses there will be four moneys—35, 30, 20 and 15 per cent. On the second day there will be a 5-men team race, 20 targets per man, $5 per team, the prize being $25 in cash. The magautrap will be used for throwing the targets in all the events. The entrance fees are at the rate of 10 cents per target, with targets extra at 2 cents each. There are five 15-target events and five 20-target events on the first day. On the second day the team race takes the place of one of the 15-target events. The tournament committee is composed as follows: L. V. Byer, L. McCord and L. Davis. Judging from other tournaments given by the Rochester Rod and Gun Club at this time of the year, this tournament ought to have a good attendance. Rochester has some excellent country to draw from; Buffalo alone can furnish one or two squads of more than average material; and stayers, at that.

Ed. Taylor was a guest at the opening shoot of the Crescent Athletic Club of Brooklyn's target shooters on Saturday afternoon last. He only took along 100 shells and soon had nearly all of them emptied. When he was in this plight an expert rule race at 25 targets was called for. Ed wanted to get in it, so borrowed some 3dr. loads of E. C. powder and proceeded to pulverize his targets with due regularity. When the end of the twentieth round had arrived, he found that he was high with 18 out of 20, and only 5 more to shoot at. "This won't do," said he, "if I miss any more I may not be high; I'll use five W-A loads next time." He used them and broke all 5. "There," said he, "if I'd had twenty-five shells of our own powder, instead of only five, I'd have gone straight, and broken somebody's heart!"

Correspondents, when sending us matter for publication, should be careful to add the name of the State to that of the place for holding the tournament. It not infrequently happens that the promoters of a tournament forget to put the name of the State in the programme, thus making it a guessing match for us as to what State the place designated is located in. As we don't like to guess, we have generally to omit all reference to the shoot. A case in point is the live-bird shoot called the "Jefferson County Fair Association Handicap," $10, 25 birds, birds extra, $100 to be added by the Fair Association. The programme states that entries should be sent to J. T. Lloyd, but unfortunately omits all address. There are so many Jefferson counties in the United States that we have had to give up this conundrum.

One of those present at the Crescent's shoot on Saturday last was Charles A. Sykes, at one time secretary of the New Utrecht Gun Club. Mr. Sykes took part in some of the sweeps, but was using a load of powder altogether too light for target breaking purposes. This didn't seem to worry him much, however, as he is too full of his trip out West to bother about a few bluerocks getting away from him. He left on Sunday, we believe, for the far West, intending to stop for a week at the famous Horicon marsh, where he has been invited for some of the duck-shooting. He is also making for some lake with a name that is unpronounceable and unspellable as far as we are concerned: it ends something like 'bigosh!

Secretary Higgings, of the Laflin & Rand Powder Co., who is also secretary of the Crescent Athletic Club, of Brooklyn, N. Y., says that he knows more about powder when it is outside a gun than inside. He has expressed the determination, however, to have some private tuition on bluerocks, his avowed intention being to get even with Old Reliable Taylor, of the same company. Mr. Higgins is an adept with the billiard cue, and it is our opinion that any man who can play a good game of billiards or pool, can become a good shot with comparatively little trouble.

At the time of writing this there seems every prospect of a big four-handed match taking place shortly on the new grounds of the Carteret Club, at Garden City, L. I. The contestants will be R. A. Welch and Edgar Gibbs Murphy against Geo. S. McAlpin and L. T. Duryea. The conditions will be 100 live birds per man, 30yds. rise, Carteret Club boundary, $1 000 a side. We saw Mr. Duryea on Monday morning of this week, and he told us that they were only waiting to hear from Mr Murphy; and that there was no doubt but that the match would be made. If made, he said that it would have to be shot some time before Nov. 6.

The Kansas City *Star* had a very good report of the Elliott-Gilbert match for the *Star* cup on Oct. 8. Mr. James Whitfield is the sporting editor of that paper, which accounts for the readable nature of the report, Mr. Whitfield being an enthusiast on shooting matters and understanding what he is writing about. The report was illustrated with a cut of Gilbert that we at first refused to believe was anything like him. It portrayed the Chief of Spirit Lake with his upper lip clothed with a growth of hair! Gilbert has raised a moustache since we saw him at Oil City, Pa., last June.

We are told that about 1,000 people witnessed the Elliott-Gilbert match at Kansas City, Mo., on Oct. 8. We can safely say that at no point this side of Pittsburg, Pa., could such a crowd, or anything like it, be gotten together to see a pigeon match. Years ago it could be done, but it would take something far above the ordinary to draw 500 together anywhere in the vicinity of New York. If the Kansas City figures are correct (and we have no reason to doubt them), exhibition matches on the square should be paying ventures in the Missouri city.

Jno. J. Hallowell, of Bethayres, Pa., is now installed as assistant to U. M. C. Thomas in the employ of the Union Metallic Cartridge Company, at Bridgeport, Conn. Mr. Hallowell should make an able and popular assistant, as he possesses an individuality that enables him to make friends with ease, and, best of all, to hold them. Mr. Hallowell's connection with the U. M. C. Company dates from Oct. 12, 1897, when he left for Louisville, Ky., on his maiden trip for the company. He will descant on the merits of the U. M. C. goods at the tournament in Baltimore this week.

Cornelius Furgueson, of the New Utrecht Gun Club, tied with Morfey for first honors in the 50-bird race at Woodlawn, L. I., on Wednesday last, Oct. 13. Mr. Furgueson killed his first 24 straight, then slipped up on his 25th, but ran out with a straight score for the last 25. And the birds were not so easy after all. They were mixed, some slow and some exceptionally fast. When Louis Duryea, one of the very best amateur shots around this part of the country, cannot kill more than 46, the birds must not be classed as a poor lot.

Mr. John S. Wright, captain of the Brooklyn Gun Club, is making preparations for that club's shoot on Thursday, Oct. 28. Capt. Wright says that he is going to get out a programme that will please the boys. Among the attractions he will offer are some valuable merchandise prizes, liberal handicaps to weaker shots, and free lunch. The latter article, he adds, will have no connection with Sunday sandwiches.

Ben H. Norton, of the Hazard Powder Co., was in the city last week, but left for other parts on Monday of this week in the interests of Blue Ribbon. Of course Mr. Norton had something to say about J. J. Hallowell and his run of 154 straight at the Portsmouth, N. H., tournament, Sept. 16. On that occasion—and in fact during the whole of the past summer—Mr Hallowell used Blue Ribbon. He still uses it.

Mr. W. E. Keesler, of Des Moines, Ia., writes us that he has selected Nov. 16-19 as the dates for his tournament. The first two days will be open to amateurs only; the last two days will be open to the world. Prizes will be added every day. Live birds will be shot on the afternoons of Nov. 17 and 19. Anybody who wants a programme should address Mr. Kessler at 1105 Maple street, Des Moines, Ia.

Rolla Heikes shot very well at the Riverton Gun Club's shoot on Friday last, Oct. 15. He won fourth money on 19 out of 20 in the second event, and second money in the 30 bird event with 28 out of 30. Rolla was placed on the 31yd. mark in the first-named event, on the 30yd. mark in the 30-bird event.

Justus von Lengerke, of the firm of Von Lengerke & Detmold, 318 Broadway, came back to the city on Monday morning, Oct. 18, with a nice bag of woodcock, grouse and rabbits that had become acquainted with Justus up in Sullivan county, N. Y., at a recent date. They made a catchy display in the window of the store.

The match between W. H. Wolstencroft, the holder of the 147 trophy, and the party who has challenged him for that cup, will take place on Saturday of this week at the grounds of the Keystone Shooting League, near Holmesburg Junction, Pa., on the main line of the Pennsylvania Railroad. The conditions are 100 targets, expert rules.

On Friday of this week, Oct. 22, Fred. Gilbert will shoot another match with Jim Elliott. This time the contest will be for the Du Pont trophy, now held by Elliott. The match will be shot in Kansas City, of course.

A Newburgh, N. Y., paper has the following item: "Messrs. Halstead and Pierce, of Peekskill; Eb Likely, of Highland Falls; H. C. Higginson and Charles M. Stebbins, of this city, all members of the West Newburgh Gun Club, are in the Adirondacks seeking game—quail, partridge, deer or bears. It matters not what it may be so long as they can draw a bead on it. They went to Plattsburg and entered the great North Woods from the extreme western point. They are expected home on Saturday." The party mentioned above has always been considered a dangerous one for any kind of game, whether with chips or without.

On Oct. 10 in five 15 target events and one 25-target event, 100 targets in all, Barney Worthen, of the Palmetto Gun Club, of Charleston, S. C., broke 96 targets, finishing with a run of 54 staraight. The shoot took place on the grounds of the Palmetto Gun Club at Charleston.

G. M. C. Thomas has sailed for the Land of Taffy to see friends and relatives he left behind in Wales many years ago. U. M. C. sailed in the Campania on Saturday morning last, Oct. 16, and carried with him the best wishes of his numerous friends on this side of the Atlantic.

B. Leroy Woodward, of Campello, Mass., the representative of the Remington Arms Co., of Ilion, N. Y., passed through this city on Monday morning *en route* for Baltimore and her tournament.

"Well, I don't know," as the small boy says. How's this? McMurchy, Heikes, Van Dyke, Dickey, Glover, Fulford, Leroy, Hallowell, *et. alia*. Will the Baltimore shoot be a warm one?

Oct. 19. EDWARD BANKS.

Western Traps.

KANSAS CITY-CHICAGO INTERURBAN RACE.

CHICAGO, Ill., Oct. 16.—The team shoot between Kansas City and Chicago may be considered a practical certainty for the dates of Dec. 7-8 at Watson's Park, Chicago. On Oct 14 at Kansas City a committee was appointed, representative of the general meeting of shooters, such committee to form the nucleus of the team, and to push at once the work of selecting the full team of ten men. The members of this important committee are J. A. R. Elliott, J. B. Porter, Chris Gottlieb, Ed. Hickman, Col. Campbell and Frank J. Smith.

At the Chicago end of the line the final meeting of organization for the purpose of the interurban shoot was held on the afternoon of Oct. 13, the following gentlemen being present: E. S. Rice, W. P. Mussey, W. L. Shepard, C. Wilcox, George Roll, John Ruble, F. P. Stannard, A. W. Adams, R. B. Organ, Col. C. E. Felton, J. H. Robbins, Percy Stone, John Watson, Dr. Shaw, J. J. Smith, M. J. Eich, Ed. Steck, O. von Lengerke, C. P. Richards, W. R. Morgan, John Glover, Fred. Gilbert, Ed. Bingham, F. R. Bissell, H. N. Eason. The assembly was held at the office of Mr. E. S. Rice, agent of the Du Pont powder, he being in the chair, Mr. J. H. Robbins acting as secretary. The following committees were ratified as representing the shooters of Chicago in the plans for the interesting contest:

Reception.—W. L. Shepard, chairman; F. H. Lord, Ed. Bingham, C. B. Dicks, W. F. White, T. P. Hicks, Chas. Antoine, Hon. Jacob Rehn, Abner Price.

Entertainment.—Col. Chas. E. Felton, chairman; Dr. S. Shaw, R. B. Organ, J. H. Amberg, Lemuel C. Willard, Henry Ehlers, Geo. Kleinman, Abe Kleinman, Horace Foss, M. J. Eich, Col. Wm. H. Alberger.

Transportation.—F. H. Lord, chairman; W. F. White, E. H. Hughes, J. M. Gillespie, F. C. Donald, J. R. Griffeths.

Grounds.—John Watson, chairman; Dr. E. H. Frothingham, Edw. Steck, E. E. Neal, Oswald von Lengerke.

Advertising.—J. H. Robbins, chairman; W. Bruce Heffingwell, August Hirth, G. H. Mead, G. M. Holt, J. R. Griffeths.

Finance.—E. S. Rice, chairman; W. L. Shepard, J. H. Robbins, John Watson, C. P. Richards.

Press Committee.—E. Hough, FOREST AND STREAM; C. P. Richards, *American Field*; J. H. Robbins, *Sportsmen's Review*; H. T. Woodruff, *Times-Herald*; C. B. Whitford, *Chronicle*; Lew M. Houseman, *Inter-Ocean*; E. S. Sheridan, *Tribune*; H. E. Keough, *Journal*; R. L. Carney, *Dispatch*; H. P. Spalding, *Record*.

Printing and Badges.—C. P. Richards, chairman; W. D. Stoddard, W. R. Morgan, Ed. Bingham, Fred. Fish.

Ladies' Entertainment Committee.—Mrs. Dr. Carson, chairman; Mesdames S. Shaw, E. S. Rice, C. P. Richards, Ed. Bingham, R. B. Organ, J. H. Robbins, John Watson, J. H. Amberg, Miss Mary Watson.

Executive Committee.—E. S. Rice, chairman; W. L. Shepard, John Watson, C. P. Richards, Treasurer; Mrs. Dr. Carson, Col. Charles E. Felton, F. H. Lord, J. H. Robbins, Secretary; E. Hough.

Col. Felton moved that the Kansas City shooters be advised to the effect that the Chicago shooters preferred conditions similar to those obtaining in the earlier races between the two cities (10-men teams, 50 birds to the man). Mr. G. M. Walden, president for the Kansas City shooters, was so advised. On Col. Felton's motion the chairman of each committee was empowered to increase his committee as he saw fit. In the matter of the important question of selecting a team, it seemed best to follow the plan adopted at Kansas City in the last contest, and Mr. Mussey moved that the chair appoint three committeemen, not necessarily to be members of the team, they to chose five men to shoot on the team, and these five to chose the sixth man, these six the seventh, and so on until the team be filled. It was so ordered. The chair appointed for this committee, Mr. W. P. Mussey, Col. C. E. Felton, Mr. R. B. Organ.

In the matter of the date for the contest there was some discussion, it being desired that the Elliott-Gilbert race for the *Star* cup should be shot here at the same time of the Interurban meet. The sixty days' limit would make it necessary to shoot this before Dec. 7. It was finally decided, after motion by Mr. Organ, that the dates of Dec. 7-8 be submitted to the Kansas City men for the team contest. It was otherwise determined that the Elliott-Gilbert race for the cup should be shot Monday, Dec. 6, thus giving three days of interesting sport to the shooters of Chicago and their guests.

On Mr. Organ's motion it was resolved "That we entertain the Kansas City shooters and visiting friends." Some discussion ensued as to the best manner of doing this, the results of which plans may be passed upon by the Kansas City men when they shall have arrived here, although it was agreed that, try as they might, the shooters of Chicago could not surpass the hospitality extended them by the Kansas City men at their last meeting. Col. Felton requested that Mr. John Watson furnish the team committee such lists of the shooters of Chicago as he could from his books. The meeting adjourned on call after a very practical and businesslike session. Messrs. Whitfield, Gottlieb, Herman and Walden may feel sure that their suggestion in regard to the third team race between Kansas City and Chicago has borne speedy and promising fruit. Enough time will elapse to allow both cities to get their men in good trim, and the meeting should come at a time of year and at a place where the live-bird shooting will be a good game for the best of the boys. The event should be a highly pleasant one, and the gentlemen from Kansas City may feel sure that their Chicago brothers are entering into the spirit of the matter very heartily and with much expectation. Already the word has been passed that the place for each Chicago shooter from now until Dec. 1 is at Watson's Park.

There will be some speculation, of course, from now on in regard to the probable result of the Interurban team race. The general impression here seems to be that the Kansas City men will cheerfully wipe up the earth with the Chicago team, but we hope to be able to show ten men who will be fit to serve in this part of the entertainment committee. No matter who wins we will have a good time, and nothing in the world can prevent it. All the arrangements have been made by the Chicago shooters, of course subject to the convenience of the Kansas City shooters; but the latter men do not commonly worry much over conditions when there is a shoot in prospect, so that the above programme may be considered as practically certain to be pulled off in detail as above. At this writing all is in speculation as to the *personnel* of the Chicago team. We are going to do the best we can with the Kansas City Cowboys, but realize very fully that they are a hard proposition at the live-bird traps. There is no consideration in the contest beyond the price of the birds, but the race will be as hot as lies in the ability of these two cities to make it. The contest is the event of the trap season here, and will without doubt bring together many shooters not directly interested in the competition.

GILBERT INTERVIEWED.

When talked with on shooting matters, Fred Gilbert said in regard to his late victory over Mr. Elliott, that the birds seemed to him a strong lot, but that the wind in the Kansas City park was not so great as it sometimes is at Watson's Park in Chicago, so that perhaps the birds would not seem so fast. He said that the score was a tie at 92, but Elliott missing his 93d bird opened the gap of 1 bird which was the result at the close of the race. In regard to the shoot for the Du Pont trophy at Kansas City, Oct. 22, Gilbert very courteously admitted that he knew he was against a hard man, but modestly said that he would rather make it two straight for himself than one each for him and Elliott. Both he and all his friends expressed their satisfaction at the courteous way in which the late race was shot, and in which the spectators treated the visitors. Elliott, in shaking hands with the victor, remarked that it was the first time he had been defeated on his own ground since 1892.

COOK COUNTY LEAGUE.

At a meeting of the Cook County Trap-Shooters' League, held at Chicago, Oct. 15, 1897. President Adams presided. Roll-call showed three clubs present: Eureka, Garfield and Calumet Heights, a quorum of *bona fide* clubs. The meeting was held for the purpose of awarding individual prizes in the several classes and for establishing a handicap for those eligible to contest in the final handicap shoot. The prizes awarded in the majority of contests under the different classes have all been published exclusively in FOREST AND STREAM two weeks ago. Following are additional awards as determined:

LOWEST INDIVIDUALS

Lowest average, 49 per cent., Silas Palmer, 100 Peters loaded shells. Second lowest, C. W. Carson, 64 per cent., one sub. Gameland. Third lowest, G. E. Marshall, 65 per cent., one sub. Gameland.

PRIZES TO BE AWARDED IN HANDICAP CONTEST.

First, L. C. Smith ejector shotgun, 12ga.; second, one Remington ejector shotgun, 12ga.; third, one Winchester repeater shotgun, 12ga.; fourth, one gold medal; fifth, one Vom Hofe President reel; sixth, Upthegrove hunting coat; seventh, one 5lb. drum Gold Dust powder; eighth, ninth, tenth, one high grade bench closer each; eleventh, 100 Peters loaded shells; twelfth, one set B. G. I. cleaning implements; thirteenth, one year's subscription *Sportsman's Review*; fourteenth, fifteenth, sixteenth, seventeenth, one subscription *Sports Afield* each; eighteenth, five dozen Jones's decoy anchors.

HANDICAP IN TARGETS.

Percentage of four best scores:

	Per cent.	Shot at.		Per cent.	Shot at.
J Ruble	100	25	R Kuss	93	26
E E Neal	93	26	F P Stannard	93	26
E M Stick	92	26	A C Paterson	90	26
H A Ferguson	89	27	A W Fehrman	89	27
E Graham	89	27	G C Lamphier	88	26
Dr S Shaw	89	26	J S Houston	88	27
O von Lengerke	87	26	R A Turtle	86	27
F M Fish	86	27	T Graham	85	27
L H Goodrich	85	27	T P Hicks	85	26
H Wiley	85	28	T P Richards	84	28
A W Adams	84	28	S Young	82	28
S M Booth	81	28	F Edgar	80	29
M E Bowers	79	27	P D Norcom	78	29
W Matcalf	77	29	A Hilman	76	29
I P Goetter	75	29	E B Knott	74	28
M J Lowrey	74	29	G W Pricket	74	29
C Stickles	74	29	W H Cornwall	73	29
W Cheesman	72	30	Dr A Mathews	72	30
S H Greeley	71	30	M Goldsmith	70	30
A C Black	68	30	A W Harlem	68	30
W E Schmidt	68	30	H Lavi	65	30
G E Marshall	65	30	H B Morgan	65	31
Dr C W Carson	64	31	A Cheesman	64	31
F G Barnard	61	31	D Russell	56	31
S Palmer	49	31			

No participant will be scored including the handicap more than the possible, 25 targets. Ties will be shot off at 25 targets with handicap, or be decided by those in tie between themselves. The contest will be held at Watson's Park, Burnside Crossing, Ill., on Oct 30, 1897, providing grounds can be obtained on that day, and will commence at 1 o'clock P. M. sharp.

EXTRA EVENT.

On termination of handicap contest a team race of four men per team chosen from those eligible for the handicap shoot for a prize of a set of five expert bluerock traps with pull. Each club will be allowed to enter one or more teams, and all shooters on teams shoot with the same handicap, as in the previous event.

NO TEAM WINNER RETURNED.

There will still be another meeting of the Cook County League at a date not yet determined, at which time there will be taken up the matter of team classification. There was not time at the last meeting to figure out all these team results, and it is a matter of fact that even at this date the winning club team of the League for the season of 1897 has not yet been officially announced. Three weeks ago, in FOREST AND STREAM, it was announced that Garfield A class team would without doubt be declared winner; and so far as is known at date, this prediction is the only thing settled for the team totals for the season.

CHICAGO, Oct. 19.—The Chicago team membership will be uncertain for a week or more. Practice is going on under the committee's inspection. At a meeting of the directors of the Cook County League this morning the League handicap shoot was decided to be high guns win, with no class shooting and no dropping for prizes.

E. HOUGH.

GILBERT ACCEPTS.

The following formal acceptance by Mr. Gilbert of Mr. Elliott's challenge for the *Star* cup has been to-day received at this office:

"CHICAGO, Oct. 16.—*Mr. E. Hough:* Dear Sir—I hereby accept Mr. J. A. R. Elliott's challenge to shoot me a match for Kansas City *Star* cup, and name Watson's Park, Chicago, Dec. 6, at 2 o'clock, as place and time for said contest. FRED GILBERT.

TOM MARSHALL SICK.

Tom Marshall, winner of the Grand American Handicap, is now at Clinton, Ia., at an infirmary, under treatment for an affection of the throat which has been giving him a great deal of trouble. Mr. Marshall is cheerful, as usual, but says the way the doctor goes after the bottom of his neck is no joke. He hopes to be out and quite recovered before long.

ROCKFORD SHOOT.

The Rockford Gun Club announces its diamond badge tournament at bluerocks to be held Oct. 19 at Rockford, Ill. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Shooting at Peoria.

PEORIA, Ill., Oct. 15.—The challenge shoot for the Peoria *Herald* trophy took place to-day on the grounds of the Peoria Gun Club. Mr. A. Heilman, the holder of the trophy, and Mr. A. E. Leisy, the challenger, were the contestants. The conditions were 25 birds per man, from five unknown traps. Mr. Heilman won by a score of 19 to 14. Mr. Leisy drew much the hardest birds. The birds were the best we have ever had, there being a strong wind from the southwest, causing nearly all the birds to be tailers with great speed. Both gentlemen made some remarkable kills with the second barrel.

Mr. Heilman was immediately challenged by Mr. Gus Walpert, of Spring Bay. Mr. Heilman accepted the challenge and set the date for Oct. 22, each contestant to shoot at 25 birds.

Another match will take place on the same day, after the trophy match, between Mr. A. E. Leisy, Mr. W. Bordeaux and Mr. Chas. Bartson for the championship of the Leisy Brewing Co. team. This will be a great race, as there is a great deal of rivalry between these shooters as to who is the best shot. I will say, I do not know of three more evenly matched men in the Peoria Gun Club.

Great interest is being manifested in shooting circles in Peoria since we have secured the Illinois State Sportsmen's Association meet for 1898. The dates for the next meet were set at the last meeting of the board of directors for June 7, 8, 9, 10 and 11, 1898. We expect to hold the greatest meet the Association has ever held. Many inquiries are already coming in as to dates of the meet and applications for membership blanks. SIMMIE.

Palmetto Gun Club, of Charleston, S. C.

CHARLESTON, S. C., Oct. 10.—Below are the scores made to-day by members of the Palmetto Gun Club, of this city, in the regular weekly practice shoot of the club. Mr. Alston, of the Winchester Repeating Arms Co., and Mr. McEachern, a prominent trap-shooter of Wilmington, N. C., were present as guests of the club. Mr. Alston shot through the sweeps, and as will be seen from the scores he was pointing his firm's gun pretty straight. Worthen was shooting in about the same old form, breaking 96 out of the 100 he shot at, and making a run of 54 straight. Scores follow:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

W. E. P.

The Baltimore Tournament.

BALTIMORE, Md., Oct. 19.—*Special to Forest and Stream:* The Baltimore tournament promises to be a notable one, chiefly on account of the number of cracks who are here. Heikes, Van Dyke, Leroy, Dickey, Glover, Fulford, Charlie Young, Hallowell, Keller, Billy Wolstencroft, G. W. Clay, of Pine Grove, Ky., and several other good shots are on hand. Everything has been done by the home club to make this shoot a success.

Hallowell reports that the Kentucky Gun Club's shoot last week was a dandy. Sam Hutchings won the championship of Kentucky; he tied with Bland, Ballard, Du Bray and Woodcock, of Danville, each killing 25 straight. On shoot-off Hutchings won with 15 more straight. Ballard lost his 14th, Woodcock his 9th and Du Bray his 8th bird. Hutchings used a Parker gun, Du Pont powder in U. M. C. shell. J. D. Gay, W. Clegg and Dr. Marsh scored 24 out of 25. Ballard won the championship last year. EDWARD BANKS.

Limited Gun Club's Scores.

First Day, Sept. 28.

Events:	1	2	3	4	5	6	7	8	9

Team shoot, 50 targets per man, unknown angles:

Wallace	43	Beck	41
Apperson	45—88	Cooper	42—83
Corbett	41	Partington	39
Griff	45—86	Jack Snipe	42—81
Garland	43	Wildhack	39
Tripp	43—86	Parry	42—81
Pruno	45	Rike	42
Kalb	29—84	Robinson	37—79
Happy	30	Hearsey	32—62

Extra No. 1, 10 targets, three moneys: Garland 10, Wildhack 9, Rike 9, Wallace 8, Beck 8, Cooper 8, Dietrick 7, Kalb 7, Parry 7, Tripp 7, Craft 6, Griff 6.

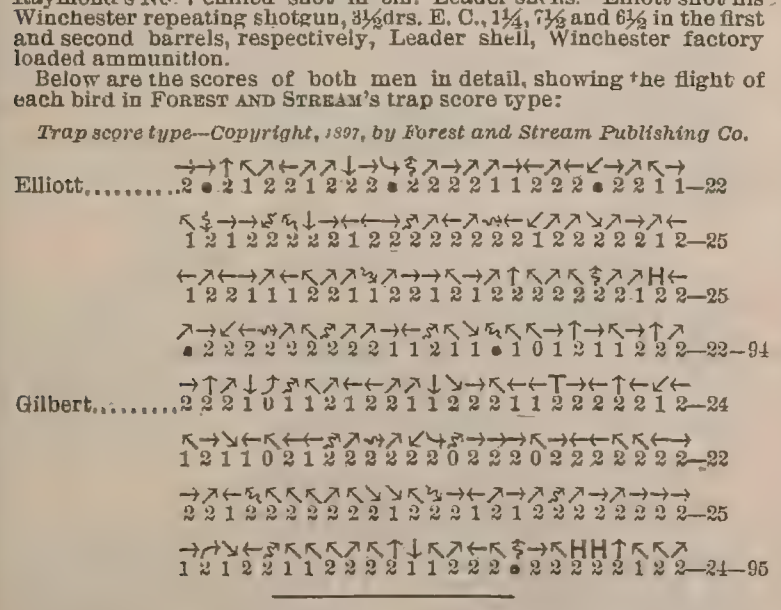
Extra No. 2, 20 targets, three high guns: Cooper 20, Beck 19, Robinson 19, Wallace 19, Kalb 18, Rike 18, Wildhack 17, Tripp 17, Garland 16, Parry 14.

Extra No. 3, 20 targets, two high guns: Tripp 18, Garland 18, Cooper 15, Beck 15, Parry 15, Robinson 14.

Gilbert Won the "Star" Cup.

KANSAS CITY, Mo., Oct. 8.—The Elliott-Gilbert match for the Kansas City *Star* cup took place this afternoon in the Exposition ball park. After a most exciting and close match Fred Gilbert was the winner with 95 to 94. The attendance of spectators was quite large, in the neighborhood of 1,000 persons entering the grounds to view the match.

John Watson, of Watson's Park, Chicago, was chosen referee, and it goes without saying that his decisions were accepted without a murmur. C. C. Herrmann was trap puller; C. P. Richards, of Chicago, and James Whitfield, of the Kansas City *Star*, acting as official scorers. The birds were an exceptionally good lot, having been selected from a lot of over 2,000 pigeons now in the loft of the Elliott Brothers at Washington Park.



Elliott won the toss and went to the score first. He was also the first to lose, his 2d bird falling dead out of bounds. Gilbert lost his 5th and evened matters up. Elliott lost his 11th and 21st birds, both dead out, while Gilbert killed 24 out of his 25: thus at the end of the 25th round Gilbert was 2 birds in the lead. In the second 25 Elliott scored all his birds, while Gilbert lost his 30th, 39th and 43d birds, giving Elliott a lead of 1 at the half-way mark. In the third 25 both men scored all their birds, Elliott being still 1 in the lead at the three quarter pole. He then lost his 76th bird, dead out, and the score was a tie. With only 10 more birds to shoot at and the score still a tie, Elliott created a sensation by losing his 91st bird, another dead out of bounds. Then Gilbert lost his 92, also dead out, and there was great excitement, with the score again a tie and only 8 more to shoot at. The 93d round settled it, as Elliott lost his bird, while Gilbert killed out straight and won by 1 bird.

The long runs of the two men were; Gilbert, 48 and 24; Elliott, 54 and 14.

Gilbert shot his L. C. Smith gun, 3¾drs. of Du Pont Smokeless, 1¼ Raymond's No. 7 chilled shot in 3in. Leader shells. Elliott shot his Winchester repeating shotgun, 3½drs. E. C., 1¼, 7½ and 6½ in the first and second barrels, respectively, Leader shell, Winchester factory loaded ammunition.

Below are the scores of both men in detail, showing the flight of each bird in FOREST AND STREAM's trap score type:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

Charlie Zwirlein, of Yardville, N. J., held his first open-to-all shoot at live birds for the winter season of 1897-8, on Friday of last week, Oct. 13. Zwirlein always manages to have on hand some of the fastest birds in the country, and a man has to shoot straight to kill Charlie's birds as they make for the fence that marks the boundary

IN NEW JERSEY.

CUP RACE AT HACKENSACK.

Oct. 13.—The sixth contest for the Recreation cup was decided this afternoon on the grounds of the Bergen County Gun Club, of Hackensack. The weather was brilliant and warm, with not a breath of air stirring to make the flight of the targets erratic. The traps, however, were not in good working order, and the result was a variety of flights, particularly as to height, that made it necessary to keep everlastingly at it. E. G. Horton, although no longer a resident of Hackensack, was on hand to run the shoot; but his work was easy, the number of shoots, live-bird and targets, cutting down the attendance to a smaller pitch than ever before at similar gatherings of the club. The fact, too, that two men, Sinnock and Remsen, had each a couple of wins for the cup, with Banks credited with the other win; and with only one more shoot besides that of to-day to decide the absolute ownership of the cup, had unquestionably something to do with the scarcity of shooters.

Among those present were Rolla O. Heikes and Ferd Van Dyke, of the Winchester Repeating Arms Company. Neither of these two experts were eligible to compete for the cup but they were entitled to shoot along for second and third places, which paid respectively $5 and $2 for the $2 entrance fee. An optional sweep of $1 on each 25 targets was also open to all. Ferd Van Dyke was not in good health, and withdrew at the end of the 50th round to catch a train. Rolla Heikes, too, was suffering from a cold that he caught the other day when out fishing for striped bass with Col. Sanford of the W. R. A. Company. This cold was too much for Rolla and he lost more targets in this 100-target race than in any similar event in years. In short, those who shot along to-day, had the privilege of seeing Mr. Heikes make the lowest score he has been guilty of making since we have had the pleasure of his acquaintance. Among the spectators were Ed Taylor, of the Laflin & Rand W. A Powder Company, and his Cincinnati friend, Mr. Clements.

The race was an interesting one by reason of the previous wins standing as they did. At one time it looked very much as if Sinnock was going to score another win. At the end of the 59th round he had a lead of 3 targets on Banks, his nearest opponent; but out of the last 41 he lost 11 to Banks's 2, ending 6 behind the latter's winning total of 93, a score that gave him his second win. There are thus three ties so far for the cup, with only the shoot in December to finish the series. Remsen shot an even gait, but was below his mark; he landed the $5 with a score of 89. Byrd began poorly, with 15 out of 19, but finished his string of 50 targets at known angles with a score of 46; to him belongs the honor of making the only 25 straight scored to-day. His 42 out of 50 at unknown angles just landed him in third place and earned his entrance fee. Sinnock broke 48 out of 50 at known angles, but in the unknown angles he dropped down to 39, an unexpected finish, and one hard to account for, as he was shooting in good time and centering his targets when he broke them. Beveridge looked like a surprise party; he lost 5 out of his first 15, and then pulled himself together, scoring 53 out of the next 60, thus being tied with Sinnock for second place at the end of the 75th round with 68 out of 75. His fourth string of 25 was fatal to his chances of a place, as he lost 6 targets and ended in a favorite hole with the popular number of 87 breaks, tying Sinnock and Heikes. Waters has not shot at a target for months; in fact, not since the time when he and his partner, Tom Keller, defeated the Van Dyke-Hildreth and Banks-Cameron combinations on these grounds last spring. He broke 41 out of each 50 targets, and at the end of the 75th round looked like making a much better total than he came out with. A 19 out of 25 in his last string pulled him down to 83. George Piercy, who has not been seen at the traps for some time, also, was away off and could not score more than 37 out of each 50.

The scores in detail were as below:

Recreation cup, 100 targets per man, 50 at known angles and 50 at unknown angles, $2 entrance, high gun scores a win for the cup; second high gun receives $5 from the club; third high gun saves his entrance fee. Optional sweep of $1 on each 25.

EDWARD BANKS.

ELKWOOD PARK.

Oct. 14.—A mixed programme of blackbird and pigeon events was issued for to-day. There was enough wind to make the blackbirds fly well, the result being that some excellent sport was obtained. Morfey and Daly both shot exceedingly well, while Marryott took first alone in the second event on 15 straight. Scores were:

No. 1, 10 blackbirds, $2.50: Morfey (25) 10, P. Daly (24) and F. Beale (20) 8, Green (23) 7, Banks (22) 6, Marryott (23) 5.

	No. 2, 15 blackbirds, $3.	No. 3, 25 blackbirds, $5.
Morfey (25)	212111101112002—12	(24)..201022221111010112212212 22—21
Banks (21)	011122001212222—12	(20)..202112112111222111120020 2—21
Beale (21)	211021010021100— 9	(20)..000101211001121111110101—17
Green (22)	002202120201120— 9	(21)..021011102112121102222 1002—19
Marryott (22)	112221211222112—15	(23)..012111222201010122001111 1—19
Daly (25)	122222222021012—13	(25)..122222221211212021112 2100—22
Patten		(20)..022000111200w

After the blackbird programme had been concluded, the following live-bird events were shot:

	No. 1, 10 birds.	No. 2.	No. 3.	No. 4.	No. 5.
Morfey (31)	2222221122—10	222	01 11 10—4	00 10 01—2	01 11 11—5
Patten (26)	2222222222—10	20	01 00	00 01	00 00
Green (28)	1202222220— 8	...	.. .. ..	.. .. ..	.. ..
Daly (30)	1111201020— 7	111	11 00 10—3	11 00 01—3	00 11
Beale (25)	0010120002— 4	...	.. .. ..	.. .. ..	.. .. ..

*C Wise	01001111111111011110101100110111111110111111111110	—39
*B Abbott	01101000101001101001001111111111011111010101110111	—32
*James	01100000111111C011101111111110100100111111011111	—34
*Matzen	10010001111110110011111010001010111010111110101101	—31

* Wise, Abbott, James and Matzen did not shoot off their handicaps.

Shoot-off, 25 targets:

Wright	1111C0011011111101111101 1—19
Huck	1101111111111100111111111—22

Sweeps were shot, as below:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	10	10	10	Targets:	10	10	10	10
Wise	9	8	5	3	Van Dyke	9	8	5	10
Wright	9	9	8	8	Huck	8	8	8	8
Matzen	6	6	5	8	Abbott	4	8	5	4

HENRY HUCK, Sec'y.

Rolla Heikes is still with us, but he leaves for the West immediately upon the conclusion of the Maryland handicap at the Baltimore tournament this week. We shall probably not see him East again until the Grand American Handicap at Elkwood Park next March.

Riverton's Big Shoot.

PHILADELPHIA, Pa., Oct. 15.—The first day of the Riverton Gun Club's big live-bird shoot was favored with very fine weather, so far as the spectators were concerned. To make really fast birds, a little more wind might have been desired. Still, the birds were a nice, clean lot, and on the old grounds, there were some that were too fast for the best of them.

The Ralli shoot was quite a feature on to-day's programme. As it has often been described in these columns, it is hardly necessary to do more than reiterate the statement that in this shoot the birds are all liberated from the center of a circle. The circle itself is divided into a certain number of divisions (say 10) by flags, which mark the boundary lines of each competitor's territory. All pigeons which fall within a certain section are counted to the gunner who is located in that section, whether he kills them himself or not. When 20 pigeons have been liberated, the shooters move around to the next sections; and this is done after each 20 birds have been liberated. This enables each man to try his hand at each point. Of course, the winning of such a sweep as this is largely a matter of luck. This year the event was won by Dr. Daniel Karsner, of Philadelphia, with 22. George McAlpin shot well up and scored 19, but had the fortune to see several birds that he had brought down, fall in his neighbor's territory. Last year he won the first Ralli shoot ever tried in this country. From a shooter's point of view, that match is not one to shoot often; but to spectators there is something more interesting in one of these shoots than in anything in the line of live-bird shooting, outside of an individual match between two top-notchers.

As will be noticed from the names in the scores given below, the company was decidedly warm, several prominent professionals being invited to take part in the shoot. The amateur class was also very warm, George McAlpin, R. A. Welch, Louis Duryea and others forming a strong combination.

Ralli shoot: Dr. Daniel Karsner 22, G. S. McAlpin 19, J. M. Hawkins 18, W. R. Ellison 4, Harry Ducker 14, Hazen Carstairs 13, Harvey McMurchy 12, W. Ferguson, Jr. 11, D. A. Wilson 10, and E. F. Toland 6.

The second event on the programme was as follows:

Handicap, 20 birds, $10 entrance, handicap and bird allowance, 40 per cent. to winner, 25 per cent. to second, 15 per cent. to third, and 10 per cent. to fourth:

* Dickson and Carstairs received 6 misses as no birds.

McMurchy, Dickson and Douglas divided the sweep with scores of 20 each, Dickson using up 5 of his allowance.

The third event was another handicap, 30 birds per man, $25 entrance; 10 birds to be shot on each ground. The money was divided 50, 25 and 15, with 10 per cent. to the club. Scores:

Second Day.

The 60-bird event was the main feature to day. This event called for $50 entrance, 20 birds on each grounds. Trophy and 50 per cent. to winner, 20 per cent. to second, 15 per cent. to third, and 5 per cent. to fourth. The winner was D. A. Upson (Wilson), of Cleveland, O., who was lightly handicapped at 29yds. He scored his first 54 birds, but lost his 55th, dead out of bounds. O. R. Dickey came next with 56. Welch, Douglas, Philips and Dolan shot off for third and fourth moneys, being tied on 55 each; Welch and Philips divided on the 9th round with 9 straight. Scores were:

L Welch (30)	12212122222222222222212222122 22—30 22202022222222222222212002202 2—25—55

A. C. L. HOFMEISTER, Sec'y.

Sherburne vs. Norwich.

SHERBURNE, N. Y., Oct 6.—A large crowd was present to-day to see the match between teams representing the Sherburne and the Norwich gun clubs. The weather was fine and an enjoyable time was had by all present. The match was closely contested, the Sherburne team winning by 7 breaks. The scores were:

Sherburne Gun Club: Paddleford 20, Brainard 17, Smith 16, Burlinson 15, Hall 14, Burlingham 14, Bonney 14, Shepard 11, Simmons 10—131.

Norwich Gun Club: Jones 18, Harvey 17, Lewis 13, Eastman 15, Hines 16, Case 13, Coy 10, Hadcock 9, White 8—124.

Oct 12.—A return match was shot to-day between the Sherburne and the Norwich teams. The Sherburne team won again, but this time by a score of 109 to 88, a lead of 21 breaks. Scores were:

Sherburne Gun Club: Paddleford 19, Hall 16, Simmons 16, Burlinson 13, Smith 13, Brainard 12, Shepard 11, Burlingham 9—109.

Norwich Gun Club: Jones 14, Bonney 13, Hinds 13, Sheff 12, Kinney 12, Case 10, Coy 8, Eastman 6—88.

D. GEORGE.

ON LONG ISLAND.

THE CUCKOOS AT ROCKAWAY BEACH.

Oct. 11—The first shoot of the season for the Cuckoos was held at Rockaway Beach to-day. There was a fair attendance of members, and some good scores were made. The club has economized in the matter of trapping targets, having put in three traps on the Sergeant system instead of the old five-trap plan. The working of the Sergeant system gave entire satisfaction.

The club shoot for this season is a handicap, 25 targets and upwards, an allowance of extra targets to shoot at being made to the weaker shots. A point is scored by a shooter for every break over 15, but no one can score more than 10 points in a shoot; that is, no one can break more than a highest possible of 25. At the end of the season the club will donate prizes as follows: To the shooter making the greatest number of points during the season, a gold medal; to the shooter making the next highest number of points, a $5 gold piece. Merchandise prizes will also be distributed among the other shooters in order of merit. To-day's scores were:

		Points.

In the fourth event B. B. Fogarty withdrew on his 16 birds. No 6 was 5 pairs.

J. W. H. FLEMING.

NEW UTRECHT GUN CLUB.

Oct. 13.—The 50-bird race at the New Utrecht Gun Club's live bird grounds, Woodlawn, L. I., did not have anything like the number of entries that had been expected. Six names were all that were posted up on the scoreboard when the race started. The birds were a mixed lot, some very fast, with none actually poor ones in the whole 300 trapped. But they had no wind to help them, the result being that Tom Morfey and Cornelius Furgueson, both of whom were shooting in perfect form, made very high scores. Morfey lost his 7th bird, dead out of bounds, and then scored his last 43 straight, going out with 49 out of 50. Furgueson ran 24 straight, but lost his 25th, an exceedingly hard bird to kill. His last 25 were all scored dead, so he ended with 49 and equaled Morfey's total. Both Furgueson and Morfey were on the 30yd. mark. Louis Duryea, another 30yds. man, scored 46, tallying 23 out each 25, two of his lost birds falling dead out of bounds. Chris. Meyer (30yds.) scored 22 in each series of 25, tying with G. B. Hutchings (28); the latter was shooting a Winchester repeating shotgun that was new to him, but he managed to score 26 out of his first 27, the lost bird falling dead out of bounds. J. N. Meyer, at the 28yds. mark, scored 22 and 21 out of the two series of 25 birds. Detailed scores follow:

Handicap, 50 birds, $25.		No. 1.	No. 2.
C Furgueson (30)	22222222222222222222222220—24 22222222222222222222222222—25—49	02222—4	22222—5

ERIE GUN CLUB.

Oct. 13.—The Erie Gun Club's members met at Dexter Park this afternoon for the regular monthly live-bird shoot. The club event is at 7 live birds, but so good were the pigeons supplied for the occasion that not one of the twelve entries could score more than 12 birds. Scores:

Class A, 28yds.:			
Chas Platt	0211111—6	M J Elsasser	0111120—5
John Platt	1121201—6		
Class A, 28yds.:			
Henry Muller	0110122—5	H Blackly	1212002—5
H Jankowsky	0112220—5		
Class B, 27yds.:			
Fred Gref	2112210—6	Wm Roberts	2100001—3
Geo Fuchs	0010122—4	C H Luhrssen	0000221—3
Class C, 26yds.:			
J H Platt	0222122—6	H Degenhart	1000011—3

UNKNOWN GUN CLUB.

Oct. 15.—John Akhurst, who was placed on the 25yds. mark, was the only member of the Unknown Gun Club to kill straight in the club event this afternoon. This was the Unknown Gun Club's regular monthly shoot at live birds, and, as is the custom of the club, it was held at Dexter Park. Below are the scores:

J Akhurst (25)	1112112—7	H Knebel (26)	0210122—5
J B Voorhies (29)	2221102—6	Dr Moore (25)	2101101—5

W A Sands (26)	0202222—5	H A Ahrens (21)	1100110—4

CARTERET CLUB.

Oct. 15.—The regular weekly shoot of the Carteret Club was well attended. Among those present were Capt A. W. Money, Geo. S. McAlpin, W. G. Brokaw, C. M. Chapin, W. A. H. Stafford, etc. The last-named shooter was in great form, and won both cups put up for competition this afternoon. McAlpin also shot wonderfully well on the fast birds provided by Superintendent Mott, scoring 33 straight from the 32yds. mark in the opening event. The conditions of this event were as follows:

Handicap, 10 birds, $10; 29yds. and back, two misses out; 28 and 27yds., three misses out; 26yds. and forward, four misses out. Cup to winner:

W A H Stafford (26)	2222222222—10	W G Brokaw (29)	22•220 — 4
F W Duryea (27)	•222111212— 9	G S McAlpin (32)	2222222222—10
W W Smith (27)	021212•212— 8	Capt Money (25)	11•2122•21— 8
Chas Chapin (28)	22222•2121— 9	C H Robinson (25)	2210020220— 6

At the end of the 10th round all but Brokaw and Robinson were still in the race. Chapin dropped out on his 15th, Smith on the 16th, Duryea on the 17th. Stafford, McAlpin and Money divided the sweep on the 33d round, McAlpin went out on the 34th, and Money missed his 40th bird. Stafford won the cup with a score of 35 out of 40.

The next event on the programme was the Members' Cup Handicap, 29yds. and back, one miss out; 28yds., two misses; 27yds. and under, three misses. Stafford won again, after a prolonged struggle with Capt. Money and F. W. Duryea. The scores were:

Stafford (26)	2212222222212022222—17
Duryea (27)	2121122120112220 —14
Smith (27)	2•212210 — 6

Money (28)	11112212•111112220—16
Robinson (26)	200220 — 3
Nelson (27)	0222122122210 —10

CRESCENT A. C., OF BROOKLYN.

Oct. 16.—The opening day at the Crescent Athletic Club's shooting grounds, at Bay Ridge, was set for to day. The afternoon was exceedingly pleasant, there being very little wind, comparatively, to bother the flight of the targets. We say "comparatively," for the Crescents' grounds overlook the upper bay and get all the wind that's going. The baseball field has been turned into a shooting park for the winter season, the traps facing nearly due east. While an ideal ground for live-bird shooting (something not permitted by the management of the club), the background is about as hard as one could find for target shooting. It is a particularly hard ground on beginners, every target requiring most careful attention to accurately gauge its flight, and also needing a mental calculation as to where to shoot that has to be done with a quickness that can only be gained by constant practice.

The club has placed in position a magautrap, and this machine was used to-day for the first time. Considering that Supt Kerr had not had any time to get acquainted with his new charge, the target-throwing by this machine was capital, although there were several balks at first, owing to the man who was running the trap speeding it too fast and not taking enough care about cracked targets. Toward the close of the afternoon's sport it ran very well, indeed, and the members and their guests who were present did some rapid-fire shooting that was rapid-fire in fact. The five expert traps, with their rope pull, have been left in position, and these were used when a variety of styles of shooting were wanted. For instance, the afternoon's programme was varied in this way: Nos. 1, 2, 6 and 7 were at unknown angles, magautrap; No. 3 was at 5 pairs thrown from the magautrap; No. 4 was at 10 pairs from the five traps, while No. 5 was at 25 targets, expert rules. Scores were:

NEW UTRECHT GUN CLUB.

Oct. 16.—The semi-monthly target shoot of the New Utrecht Gun Club was held this afternoon at the Dyker Meadow grounds. There was quite a large attendance, ten members being on hand to take part in the two main events, the club shoot and the prize gun event. M. Van Brunt, in class A, and C. C. Fleet, in class B, were the winners in their respective classes. The scores made in all the events shot off this afternoon were as below:

Club shoot, 25 targets, unknown angles, handicap:

M Van Brunt (A)	1111111111111111110101011	—22

G. E. POOL, Sec'y.

At East St. Louis.

ST. LOUIS, Mo.—*Editor Forest and Stream:* The first annual amateur and fourth annual fall tournament of the King's Smokeless Gun Club, held on Thursday, Oct. 7, and Friday, Oct. 8, at East St. Louis, Ill., was the most successful shoot ever given under the auspices of this club. The only objectionable feature of the shoot was the grounds. Owing to the refusal of the owners of the baseball park to allow a hole to be dug for the magautrap, the club had to use other grounds, and could not get a location on the electric line, hence wagons had to be used for transportation. The shoot was under the ever-popular manager, Jack Parker, of Detroit; W. W. Dean, of East St. Louis, presided at cashier's desk. Jack Trendley was assistant to Mr. Parker, and was every place when needed. The entry list the first day was large, but fell off considerably on second day owing to the poor arrangements for getting to the grounds. Mr. Trendley wishes to say that at the big spring tournament these difficulties will be overcome, and shoot will be given on grounds on line of electric line.

The programme each day called for eight events, four of merchandise prizes, entrance 40 cents, and four of $5 added money each, 20 targets, entrance $2.

Scores of first day as follows:

First Day.

F. W. WILTON.

The Intercity Shoot at Chicago.

CHICAGO, Ill., Oct. 18.—*Special to Forest and Stream:* James Whitfield wires me to-day that the Kansas City team for the Chicago-Kansas City team match will not be completed until Wednesday. On that day J. A. R. Elliott, J. B. Porter, Chris Gottlieb, Ed. Hyndman, F. J. Smith and Col. Campbell, the six men selected to date, will present at a general meeting the names of the other four regulars, together with four or five substitutes. Andy Thomas, J. L. Porter, J. E. Riley, George Stockwell, J. H. Durkee and W. S. Hallowell will probably be named.

E. HOUGH.

1206 BOYCE BUILDING.

North Milwaukee Gun Club.

MILWAUKEE, Wis., Oct. 10.—The North Milwaukee Gun Club held its monthly shoot at bluerocks yesterday. Owing to the previously arranged team match between members of the club, a good majority of the boys were on hand. Rain most always comes before sunshine, and Providence did not spare us. Two of our best shooters did not appear, and, as it happened, they belonged to the one side. So the team shoot was postponed, and the boys all took part in a 30 score of bluerocks, each killing out his average number. After enjoying the afternoon's sport, the boys concluded to be on hand to-day and have a live-bird shoot. This came off with very good success; the birds were a good lot, and out of the 300 birds 57 were straight away, 167 outgoers to the right, 9 outgoers to the left, 51 rightquarterers, 4 leftquarterers, 5 direct incomers, 5 incomers to the right and 2 incomers to the left. The scores are as follows:

Answers to Correspondents.

No notice taken of anonymous communications

E. E. H., Wheeling, W. Va.—I have just purchased a copy of *Game Laws in Brief*, and fail to find therein any mention made of the law relating to the killing of ruffed grouse in the State of Ohio. Ans. The only mention of ruffed grouse in the Ohio law is in Section 6964 (page 48 of the *Brief*), which forbids having in possession except between Nov. 10 and Dec. 15.

W. E. WARREN, Fox Lake, Wis.—I wish to take my wife and two little girls to the Southwest (Texas preferred) for the winter; don't want to go to a dude resort and must live cheap; am not a game hog, but would like a locality where I could get a few ducks and snipe and be within one or two days' drive of deer or antelope. Will some brother sportsman help me out? Ans. The combination can probably not be found. Both fowl and big game can be had out of Brownsville, Tex., but the accommodations are not good. Rockport, Tex., would be pleasant, but offers no deer and few snipe. Houston, Tex., would be good for snipe and ducks, and the Big Thicket of the Sabine still holds some big game. The upper Nueces River would afford mixed sport, but camping would be necessary. Gulf Coast points, such as Galveston, Corpus Christi, etc., have now the yellow fever scare. For the trip proposed, and barring the fever scare, Rockport would be about as good a point as any.

S. W., Franklin, Tenn.—There have been a good many dogs dying here of a malady unknown to any of us. One friend lost five setters that he kept in the kennel all the time. Another lost a Skye terrier that followed him about town, and I've lost a setter and a fox terrier that had the free range of my farm of several hundred acres. All were affected alike. First symptoms are sluggishness and refusal to eat, followed in a few hours with a high fever; mouth open all the time to breathe; a thick, brown, ropy saliva flecked with foam running freely from the mouth; eyes dry, but bright and intelligent; legs from knees down and ears cold and clammy; frequent lapping of water, but swallowing seldom and then with great pain. This is the only sign of pain they ever exhibit. The third day the flow of saliva ceased, and the fever left, but the dog is too weak to stand; mouth dry and parched; dog unable to swallow at all, followed in a few hours by death, seemingly painless. What is the matter with them? What remedy would you give? What is the best preventive? One dog taken fifteen days after the other. Ans. Without an autopsy it is impossible to say what the disease is. They were either poisoned or it must be some specific disease.

PUBLISHERS' DEPARTMENT.

Gettysburg, Luray, Washington.

PERSONALLY CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

OVER the battlefield of Gettysburg, through the picturesque Blue Mountains, via Hagerstown and Antietam, and down the beautiful and historic Shenandoah Valley to the unique Caverns of Luray; thence across the rolling hills of northern Virginia to Washington, is the route of this tour—a section of the country intensely interesting from both a historic and a scenic standpoint.

The tour will leave New York 8 A. M. and Philadelphia 12:20 P. M., Saturday, Oct. 23, in charge of one of the company's tourist agents, and will cover a period of seven days. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the trip throughout. Round trip tickets, covering all necessary expenses during the entire time absent, will be sold at the extremely low rate of $27 from New York, $26 from Trenton, $24 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents. Tourist Agent, 1196 Broadway, New York, or address George W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia. —*Adv.*

Dogs Free over Southern Railway.

Editor Forest and Stream:

Will you kindly announce through the columns of your paper that effective Oct. 15, 1897, and continuing until March 31, 1898, dogs of sportsmen and hunting parties will be transported free in baggage cars over the lines of the Southern Railway, when accompanied by owners or care-takers, and for further information regarding the hunting grounds to communicate with me.

ALEX. THWEAT, Eastern Passenger Agent.

271 BROADWAY, New York.

ABOUT Dec. 20 I expect to kill one of the largest and finest buffaloes in the United States, and dispose of the meat for the Christmas holidays. The head and hide will also be for sale. The purchaser of the head (whoever he may be) can have the privilege of killing the animal. The buffalo has been fattened upon his natural food (buffalo grass) and is fat and fine. His coat is in the best condition, and he has an exceedingly large and fine head. This is a chance to obtain some royal game that is now almost extinct; and those who wish to secure some should write well in advance. Address Chas. Payne, Box 913, Wichita, Kan.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, OCTOBER 30, 1897. | VOL. XLIX.—No. 18. No. 346 BROADWAY, NEW YORK.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

THE PENNSYLVANIA FISH COMMISSION.

FISH protective associations and citizens are coming promptly to the aid of the Pennsylvania Fish Commission with money, now that the full significance of the Legislature's neglect to make the regular biennial appropriation to enable it to carry on its work is plainly understood. Undoubtedly a strong factor in arousing and sustaining the interest in the movement to raise funds by private subscription is the lively interest that Governor Hastings takes in the matter. It was he who urged the different fish protective associations to back the call of the Fish Commission and the Pennsylvania Fish Protective Association for a convention, which was held at Harrisburg on the 15th of last month. It was he who headed the subscription list with $500. He has since, by his own personal solicitation, raised nearly $2,000, in addition to his own and the State Attorney-General's subscription, and he is still laboring. To date nearly $15,000 have been subscribed or pledged, enough to insure the continued existence of the Fish Commission, but not enough to enable it to carry on to the full capacity the work of the four large hatcheries.

The appropriation usually made the Pennsylvania Fish Commission by the Legislature is $45,000 for two years. With this comparatively small sum, from 100,000,000 to 160,000,000 fish were hatched and distributed annually, four hatching stations maintained, and the warden service sustained. The magnitude of this work may be better appreciated by the statement that from the money appropriated, a heavy rental must be paid for the Allentown and Bristol hatching stations—these not being owned by the State—and that all the white-fish eggs, the pike-perch eggs, the shad eggs, the black, rock and calico bass, and the yellow perch for distribution have to be purchased. For the shad eggs alone $10 a million have to be paid, and the black bass average 5 cents each.

When it was found that the Legislature had overlooked the usual appropriation to the Commission, the latter at once in connection with the Pennsylvania Fish Protective Association, with the advice of Governor Hastings, made a public statement of the situation, and the thousands of dollars which the State stood to lose by the destruction of the brood fish alone in the trout ponds, and announced the smallest sum with which the Erie, Corry, Allentown and Bristol hatcheries could be maintained in a reasonable condition of efficiency. This sum was fixed at from $20,000 to $25,000. Of this sum fish protective associations have pledged themselves to raise $11,000, and some $5,000 have besides been subscribed to date by individual citizens.

Through some misunderstanding, an impression has got abroad that subscriptions of less than $500 are not desired. The error of this cannot be too promptly corrected. Subscriptions of any amount are gratefully received. Every friend of fishculture and fish protection is earnestly begged to contribute according to his means, even though the sum be but $1. It might be explained that the next Legislature is to be asked to reimburse those who contribute the money now to the maintenance of the Fish Commission, and that the Governor, several State officials, and the most influential members of the Legislature and prominent politicians in both factions of the majority party, are pledged to use their influence to have this deficiency bill passed. Under these circumstances, while no pledge can be given that subscriptions will be returned by the State, there seems to be little doubt that they will be.

Large or small sums can be sent to Hon. Henry C. Demuth, treasurer of the Fish Commission, Lancaster, Pa.; Alfred Hand, treasurer of the Pennsylvania Fish Protective Association, 204 Walnut place, Philadelphia; the treasurer of the Norristown Fish and Game Association, Norristown, Pa.; the treasurer of the Renovo Rod and Gun Club, Renovo, Pa.; the treasurer of the Delaware County Fish and Game Association, Chester, Pa.; the treasurer of the Pottstown Fish and Game Association, Pottstown; the treasurer of the Lehigh County Fish and Game Association, Allentown, or in fact, the treasurer of any fish and game protective association in the State. These associations and the Commission have a regular form of receipt which insures the return of the money in event of the Legislature passing a deficiency bill.

Persons who would like to subscribe should bear in mind that it is not necessary to give all they would wish at one payment. They may forward amounts from time to time in such amounts as they feel they can conveniently afford. It will be two years before the Legislature meets again, and expenses will be going on all the time.

MANSLAUGHTER

IN its general application to the mishaps of life, such as the maiming and killing of people and the injury to property and the loss of it, if undesigned, there is no term more abused than is the term accident. Nor is there any other which has more constant demands for its use. So many misfortunes, which are beyond human foresight, daily befall people, that the term and its implication are a necessity in expressing the nature of such happenings; but there are many other evil happenings, having their origin in the acts of men who are inexcusably ignorant, criminally careless, or recklessly disregardful of consequences to others, acts which are charitably cloaked with the excuse of accident. In any mishaps to the life, limb or property of the people, resulting from the careless acts of individuals, public opinion is prone to leniency of judgment in respect to the offenders, so long as no malicious or direct intent by them to perpetrate a wrong is apparent.

Of the calamities, miscalled accidents, the misuse of firearms is responsible for a large part. There is no other mechanism so dangerous when improperly used and so readily within the reach of all, permitted to be freely in the possession and use of the unskilled, ignorant and incompetent. No man is permitted by law to have charge of an engine unless he is properly educated and qualified in its use, and so with many other mechanisms which endanger life when exercised by the untrained. Legal or other restraints in respect to them are imposed, those which protect the public from incompetency or unfitness. But any man, be he wise or foolish, careful or reckless, competent or incompetent, may take a gun the first time he chooses to do so and go forth to exercise his pleasure in his own way in the use of it.

If he were dangerous to himself only, it would not be so serious, for then the calamity would fall on the cause of it; but the property and life of others are menaced by him, and others are generally the sufferers.

Thus, in the hunting season, it is not an uncommon event that a man is shot in the woods, and the offender makes the excuse that he thought the man was a deer. This is commonly accepted by the public as a good plea by way of relief to the offender from all legal responsibility.

No man can possibly mistake another man for a deer, for there are no two beings more dissimilar than they are. When a man is deer hunting in a country known to contain other hunters, to shoot at something moving in the woods, without knowing absolutely what the object is, is nothing short of criminal carelessness and recklessness.

An accident is something which cannot be foreseen by careful, ordinary foresight, and is generally extraneous in its interference, but anything harmful happening which can be avoided or prevented by reasonable care or foresight is not an accident.

The majority of the accidents with firearms are from criminal carelessness, recklessness or ignorance of their use. The death rate from such causes is becoming so great that it is a serious matter, and a check is necessary on the abuse of firearms which causes such deplorable "accidents." Public opinion should be more censorious, and legal restraint should be imposed if necessary.

Ignorance in the use of firearms is quite as offensive and inexcusable a plea as any other when misfortune is caused, for a man ignorant in their use has no justification to use them till he has the requisite knowledge. No man can plead ignorance as a just defense for killing, maiming or causing loss to others.

The acts of the reckless, ignorant and careless cast odium on the skillful sportsman, and deter many others from engaging in a sport so laden with unnecessary dangers. It is brought further into just disrepute with the property owners where the game abounds and where the hunting takes place. When men are roaming about who cannot distinguish between a man, cow, horse or deer till they have fired and killed one or the other, it is the part of good sense, of landowner and hunter, to object to the presence of such men. It is the part of all to insist on their responsibility for their acts.

It is high time that the accidents from the use of firearms by the careless, the ignorant and the malicious were called by their right names, and meted the punishments which are visited upon such harmful acts in other fields of society.

SNAP SHOTS.

IT is a familiar complaint which comes to us from a correspondent in central New York, who sets forth that as practically operative in his neighborhood the game laws serve to put a restraint upon good citizens while exercising no deterrent effect upon the "sooner." The result is that the law-abiding sportsman must sit helplessly by and see his chances of shooting when the season shall open ruined by his less conscientious fellow, who pots the game before the law is off. This, we repeat, is a familiar complaint; to state the case in one section is to picture a condition which prevails not only in central New York, but in most of the States of the Union.

It is not without a remedy. In New York, for instance, there is a large force of game protectors, who are charged with the special duty of bringing to book the out-of-season shooters. If they are derelict and conspicuous by their absence from the field of lawlessness, it is the province of the individual citizen, or rather of a number of individuals united for the purpose, to prompt the protectors to do their duty, by communicating directly with the chief protector. If the information is given anonymously, it will most probably accomplish nothing. If made by one who has the personal interest and courage to state facts and make himself responsible for the statements, the chief protector will be found eager and earnest in his effort to secure enforcement of the law. True, to make one's self an informer is not a pleasant duty; the average man rightly shrinks from it; he is not a detective, is reluctant to assume the responsibility of the affair, and loath to incur the enmity of those upon whom he could inform. But it is a condition which is practically inseparable from game protection that even the most vigilant and energetic and astute officials, and those who are most honest in intention and able in performance of their duty, must depend in a very considerable degree upon the co-operation of private citizens to give the information upon which to act. The very nature of their work is such—involving the policing of wide territories, and dealing with occurrences which cannot come within their personal purview—that they must have the co-operation of others. Under these circumstances it becomes the duty of every sportsman who may be cognizant of violations of the game laws, to give information to the authorities; not in the way of vague complaints of the laxity of protection, but in specific reports of specific offenses, with name, place and date; and not in the form of anonymous letters, of which the protectors always and everywhere have a sufficient stock already on hand, but over the real signature of a real person. The sooner we all realize that by doing each one his part a new order will prevail, the sooner shall we have the shooting preserved for the people, to be the common privilege of all, lawfully and in season.

In their campaign for a tariff provision to restrict importation of personal wearing apparel by passengers on the trans-Atlantic steamships, the tailors and dressmakers and clothing manufacturers presented an impressive array of statistics to prove the magnitude of such imports. Not less impressive and convincing would be the figures, if they could be obtained, showing the consumption of American game by the hundreds of thousands of passengers on these transportation lines. On all the ships of the first rank American game birds have place on the menus year in and year out, in season and out of season. The amounts of venison, quail, partridge, woodcock, snipe and plover thus consumed in the course of a year is enormous. New York is, of course, the great storehouse of supply, with Boston and other centers furnishing their quotos; but in reality the game comes from many quarters East and West, whence the steady stream flows into the cold-storage warehouses as the rivers to the sea which yet is never full. The expedient by which this ocean trade in game may be discouraged does not present itself. New York and Boston are, in all practical respects, wide-open game depots; and nothing stands in the way to prevent an unlimited traffic. This consumption of game on trans-Atlantic steamships must have a place in making up the count against the market as the most tremendous agency in the depletion of our covers; it accounts for the disposition of a considerable proportion of the stock.

The Sportsman Tourist.

THE NATIVE AMERICAN HUNTER.

IV.—HOW THESE HUNTERS SUFFERED.

This is the story not of a hunting party, but of a war party. Yet these men made no war, and did much hunting, not because they wished to, but to keep themselves alive. The narrative gives a true notion of the endurance of the Indian in old times, and of the suffering that he often underwent. Such misfortunes as this party met with might happen to any group of men who set out to travel.

The events here related took place forty years ago last autumn—in 1857. The story was told me by White Bull.

This party started out from the mouth of Lodge Pole Creek, on the South Platte River. There were twenty-eight of them, all on foot, going to take horses. White Bull was the leader. They went into the Ute country, into the mountains. It was in the autumn, when the leaves were just beginning to fall, and in the mountains it had already begun to snow a little.

They went on up between the South Platte and the Arkansas, following up between the mountains until they got into South Park. There they found where some Utes had camped lately, and it looked as if they had been gone only a couple of days. It had snowed a little in the morning, so that the ground was covered, and they built up a war lodge, which was also a kind of fort, and thought that they would look about to see if they could find any trail, and then come back and sleep there. They did so.

The next morning they scattered out to go to all the high points, so as to see what they could discover. Two of the men found the Ute trail, where the lodges had moved along. They followed it on to the next creek, and found where the Utes had camped, two lodges of them. They had moved away that same morning. They had been there the same night that the Cheyennes had camped in the park. The two young men went back and reported what they had seen. It now began to snow.

When all had got in and had heard what these two had found, White Bull said to his young men: "I think we would better go on now to this Ute camp that we have found." They did so. Just a little way from the camp there was a projecting ledge of rock. It was still snowing hard, so under this ledge they built a fire and stayed there all night. It snowed all that night and all the next day and all the next night, but the next morning it cleared up. During all this time, from the day when they had entered the Park, they had had nothing to eat. They had been starving for four days.

That morning White Bull took his gun and went out to try to kill something to eat, a deer or some other animal. The snow was so deep that he did not go very far. He found no game, and pretty soon he went up on a hill and sat down there, and for some time he sang his war song, and then sang his medicine song, to try to bring something to help them. Nothing came, and he went back to the camp and went in under the rocks, where all were waiting for him. He said to them, "I can find nothing to kill, and it is my opinion that we would better try to go home. There is no game here, and we are likely to starve to death. If we go on further and find the camp of the enemy and take their horses, we cannot get home with them because the snow is so deep; therefore, we had better try to go home now." All agreed to this, and they started on the trail back toward their home, leaving this camp about the middle of the day. They traveled on for about half the afternoon, but the snow was so deep and the men got so tired, that White Bull said to them: "Now we are all tired out, and we are all getting wet in the snow; let us turn around and go back to our old camp, and take the chances that some game may come to us." They did this, and spent the night at their old camp.

Early in the morning White Bull went out and found a place where many cherry bushes grew. He cut a lot of the limbs of these bushes and brought them into the camp. Then he sent some of his young men out to get snow and melt it by the fire and told them that they must unplait their rawhide ropes; then he made a frame of the cherry brush, and with the strands of the lariat he made a snowshoe, and then they all made snowshoes and on these they started home.

They walked easily with the snowshoes, but they could not go very far in a day. All they had to eat was the buds of the rose bushes sticking up through the snow along the creek. They went on for eighteen days, eating nothing but such buds as they could gather. On the eighteenth night they camped at a place where a big pine tree had fallen and its limbs had broken off, and they built a fire against the trunk of this tree. After the fire had heated the log, two rabbits came out of the hollow in it. They caught them, cut them up and divided them, and ate them up, flesh, entrails, hides and all. From this time on they went without anything to eat for two days more. By this time they were out of the mountains and down close to the South Platte River. Here there was less snow than there had been higher up, and White Bull said to his young men: "Now we can walk better without these snowshoes. Let us throw them away." They took off their snowshoes and threw them away. Going on, the snow got less deep and they made a camp early, for they were very weak and tired. Then White Bull said to his young men: "Now, my friends, the snow is less deep and we are about starving to death, let the stronger ones take their guns and go out and see if they cannot kill something to eat." He went out himself, and only the weakest ones, those who could not walk, stayed in camp.

As White Bull was walking along, looking about to see what he could find, he heard something whistle. He looked about him, and presently he saw, not far off, one of his own men standing by a pine tree and beckoning him to come to him. White Bull went over to where the man was, and there, up in the tree where he pointed, was a great big porcupine. It was too high up to be reached, and they did not like to shoot, because that day they had seen in the snow signs where people had passed, but the tracks were not very fresh, for snow had fallen or blown into them. Still, there was danger that if they shot they might alarm these people.

They finally made up their minds that they must shoot the animal, and they did so. He fell down, turning over and over, and they opened and skinned him, and then the two men sat down and devoured the entrails raw. They took the carcass into camp and cut it into pieces—a piece for each man, telling them that they could cook it or eat it raw. Some cooked it, and some ate it raw.

The next day they started on again toward their home. The snow kept getting less deep, and now they could walk easily. White Bull said to his young men: "Now, there is not much snow, so all of you scatter out and see what you can kill, and we will all meet to-night at an appointed place." When they got to camp at night, one man had a wildcat, and two had turkeys. They skinned and ate these, and all felt better and as if they would get home. They told stories, and acted as if they had never been starving.

Next morning all got up early to start, and one young man went out a little way from the camp, and soon those in the camp heard the report of a gun, and then the young man came in dragging a wolf behind him. This made them a breakfast. The wolf was following the trail where the wildcat had been dragged along the day before.

All that day they traveled and killed nothing to eat. There was still a light snow on the ground, and they walked fast; but they got tired early and camped, and built a fire and lay down about it. Not far from the camp there was quite a little butte, and White Bull thought he would climb to the top of it and see if he could see anything. He climbed up there, and found that he could see Cherry Creek where it enters the Platte (where Denver now stands). As he sat there looking, he thought that he could see something moving far off, coming down toward the creek. It looked like a man on foot. He sat there and looked, and pretty soon he saw a herd of horses close to where the man had disappeared in the creek bottom. He went back to the camp and said to his young men, "I have made a discovery. I have seen a man and a herd of horses on Cherry Creek, where it enters the Platte. I think we would better start to-night, and travel there. It may be a camp where we can get something to eat."

They set out, and had only gone a little way, when they came to a place where there was a tree full of turkeys. It was not yet dark, and the turkeys were just flying up into the tree and lighting there. They began shooting with bows and arrows, and with guns, and killed nine turkeys. White Bull said, "We will not go further. We will go down onto this little creek and cook our turkeys, and eat them to-night. They went down to the water and camped, and skinned the turkeys and roasted and ate them, and all were happy and talked and sang.

At daylight they started again to go to where they had seen the man and horses. They traveled on, and got pretty close to the camp, when White Bull, who was ahead, saw a wagon. He stopped and waited, and when the others came up he said to them: "These must be white people; I see a wagon." He looked at all his people and saw that they looked like ghosts. Their eyes were sunk in and their cheeks hollow, and he thought that he would look at himself to see how he looked. He got out his mirror and looked at himself, and was almost scared when he saw his face, for he looked like a dead man. He said to his people: "If we go into the camp looking like this we will scare the people. They will think that a lot of dead persons have come to them. You can all see each other how you look. Let us all paint our faces, so that we will not look so queer." They did this, and went on down to the camp, and found it was a white man's camp, a man named Peiselle, who had married an Arapahoe woman. His wife is a relation of White Bull. This man had some cattle, and gave them a beef, and told them to kill it and to eat all they wanted to. They did so. The old man gave to each one of the Indians a blanket and a shirt, and each one gave to him a horse and five robes. They stayed here with him and borrowed two horses to ride, and sent two of the party to the village to bring back horses on which they could ride home. These men were gone four days and then returned, bringing back a horse for each man to ride, and also the horses that had been given to old man Peiselle. Also, many of the people came back with these young men to see their relations. This happened in 1857.

THE CHESTNUT RIDGE.

VII.—And Along Its Foot.

Dr Jackson, in his book, "The Mountain," has treated very thoroughly, and with characteristic humor, the Fauna of the Alleghenies. "The forms of this fauna," he says, "are not much diversified, and present a medium variety between the region north of the tree limit or isothermal zero, the line of perpetual ground frost, and the tropical zone of plants and animals."

In the great class of mammalia—he, of course, places man at the head of the list—the original or indigenous man, he remarks, has disappeared. But little trace of him remains outside the records of history. The humble tumuli here and there, that mark his final resting place, where, we may add, they have not been ransacked and ruined by his successor in search of "relics," and the occasional flint arrow heads and stone hatchets that are picked up by a race of curiosity hunters, faintly attest his former presence as the occupant of the soil.

Next in order descending from man is the quadrumana, or monkeys. Of these there are none indigenous on the Allegheny ranges. The nearest approach to this creature—and an approach so near that it would probably give great encouragement to a modern disciple of Darwin—is an animal which Jackson describes as having many points in common with the niam-niams; but it is of a different color, a rougher skin, and the caudal prolongation of the vertebral column has been abraded by an obstinate indulgence in the sitting posture, the animal being given much to contemplation and quietly beholding the flow of the river of time. Among its chief characteristics is a love of indolence and ease, being improvident and disposed to let things alone, with the exception of an occasional surveillance of the neighboring hen coops and sheep pens. "The great predominance of the bones and muscles of the face," he says, "the protrusion and magnitude of the jaws, constituting the prognathous muzzle, or countenance, which may be taken hold of, together with the extreme minuteness of the brain-box, or skull, would point rather to the Hylobates." He would recommend the missionary who would attempt to evangelize this variety, to provide himself with a sufficient number of steel-traps strong enough to hold a bear, and a supply of cat-o'-nine tails. Some of the animals once common on the Ridge have disappeared or grown few in number; but the creature here described may likely yet be found without difficulty.

Jackson speaks of the panther, the wildcat, the gray wolf and the elk as still in his day more or less common on the ranges of the Alleghenies in Pennsylvania, but I am inclined to think them all extinct at this date. A bear or a deer may possibly be met with at rare intervals, but all the larger wild animals have practically disappeared. When the Doctor wrote, the common red fox was found in plenty. "From the abundance of the red fox," he says, "he can be started at any time by hounds, and from his well-known habit of circling about his native den or thicket, and running for a great length of time in circumscribed spaces, the richest and rarest sport may be enjoyed by those who love the excitement of the fox hunt. Eight, twelve or twenty-four hours of effort on the part of the pack is required to fairly beat the red fox, ungorged and in good condition, the surface being equally propitious to both dog and fox." This animal may still be found occasionally, though he is not now greatly in evidence. The weasel, the skunk, who has been "smelled twenty miles at sea," the night prowling raccoon, the opossum, the squirrel, the prophetic ground hog and the rabbit, still exist in sufficient numbers to warrant the sportsman in hoping for a shot

About the same is the history of our native birds. Hawks of various kinds, owls, crows, partridges, pheasants, and other birds of many species are still to be found. A generation ago wild pigeons visited the Ridge country in vast flocks, and two generations ago wild turkeys were abundant. The latter bird is now practically extirpated. Dr. Warren, the State ornithologist, in his report on the "Birds of Pennsylvania," 1890, says that the wild turkey "is still found in small numbers in many wooded and thinly populated districts of the State." He adds, however, that some of the old residents believe that the so-called wild turkeys of the present are really domestic fowls that have wandered into the woods and returned to a wild state. This may be true. But formerly the wild turkey was abundant, and was depended upon by the settler as a sure resource for the larder.

Of the wild pigeon, Dr. Warren observes, "We never see large flights of pigeons anywhere in the State as in former years." This bird is still to be seen occasionally, but mostly in small numbers, and only as migrants. The flocks of wild pigeons thirty or forty years ago were sometimes reported as darkening the sky, and when they settled at night they broke down the branches of the trees over acres of ground with their weight. But they seem to be rapidly passing the way of the buffalo and the wild turkey. They were killed in great numbers with guns, traps and nets. Nature, however, has her revenges, and the wanton destruction of the poor birds has resulted in their scarcity. A favorite method of capturing them was by means of nets and decoy pigeons; these latter were of two kinds, flyers and stool pigeons; the stool pigeon was held by a string; the flyer had his eyes sewed shut and then he was thrown out. Of course, being blinded, he could only flutter about aimlessly and feebly. We trust that in sewing up the eyes of the poor victim his captors followed Walton's advice in sewing a frog to a hook—that they "used him as though they loved him."

The birds of Pennsylvania, as of everywhere else, are becoming noticeably few. The edicts of fashion are unsparing and cruel. It is to be hoped that a time will come before long when every woman who wishes to be thought well of will disdain to wear any part of a bird as a decoration. When that day comes, we may hope to save "the feeble remnant" of our feathered songsters from extinction.

To my mind, the crow is the gentleman among birds; always dressed in his shining suit of scholarly black, tiptoeing so daintily across the fields, or uttering his cheerful caw, caw, from the top of some tall tree, he is a reminiscence of the past and a reminder of our days of youth and innocence.

"Thou were not born for death, immortal bird!"

Opposite my bedroom window, and only thirty or forty rods away, is a high, wooded hill, what good old Gilbert White would call a "hanger," and on the summit of this hill in spring and fall bevies of crows are wont to gather, and many a morning the first sound that has met my waking senses has been the call of the crows from the far-off tree tops, softened into music by the distance. I love the crow; and I am glad that the law has again taken him within its embrace. May his days be long in the land!

On the other hand, I regret that my boyhood's friend, the owl, has been excommunicated. One of my very earliest recollections is of seeing an owl with great eyes blinking at me from the joist of an outbuilding. A few years later in life my best-loved book was the "Boys' Winter Book," by Thomas Miller; and it was introduced by a passage from Shakespeare, wherein the owl appealed strongly to my imagination:

"When icicles hang by the wall,
And Dick, the shepherd, blows his nail,
And Tom bears logs into the hall,
And milk comes frozen home in pail;
When blood is nipp'd and ways be foul,
Then nightly sings the staring owl,
'Tu-whit, tu-who.'"

I know of no sound in nature more weird or startling in its effect than the voice of the owl calling out in the darkness from the lonesome woods.

As a slight offset to the black eye that the poor owl has received at the hands of the law, I copy the following from Bingley's "Natural History," which shows that he has a better status in some countries than in this:

"The Mogul and Kalmuck Tartars pay almost divine honors to the white owl, for they attribute to it the preservation of Jenghis Khan, the founder of their empire. That prince, with a small army, happened to be surprised and put to flight by his enemies. Compelled to seek concealment in a coppice, an owl settled on the bush under which he was hidden. This circumstance induced his pursuers not to search there, since they supposed it impossible that that bird would perch where any man was concealed. The prince escaped; and thenceforth his countrymen held the white owl sacred, and every one wore a plume of feathers of this bird on his head. To this day the Kalmucks continue the custom on all their great festivals; and some of the tribes have an idol in the form of an owl, to which they fasten the real legs of the bird."

T. J. Chapman.

Pittsburg, Pa.

A STRING OF BEADS.—III.

LOADING all my shells with buckshot I sallied out on the morning of the 1st full of hope which did not materialize into deer, though I hunted hard all day, jumping two deer, but getting a glimpse of neither.

Returning by Little Rice Lake, which was now an open water lake, the rice stems having been beaten down by ducks, I saw a flock of several thousand mallards "milling," preparatory of their Southern flight. Slipping down to the lake shore I was some 200yds. from them, but from that on the lake was one solid mat of ducks. Holding well up, I fired two loads of twelve buckshot each into the lake. With the roar of a mighty torrent the ducks rose, leaving twelve of their number struggling in the water.

My ducking boat was still lying on the lake shore, and getting it I retrieve them as the spoil of my first day's deer hunt.

The next five or six days I put in tramping the woods in search without result. That there were plenty of deer in the woods I was well satisfied, but the ceaseless tramp without even getting a glimpse of one discouraged me.

Ben Lamere, whom I expected to easily excel, had got several in the meantime, but complained that still-hunting was a mere chance under such circumstances, and proposed a drive. This just suited me, and the arrangements were quickly made.

The party was to consist of Ben and his two sons, George and Ely, his brother Louis, and myself. Early next morning we were off for the grounds we intended to hunt. After the first day's hunting I had been carrying a Winchester rifle, but concluded a shotgun was better for a drive, and so left the rifle at home and took the Parker. In this I made a mistake, for I had got only about three-quarters of a mile from the house when two deer were sighted crossing a burn on the side of a hill some 400yds. away.

Old Ben opened fire on them, though it was evident he had little faith in shooting at a running deer at that distance, and after two ineffectual shots he gave it up, though the deer were still in plain sight running up the side of a hill.

It fell to Louis Lamere and myself to take the first stand. Directing us where and how to go to where two large lakes were divided by a couple of hundred yards of oak ridge, old Ben said he and the boys would wait an hour before starting in to drive the intervening woods.

Louis and I took separate routes in going to our respective stations, I going round to the east and he the west side of the ridge, taking our stations in such manner as to command the entire ridge. "It never rains but it pours." Before reaching my stand two more deer ran out on the top of a hill in front of me about 150yds. away and stopped to look. Too far for a shotgun; but what a splendid chance if I had only brought the rifle.

Having but meager time to reach my station I kept on regardless of the two deer. On arriving at the ridge I took my stand beside an old log, seating myself on a bunch of leaves and resting my arm and gun across it. I saw nothing of Louis, but supposed him to be at his station on the other side of the ridge.

I expected a long, tedious wait, but in this I was mistaken. I had not been in position to exceed ten minutes when I detected something moving down under the tameracs at the point of the ridge. This I soon made out to be two rows of four slender legs each twinkling over the moss in my direction while the owners of the legs were yet concealed from me by the low-hanging tamarac boughs. Deer sure enough, less than 100yds. away, and coming straight at me. I had only to push my gun slightly forward over the log and raise the breech to my shoulder and the deer were covered. When the deer arrived at the edge of the swamp they stopped to look. They proved to be a doe and a well-grown fawn. They were still nearly 50yds. away, and any one who ever used them know the pattern of a load of buckshot is very uncertain at 50yds. It seemed the better policy to wait for them to come still closer, but no sooner had I glanced at them across the barrels of my gun than the wild impulse to shoot regardless of consequences, which constitutes buck fever, seized me, and I pulled the trigger.

Both deer went down in a heap, the doe struck squarely in the center of the forehead, and the fawn with a broken neck. It was half an hour before the drivers arrived, when we dressed out and hung up the deer.

The next drive was through a thick tangle of underbrush, along a side hill which sloped down to a lake. Old Ben took this stand, bidding us to wait twenty minutes for him to get into position at the further end of the lake. Louis and the boys scattered along the top of the hill, and angled down through toward the upper end of the lake, while I went straight through parallel to it. I must have waited longer than the rest before starting, for I had gone but a short distance when I heard three shots ahead, and when I got to the meeting place I found Ben, Louis and the two boys engaged in dressing a deer. Ben said there were two of them; that he had killed this one at the first fire, and had shot twice more at the other; thought he had hit it, but had not examined for blood marks as yet.

Going to the spot pointed out by Ben as the place where he last saw the deer, I found tracks, and 20yds. further on the dead deer. Both shots had gone through him, and after a few bounds he had dropped dead.

On the opposite side of the hill we had just drove was another likely thicket, and we decided to drive it and go home. We took a different plan for this drive, Ben following along on the top of the hill, and I keeping along the bottom, while Louis and the boys kept through the center 100yds. or so behind. "It never rains but it pours." We had proceeded thus but a short distance, when the thrilling cry, "Watch! watch!" came from the drivers, and an instant later I got a glimpse of a deer coming angling down the hill toward me. Just above me was a tree that had been blown down by the wind, the trunk remaining on the stump and slanting to the ground.

From the course the deer was taking I thought he would come through a little opening just beyond this tree-top, and I planned to pot him there. But he fooled me, when just opposite the fallen tree the deer turned and came down the hill straight at me. Though I could tell the course he was taking very well, there was no chance to shoot for trees and bushes, till he came diving under the windfall within 10ft. of me. It was "touch and go" then, and when I pulled the trigger the deer's head was within 5ft. of the muzzle of my gun. Though the deer's head was blown to atoms his impetus carried him on down, and he struck my feet, which flew from under me, and I came down in a heap on my quivering victim.

There was some giggling when Ben and the rest of them arrived, and I explained my adventure.

We carried the deer over to where the other two were hanging, and then to make it more imposing, went and got the two I had killed in the morning and hung the whole five on one pole.

We tried driving several times after that one great day, but failed to get anything except one deer, which Louis killed while acting as driver.

The crying need of the hour was snow, and we loudly bewailed the adverse fortune which sent it not. So it was that when we rose one morning and found that about 8in. of the emb'em of purity had fallen during the night, there was great rejoicing at breakfast, for we anticipated great times that day.

Waiting to hear where the others were going, I took the unoccupied field after their choice was made, and started out, taking the Winchester, for I expected to empty the magazine at least three times at the fleeing possibilities. The storm had cleared away, the sky was clear and the breezes slumbered. Every twig and branch was a-glitter with frost. The display was grand, while

> "Round the glittering wonder bent
> The blue walls of the firmament,"

but I was not after scenery.

Before I got 300yds. from the house I struck a deer track which I followed through many devious windings, till I came to a place where deer tracks were so thick it was impossible to follow any particular track. From that on I went by random, occasionally following an individual till it was lost in a wilderness of other tracks.

When night came I had not sighted a single deer, though I found at least a half dozen smoking nests after the birds had flown. I had often heard that deer when lying down to rest would make a detour and lie down where they could watch their back tracks. The day's tramp proved to me that this is a fact, as I saw it verified in three successive places by their tracks and beds in the snow, though the same evidence proved they do not always do it. When I got home I found Louis had had the same luck as myself, but old Ben had blood on his boots when he returned.

Next morning I started out with a new purpose; I had proved one supposed myth to have a sure foundation; why not another? Somewhere I had read of a man tiring out and killing a strong, healthy buck in less than eight hours by walking steadily on his trail and keeping him moving. I would do the same. I had the good luck to jump a doe and two fawns early in the morning and took up the trail at once. The second time I jumped them they separated, one fawn leading off by himself. I concluded to follow this fawn, as it would likely be more easily tired out. The fawn soon turned and headed for the starting place. All day I followed that fawn round and round. Five times I followed him over the same trail. Three times he laid down and apparently had a good, long rest.

Twice I found where he had taken the back track for half a mile, turning off when he heard me coming. Each time I followed on to the turning point before discovering the trick. Several times I had trouble in following him, on account of a superabundance of tracks, but my quarry being on the jump I succeeded in tracing him. All this time I got sight of him but once as he flashed through an opening in the wood.

When he started in the morning his jumps averaged about 15ft., and I noted with pleasure when they were reduced to 12. This he kept up most of the day, but when I jumped him the last time it seemed to dawn on him that there was something on his track, and he started in a straight line for the far-away, and when I left the track at dusk he was clearing 18ft. at every bound.

There was much amusement at Lamere's that night when I told of my chase. Lest the man who walked down the buck might say I must be a poor walker, I hereby challenge him to a walking match from New York to San Francisco, he to pay all the expenses and I to harvest the glory, and he can satisfy himself as to that.

Now the fact is, I knew in the beginning that I could not tire out a deer, for I well knew that a deer in ten minutes' run could get far enough ahead to have an hour's rest before I arrived and be fresh for another race when I got there. But my chance for a shot was just as good in following his track as anywhere else, and I also had hopes that he, being only a fawn, might make some blunders and give me a shot.

I suppose the idea of walking down a deer came from the old theory that a man can tire out a dog. This theory or statement, which I took for granted from childhood up because some one said so, has no foundation in fact. Of course a man can tire out a dog if the dog be hunting and goes ten miles to the man's one; but let the man follow in the dog's footsteps and the dog would die of old age waiting for the man to get there, and so would a deer.

By this time the school had begun for the winter in the Lamere district, and the schoolmarm boarded with them, and we had high old times playing six-handed cinch. This added something to the pleasure of the hunt, but was fully offset by the schoolmarm's critical examination of my boots for blood when I returned empty-handed, and her supreme indifference when success had crowned my efforts.

The next time I started on a hunt it was with small expectations of success. There had been a slight thaw, however, and the snow was in excellent condition for tracking, its softened surface giving back no sound at the pressure of a foot. It was no trouble to strike a trail in those woods, the only trouble being to find a place where tracks were so few that an individual trail might be followed. Deer, like rabbits, seldom lie by near where they have spent the night capering and feeding about; but take each their separate way and lie by in some isolated place. This only applies to early winter, as when deep snows prevent their traveling they gather in yards to spend the winter. Circling a playground, where the snow was dotted by tracks like a sheepyard, I took an individual leading off and followed it. Here and there the trail wound, over hill and hollow and through swamp and thicket, till I began to think it would never stop. Finally the track turned into a ravine, up which I followed it a long distance, when it turned squarely up the bank. Cautiously I climbed the bank, expectant, though I know not why.

The first thing I saw on reaching the top of the embankment was a deer bobbing across a wide "slashing" in front of me. There was about ten acres of fallen timber, laid low by wind or fire, over which the deer had to go before reaching the standing timber beyond. There was also between me and the fleeing deer a thick bunch of poplars which the storm king had spared. These interfered greatly with my aim, their long, slender branchless boles covering more than half the space in front of me, but I opened fire. One, two, three, four, five, six times the crack of my rifle rang through the forest, and then the deer disappearing in the standing timber, I stopped the cannonade. I could see the splinters fly from the poplars as I fired, and I knew most of my shots had gone wrong. On examination I found where four of the bullets had passed through trees 4 to 6in. in diameter; this left two possibilities unaccounted for.

When I started on after the deer I had gone but a short distance when I became conscious of a deer lying half concealed behind a treetop and not 20yds. away. Knowing that if I stopped and turned to look at him he would be off in an instant, I kept on dropping the barrel of my rifle across my right arm and bringing it to bear on him, keeping on as if to pass him. When I got to a favorable point I stopped and raised the breech of the gun to my left shoulder. When I halted I could see the hair on the old fellow's neck rise and stand straight up, but he did not move. Raising my right arm I brought the rifle to a level, without taking the barrel in my hand or turning round, and aiming an inch below the butt of the horn, just between the eye and ear, pulled the trigger. With one mighty bound the deer landed in a heap 10ft. away and an adventurous life was closed.

He was much too large for me to hang whole, and so saddled him and hung the separate parts in the grove that had erstwhile intercepted my bullets.

When I started on again I took the track of the deer I had fired the six shots at, without any definite idea of what I was to accomplish by it. I had gone but a few hundred yards, when I almost stumbled over its carcass lying dead on the snow. One of the bullets had struck it in the flank and ranged through to the opposite shoulder. Death had apparently came to it in midair, for the carcass was lying full 20ft. from the last tracks in the snow.

As I was working with this deer I fell to wondering how it came to lie down without guarding its back track. Returning, I examined the ground and found the deer I had been trailing had not stopped in the windfall at all, but had crossed it and gone into the timber beyond. The two deer I did kill had each came from different directions and had laid down close together by a mere chance. "It never rains but it pours," and the trumps I held that night in the cinch game were a fright to see, and thus my outing ended in a blaze of glory.

Natural History.

MY FIRST GROUSE NEST.

LOWELL, Mass., Oct. 9.—A love of the woods, with their ever-beautiful and varying colors, the many sweet odors that delight the sense of smell, the weird music of the leaves in their never-ceasing quarrel with the winds, the matchless effect of light in the tracing of shadows, the ripple and gurgle of crystal waters, the many voices of animal, bird and insect life—all these furnished an irresistible charm, that like a magnet would cause me, away back in the early sixties when I was only a little boy of ten years, to wander off alone far into the big woods, sometimes miles from the settlement, much to the concern of my parents and friends of the family. Numerous and ingenious methods of punishment were tried without avail; but as I always turned up at night with cheerful regularity to receive advice and more solid arguments, it soon became on old story, and long before I reached my teens I was less worried about, while our family were ransacking all the old traditions and wondering if a visit from some friendly St. Francis Indians at our home just previous to my advent on this sphere had had anything to do with my bush-loving proclivities.

There came a beautiful day in spring, when the birds, tiring of winter's icy clasp, were bursting to greet a warmer sun; the grass on the sunny slopes was beginning to look green; along the little brooks the skunk cabbages were pushing up through the winter covering of springy ooze; and the birds, so long strangers, were back with us once again. The morning found a little boy absent from school, while the teacher, obeying instructions, took notes of the matter for sending to the head of our family, who received much sympathy and advice regarding the behavior of his oldest son. I was some two miles in back of the settlement peering under a clump of ground hemlock growing by the side of an old log, to discover what an old partridge was doing there. The bird had just taken flight and a nest was found filled with eggs, in fact, too many for counting, and what appeared to be a whole capful. Here, indeed, was a prize; not only did I want the eggs, but the mother of the prospective brood. Plans were immediately laid for her capture when again she returned to the nest.

A careful survey of the premises was taken and I departed, only to come back in about two or three hours to capture the grouse. During this short time visions of many grouse hatched out at home, kept and bred on a large scale, were mentally photographed on my mind, and Uncle Eben, who was a great bear and deer hunter, and used to trap sable, mink, otter and foxes, besides gathering wonderful quantities of spruce gum, would turn green with envy when he beheld my grouse farm. Uncle Eben also used to shoot many partridges, and he was ably assisted by Hunter, a small yellow cur of unknown breed. He had a sharp, yelping bark which, together with his tawny color, was noted as a wonderful dog in his day. Please note the color, none other was considered good for a partridge-treeing dog, as the birds refused to tree well, and be contented to stand with outstretched necks while being shot out, lowermost ones first, until the whole flock were killed. Hunter also was noted as a woodchuck dog, but as Uncle Eben had an enormous appetite that hankered for game early as July each year, Hunter did not have much time to hunt woodchucks or other varmints that made him smell too strong for company in the house.

With all my plans and details in mind, it is little wonder that, after hanging my little cap on a bush, and creeping along on hands and knees, which became wet from moisture

in the cold, damp moss that covered the ground beside the old log under the shadows of the firs and spruces. I realized that my heart was beating louder than usual. Silently and with great care, I crawled along until, nearing the end of the old log, when a halt was made, and after a sly peep over a depression in the top of the log, I was overjoyed to see that the grouse was back on the nest, and with her tail toward the end of the log, for which I was most carefully moving. How my heart did beat, and I wondered what was the matter with me. Years afterward, when buck ague spoiled my aim, I was admonished that an old complaint contracted when young had returned again. Slowly creeping over the soft, damp, moss, which gave no sound, I was able to peer cautiously around the end of the old log, and was pleased to see that the grouse had not changed its position.

Mentally calculating the distance and not daring to move nearer, with my knees drawn up under me for a sudden spring forward, a chubby fist grabbed grouse by the tail.

For the instant the worst seemed over. The consummation of my cherished plan was already in sight, and a yell of victory was welling up in my throat, only to be choked back by the villainous behavior of this terrified bird. I had heard my aunt, who had blessed us with many cousins, once say that a hen could scratch for a whole flock of chickens as easily as she could for one. I had often seen the little shallow holes left by the grouse that I had frightened away while dusting, and experienced a feeling akin to pity for the little partridges that depended on such a mother to scratch for them. But here in this bird was a marvel in the scratching line. Her wings were beating with wonderful rapidity, while her feet were moving like lightning. The eggs all came my way first, nearly blinding me, as I was lying prone on my stomach. They impartially distributed themselves, all broken, over my hair, and covered my face and neck, also my little colored jacket, which my mother had made for me out of an old balmoral skirt.

During this trying time I had kept a firm hold of the grouse's tail. Next came the fir and spruce needles, along with the dirt and litter under and around the nest, all adhering to my hair, face, neck and jacket, which were already sticky with broken eggs. Last of all, the tail, on which I all this time had maintained such a deathly grip, gave way, and the terrified bird struck out for cover with a speed I have never seen excelled during over thirty years' hunting her descendants. A few tail feathers were left in my hand, while my sleeve was full of broken eggs and dirt. I would instantly have exchanged places with the boy that drew the elephant in the lottery. The little brook that flowed down a gully near the old log was soon reached, handfuls of moss wrung out in the water played an important part toward making up my toilet, and soon all except my feelings were quite presentable

More than thirty years have come and gone, and when, during autumn, the woods are filled with the fragrant odors of the dying leaves, made beautiful in many colors like the dying dolphin by death, and a wily old grouse after a long hunt is cornered; and when flushed over a point before my old dog, and in terror breaks cover and starts for some place of safety, my mind will revert back to one of her ancestors that I will always have cause to remember.

Geo. W. Dearborn.

COON INSTINCT.

Editor Forest and Stream:

Two years ago this fall I became the fortunate possessor of an invitation to spend a couple of weeks at Lonaconing, Md., as the guest of Mr. R L. Sommerville, superintendent of the George's Creek Coal and Iron Co. Most of the time during my stay there was put in camping on the trail of the elusive wild turkey, but incidentally I tumbled on to a number of parts in nature new at least to me.

The most puzzling of these, so far as I was concerned, had to do with the behavior of a coon which the boys at the engine house of the mine had permanently retained for a pet. Through constant teasing from his earliest infancy there had been brought to the surface of this coon's character about all the satanic traits which a well-regulated coon could reasonably have been expected to develop. He would drink, fight, steal and upon occasion use bad language with great force. But his strong point was fighting. He would get up out of a sound sleep on a rainy night and "spoil" for a fight, if an animal with any number of feet from two up might come within reach of the steel chain by which his ambition was confined, and this, too, at the tender age of six months.

The engineer used to put on a pair of heavy buckskin gloves and "scrap" with him a few rounds every morning, just to keep him in training, you know. All this was not, I presume, so very remarkable for a coon, but what got me was his behavior when his sparring partner "fouled" him by getting hold of the fur on his throat. The instant this occurred he ceased operations with his front "hands" and clasped them tightly over his eyes, spreading the little "fingers" to completely cover and protect the lids and eyeballs. I puzzled long for an explanation of this apparently instinctive act. His foster parent, the engineer, who had adopted him when two weeks old, could not account for it; said he had always done so, right from the start. It has occurred to me that coons may have learned in the course of fights with those other night prowlers, the owls, that when you get a fellow's claws on your throat you are in a fair way to have your eyes picked out unless you cover them up real quick. This bit of practical experience, continued from generation to generation of coons and owls, might have developed the instinctive act of self-preservation so curiously brought out in the case of this little coon, reared under the refining influences of civilization.

I will confess it is with some trepidation that I hazard this guess, but I am in search of information, and this will do for an opener.

Will some one please shed some light on the subject?

R. L. Warner.

Boston, Mass.

New England Bluebirds.

Editor Forest and Stream:

While driving near Dover, N. H., on Oct. 4, I saw a flock of about ten bluebirds. There may have been more in the fields on either side, but that was about the number in sight. As this bird has been very scarce in New England for the past two years, I thought this might be of interest.

Mark E. Noble.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

RAMRODS AND BIRD CAGES.

St. Augustine, Fla.—*Editor Forest and Stream:* Mr. Louis Benson Akin preaches about "fun," in your issue of the 9th, and I like to see such sermons now and then. I am not ashamed to say that my feelings are always shocked when I read descriptions of Southern coon and 'possum hunts, because they are characterized by more brutality than any other kind of sport. The wary and frightened animal avoids a tree as long as possible, because he seems to know the danger of that last resort; but he is forced to it by the dogs, and then a member of the party climbs the tree and shakes him off, to fall among the dogs, and they all enjoy the "fun" as heartily as rowdies enjoy a dog-fight.

In the olden time, when flint-lock guns were loaded with ramrods, to which was prefixed a screw for drawing loads in certain cases, I was one of those thoughtless and heartless things called boys, and another specimen about as wild as the youthful Podgers, used to tell me about his squirrel hunts, and how, when one of them ran into his hole in a tree, he would climb the tree and thrust his ramrod down the hole and twist the screw into the little animal and draw him out and throw him down among the dogs. I suppose that I was bad enough, but that case of beastly cruelty made such an impression on me, that even to this day it will not down.

And here let me say that the sentence of Julius Delmotti, of Somerville, N. J., has not drawn a single sympathetic tear from my unfeeling eyes, because he is only one of a class who are utterly devoid of human feeling, and the brutality can only be driven out of them by legal process. His employer, by the way, is not entitled to any more respect than he, because he advised him to violate the law and then sneaked out when the consequences came round. Most of the bird fanciers are Italians, and they will cage up anything in their windows that wears a feather. I have even seen swallows penned up there to starve to death.

Anywhere through the country Italian loafers may be seen in summer, while the bobolinks and other singing birds are nesting, lying about the meadows with their trap cages, and the bright domestic bliss of hundreds of little songsters is cut short, and changed to a brief career of torture. This might all be stopped, but our noble legislators are too deeply absorbed in political schemes to give a moment's thought to such trifling matters, and the end of all this wretched brutality seems a long way off.

Didymus.

A New Mountain Sheep.

The proceedings of the Biological Society of Washington contain this description, by Dr. C. Hart Merriam, of *Ovis nelsoni*, a new mountain sheep from the desert region of southern California:

Mountain sheep were found by the Death Valley Expedition in several of the desert ranges of southern California and southern Nevada, where ten specimens were secured by Mr. E. W. Nelson. They were killed in the northern continuation of the Funeral Mountains, locally known as the Grapevine Range. Compared with the well known Bighorn of the Rocky Mountains and Cascade-Sierra system, they are much paler in color, somewhat smaller in size, and have very much smaller molar teeth. Compared with *Ovis stonei* recently described by Dr. Allen, the contrast in color is even more marked; but the pattern seems to be the same, and the darkening of the under parts and legs is also a character of *stonei*. In the absence of necessary material for comparison it seems best to treat the new form as a full species.

The geographic range of the southern Bighorn is unknown, but it is probable that all of the sheep of the semi-barren desert ranges of Mexico and the southern United States, from Texas to California, belong to the present form.

It is a noteworthy coincidence that Mr. Nelson, who in northern Alaska discovered and named the northernmost American sheep (*Ovis dalli*), should also secure, in the Sonoran deserts of California, the southernmost representative of the group. In view of these facts, it seems peculiarly appropriate that the new sheep should perpetuate Mr. Nelson's name, which I take pleasure in bestowing upon it.

Ovis nelsoni, sp. nov.

Type from Grapevine Mountains, on boundary between California and Nevada, just south of latitude 37°. No. $\frac{223243}{40487}$, ♀ ad. U. S. Nat. Mus., Biological Survey Coll. Collected June 4, 1891, by E. W. Nelson. Original No. 942.

General Characters.—Apparently similar to *Ovis stonei* Allen in pattern of coloration, but much paler; rump patch small and completely divided on median line; tail short and slender; molar teeth very small

Color.—Upper parts, except rump patch, pale dingy brown; under parts and legs much darker, contrasting sharply with the white areas; inguinal region, hinder part of belly (narrowing to a point anteriorly some distance behind forelegs), inner aspect of thighs and posterior aspect of fore and hind legs, white.

Measurements (taken in flesh by collector).—Total length, 1,280; tail vertebræ, 100; hind foot, 360; height at shoulder, 830. In the dry skin the rump patch measures about 190 in breadth by 150 in length (from apparent base of tail).

A Fooled Kingfisher.

Windsor, O.—*Editor Forest and Stream:* After reading "Birds in a Predicament," I venture to relate an incident that happened to a brother angler. During the latter part of August just past Mr. John G. Bayless, while fishing for bass below the dam at Mechanicsville, O., on Grand River, thinking his minnows needed airing removed the cage from the bucket and set them in the water near the dam. It happened to be nearly under "that old dry limb" which was soon occupied by Brer Kingfisher, who immediately sized them up, and no doubt thinking they were his proceeded to go up in the air to the proper height, when he closed his wings. The result was a scared lot of minnows and a very sorry bird. Mr. B. gently lifted him out and smoothed his ruffled feathers and set him going again. A. A. B.

Rabbits and Weasel.

Hyde Park, Mass.—I have a little story for the Forest and Stream family, if you think it worthy.

While at my summer home in Marion, Mass., last July, I was returning to the house by way of a narrow path through the woods, when I saw a half-grown rabbit coming at full speed down the hill toward me. Knowing their habits, I felt that he would not turn out if he could avoid it, and I stood astride of the path, putting my hands down as I would to catch a ball rolled toward me, and he ran right into them. I took him to the house and put him in a box, and returning to the place of capture I saw another rabbit running down the same path, away from me this time, and after him what appeared to be a red squirrel. They disappeared; but while I stood wondering at a squirrel chasing a rabbit, I saw them returning on the path. When they got within 10 or 12ft. of me, the squirrel jumped on the rabbit's back and caught him by the throat. I stepped quickly forward and picked up one animal in each hand, when I found the squirrel to be a two-thirds grown weasel. I took them both home, notwithstanding the unpleasant odor from the weasel, and putting the rabbit with the first one took the weasel outside and killed him. I later released the two rabbits. M. E. N.

Game Bag and Gun.

A MOOSE COUNTRY.

Campbellton, N. B.—*Editor Forest and Stream:* As you invite report of one's sport, I venture to submit the following memorandum. It was just what your brilliant correspondent, Mr. E Hough, would call a piece of "Forest and Stream luck!" with a *veni, vidi, vici* smack about it, thus: Sept. 1—which is our opening day in New Brunswick hereaway, left camp at 8:10 A. M. and at 9:15 A. M. (in one hour and five minutes) was smoking a pipe, seated on the back of my "first moose" and probably "first" knock-down of the season. The antlers had fifteen points, 4ft. 3in. across, main plate of antler 15in., height of antler 2ft. 11in.

What easy fun one thought moose hunting just then, but one had full and ample occasion subsequently to change that idea; for, oh, the cruel tramp in that eternal morass and never-ending quagmire, that shove along, push ahead, uphill, down dale, and daily so, until, on the following 18th, monarch No. 2 bowed his grand head, as did his predecessor, to one ball from a .30 40 U. S. A. Winchester. (I feel sure this will please Mr. Hooper, and hereby he will understand my vast gratitude to himself. The second head is somewhat larger and some say handsomer than the first. Since return here, both heads have been visited and inspected by crowds, and one has heard the epithets "dandies, noble, fine, terrible, exceptional, etc.," applied to them. No egoism this; not my fault what they say and think; one only listens and feels lucky and jolly, and withal so fully repaid for past struggles and tumbles in muck, mire and slush. The heads are to be mounted; and acting on the emphatic verdict of Mr. W., of near New York, a hunter of moose for the past seven years, and who considers that they are the two "finest heads" hitherto brought low on the Eastern coast of North America, it is my purpose to ask permission to expose them in the hunters' exhibition at New York.

I saw some forty animals—moose, caribou and deer—thirty-four of which were cows or does and so, of course, as "sacred" in the eyes of a sportsman as they are in those of a Brahmin!

Now perhaps some of your readers might like to know where this moose country is to be found. Well, then, I should advise them to apply to Mr. Thomas Downs of this town, Campbellton, a guide who knows the country thoroughly. Starting from here, you go some forty miles up the Restigouche River by scow or canoe, landing at the Restigouche Salmon Club's lodge at Red Bank; then a twelve-mile portage will bring you to the grounds, most easy to reach. Nearly all requisite provisions, butter, bread, flour, lard, eggs and vegetables are procurable at Mr. Wyer's farm, at the mouth of the Patapedia, which is three miles this side of Red Bank. The hunting ground is called the "Dead or Still Water." It is a sure find, a certain kill.

Now surely one or another will call one magnificently generous, being thus explicit; or a third may scent something disadvantageous being kept back, and so forth. Well, briefly, neither am I the former nor doing the latter, being bound next year for "pastures new"—forsooth for Alaska! Ah! for gold, another Throndiucker (vulgarly ycleped Klondyker—the Indian name being Thron-diuk, which means a river full of fish—this, by the way, and for those who wish to know what I didn't twenty-four hours ago). No—again one would be wrongly construed. Have not a Shakespeare by me—but did not Harry the Fifth, just before the battle of Agincourt, say to his coz, Westmoreland, something as follows:

"By love, I am not covetous for gold;
I care not who doth feed upon my cost;
It yearns me not if men my garments wear;
Such outward things dwell not in my desires;
But if it be a sin to covet honor,
I am the most offending soul alive."

Well, then, for "gold" substitute "moose" if you will, and my confession will be understood. Eustice Hill.

REMINISCENCES OF AN OLD SPORTSMAN.—III.

(*Continued from page 326.*)

We will now take one more squirrel hunt and then we will change the subject. The clerk in our village store was one of the most penurious and close-fisted fellows that I ever knew, and when he took his departure to start in business for himself in a neighboring village everyone appeared to be well pleased with the arrangement. The next fall the hunters in his village challenged those of a rival village near by for an old-fashioned squirrel hunt, the losers, of course, to pay the bills for a supper for both parties, and somehow they induced our penurious friend to take part in the hunt. As he well knew that I was lucky (as he chose to call it), he came up the night before the hunt to secure my services to show him and his companion where the squirrels were, adding that I need not take my gun, as they would attend to that part of the performance, and all that I would have to do would be to show them the squirrels and carry the game; and as the hunt was to be for two days, he would pay my expenses and give me 25 cents in cash.

While the man was talking I had been first amused and then a bit r'iled, and was on the point of interrupting him and telling him that I could not go, but just then he had arrived at the point where my gun was gone back on, and my dander began to rise, and I listened until he wound up with the alluring cash offer, when I was just as mad as I could be, and was about to pull the throttle wide open and go for him, when I was suddenly seized and overpowered by an inspiration. As I have previously recorded, when this happens it is of no use for me to try to escape the toils; struggle as I may, they only tighten and work their sweet will upon me regardless alike of my better feelings or resultant consequences to others, so when he sprung the 12½ cents a day upon me, the "power" had me fast and tight, and the result was that I eagerly accepted the munificent offer and bade him be on hand at daylight the next morning and I would show him such

squirrel hunting as he never saw. You see, the spirits which so cruelly worked their racket on poor, defenseless me, had ordered me to take this man into the wilderness and give him a fair sample of what 12½ cents would accomplish in the way of rocks and stumps, briers and brambles, swamps and bogs—but no squirrels.

All in vain were my earnest endeavors to save this man from the punishment marked out. The fiat had gone forth and perforce I, as the humble instrument of the avenging spirit, must obey. So when he and his friend put in an appearance the next morning before it was fairly light, I was ready, and getting into the wagon directed them to drive to the "big woods" some eight miles away. This locality was quite an extensive tract of primeval forest some eight or nine miles in length and three to five in breadth, and was well known for many miles around as a famous resort for squirrels, and they were there, too, in plenty, if one only knew where to look for them; but it was hard lines for the uninitiated, as nine-tenths of the tract was entirely desolate, so far as game of any description was concerned. I had left my dog at home, as he needed rest; and both my companions being totally unacquainted with even the rudiments of the science of squirrel hunting, they never thought of a dog until it was nearly night.

We arrived at our destination shortly after sunrise, and leaving the team at a farmhouse, made a break for the woods, all of us as fresh as daisies and full of animation at the prospect of sport. I soon learned from the conduct and conversation of my companions that neither of them had ever killed a squirrel and that a rest for the gun and a good, long aim were necessary adjunts to success, as they at once began practice on such birds as would hold still long enough, and after several baulks and two or three shots each I had a couple of bluejays to carry, when they decided that they were up to the mark and good and ready for the business of the day and ordered me to bring on the squirrels. Now, I was under instructions from the spirit whose slave I was, not to lead them to the haunts of the game, but, instead, to lead them a wild goose chase, and show them what the old, primeval forest was like; but when I found that the bushy tails would be safe, or very nearly so, I took the liberty to modify, or rather to change, the programme, and led them to a favorite corner where I had often had lots of sport. I must say, however, that the half-hour we stayed in that vicinity showed me more fun than I had supposed was possible to be found in so small a corner. Several squirrels showed themselves, but, although I waved my hat at them in token of amity when the Nimrods were crawling up to them, they would not hold still, and, although four or five shots were fired, I do not believe that a single squirrel had cause to regret our visit.

When we had exhausted the resources of this locality I led them, for the sake of variety, straight through a rather unpromising bit of swamp some twenty rods across, and as the opposite side was a capital place for blackberry parties we had still another change. Just beyond the briar patch was a small but very steep hill covered with a dense growth of tangled hemlocks. There was a cart path a short distance to our right that led around the hill; I had always followed this when going that way and I tried my best to do so on the present occasion, but it was no go, I was led by an irresistible power straight over the top of the hill, and the only consolation I got out of it was the satisfaction of treading ground that mortal foot had never pressed before, and of course the pleasure of giving my companions the most striking variety they had yet encountered. Then we had some more fun with the squirrels, and somehow between them they managed to kill one and shortly afterward another one was added to the score. This brightened things up a bit and helped them over the rough ground in much better style than had been apparent for the last hour or two; but the sun was getting low and the order was given to return to our team and I started in the proper direction; but that insatiate spirit seized me by the collar and in spite of my best efforts we came out into the open more than two miles from where we should have been, just as the sun was setting.

Although a mere boy, I had been the captain and guide of the expedition; but now that it was plain sailing, I fell to the rear and had an opportunity to study my companions. I had known from the start that their costume was not just the cheese for a squirrel party in the thorny thickets of the big woods; and I placidly saw by the way they glanced at each other that they now knew just as much about this part of the business as I did. Not only were their clothes in a demoralized condition, but their hands and faces unmistakably showed they had not heeded my oft-repeated injunction to look out for the thorns or briars, as the case might be. Our progress toward the house was exceedingly slow and laborious, the free and springy grace that had been so marked a feature of our advance in the morning was entirely lacking, but then there was no need to hurry now, as arrangements had been made for food and lodging at the farmhouse.

After a good supper our two squirrel hunters—as I suppose I must now call them—woke up a bit, and as two or three of the neighbors dropped in and began to talk squirrel, they seemed quite cheerful, and after listening to tales of the countless legions that thronged the woods in the opposite direction from that taken by us, they reconsidered the motion that had been passed for an early return in the morning, and decided that they would try it again and visit the Eldorado that had been pointed out to them. In the morning, although still lame and pretty generally used up, we took a fairly early start, and striking the woods turned in the opposite direction from our course on the previous day.

I was well acquainted with the favorite places in this locality, but somehow we failed to connect, and when we sat down to lunch we had but one head of game. My companions were discouraged, and during our meal they fully discussed the matter, attributing their luck, or rather the lack of it, to almost every reason except the right one. Our penurious friend was very positive in asserting that the game was much too wild for successful hunting. I could have told him that if he had not gone back on the old gun, he would have had opportunity to have seen this statement knocked sky high. Then when he said that they were hard to find, I could have told him of a little dog that would have had a word to say about this, or I could have told him when he bitterly complained of the rocks and brambles that I was not the sort of boy to strew his pathway with roses for 12½ cents a day. But I would not tell him what was the matter, nor would I agree with him, for that would be telling an untruth, and I could not do that, so I just kept quiet and enjoyed myself ruminating on this entirely new, to me, phase of my favorite sport. Had our parsimonious friend been alone in the case I should have been supremely happy, but his companion, the Doctor, had developed into a pretty good sort of a fellow, and my conscience rather smote me when I thought that he was sharing punishment which belonged solely to another.

HEAD OF A MAINE DEER.
Killed by Mr. F. L. Shaw, of Portland.

While musing thus, my companions had discussed the matter and arrived at the conclusion that we had better go home; so I was told to take a bee-line for the house, and I started in the proper direction, and partly for the reason that I had had about enough of it, and partly to comply with the mandate of the inexorable spirit, in whose power I was, who well knew that a straight course would intersect quite a swamp, as well as some pretty rough ground, I held my course, regardless of bog or briar, and in a short time we were at the house. The Doctor gave me a cordial invitation to be his guest at the hunt supper, which I thankfully accepted, as I was anxious to see what it was like as well as to meet the goodly array of hunters that would be there, so we took the direct road for headquarters, instead of going to my house. Our penurious friend was to keep me over night, while the Doctor was to send his team home with me in the morning.

Arriving at the village, my companions left me to shift for myself, while they retired to change their tattered clothes for something more presentable to wear to the supper. The first place I visited was the hotel, or tavern as it was then called, where the supper was to be given, and as the landlord had been hunting with me on several occasions, I was soon on the best of terms with the whole household, and had a capital opportunity to see what was going on. But the best fun was to watch the hunters as they came straggling in; there were nearly fifty on each side, and as each one arrived he would report to the judges and hand in his string of game; then he would join the crowd in the bar-room and in nearly every case proceed to explain why he had not brought in a larger bag. I stood near the door taking in the whole of it and thoroughly enjoying myself, when just at dusk the door opened and a young fellow stepped inside, and after glancing around the room beckoned to some one, who came to him, when he told him that he had just stolen a big bunch of squirrels from Tom Morley's wagon, and had hidden them, together with his own string, behind the shed. As they meandered through the crowd in the direction of the bar I started for behind the shed and soon found the two strings of squirrels, and for fear that some one might steal them, I took them in charge and put them in a safe place and started to find Tom Morley. He and I had enjoyed many a hunt together and were fast friends, and I was bound to see him righted. I had taken but a few steps when I met the Doctor, and at once gave him the details of the affair and asked his advice, as it was now too late to return the game to Tom, for he had discovered his loss and was making "Rome howl" just around the corner. The Doctor was quick-witted, and patting me on the head called me "good boy" and bade me take the game to his office, a short distance down the street, where we cut the string and packed them in a basket; then carrying the burden between us, we started for the hotel.

When we arrived upon the scene there was considerable going on; Tom had just whipped one of the opposing side and was loudly calling for another one to come on, when at the Doctor's instigation I went to him and whispered a few words in his ear which at once brought a change over his countenance, and with a wild whoop he caught me in his arms and swinging me on his shoulder started for the house, where we arrived just in time to see the Doctor, as coolly as he would have passed over a box of pills, hand the big basket to the judges, giving them the name of our penurious friend together with his own; but the most enjoyable part was to see the modest manner in which he received the storm of applause that followed the emptying of the basket on the table. There was a perfect uproar of stamping and clapping, which he modestly acknowledged with a graceful bow and a deprecatory wave of his hands, and then, amid hearty cries of "Well done, Doc," he came over to me, and taking me by the hand he hoisted me into a chair, and motioning for silence disclaimed nearly all the credit for the performance, and pointing to me called me his friend and guide, to whom the largest share of the honor was due, and when he solemnly averred that he should believe to his dying day that instead of taking them to the game I had in some mysterious manner brought the squirrels to them. The crowd cheered and stamped again until all was blue, and I was quite the hero of the evening. It is perhaps needless to say that I bore my honors in a becoming manner and thoroughly enjoyed myself, but there was one thing that troubled me. I had come to like the Doctor for his all-around good qualities, and the fact that I had led him such a wild scramble through the briars and brambles of the big woods rather put a damper upon my enjoyment, and I resolved that I would within a few days see him and make a clean breast of the whole business; but opportunity served sooner than I expected.

It appeared that our penurious friend, as soon as he found that his side was beaten, and that he would have to pay the bill for some one else as well as for himself, took his departure and did not return, thus saving one-half the bill, and as a result I was left out without a place to sleep, and was about to start for home, as I had not a cent to pay for my lodging. As I started to go, the Doctor came to me and asked if I had been paid, and as I shook my head he put his hand in his pocket and asked me how much I was to have. With a tone and manner intended to convey my appreciation of the munificent amount, I named the sum, when he raised his hands in the air and ejaculated: "Je-ru-sa-lem," then muttering to himself, "that settles his business," he dived down into his pocket again, and pulling out all the change he had—a little more than $3—he poured it into my hand and bade me stay at the hotel and he would pay the bill and send his team home with me in the morning. This broke me up, and I poured into his willing ear the entire tale of this man's conduct and the motive that led me to try and mete out to him at least a portion of the punishment I thought he deserved, and ended by trying to express my regret that he should have received any part of it. The Doctor was in ecstasies, and laughed until I was fearful that he would burst a blood vessel, but he finally sobered down, and placing his hand on my shoulder he told me that I was just the sort he was looking for and that we must be the best of friends, and declared that he would not have forgone one thorn or bramble of the punishment for untold gold, adding that I had done him inestimable service, for that sneak had very nearly roped him in to join him in a business transaction, but that this had settled that business forever. This removed the last bar to my complete happiness; in fact, it added not a little to my enjoyment, and I went to bed and slept the sleep that only comes to the innocent and good.

SHADOW.

[TO BE CONTINUED.]

The Sportsmen's Exposition.

THERE is no longer a doubt about the ultimate success of the fourth annual Sportsmen's Exposition and bicycle show, to be held in January, at Madison Square Garden. At first there was a hesitancy on the part of some of the trade to take space, but the popular feeling was too strong to withstand, and as the leaders in both the sporting goods and cycle industries have taken advantage of securing good positions, many of the others have followed suit. It is too early now to announce the special features that will go to make this the greatest exposition that America has ever seen, but plans are being formulated that will be sure to attract the attention of the many thousands who are interested in out and in-door sports. The advent of the chainless wheel, the horseless carriage and the scores of other improvements in sporting goods and cycles will be sure to maintain their prestige against any of the beautiful spectacular effects that have of late been such prominent features of industrial expositions. The committee who have the exposition in charge are leaving nothing undone toward making it a success, and within a short time the special features will be announced. Applications for space and other information may be obtained at the office of the National Sportsmen's Association, 377 Broadway.

J. A. H. DRESSEL, Sec'y-Treas.

CHICAGO AND THE WEST.

Chicago, Ill., Oct. 23.—A number of inquiries are at hand in this office from gentlemen wishing to know where good deer country can be found this fall. The season is now practically at hand, and the tide of deer hunters is already well under way to the pine country of the North and Northwest. One railroad, on one evening this week, carried out sixty-seven deer hunters out of Chicago, all bound for Staples and Park Rapids, Minn. Many of them would go to Wisconsin, but for the license. A great many deer hunters have also gone to Deer River, Minn., on the Duluth, Superior & Western R. R. One party has gone to Cloquet, Minn. I think probably over 100 deer hunters have gone into Minnesota already over this one road alone from or through Chicago.

I am advised by a man just back from the Fifield country of Wisconsin that the deer are to be found in that neighborhood in great plenty this fall. Although of course not hunting, he saw a great deal of sign, and the local men said it would be no trouble to get plenty of deer in season. This is one of the safe points to reach, I think. Go to Fifield, on the Wisconsin Central, then wagon twenty-four miles east to Feeley's place, on the Fifield Chain. Bob Hurd, the game warden for the county, is a guide who is recommended.

Ellis Junction, on the C., M. & St. Paul Railroad, is now and has for years been in the heart of a splendid deer country. Take wagon at that point for the woods some twenty or thirty miles west. Guides will be needed. Another fine point on this road is Lena, Wis., where deer are this fall in good numbers This point is not far from Green Bay, and has hardwood and swamp country both. Take wagon at Lena and go fourteen miles west to Kelly Lake, where there is a small settlement and where a guide can be procured. This is a safe point for deer.

Ducks.

Mr. C. N. Souther, of the Milwaukee & St. Paul Railway in this city, is just back from a little run up to the northern marshes about Horicon, and says that on the club marsh of Diana Club he saw more ducks than he ever did before. He made a nice little bag.

Mr. W. S. Milligan, tax commissioner, this city, is just back from a trip to Big Stone Lake, Minn., and is delighted with that region. He says the ducks were there simply in clouds, and he had never seen the like.

Mr. Chauncey M. Powers, of Decatur, Ill., to-day passed through Chicago on his way home from a trip to the Devil's Lake country of North Dakota, where he has been three weeks shooting with Fred and Dick Merrill. They shot ducks, geese and chickens. The latter were scarce and wild, and the goose shooting was cut into by a lot of horseback hunters, who went all over the country and scared the geese out of their regular flyways. Ducks did not seem to decoy very well, but they had fine sport in blind shooting on points, calling in the ducks with the good old Illinois River duck call, with which instrument very few men are more expert than Mr. Powers, The latter is now on his way for a week or so at the Hennepin Club grounds of the Illinois River, to which club he belongs. The mallard shooting on those famous preserves should be very fine this fall if the water holds.

The Kankakee marsh is dried up and burning up this week, and we cannot hope for much shooting there. There is not water enough to hold even the snipe, and but few bags have been made of any consequence.

Mr. Smith, of the town of Niles, on the edge of Chicago, has just returned from South Dakota, and has talked to a friend, who has talked to me, not knowing that he was telling anything out of the way about Mr. Smith. He could not tell me Mr. Smith's initials, so I don't know which Mr. Smith it was. He tells my informant that he 'had to smuggle his game out of the State," but he brought home a lot of ducks, which he had salted down in barrels by the farmer's wife at the place where he stopped. He says these ducks were skinned and the breasts taken and slightly salted. They are described as tasting very well, perhaps all the better because they are stolen salts.

Mr. J. C. McDonald, a long time reader of Forest and Stream, asks for good open duck country in Wisconsin, where he can also get some grouse shooting. Can Mr. W. E. Warren, of Fox Lake, Wis., give us any information about his neck of woods as a place for a few ducks and a few grouse? I should think that one might locate somewhere in that region, and get all the shooting he would need for a little leisurely trip of a couple of weeks. Many of the best Wisconsin marshes are preserved, but not all of them. Part of the Butte des Morts and Poygan country is still open, and much of that country is still good at times in the fall flight, though usually better in the spring, when bluebills (legal game in that State in spring) are very often killed in hundreds. For upland shooting, a few grouse and a pleasant country, I think Berlin, Wis., would be a good place. Bab cock is another good point to keep in mind for a little fall woods hunt.

Colorado Game.

It is Mr. Warren, of Fox Lake, by the way, who writes me more fully about his Colorado trip, to which I referred last week. He thinks the big game of Colorado is not yet all gone, and remarks:

"I have been reading the 'sheep and snowshoe' articles. I have been through the mill in Colorado, and while out there this fall climbed into the sheep country four times and saw sheep three times. But for the stringent game laws would have brought out some fine trophies. Would have got a fine picture of three old rams and two ewes, but had foolishly left the camera in camp that day.

"Gunnerson county has the name of being shot out, but there's plenty of game there yet—I think at least 300 sheep in one locality in the West Elk Mountains. While I was there this fall a party of four caught 80lbs. of trout in a half day. Another man caught eight trout in one day that weighed 43lbs.; so you will readily see there are fish there yet. Colorado has a hot game and fish law, and is really trying to live up to it, all of which I was glad to see."

Big Missouri Preserve.

Despatches from St. Louis dated Oct. 19 describe one of the most interesting movements in preserve matters which have recently come up for chronicling, in the middle west. The news reads as follows.

"Deeds will be signed to-day completing the purchase of the last 780 acres of a 17,000-acre tract of land in Iron county, Missouri, that is designed to form one of the greatest game preserves in the United States.

The purchaser is the Mountain and Lake Hunting and Fishing Club, including in its membership many well-known men in St. Louis.

The tract selected for the purpose of the club is in the heart of the richest game regions in Missouri, in the beautiful Arcadia Valley, surrounded by the Ozark Mountains

The intention of the club is to present the preserve to the State at the expiration of fifty years, providing the plans of the club successfully carry out" E Hough.

1206 Boyce Building, Chicago.

NOTES FROM NEW BRUNSWICK.

Fredericton, N. B., Oct. 23.—The head of the large moose shot on the Nepisiguit by Mr. John Bodkin, and which was reported in the press as being a record head, reached Fredericton yesterday. It proves to be considerably under the measurement claimed for it, but is nevertheless a remarkably large and massive head. From tip to tip it measures 60¾in. Some idea of the kind of game country Mr. Bodkin was in may be formed from the fact that on the evening that Mr. B. called up this moose four other bulls responded to the call. Mr. B. now thinks that there is no such thing as an ideal rifle for all kinds of game. He says that his gun, which throws 1½oz. of lead, is just the right thing for moose, but when it comes to shooting bears at a range of from 200 to 300yds., of which animal he saw five on the trip, his weapon was inadequate, not having a sufficiently flat trajectory. In addition to this moose, the head of which will be sent to Mr. Crosby, of Bangor, for mounting, Mr. Bodkin shot two fine caribou.

The big moose head taken on the Tobique, referred to last week, though not 69in. beats the record for New Brunswick, Nova Scotia and Maine by a large majority. Mr. Crosby, of Banger, writes me: "The big head that came from the Tobique last week has an exact spread of 66in. It has twenty-eight points, and was killed by Stephen Decatur, of Portsmouth, N. H. This head is the widest spread we have ever handled."

At least half a dozen moose have been shot in New Brunswick this fall with spreads of 60in. or more. One of these was secured on Nictaux Lake, on the headwaters of the Tobique, by Chauncy P. Williams, of Albany, N. Y., who spent a month in that ideal game region in company with his friend, George R. Shaffer, of Troy, N. Y. They had as their guide George Armstrong, of Perth Centre, Victoria county, N. B., who is a thoroughly reliable man in every respect and a fine moose caller. Mr. Shaffer secured a moose with a horn measurement of 49in. Mr. Williams said he had never seen a fish and game country that equalled the Tobique, and that he fully intended to return next year. The party saw over twenty-five moose on the trip. Mr. Armstrong informs me that fourteen large heads have been secured on the Tobique this fall, and he saw two besides the one taken by Mr. Williams that measured over 60in. across the points. It is currently reported at Andover that a mammoth moose has been shot up river by Hon. John Costigan, of the Dominion parliament, the antlers measuring 70in. As a rule these reports of record heads cannot be relied upon; the figures show a marked tendency to shrink when brought in contact with the tape-line. It is a notable fact that while Mr. Costigan has been for a quarter of a century one of the most prominent of Canadian politicians, in his early days he was a professional hunter and trapper in New Brunswick. He still retains all his old-time love of the woods and spends a month or more every fall on the upper Tobique. It would seem that the moose heads taken on the Restigouche and the Tobique this year have distinctly out-classed those which have come from the Miramichi, though the latter is reckoned as one of the finest moose countries on earth.

American sportsmen are still arriving on nearly every train from the West, and most of the prominent guides have their dates filled until Jan. 1, when the season closes. There is no doubt that they will come next year in still greater numbers, as the hunting opportunities of the Province are becoming more widely known. Some of the Maine guides, dissatisfied with the short season in that State and attracted by the game reports from New Brunswick, are preparing to locate here permanently. Some are now prospecting on the Tobique, Restigouche and other streams; others are building hunting camps in readiness for business next season. It is not surprising that there is some local sentiment against non-resident guides coming into the Province and competing with the local men. In Maine no guide is allowed a license unless he has had previous residence of at least three months, and it is felt that Maine guides have no right to expect better treatment in New Bruswick than our own men receive in Maine. I do not think it probable that the Provincial Legislature will debar non-resident guides from coming in, but it is not unlikely that a license fee will be imposed.

Talking about big moose, I am reminded that Mr. James Turnbull, of Halifax (who is not unknown, I think, to the readers of Forest and Stream), has received a letter from the noted big-game hunter, Dal DuWeese, of Cañon City, Col., who last year hunted with Mr. Turnbull in the Northwest, giving an account of a very successful trip he has had in the Yukon region, Alaska. Mr. DuWeese shot three moose, one of them having a 69in. spread, nine mountain sheep, a grizzly bear and a mountain lion.

A few weeks ago Mr. Jerome Bradley, of Dobbs Ferry, N. Y., with another gentleman, decided to try his luck on the Nepisiguit upon my recommendation. I have just received a letter from Mr. Bradley in which he says that the party had a most enjoyable and successful trip. They shot one moose, two caribou and two bears.

Guy Saunders and Archie Hale, of Woodstock, returned last Friday from the Tobique, bringing with them two moose and two caribou.

John Nelson, of Gibson, has returned from a very successful tour of the lakes in Queen's county. He brought home a fine moose head, also sixty-eight black ducks.

The returns are beginning to come in from the haunts of the goose and brant on the North Shore. James Rundle, Joseph Petrie and George Johnson, of Newcastle, remained about a week at Tabusintac Beach. They bagged over 100 sea fowl, chiefly brant.

A very sad and mysterious story comes from Newcastle concerning the disappearance of Mr. W. E. Anslow, editor of the Newcastle *Advocate* and one of the most widely known of Provincial journalists. He was on a partridge shooting expedition, in company with his son, at a point on the Sou-West Miramichi, twenty-four miles above Newcastle. The son left his father on a small island in the river while he went on some errand to a neighboring farmhouse. When he returned he could not find his father. This occurred on the 14th inst., since which time (though hundreds of men have been scouring the woods in the vicinity), no trace whatever has been discovered of the missing man. At first it was thought that Mr. Anslow was lost in the woods, latterly the prevailing opinion is that he was drowned while attempting to ford the river from the island to the mainland. Frank H. Risteen.

HARD LUCK.

New York, Oct. 20.—*Editor Forest and Stream:* "Report your luck for Forest and Stream" Nothing said as to any particular class of luck. Therefore I inclose a memorandum (made at the time) of a day's turkey hunting in the swamps of North Carolina. It may appeal to others who have not always been successful, viz :

Dies Iræ. (March 12, 1895.)

6:00 A. M.—Rain.
6:05 A. M.—Hunting boots badly burned last night; must wear the low ones. N. B.—The branches and slashes are knee-deep.
6:10 A. M.—Cold breakfast.
6:20 A. M.—Darky boy don't know the way to Wolfenden.
6:30 A. M.—Mud, rain, mud. Missed road three miles out.
8:00 A. M.—Seven miles out. Everything wet.
9:00 A. M.—Crossing branch, floating log gave way. Mud knee deep, water deeper.
10:00 A. M.—Nothing done. Right heel badly blistered.
10:15 A. M.—Drove to another lot of ridges. Smashed buggy; patched it up. Mud, rain. Roads awful.
12:00 M.—Gun only weighed 9¼lbs. at 8 A. M.; weighs about 19lbs. now. Rain. Swamps full. Only just able to hobble.
2:00 P. M.—Lunch; bread soaked, ham wet, pie uneatable, nothing to drink.
2:30 P. M.—Tobacco pouch soaked, matches wet.
3:00 P. M.—Nothing done. Drove to a third series of ridges. Rain heavy. Water in gun barrels. Safety catch for left lock seems out of order.
4:00 P. M.—Leather coat soaked through.
4:15 P. M —Tried a fourth series of ridges.
5:00 P. M.—Sighted an old gobbler across the branch and 150yds. away.
5:30 P. M.—Stalked him half an hour. Never got within 80yds. Lost him in the twilight. Heavy rain.
6:00 P. M —Back to buggy.
7:30 P. M.—Seven miles of mud and rain. Road well under water in the swamps Ran down another buggy in the dark.
8:10 P. M.—Too late for supper. Cold meat, bread and water.
8:20 P. M.—Mail late. Here at last. Anything for me? Yes, a cold Note (from further South). More rain. Much discouraged. A wretched day, and there are only a certain number of days in a lifetime. C. S. D.

THE VERMONT DEER.

Fisheries and Game Commissioner John W. Titcomb has taken pains to collect statistics of the deer killed in Vermont. Under date of Oct. 23, he writes us: "I see your last paper gives a very fair account of the deer question. The fact is that deer hunting in October without dogs is not what it is cracked up to be, and while our territory is not extensive, I do not think our deer will be exterminated. I was personally opposed to having an open season in any part of the State except Essex county.

"In order to inform myself as to the number of deer killed throughout the State, I issued postal cards to every postmaster in Vermont similar to the inclosed. I think that the reports which I have received cover about 90 per cent. of all deer killed from Oct. 1 to date. The following is a summary of the number of deer killed, by counties, from which you will see that there is a total of fifty-nine. Among this number may be included two or three does. One of the does had quite conspicuous horns, about the same as those on a yearling buck."

SUMMARY.

Addison county	1	Rutland county	15
Bennington county	5	Washington county	1
Caledonia county	5	Windham county	7
Chittenden county	1	Windsor county	15
Essex county	3		
Lamoille county	2	Total	59
Orleans county	3		

The Rutland *Herald* reviews the deer stocking and the 1897 hunting;

"Deer have never been exterminated in Essex county, but in other parts of the State they had grown more and more rare, and for many years not one was seen. The first move toward restocking the State was made in 1876, when the Legislature made a law giving absolute protection to deer for five years. That law has been renewed and in constant operation, until the 'open season' began with this month under a law made by the Legislature of 1896.

"It appears that the first deer brought to the State were a buck and two does released at Manchester in the spring of 1877 The work was done by Manchester men, and doubtless M. S. Colburn was prominent in it. All three animals, with one fawn, were reported living in the country a year later. Some Rutland men, the next spring, in 1878, bought and brought here twelve or thirteen deer for breeding purposes; but one died before and another after release, so that ten or eleven living animals were sent into the woods.

"This reintroduction of deer in the State was heartily welcomed by the public upon every hand, and the law protecting them was generally supported and obeyed, and the animals left unmolested. Finally the deer damaged crops a little here and there. The *Herald* has never been able to learn that the damage was anywhere of any sort of practical consequence, but it was enough to make a lot of talk about. Then people in Essex county wanted a right to hunt deer, and somehow or other—nobody seems to know how—the Legislature in 1896 made a law establishing an open season of a month in each year. The beginning of the open season came Oct. 1—and then the other side was heard.

"In the first place, it at once became apparent that the deer were generally regarded as public pets, in many cases particular animals had become special pets of individuals, and the shooting was resented. And the fear that the deer would be again exterminated made the feeling stronger ye..

From all sides comes a demand for the repeal of the law—the demand, voiced at the start by the *Herald*, is practically universal.

"Let us have the law repealed, by all means, but that cannot come at the moment, and let us now have the law obeyed. There is unquestionably a good deal of illegal killing going on. The *Herald* has a report that three dead does have been found in Mendon, shot by miscreants who did not dare to carry their carcasses out of the woods. No doubt does have been killed, and no doubt bucks are being killed illegally—by the use of salt and lights and the like.

"It would do a lot of good to have some of these lawbreakers hauled up and severely punished. But if legal killing alone is considered, the facts seem to show that the number of deer in the woods has been greatly overestimated. The animals reported killed since the first rush upon 'cossets' has been very small."

MARYLAND GAME INTERESTS.

STOCKTON, Md., Oct. 20.—*Editor Forest and Stream:* I have had little to say of game or shooting since the beach birds were here, but now that the *honk* of the wild goose is borne along with the northeast gale, I feel that perhaps others would like to know of the fine prospects for fall shooting promised to us here. Shell ducks are already on the shoals in good numbers, and every day adds to the increasing bunches; this is at least two weeks earlier than usual, and as yet we have had no weather that could even be called cool. They are not much of a duck, although many here eat them, especially the colored population, but they fly swiftly, decoy nicely, and make very good shooting. I have seen no brant yet, but a few geese are dropping in.

Never in all my life have I seen the quail in such numbers; they are everywhere—in every field, in the woods, and in the thickets. In a 60-acre field joining my farm there are no less than five coveys—not divided bunches, but separate coveys of fifteen birds or more each. I am sorry to say that but little attention is paid here to game laws, and already quail are being shot by boys and irresponsible parties. These parties go, as they say, for squirrels (by the way, there is about one squirrel here for every five shooters), but shoot everything they can that flies or runs; all are meat to them. Then again our quail season does not open until Nov. 15, but the rabbit law is out on Nov. 1. Every rabbit shooter seems privileged to shoot at all the quail he finds, while the rest of us must keep our dogs chained and stay at home or follow the example of the others and go rabbit shooting for quail.

Why all our shooting does not commence on Nov. 1 is a mystery not only to me, but to all our local sportsmen. It seems to me that often but very little judgment is used in framing game laws. Some say, be your own game warden. This is nonsense, for no farmer is foolish enough to inform on a neighbor and gain his enmity for all time just on account of two or three quail. What we want here is a good warden, one who will do his duty and take an interest in the work. Woodcock are shot as soon as they come in the spring; ducks at any and all times, even the young black ducks are caught before they can fly, while quail and rabbits are good game as soon as the corn is cut. A few convictions would break this up, for many of the gunners are law-abiding men. The damage is mostly done by the idle and careless, and by boys. Then the others say, "If these fellows are going to kill the birds, I might as well have my share." With all this, I know of but one, perhaps two, game hogs in the whole section. I saw in FOREST AND STREAM last August, a note from an old gunner who had shot with numbers of other men, who said that in all his time he never saw anyone ready to stop when the game was flying. If he were here, he would find plenty who stop when they get enough for a meal or two. Very few here go ducking more than a few hours in the morning; they get two or three pair of ducks, and are back to late breakfast and their work. If you ask them, they will simply tell you that they came home because they had all they wanted. It is the same with quail and beach birds; those who live here rarely kill more than half-dozen or so of quail, or a dozen or two of beach birds. An hour or two of good shooting is all we ask, but then "there are others." By the way, we have another crop of game here, our oysters; they are the finest and fattest for years.

O. D. FOULKS.

SHOOTING IN CENTRAL NEW YORK.

ITHACA, N. Y., Oct. 22.—Oct. 15, the opening day of the squirrel, hare and rabbit season, found a pretty numerous contingent of gunners afield, and had the weather conditions been more propitious, heavy scores would have been made in some directions. But summer heat—84° in the shade—prevailed, the woods were veritable tinder boxes, and foot pressure upon a leaf caused a crackling that could be heard at an amazing distance. With such conditions in its favor, the squirrel supply did not suffer extensively. The best score made upon that date, learned by the writer, consisted of ten squirrels to three guns. In the northern part of Tompkins and the southern part of Cayuga county, the squirrel supply has been reported as unusually large.

From all directions have come reports of a great deal of illegal squirrel shooting. This was the case prior to the opening day of '96, and it will prove the case next year, unless more vigorous protective measures are instituted, or a change in the date of opening occurs. This particular clause of the game law, so far as its practical enforcement applies to this sweep of central New York country, is a failure of a most pronounced type, to put the case mildly. It promotes disrespect for law, arouses widespread contempt for whatever of dignity may be supposed to belong to it—does this lack of enforcement.

It is not easy to dwell upon this particular phase of game law legislation without thinking that this date of Oct. 15 has been and must continue to be a mistake, as it is used upon the statute books. Either may we consider this date a mistake, or Aug. 16 the date of opening the woodcock and ruffed grouse season a mistake. The opening of the grouse season now finds the birds scarcely two-thirds grown and quite incapable of furnishing the sportsman a genuine measure of sport, and Oct. 15 finds the squirrel supply illegally shot to pieces. Would not a modification of these two extremes prove of greater benefit to the sportsmen in general? Making the opening date on woodcock, grouse, squirrels, hares and rabbits Sept. 15, for example, would confine the law-defier to a square issue. He would have no excuse for going afield in quest of one thing while really in search of another; or for going primarily for the purpose of shooting woodcock or grouse, and secondarily for the purpose of shooting squirrels or rabbits, as opportunity may present itself. This uniform date for opening the season on the various varieties of game, its advocates it would seem justly argue, may be accepted as removing the main incentive to transgress the law.

Certain it is that the New York State Association for the Protection of Fish and Game, at its approaching convention, should give this matter of game seasons and their dates a careful consideration.

The woodcock supply has been distinctly unsatisfactory so far. The long-continued dry weather has resulted in causing the longbills to forsake their usual haunts, and all attempts to relocate them have been in the main unavailing. This is to be regretted, for, barring the rise of his majesty, the ruffed grouse, what is more inspiring than an October woodcock topping the alders with the glint of the sunshine caressing his plumage?

Grouse in plenty abound in the various well-known covers. Taking Ithaca as a base of operations, good shooting may be had upon these birds at West Danby, Newfield, Spencer Summit and Van Ettenville. A strip of cover something like a mile from the latter hamlet, in the direction of Ithaca, is fairly classed as a famous grouse and rabbit shelter. These places may be reached via the Lehigh Valley R. R. Going north on the Auburn division of the same system, one may profitably stop off at Lake Ridge or at points further north. This lake country should afford some brisk grouse shooting. Over in the land about Mecklenburg, reached from this city by carriage or stage, is usually located a neat little array of grouse, as that enthusiastic and jubilant friend of the FOREST AND STREAM family, Dr. Sears, of Trumansburg, N. Y., will tell you. Over on the Southern Central division of the Lehigh are Harford Mills, Richford and Peruville, inviting grouse centers. Then on the Cortland-Elmira line of the Lehigh comes Brookton, Freeville, East Homer (the home of the famed one armed wing shot, and a wonderfully prolific grouse section, one year with another), Truxton and several other stopping-off places, reaching well along up to picturesque Cazenovia, all of these localities being kindly regarded by the lovers of grouse shooting.

No flight of ducks yet, but Cayuga Lake is said to harbor a fine lot of these waterfowl.

M. CHILL.

MAINE'S ABOUNDING GAME.

I SEND you clipping of the Bangor, Me., *Whig and Courier* of Oct. 15. No one will dispute for a moment that Maine is the greatest State in the Union for big game:

Friday was a great day for game, the record of arrivals here of deer and caribou being double that of any of the fall and equaling any day last year.

The morning train from Greenville brought seven deer and a caribou. The latter was killed in the region around Moosehead Lake by C. M. Comstock, of Montville, Conn., and was the first caribou to be shot in this section of the State this year. W. L Corey and A. N. Merry, of Portland, each had two deer, and W. S. Quimby and F. A. Jennison, of Boston, had two. There were twenty six deer and a caribou on the noon trains which arrived here from Vanceboro and Houlton. Game Commissioner Carleton came down from a business trip up along the line, and left on the afternoon train for home.

From the B. & A. came G. E Stedman, of Oldtown with two deer; J. R. Clifford, of Woodfords, two deer and a caribou; Rev. B C. Wentworth, of Skowhegan, two deer; W. H. Abbott, of Waterville, two; P. E. Rice, of Bangor, one; W. W. Case, of Springfield, Mass., two; W. E. Shedd, H. C. Shedd and I. E. Shedd, of Waltham, Mass., four; F. B. Thompson, of Brooklyn, one, and J. L. Wyckoff, of Holyoke, Mass., two; Messrs. E. W. Anthony and W. B. Stillman, of Boston, came from Katahdin Iron Works with two deer, and M W. Davis, of Skowhegan, had one. Messrs. Geo. W. Kimball and S L. Hutchins, of Union, N. H., had three deer that they had killed in the region around Patten. E. K. Koehler, of New York, had two deer, which were shipped from Masardis.

The evening train from Greenville, brought thirty-one deer and one caribou, and the Houlton train fourteen deer.

Another moose was killed by a B. & A. train on Thursday night between Masardis and St. Croix. This makes three moose which have been killed by the cars during the past ten days.

On Monday thirty-three deer and a bear came to Bangor on the noon train from the Bangor & Aristook Railroad. The forenoon trains brought a number of deer, and the whole shipment for the day numbered about forty deer. A seizure of a box of partridges was made on the noon train from Bar Harbor.

Dr. H. L. Jewell, of Bangor, came down from West Sebois with a buck. Henry Walker, George W. Purinton, J R. Stewart, Jr., Walter Simonds and Geo. D. Pike, of Boston, brought a deer, killed in the region around Ashland. A. C. Musselle, of New York, had two deer from Patten, and G. A Dearborn, of Portland, had one from the station. There was a bear which was killed at Patten, which was going to Swan & Newton, of Boston. H. H Bryant, of Waterville; J. W. Cole, of Boston; W. H. Bryant, of Boston; A. F. Wingate and P. J. Anderson, of Hallowell, each had two deer which were killed at Stacyville.

B Fuller, of Dorchester, had a deer from Stacyville; Wm. Whitney, of Milo, brought down one from Norcross, and D. Cram, of Newport, had a deer from that station.

There were shipped from Schoodic two deer for F. A. Merriman, of Boston; two for W. H. Partridge, of Wellesley, Mass., and two for H. L Haddock, of Roxbury, Mass. Fred Castle and G. L Smith, of New York, were here with three deer, which were killed at Katahdin Iron Works. C. E. Mayers, of Portland, had two deer, which were killed at Norcross. O. D. Severance, of Boston, and Victor Smith, of New York, each had a deer killed in the region around Greenville.

I received a letter yesterday from East Orland, Me., stating that some hunters had a hunt after a large bear at Griggs Pond. They put six dogs on him. He whipped them all, killed one of them and made his escape. Unfortunately the hunters never got a shot at him.

W. O. BLAISDELL.

BOSTON, Oct. 23.—Reports of deer slain in Maine are simply enormous. If these reports are not exaggerated, the number is much greater than a year ago. The greatest number seems to be coming over the Bangor & Aroostook Railway, though the Maine Central is bringing a great many from the Rangeley and Dead River regions. State of Maine hunters are more numerous than ever. Walter Sutton and Dr. Brackett, of Lewiston, have just returned from the vicinity of Machias port, and up the famous Fletcher Brook, where a one-armed game warden was shot by a deer-dogger several years ago, and for which the latter is serving a life sentence in State prison. The hunters got two deer there and two at Second Pond. M. T. Keefe, of Boston, is just out of the Moosehead woods with a big buck deer. Sixteen deer have been killed by local sportsmen in the vicinity of Stratton since the opening of the season. On the Byron farm, near Bragg Corner, two deer have been coming out all summer to feed. These have fallen to local hunters. H. W. Gheeley, of Wintrop, has taken his two deer near Greenville. R. W. Moore, of Boston, has taken two near Sherman. A. Rose, of Boston, has taken his two deer near the Katahdin Iron Works. The last bulletin, at the Food Fair, in the Mechanics Building, records 574 deer over the Bangor & Aroostook Railroad, with eight moose, nine caribou and nine bear up to Oct. 21

Mr. Bessee, of Boston, has just returned from a deer hunting trip to Bemis, Me. He was accompanied by his brother, who shot his deer. W. B. Shedd, of Boston, has recently returned from a very successful hunting trip in the vicinity of Mount Katahdin. He was accompanied by his son Irving. The young man shot a buck with "four snags" to his antlers. Together they got four deer, two bucks and two does, and a caribou. They are greatly charmed with Maine hunting.

Mr. C. H. Cook, of Boston, writes me in regard to the hunting trip of two young men, Fred Rydstrom and Harry E. Greenlaw, aged nineteen and twenty, young men in his store. They went in to Lake Moluncus and were gone about ten days. They had no guide and were very successful, each getting two deer and several partridges. They were very much pleased with the place. Each brought home a good-sized buck as a souvenir. This hunting trip is all the more remarkable when it is considered that two boys from a dry goods store, without previous experience, were able to get so much large game. Verily, every hunting region in the world must soon begin to pale before the wilds of Maine.

SPECIAL.

THE MENDOTA CLUB CASE.

MADISON, Wis., Oct. 20.—*Editor Forest and Stream:* Inclosed herewith I send you clipping from local paper relating to a test suit which the Mendota Club has commenced to determine their right, on lands controlled by them. These lands are located across Lake Mendota, one of the lakes on which Madison borders, and the club house and grounds are six miles distant, I shall be pleased to keep you further informed.

ROBT. M. LAMP.

The report reads:

Duck hunters who have been in the habit for some time past of running their boats into the bunches of grass and weeds which abound in the vicinity of the point where the Yahara River glides into Lake Mendota, on the north side of the lake, will await with interest and apprehension the outcome of a suit instituted by the Mendota Club against Otto Anderson, Jr., and John Niebuhr, for trespass on the grounds of the club. The case came up Saturday before Court Commissioner C. E. Buell on an application for an injunction to restrain them from future offenses in this line. On motion of the defendants, the hearing of the case was postponed until Monday, Oct. 25, and a temporary injunction was issued restraining them from trespassing in the precincts of which control is claimed by the club, pending the decision of the suit.

The Mendota Club owns and leases 700 or 800 acres adjoining the outlet of the Yahara, and lying on both sides of the stream. R. E. Replinger is president of the club, J. M. Thorp secretary, others of the twenty members being Hon. R. M. Bashford, A. B. Morris, E. M. Fuller, M. C. Clarke, Jerome D Clarke, F. K. Conover, A. A. Mayers, F. M. Wootton, A. G. Park. The club claims control not only of the solid ground included in the property it owns or leases, but also of the stream itself, for the distance its lands extend on either side, and of what is now a portion of the lake. It is stated that the old shore line, before the erection of a dam at the Robbins & Baltzell mill, was what is now a bar some distance from the border of the shore. After the erection of the dam the low ground inside this bar was flooded for some distance, but the plaintiffs, the club, claim that this fact in no way interferes with their rights, and that they control all the section inside the bar, and extending up the stream to within a short distance from the Brickson bridge, and east and west from the asylum grounds to the Six Mile Creek. Under decisions of the Wisconsin courts, sustained by the United States supreme court, they also claim control of the stream itself, so far as hunting and fishing are concerned, the question of navigability of the stream cutting no figure so far as these rights are concerned.

The club keeps watchmen employed to keep trespassers off their property, but say they have treated them with considerable leniency in the past. Members now say that they propose to enforce their rights.

The complaint in the case alleges that the defendants and other parties have at various times since 1893 gone upon their premises to shoot ducks, and that during the months of September and October, 1896 (when the lake was very low), went upon the dry land on their property for the same purpose; it is further alleged that on Sunday, Oct. 10, they declared to the president and other officers of the club that it was their purpose and intention to go upon the said premises whenever they saw fit, and to engage in shooting and hunting thereon, notwithstanding the warnings and protests of the plaintiff.

Virginia Game Grounds.

SURRY, Va., Oct. 18.—The open season for both deer and turkey is now at hand, and will remain open until '98 (see *Game Laws in Brief*). The past spring and summer were very dry, and in consequence the turkeys were not killed out as they are during the wet seasons, so large flocks of them are abundant this fall. Partridges are also very plentiful, and will be shot this season notwithstanding the law passed by our last Legislature. A test case of the law was recently made, and it was decided that persons owning or controlling lands had the right to shoot during the usual open season. An effort will also be made to shorten the open season, and repeal the present law.

Several deer have been killed already this season, and from all reports there seems to be a plenty of them for all hands to shoot at.

For the information of your readers (as I have read several letters of inquiry), I will give them an estimate of the cost of a trip to this section, and how to reach it. Board and sleeping accommodations can usually be had at some farmer's house for from $1.50 to $2 per day; and let me assure you that while you don't have all the comforts and luxuries of a city home, the farmers do all they can to make you enjoy yourself while with them. They don't want any game hogs or roughs, but gentlemen can always be accommodated. A guide will cost about $1 per day when needed; but as a general thing, the farmer will guide the sportsman and make no charge. The best route here, if you are in a hurry, is to take the New York, Philadelphia & Norfolk Railway, which connects at Old Point Comfort every Tuesday, Thursday and Saturday with the Virginia Navigation Co.'s steamer Pocahontas, at 9 o'clock A. M., arriving here about 11:30 A. M. On your way up the river you cross Hampton Roads, made famous by the fight of the Monitor and Merrimac, and pass Newport News, the terminus of the C. & O. Railway, and where the great dry dock and ship-building plant is located.

A. B. G.

A New Hampshire Deer.

BERLIN, N. H., Oct. 21.—In Groveton, N. H., Oct. 15, Mr. John Manning shot and killed a buck deer that weighed 310lbs., and dressed 250lbs. The antlers had a spread of 24in.

T. L. W.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

Rod and Gun Club of Massachusetts.

At a recent directors' meeting of the club sixteen applications for membership were presented. The treasurer reported a donation of $23.69 from the members of the Medford Shooting Club, for which the club offers its warmest thanks. The membership of the club (not including the above applications for membership) now numbers ninety-eight, and the treasurer reports the cash on hand $624.06, with no bills outstanding.

We quote from the secretary's report: "The last bulletin was dated March 22, but the secretary (to tell the truth) has been too busy to write bulletins. Every day has counted, however, and the future will be influenced much by the work of the past eight months.

"The whole State east of Worcester has been covered, largely on foot, and correspondents, places to stop at when in the field, and the most notorious poachers in the different towns have been located.

"The beginning of a system of 'underground communication' has been established, and we have already begun to make good use of it, so that we can quickly learn from reliable sources if any of the many poachers begin to get to work, in fact, three notorious ones have gone to work at their trades this summer for the first time in years.

"Several persons, but not many, found with guns in the woods during the summer have been sent home—and they all went.

"We had one complaint, in July, of quail shooting, which was well founded. It proved to be the work of a boy, and out of consideration for his father, a respected citizen of the town, the matter was dropped. The boy will probably do no more shooting out of season.

"In a postscript to the March bulletin, mention was made of illegal trout fishing; also of seining smelts. The club secured conviction in both cases. In the trout-fishing case the man was sent to jail, as he did not see fit to pay $20 fine and costs; and there is also another story connected with the case. He got off easy, and there was no more fishing in that locality until the law went off.

"In the smelt-seining business six persons were interested, and at the trial in Hingham were all convicted, being fined $50 each and costs. They were not satisfied, however, and appealed to the Superior Court in Plymouth, where they had what did (apparently) suit them, viz., $65 each, instead of the $50 at Hingham; and there wasn't a man on the smelt-spawning grounds all the rest of the season except our warden.

"We had hoped to stop the spearing of black bass on their spawning beds during the spring, but were not successful, though not from lack of endeavor. Better fortune next time.

"Several complaints of snaring came with the opening season, and at Burlington Charles A. and George H. Nichols were arrested on Sept. 22. The trial came off Sept. 28 at Woburn, and conviction and fine of $20 each followed. In almost every case there has been an interesting story, and this case was no exception.

"It was hard to have our warden kicking his heels impatiently in the bushes at Burlington waiting for his man to turn up, while the secretary was receiving notes and telephones every day from three other places; but he went as soon as he could to Dighton, and the trial of Everett Horton comes off next Tuesday for snaring. Your warden is now in another locality, and it is not the pleasantest thing in the world to lie in just one clump of bushes from daylight to dark, day after day; but if the snaring of our game can be stopped, it is worth much to us all, and far more than the money it costs to stop the business.

"Every week of the club's existence gives added testimony to the good use we could put another warden. And although the members have done nobly in furnishing money for the work in hand, yet again the secretary would ask the help of all to make our membership 200. With 200 members, the annual subscription of $10 will help give us the services of two wardens all the year, and extra help when needed. There are hundreds of sportsmen who would gladly help on a good work, and we are doing good work, and want to do more and better.

"The prospects for game this season seems more uncertain than usual. In some sections partridges have done well, particularly in portions of Essex, Middlesex and Worcester counties. In portions of the above and in the southern counties, they seem to be unusually scarce. Woodcock are hardly as plentiful as usual, though, of course, the flight birds will not be here for some time yet. Quail have, as a rule, done well, and there ought to be good shooting, particularly on the Cape, from all appearances."

HENRY J. THAYER, Sec'y.

Game Laws and Game Protection.

Editor Forest and Stream:

It is a well known fact that the enactment of the laws for the protection of game and fish do not necessarily accomplish such a purpose. On the contrary, they cause great annoyance to the class of our citizens, who are most desirous that the game should be protected. This is always the case when an otherwise good law is not enforced. For example, a law is enacted that partridges, ducks, squirrels etc., shall only be shot between certain dates. The sportsman who wishes to shoot for pleasure in a day's outing respects the law; he does not shoot game for sale, and is interested in conserving the supply, to the end that game shall be plenty. On the other hand, the "pot hunter" and "sooner," who will not hesitate to kill the last bird in a flock or covey, or the last squirrel in the woods, are at it early and late in the close season; and if the law forbidding such shooting is not enforced, it operates to give this scalawag a monopoly of the game, to the great injustice of people who wish to obey the law.

A game law not enforced is much worse than no law at all. It is of no effect for the very purpose for which it was enacted and it is demoralizing to the citizens of any community, who, seeing laws of the State openly violated with impunity, lose in a certain degree respect for all law.

This is now the situation generally in the State of New York. The laws for the protection of public game are good enough, and if they were enforced the game would be amply protected and would increase; but the trouble is that in many localities these laws are constantly violated by certain persons, who have no respect for the laws and are not apprehended or punished for such violation. It is useless to ask citizens to take notice of these matters locally, for they will not spend their time and money and incur the ill-will of the class of persons who violate these laws, in attempting to punish them. The game laws can only be enforced by State officers, who are independent of local influences, particularly local political influences. Unless we can have a largely increased force of game protectors, to thoroughly cover the State, the public game is doomed, and the time is very near when there will be no game in the State, except in private parks.

Let us have sufficient State game protectors to effectively guard every portion of the State, or change the game laws so that they shall only apply to public and private parks. Give decent citizens a fair show, instead of giving the "pot-hunter" and the "sooner" a monopoly of the game.

J. B. A.

My First Prairie Chicken.

LATHAM, Kans., Oct. 6.—It was a perfect frosty morning in October. Overhead the gloriously beautiful blue sky of "Sunny Kansas," underfoot the uncut grass of the prairie, on one side a good shot, in front, King, a setter dog. Suddenly the sharp words "the dog is drawing," and then out from the dead grass came five magnificent full-plumaged birds. A moment more and two of them—one to my companion and one to myself—fell on the sward. Whatever success I attain to in any way I do not expect ever to see a happier, richer moment than when I held in my hand that first chicken, the first one to my gun.

I have been over a good bit of the southern part of this State the past summer. Quail were very plentiful everywhere, especially in Sumner county. I was pitching to the stack one day near here when (you can judge my surprise), on raising a forkfull from a load just brought by the dump-rake, I saw a full-grown, able-bodied quail dart away from among the hay as only a quail can. I suppose she had got tangled in the hay in the windrow. The last quail I shot last season had been wounded previously just forward of the thigh; I should judge by striking against a barbed-wire fence. The wound was stuffed full of small gravel stones. I thought it a good case of bird surgery.

Last spring an acquaintance who had been on a trip down among the cattle ranges along the southern line of the State, spoke of seeing there some birds wholly new to him. They were fairly large, and part of them had long, forked tails. I could not think what they were, but on questioning him closer as to color, we concluded they were the long lost wild pigeon. I will investigate further if I can. PINE TREE.

Golden Plover near Chicago.

WEST PULLMAN, Chicago, Ill.—*Editor Forest and Stream:* I must tell the readers of your paper of a day with golden plover within half a mile of the city limits. While sitting at my window trying to think of something to do I espied my friend Charlie coming with gun in hand and looking like business. I promptly joined him and we had barely passed the city limits when we saw a flock heading our way. I fired at the leader, missed, but scored one bird with left barrel. We marked them down, and one of us circled around them; they flushed, Charlie scoring one with first and two with the second barrel.

We got several stragglers and had just made up our mind to return home when a large flock was seen coming our way. They alighted some distance from us. Vick, another friend, who was with us but had no gun, circled around them and flushed, driving them straight toward us. I waited until they were well within range and scored three with first barrel and two with second, Charlie bringing one to bag at long range, a splendid shot. Total for the day: Charlie eleven plover and one rabbit, myself ten; a fair bag in this section, and enough for anyone. We shall try them again in the near future as they seem to be plenty.

Ducks are quite numerous on the Calumet marsh, but the army of shooters gives them little rest. The almost worthless mudhen is killed by the hundreds, especially on Sundays.

GUY H. STODDARD.

Rhode Island Gales and Ducks.

PROVIDENCE, R. I., Oct. 24.—*Editor Forest and Stream:* The late northerly and easterly gales which have prevailed during the past week or more have proved quite a blessing to the sportsmen along our southern shores, as it drove large flocks of ducks and other game inland and several good bags were secured in the district of Narragansett. Among the fortunate gunners was John Gardiner who in a few hours knocked over fourteen widgeons, besides other varieties of game.

The fishermen at Narragansett Pier are just now being favored with a phenomenally large run of bass and sea trout, and hauls of from 2,000 to 3,000lbs. of these fish are said to have recently been made.

Visiting hunters from this vicinity to the woods of Maine have been very numerous this fall. Those who have returned report satisfactory sport.

W. H. M.

Bears in Vermont.

MILTON, Vt.—Several of our Vermont deer hunters have met unexpectedly with bruin on their hunts and have killed some large specimens. The region known as Camel's Hump abounds with bears, which are fast reducing the farmers in that vicinity to a state of despair by their depredations on the flocks, one farmer having lost over fifty sheep. A party of eight returned here last week from the western part of Maine bringing eight deer, only one having horns. They reported deer very plentiful.

KENEWAH.

The Mongolian Pheasant in Texas.

Editor Forest and Stream:

We have just organized the Grayson County Pheasantry and Game Protective Association at this place with forty charter members, and we intend to see that the game laws are not violated. We have also ordered sixty-eight Mongolian pheasants, which, with what we have, will give us seventy-five to start from. We expect by March, 1899 to be able to stock all the northern part of the county and a few in the territory.

LEVI LINGO.

North Carolina Game.

THURMAN, N. C.—I have just returned from hunting. It resulted in very good luck. I found all the squirrels you are looking for, and in my journey I saw all the quail a man wants, but the law is not off of them until Nov. 15. There is an abundance of fish in Neuse River, trout and others; people are catching all they want. I often see lots of turkeys in traveling through the woods; I think there are more than ever before: in fact the season has been in favor for them.

J. S. H.

DEATH OF DAVID FOLSOM.

DAVID FOLSOM, president of the H. & D. Folsom Arms Co., died at his home in this city on Wednesday, of last week, Oct. 21. Mr. Folsom had been out of health for some time, but his last illness was of short duration, and the news of his death came as a great surprise and shock to his host of friends.

Mr. Folsom was born in Auburn, N. H., fifty-six years ago, his father being John Folsom of that place. He was educated at Dartmouth College, and in 1861, immediately on leaving college, went to St. Louis to join his brother, Henry Folsom, who had established a business for the manufacture of arms a year previously. The firm was known as the H. & D. Folsom Arms Company. At different periods it had branches in Chicago, Memphis, New Orleans and New York. At present it has two establishments, one in this city and the other in New Orleans. It has been chiefly engaged in the manufacture of rifles for sporting purposes. Henry Folsom died about six years ago, and his son, Henry T. Folsom, took his place in the firm. David Folsom came to this city to conduct the affairs of the company more than twenty years ago. He was a man of many friendships, and held a high place in the esteem of the business community. At a special meeting of the New York Gun and Sporting Goods Trade, called Oct. 21, 1897, to do honor to the memory, of Mr. Folsom, the following resolution was passed:

Inasmuch as it has been the Divine will to remove from us our esteemed associate, DAVID FOLSOM, with whom our constant intercourse for fully a generation, had ripened acquaintance into a deep and lasting friendship;

Therefore, We desire to give expression to our sorrow, and to make record of the worthy name he has left among us.

His honorable career was recognized and deeply valued—courteous, straightforward and high-minded. His sterling character and upright example are a goodly heritage.

Resolved, That this expression of our sorrow be conveyed to the bereaved family, and that it be duly published.

Ducks on Long Island.

THE ducks have made their appearance in goodly numbers in the Great South Bay and other Long Island waters, and shooting is now to be had at many places convenient to New York city. We shall be glad to give inquirers specific information about desirable points to visit.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

MEN I HAVE FISHED WITH.

LIX.—Prof. James W. Milner.

Fly-Fishing for Shad.

It's away back, almost a quarter of a century. I find that I am beginning to date things by fractions of centuries, a rather inexact but ponderous way of writing, which merely shows that I would write ponderously, if I could; but it was in 1873, or a year later, that Prof. Baird wanted me to help in the shad hatching, and I was to report to Mr. James W. Milner at Castleton, on the Hudson River, about ten miles below Albany. At the time Mr. Milner's fame had not reached me, and all the way down from Rochester, N. Y., I was wondering what manner of man he might be. Not that it mattered much, but a man's thought would naturally meander in that direction. When I reached Albany I had him figured up. He was sure to be a tall, slim young student who had studied fishculture in some college, and would of course make himself as disagreeable as possible to a practical man who was so unfortunate as to be under his orders. I would keep "a stiff upper lip," however that is done, and obey orders like a soldier, and if he did not know his business it was none of my affair.

At Castleton I was told that Mr. Milner had gone to interview some shad netters, but would be back soon. "There comes his boat now," said a man, and I saw the party land and go to the hotel. I recognized Milner at once, just the man I had fancied—tall, dark, and suffering from a complication of youth and importance. I introduced myself and presented my letter. He read it and said: "Oh, I'm not Milner; this is he." As the real Milner arose and grasped my hand I beheld a short, pleasant faced man of about thirty-three years, who was not in the least the man of my imagination. I was disappointed. Conscious of my own fishcultural ability, based on experience, I was prepared to serve under this man and obey his orders, only this and nothing more. I had disliked in advance without reason; but we do many things in that way. We were friends before we had known each other ten minutes, and nothing ever occured to break that friendship.

That year all the shad hatching was done at "Camp Green," on the west bank of the Hudson, some dozen miles below Albany, and in connection with the State work, which was under the immediate charge of Mr. Monroe A. Green. I went out with shad fry in cans or stayed in camp to help take eggs and hatch, as Milner ordered and the new work grew, for it was the first shad work of the U. S. F. C., and all was new to Milner and others, except to me and the State men; for I had been engaged with the latter the year before. Seth Green, the State superintendent, came down and had a dispute with his brother about hauling on certain tides and Milner referred to me. Seth had great prestige, based mainly on newspaper fame, but his brother had more practical knowledge, and I knew that he was right in saying that we could not make four hauls on a tide, and that we could not keep male shad penned up in the nets for four hours. Our first hauls were mostly of male shad, while the last haul of the tide often brought us many ripe females with many thousands of eggs, but not a "buck" to impregnate them with. A few nights with the netters was enough to show that we were right and Seth went off in a huff.

The next year we operated awhile on the Hudson and then, as the shad season opened on the Connecticut River, we shifted our quarters to South Hadley Falls, opposite Holyoke, Mass., and obtained more eggs. We were kept on the jump running young shad to Western rivers or at work with the hatching boxes, for we only knew the floating boxes then. There were Dr. T. H. Bean, Frank N. Clark, Orin Chase, and others, who have attained more or less fame, and we were kept on the go. It was early in June,

and my assistant, Charles F. Bell, whom I sketched in FOREST AND STREAM of March 6, and I had just returned from a long trip to Des Moines, Ia., and Milner proposed to send us out again that night. In those days we took from ten to fifteen cans, according to the length of the trip, in baggage cars, and one or both the men were busy all the time aerating the water, according to the temperature and other conditions, and when a rapid change of roads was to be made we took three cans, one between us and one in the outside hand and rushed them, often 100yds., to the next baggage car. As the cans held ten gallons of water, which, with the can, weighed about 80lbs., this was vigorous exercise. Therefore, when I said: "Mr. Milner, I don't want to go out to-night and I wish you would hire a man to go on a short trip with Bell, and I'll lay over until he comes back," he looked surprised.

"Please don't think that I'm kicking against being taken from the hatching work to jackass shad all over the continent, because I'm not. The jackassing of shad is part of the work of the fishculturist, and with as good an assistant as Bell, who is willing to do most of the work, and I am willing to accommodate him, we get along finely, but this time——"

"See here," said he, "I must interrupt you to object to the verb you use to describe the transportation of shad fry. Our efforts to make shad grow in waters where none grew before entitle us to be ranked with those benefactors of the human race who make two blades of grass grow where but one grew before, and it seems that you are belittling your profession when you speak of the distribution of shad fry to distant waters as 'jackassing' them."

"Professor," said I, "from your point of view you are right, but if you will go out with me once and help grab three cans and run 500ft. with them at Albany, some more feet at Niagara Falls, a dozen rods at Detroit, and several more rods, perches and poles at the different stations where changes are made, you will begin to feel that you are really 'jackassing' shad, especially if you have lost a coat in one car, a hat in another, not to mention luncheons which went away on trains before you could get back to rescue them."

"That may be so," replied Mr. Milner, "yet I would not like to have your name for transporting shad become popular with the men." I had partly forgotten this incident until I visited the New York Aquarium a few weeks ago, and Dr. Bean recalled it, for the men got it.

I owe much to Prof. Milner for starting me right when I tried to get a knowledge of the first principles of ichthyology. When I bought a farm to raise trout on, I was an angler of more or less knowledge, and knew some fishes by sight just as the ordinary angler does, *i. e.*, I could distinguish a shad from a herring if adult, or a trout from a salmon, but could not tell another person how to do it; and I was staggered when Dr. Theodore Gill, the ichthyologist of the Smithsonian Institute, and of the U. S. Fish Commission, which were then under one head, said to me: "Mr. Mather, have you ever noticed any variation in the teeth on the vomer of trout?"

Just what a vomer might be I had not the slightest knowledge, for I met the name then for the first time, and I could, with the utmost confidence, assure Dr. Gill that I had never noticed any such variation as he had named. He then went on talking about the number of rays in the anal fins of the Pacific and Atlantic salmons, and I was in a mental fog as thick as ever gathered on the Banks of Newfoundland. A dictionary told me that a "vomer" was Latin for a plowshare, and that in anatomy there is a bone in the roof of the mouth which separates the nostrils, and is so called because it resembles that agricultural implement. I put my tongue in the roof of my mouth and felt the bone, opened the mouth of a trout and saw the teeth on that bone, not only on the vomer, but on the "crest," which crosses it in front. And thus ended my first lesson in the anatomy of fishes. I had learned enough to prove that I was densely ignorant. I would study. I would buy books, and I bought Frank Forester's "Fish and Fishing" and started in to learn all about the different black basses. There were half a dozen species described, and I fished and compared my fish with the descriptions until I was sure that I had not the mental capacity to understand and to identify them.

After Milner and I had reached the confidential stage of friendliness, I related all this, and he lifted a load from a befogged mind and restored confidence in its workings when he said: "Frank Forester was an Englishman of great literary ability, who was an up-to-date man in all that related to dogs and shooting. He may have known much of English fishes, but his American book on fishing was a mere literary rehash of English fishing books. He was a sportsman, pure and simple; but, after the fashion of his day, he thought it necessary to inject some fish lore in his book, and he took De Kay's 'Fishes of New York,' which was printed by the State in 1842, and followed it. De Kay's work was a grand one in its day, when little attention was paid to the study of fishes and reptiles by people who were not enthusiastic naturalists, and in your case the blind has been led by the blind. Get Gill's monograph on the black basses, where he reduces all the species to two, and you will have no trouble in identifying any black bass which comes to your hook." I di so, and all was clear; there was no more trying to decide which one of six was caught; it was only one of two plainly marked and easily-defined species. Then it was plain that the lack of capacity was not in the scholar, but wholly in the teacher. Gill's question showed me how ignorant I was, and Milner put me in the way of learning.

Once Milner said to me: "You are beginning at the wrong end to study. Drop all books on fishes, and buy Owen's 'Anatomy of Vertebrates,' Huxley's 'Anatomy of Vertebrated Animals,' and get a smattering of the principles on which all vertebrates are constructed and how the different classes have their skeletons modified to suit their environment."

"Are they all built on one general plan?"

"Yes, the skeleton of a frog differs little from yours, but there are so-called higher animals, mammals, like the whale, porpoise and seal, which differ much more; they have the same single bone in the upper arm, the two in the lower arm, the wrist and finger bones modified into fins, or in the sea turtle into flippers."

Thus was my study of fishes begun when I was forty years old, too old to ever more than catch up with the rear guard; but it was worth the study to know what the skirmishers were firing at, and a new world with new pleasures was opened.

Once a young reporter came to our shad hatching camp. Mr. Milner was absent and he interviewed me. A week passed and I had forgotten the incident when Mr. Milner produced a newspaper and said: "That is evidently your work, but while I appreciate the fun in it I don't think it reflects credit on the Fish Commission, and I wish you would not do it again."

I had only to read one paragraph to see that the editor had not vised the young man's notes. It said: "Shad fry are to be sent from the Connecticut to Brazil to stock the waters there. Gen. Cantharides, who made the Spanish fly from Brazil, came on the Peruvian bark Calisaya to take a shipment of fry on the return voyage. The bark had a deck-load of oil in bulk which shifted in a heavy sea and bent the hawse-pipes, and the vessel was disabled. Com. Belay, of the Swiss man-of-war Alpenstock, is to sail for Rio de Janeiro to-morrow, and has kindly offered to take the fish in order to help on the good work. The commodore's interest in the transportation of these young fish is so great that he has ordered fifty tons of ballast taken out lest the vessel should be top heavy. A Holyoke firm will also send the first consignment of artesian wells to Brazil by the Alpenstock, and no doubt further orders will follow."

"Now, I ask you in all seriousness if you think it proper to stuff a reporter like that?"

"My dear Mr. Milner," said I, "there was no stuffing about it. He took it as he would have taken in a strawberry short-cake. His innocence invited it and put temptation in my way. I'm not going through this world to keep up a struggle against temptation when it is so much easier to yield to it. That young man was a tempter, as much so as the original serpent was, and he led me astray."

Once I returned to Holyoke after a long trip to Des Moines, which I started to tell about and then ran off the track. "What do you want to stop over here for?" asked Mr. Milner.

"I'll answer by asking you a question. You've seen 'em taking shad with a fly every night from boats and even from the bridge, haven't you?"

"Yes, and you want to stop over to try and take a shad on a fly?"

"Not hard to guess, but that's the case. I've watched when I've been at work taking eggs, and although stories of fly-fishing for shad floated around our camp on the Hudson, they were not believed. Here we see it done every evening, and I want to try it." He wanted to do the same, and we sent out Bell in my place, with a green assistant.

There were shad in the Connecticut in those days, and they ascended the river in great numbers as far as the great dam of the Holyoke Water Power Co. Massachusetts and Connecticut quarreled about the taking of all the fish by the fishermen near the mouth of the river; the hatching was stopped, and the once famed Connecticut River shad have almost reached the point of scarcity accorded to angels' visits and hens' teeth. But that's another story.

Thomas Chalmers lived at South Hadley Falls, and was not only an expert shad angler but devised and made flies for the express purpose of alluring the succulent shad from the clear water of the river to the clear coal fire beneath the grill, where it was afterward made acquainted with creamery butter and the juice of the lemon. I had talked with Chalmers, at odd times, and had intimated that one shad taken by hand would be worth hundreds from the net. I could stop over and so despatched a boy with a note to Chalmers; and, to insure a prompt reply, showed him a half dollar which might become a portion of his assets if he returned with an answer within an hour. He won the coin, and Mr. Chalmers would have boat, rods, reels, flies, landing-net and all complete to entice the shad from its fluvial haunts.

From our place of observation, on a low point something like 200yds. below the bridge, we could see the shad angling going on while the fishermen were hauling the seine for us to get spawning fish. While they were hauling we were busy in getting the hatching boxes in place, washing spawning pans, etc., and there was not much to be seen. But when we were "on the road" we could watch the fishing while the shad fry were put up in cans for us and we had nothing to do until the wagons delivered the cans at the railroad, after 10 P. M. At such times we would watch the men and boys who fished from the bridge. As I remember it the bridge was about 30ft. high. Long hand-lines would be let down the river, and when a fish was hooked it would be landed on the *debris* at the foot of a pier and left to flop until dead, and then it was cautiously hauled up, for the dead fish was not apt to tear loose. It was interesting, but was not just the thing for us who were not suffering for shad on the table, but did hope to fight one on rod and reel. Just what the men in the boats were doing we could not see, but I have seen as high as fifty shad taken on the artificial fly in one evening from the bridge between Holyoke and South Hadley Falls. This statement is deliberately made because there has been so much skepticism about taking shad with the fly. Why it can't be done at other places is a question.

As we settled ourselves in the boat Milner said: "Mr. Chalmers, what is your theory about shad taking the fly here in such numbers, when they not only refuse it but decline all lures in other places? We know that they sometimes take a bait in other rivers, but it seems to be accidental. Many have been taken with worm bait from the long bridge across the Potomac at Washington, but not enough to induce men to angle for them as they do here."

"Well," said Chalmers, "I don't know. There are men who think that the shad try to surmount the dam until they get discouraged and then drop back below the rapids, where they gather in such numbers that in the act of breathing they take in the fly and are hooked."

"That theory is plausible," I remarked, "for the shad, like the salmon and other anadromous fishes, takes no food in fresh water, and we usually find their stomachs empty. Mr. Milner will remember that I called him from his tent very early one morning to examine the stomach of a shad which the men were cleaning for breakfast, and which was stuffed full. He put the contents of that stomach under the microscope in a hundred or more small lots and found nothing but rotten wood, and his theory was that this gravid fish, for it was a female, had an abnormal appetite, and had filled up on what was most convenient."

"Tell me how you come to fish for shad with a fly," said Mr. Milner.

"I opened a lot of stomachs of shad," said Chalmers, "and found in them a kind of miller which is only seen here about sundown, and I made a fly after it, and in 1871 I took over 1,000 shad with it. Of course, the marketing of so many shad by a man who had no nets attracted attention and they soon found me out, and that's the whole story."

"Chalmers," said I, "this fly-fishing for shad is unique. See the duffers on the bridge using hand lines 200ft. long with a fly on the end of it. It beats all my goin' a-fishin', and knocks out all my notions of fly-fishing. I've been used to casting a fly and watching it drop on the water somewhere in the vicinity of a trout's residence; but to lower a hand-line from a bridge and let a fly drift down among the fish—the seine seems to offer as much sport."

"That's all right," he replied, "but wait until you get a shad on a rod, maybe you'll find the difference."

There was no use in casting the fly, so we let it drift down and waited. Chalmers got a strike, and the fish went away gently as compared to the rush of a trout, and it was as gently checked, but the fight seemed tame as he reeled in and landed a 4lb. fish. Chalmers said, "They fight harder than you think they do." Then I had a strike, and with trouting instinct I struck and tore the hook loose. As I reeled in to see if the fly was still there, Chalmers said: "Fred tore the hook out of that shad's mouth. If you get a strike, Professor, just—" and Milner's rod bent and his reel sang as the morning stars may have done, although I don't remember hearing them. He checked the fish easily, reeled it in carefully and landed it. "There," said he, "that's the way to do it."

I was moved to ask: "Did either of you gentlemen ever use a fly for trout?"

"Never," said Milner, "I've used all kinds of bait for fresh-water fishes, but this is the first time that I ever fished with a fly or with a reel."

"I've taken trout with a fly," said Chalmers, who was a Scotchman, "but I had to learn not to strike when I found out that the shad, with its tender mouth, could be taken with the fly."

Soon I felt something like a nibble, such as bait-fishers get from minnows and other small fish; if, thought I, a fish will nibble and taste twice of a compound of hook, feathers and wool, all right. Then came a rush which made the reel sing, and I followed precedent and checked the fish slowly until it was safe to reel in, and by careful attention to its rushes and by yielding to them, I boated a 6lb. shad. We took several shad that night, and it was an experience that is not likely to be repeated by anglers of to-day. We were too busy in hatching and rushing out shad fry to repeat the fishing. A few shad were taken by men in the daytime, but about sundown seemed to be the favorite time.

Prof. Milner was born in Kingston, Ont., in January, 1841, and his parents moved to Chicago five years later. At the breaking out of the war he was in the university at Evanston and enlisted as a private in Battery A, 1st Illinois Light Artillery, and was never absent from his company during his three years of service. While a boy his intense study brought on nervous spasms, and these returned when he again began to study and work in the Chicago Post Office, and his father bought a farm near Waukegan, Ill., on his account. His work in natural history attracted the attention of Prof. Baird, who called him to Washington to help in the work of fishculture. He mapped the currents of Lake Michigan and studied the food and habits of the whitefish. Exposure to wet and cold in his enthusiasm sapped his vitality, and in 1879 he sought Colorado; but too late. In October he was taken back to Waukegan, where he died on Jan. 6, 1880, leaving a wife and two children.

Last March I wrote sketches of Mr. Almy and Pete, down on the Tangipahoa River, in Louisiana, where I was collecting the fishes of that region for Prof. Baird. There were two ten-gallon kegs and a box of them, and Mr. Milner was anxious to see the fish; so we went down into the basement of the Smithsonian Institution to give them a preliminary sorting, picking out those which we could readily classify and separating them. The South has many members of the sunfish tribe and the half-grown ones are often hard to place. He held a fish in his left hand and was talking about it, when one of the workmen said: "Mr. Milner, there's a snake for you in that box."

"Is there? What kind of a snake is it?" and he pushed the cover from the box and took hold of the snake, all the time looking at the fish and saying: "I think we'll have to lay this one aside for closer examination."

My heart was in my throat, for I saw what was in his other hand and I dared not speak. The snake coiled about his warm bare arm and seemed to like it. Finally, it seemed a very long time, he laid the fish down, and turned to look at his other prize. His eyes opened wide, he moved his hand slowly into the box, and as slowly let go the snake, removed his hand and replaced the cover. "Phew! Copperhead!" he said, "but what's the matter, you are pale as a ghost?"

"Yes, and I was pale long before you saw what you had in your hand. I held my breath until I was faint. I knew that if I alarmed you there was danger. I've often heard that no one ever recovered from the bite of a copperhead, or cotton mouth, as they call them down South.'

"Yes they have, but they are the most dangerous of our snakes because they give no warning, and it doesn't do to fool with them; but I did not alarm the fellow, and it liked my warm arm. A sudden move would have invited attack."

"Well," said I, "it's more than doubtful if I could have been so cool under the same circumstances."

"Oh, yes, you would, that's nothing."

"Just like him," said a man of his Battery, to whom I told the story some years ago, "he was as nervy a little man as you ever saw. Before Atlanta he stood at his post until there were hardly enough men in his battery to work a single gun. After the disastrous charge of the forlorn hope at Vicksburg, he was one of the volunteers to undertake the rescue of the wounded, a work of great fatigue and peril. He was offered a commission several times but declined it, saying he could serve just as well as a private. Oh, I tell you, it would take more than one snake to scare James W. Milner." And I believe he was right.

FRED MATHER.

The Albino Bullhead.

KEESEVILLE, N. Y., Oct. 21.—I noticed in your valuable paper of Oct. 23 about an albino bullhead being caught and on exhibition at Port Henry, N. Y. Allow me to correct the mistake. The albino bullhead was caught in Lake Champlain, near the mouth of the Au Sable River, about three miles from Keeseville. Mr. D. Burton and myself were fishing out of a boat with hook and line. Burton caught the albino fish, and I have it now on exhibition in the clothing store window of J. N. Atwood, Keeseville. There are a great many old fishermen here, and they all say they never saw anything of the kind before.

The fish is very pretty, which is saying a great deal for a bullhead; it is a golden white in color all over, and is as healthy and lively as a fish can be. EDW. MCALOON.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

AMID MICHIGAN PINES.

It was hot; it was dusty; it was noisy, and the city reeked of turmoil. The air staggered with its burden of smoke. Being two of the fortunate ones who can go away under such circumstances, the Cynic and I found ourselves ensconced one evening in the Pullman of a St. Paul train bound for Pembina Junction, Mich., where we were to change cars for Manistique. Morning found us at the junction, and by afternoon we were at Manistique, where we were met by Abe Hughes, one of the salt of the earth. From here one hour's trip over the Manistique & Northwestern R. R. brought us to the lumber pull-up on the Indian River, and then a four-mile drive through the woods ended at Hughes's Ranch.

Nestling snugly down in the heart of the woods, with the little clearing behind it and the sparkling lake at the foot of the slope in front, Abe Hughes's cosy little cabin smiles a cheering welcome to the weary city man whose good fourtune may have guided him to this most lovely of places.

We arrived there dusty and tired one beautirul evening in July, when the setting sun was tinging the surrounding treetops with a brilliant crimson. The lake scintillated in the soft reflected glow, each tiny wavelet reaching up to be kissed by it, and sinking back a sparkling gem. The dogs barked a noisy welcome as the tired horses stretched their necks down and sniffed the cool air, and from the picturesque log cabin at the top of the rise came the joyous sound of supper preparations. The whole presented a picture that will be ever dear to us, so peaceful, so full of beauty and promise of grand sport to come; and in this promise we were not deceived.

A few days after our arrival our chuck came in, tents, boats and grub, all in good shape, and a day later found us preparing to leave the hospitable environs of Hughes's ranch and strike into the forests and Land of the Lakes to the north. Abe's splendid team was requisitioned. With heavily loaded wagon and with Mrs. Abe's hearty "good-by" ringing out cheerfully, we started. A long drive it is, through the woods, and slow work, too, as here and there a tree is down, and the long unused "road" is rough and crooked, but the early afternoon found us eating our luncheon on the shores of Island Lake, a beautiful sheet of water in which are two good-sized islands. Here the woods are mostly red pine, with a sprinkling of hemlock and birch, and the ground is covered with the dry needles. We parted with Abe, much to our regret, as a better woodsman than he never raised a rifle or swung an axe. Deer signs were plenty, and the cry of the ever elusive loon mocked at us from the waters.

We made a quick portage with the canoe, crossing two other lakes to inspect the proposed camping ground. The day was warm, but a fresh breeze was blowing across the water, and as we sped silently along, the waves splashing against the bow, we felt as if we had reached freedom at last. No tedious clang of trolley car was here; no newsboy's piercing yell; no turmoil of the city's life—only the vast, silent life of the forest and the great, mysterious sighing of the breeze among the trees. Here and there a bass, fierce in the search for his prey, jumped clear of the water, and the splash sounded loud in the stillness. Across the lake two deer were nibbling at the grass and moss along the water's edge, every now and then casting suspicious glances in our direction.

We found the predetermined camping spot, and agreed that it was exactly the thing. Then commenced the labor of porting our chuck over, and by nightfall we were sitting by the fire eating supper, and enjoying to the full all the sweet sense of rest and quiet about us.

In this camp and its immediate vicinity, we spent four as delightful weeks as ever it has been my good fortune to know. All through our stay the bass were biting splendidly, and we never wanted for a good meal. In Island Lake the fishing was not so good. Here the pickerel monopolize things, and, while not as good eating as the bass, still they are very palatable. In this immediate region are five good lakes, all splendid fishing grounds, mostly clear of weeds, and all surrounded by magnificent woods.

Each day, as the sun was sending his rays slantingly across the water, the wary deer would "come in" and wade along the shores where their feeding grounds were. Just as we were breaking camp the ducks commenced to fly, and it was with deep regret that we realized we were leaving at the best time of the year.

We returned to Abe's—what a sweet sound the name has to those who know all that it stands for—and settled down for a few days more of happiness before we should return. But each day was so fruitful of enjoyment, that it promised even more for the morrow. Mrs. Abe's cooking was so enticing, the game was so plentiful and the fishing so excellent, that to leave seemed absolute sacrilege.

Hughes's cabin and clearing are situated in the center of a circle of lakes, to all of which are good trails and on all of which are boats. He and his wife have that happy faculty of being able to accommodate all that come in such a glorious way that once a guest of theirs one is sure to be again. Tell Abe what you want and he will show you where and how to get it. Near to his home are two good trout streams. Partridges nestle and brood on the shores of the neighboring lakes, and the deer tracks mingle with those of the mink and marten.

Big Bass Lake is a famous duck field, and here, too, the bass run well up to the 5 and 8lb mark, and the broad expanse of water furnishes a splendid sailing course for those nautically inclined.

The time slipped by so delightfully that a day's span seemed but an hour, and, ere we realized it, the moment had come when we must bid farewell to Abe and the good friends who had been so kind to us. Back we went to the "pull-up" on the river; from there to Manistique, and thence to Pembina, where connection is made with the C., M. & St. P. south-bound train; and that night the car wheels sang a requiem over the memory of the seven delightful weeks we had spent among the pines and the game. To the readers of Forest and Stream, to the true sportsmen and to the lover of nature, I can only say: "Go thou and do likewise."

F. B. Dickinson.

A Large Wall-Eyed Pike.

Bellevue, Ia., Oct. 18.—A wall-eyed pike weighing 6lbs. and 14oz. was captured yesterday afternoon at the south Government dam at this city, Charles Hyler being the lucky sportsman. The weight is vouched for by reliable witnesses, and the fish is the largest of its kind taken with hook and line here for several years.

Clarke Helme Loomis.

Poison in a Fish Hatchery.

Rutland, Vt., Oct. 19.—*Editor Forest and Stream:* The *Herald* of to-day reports the poisoning of fish in the hatchery of Mr. Silas L. Griffith, at Mt. Tabor, Vt.: "Thomas McMinn, who has charge of the hatchery, discovered early Saturday morning that during the night some one had poured 20 or 30lbs. of Paris green into the bulkhead of the stream which supplies the fish tanks with water. The stream was immediately cut off and an effort was made to save the fish in the tanks. There is a viaduct 100 rods long leading from a small mountain stream to the breeding tanks. Above the bulkhead the viaduct is uncovered and here the Paris green was dumped into the water. An overflow at the bulkhead carries water back into the stream, and a quantity of the poison had been washed into the stream, where four families obtained drinking water. These families were promptly notified of the danger.

"There are sixteen breeding tanks arranged in line between the viaduct and a small pond. The first of these tanks, of which seven were filled with trout, contained sixty-two fine specimens selected for breeding purposes. They ranged in weight from 2lbs. to 5lbs. All were dead but twelve when Mr. McMinn got there Saturday morning. These twelve were transferred to the pond. The second tank contained 500 ½lb. trout. The third tank contained 500 ¾lb. trout. In the fourth tank were 150 trout weighing from ¾lb. to 1lb. There were 1,500 smaller trout in the remaining tanks.

"The Paris green had been floating through these tanks into the pond for several hours, and the hope of saving the 2,700 trout was very slight. They were placed in the pond, however, and during Saturday and yesterday dead fish could be seen on the bottom of the pond. The poisoner could not reach the tanks containing about 10,000 fry and fingerlings, as they are supplied with water from another source. Mr. McMinn said Saturday that he had planned to begin this week to place 200,000 eggs in the hatchery. The latter had been enlarged and refitted, and as the breeding tanks contained a fine lot of fish, he was looking forward to a large crop of fry.

"It is understood that a large reward will be offered for the arrest and conviction of the parties who poisoned the trout, but Mount Tabor and Danby folks do not need any incentive to turn themselves into detectives. There is great excitement and indignation over the outrage. Mr. Griffith recently gave 5,000 fry to John W. Titcomb, president of the Fish and Game Commission, to be placed in the streams of the State, and he was planning to put trout into Otter Creek. This crime of poisoning trout, therefore, is an offense of more than local importance."

If the fish were poisoned as alleged, it was a cowardly and dastardly act, notwithstanding that something of the kind is to be reasonably expected from the condition of public sentiment in the community, it being there understood and believed that the fish were both captured and held by Mr. Griffith in violation of the laws of this State.

The inquiry I wish to make, however, in this connection is as to the effect of Paris green upon the fish when placed in running water, as this appears to have been from the article referred to. If you can give me any information upon the subject, or direct my attention to some source from which it can be obtained, it will be thankfully received.

Mc.

[There is no doubt that Paris green will kill fish if put into the water in sufficient amount.]

Mash-Kinoje and Winin-iche.

Editor Forest and Stream:

On page 330 Forest and Stream, Oct. 23, Mr. A. N. Cheney insists that he is going to continue to spell "mascalonge" that way. Now, I read Mr. Cheney's contributions religiously every week in the belief that he would "rather be right than President," and I would like to have him stop and listen just a minute. In the Ojibwa language "mash" means "strong," and "kinôje" means "pike." "Mash-kinôje" is the name that my Ojibwa guides have always applied to the *Esox nobilior* in my presence. They may call it all sorts of other names when my back is turned.

Concerning *Salmo salar* var. Sebago, Mr. Chambers has pretty well established the name "ouananiche," but the fish lives in a Montagnais Indian country and in Montagnais language "winin" means 'fat" and "iche" is a diminutive termination. "Winin-iche" signifies anything lean, and the salmon in question is certainly lank, if not lean, in comparison with other members of the *Salmonidæ*. I find it difficult to accept the nomenclature "ouananiche" of uncertain origin, when "winin-iche" is straight Indian.

Robert T. Morris.

New York.

Cayuga Lake Fishing.

Ithaca, N. Y., Oct. 22.—Some very satisfactory bass fishing has lately been enjoyed along the east shore of Cayuga Lake in the vicinity of the Esty Lookout. An October day, soft and sunshiny, passed at this point with its delightfully pleasant off-shore picture of rugged declivities and magnificent reaches of color in which the mellow tan of the hickories serve but to heighten the radiant crimson of the oaks, even if one were to return with an empty creel, is worthy of being cherished as one of the fine experiences of life. There is the slop of the waves against the boat, the occasional roar and rumpus of a passing train, twisting, snake-like, along at the water's edge, the harsh challenge of a crow afar off, the gracious canopy of blue above—never so deeply, richly blue as in October—the wavering haze of a typical Indian summer day tenanting the landscape, and—yes, there is the blithesome bass tugging at one's line in the buoyant waters.

No large bass have been taken, but they have furnished plenty of pleasure in the taking. Although the brethren of the angle, including that esteemed member, Mr. A. N. Cheney, may not sanction the use of common earthworms as bass bait, this has for days on these waters proved the most effective lure.

Reports have reached me from Union Springs, Kidder's Ferry and points further north, reporting some decidedly pleasurable bass, pickerel and pike angling. Good bass fishing may be expected to continue until cold weather virtually freezes the angler off from the water.

During the season of '96, fishermen at this end of the lake banked heavily upon the enormous supply of carp that was to develop in the waters hereabouts the present year. But, unexpectedly, the carp failed to put in an appearance. There is but small question of their presence in the head waters of the lake, but so far they have refused to take the most appetizing bait, as a rule. Many reasons have been advanced in explanation of the season which furnishes no carp to the carp-hungry, but the general sentiment seems to be that it is simply an off year with these mud-wallowers, and that next year the prince and the plebeian may alike daily dine on carp.

M. Chill.

Judge Guild's Rug.

Judge W. B. Guild, of Newark, who owns a handsome summer home at Avon, N. J., and is one of the best known amateur fishermen on the coast, recently caught a valuable Oriental rug valued at $100 while fishing near Belmar. The rug had evidently been lost overboard from a steamer. The Judge has had it cleaned. He has refused $50 for the catch.

FIELD TRIALS OF THE BRUNSWICK FUR CLUB.

The Brunswick Fur Club held its ninth annual field trials at Barre, Mass., Oct. 19-22. This club was the first to hold trials for foxhounds, and from a small beginning the meets have grown in importance each year, till they have become one of the most interesting events of the hunting season to all lovers of the foxhound. The entries at this year's trials were larger than those of last season, and the quality of the hounds was very high; but the hunting conditions were most unfavorable, and in consequence the sport, compared with that of last year, was dull and uninteresting. The ground throughout the week was very dry. Scent lay badly at all times, and it was almost impossible for the hounds to do any work a couple of hours after sunrise.

The majority of the judges, and many of the hunters were mounted, and the attempt to ride to hounds must be considered a success. The horsemen had a great advantage over the footmen, and saw more of the running than it was possible for unmounted men to see. It is probable that there will be a large field on horseback at next year's meet.

The judges were: Stephen Decatur, S. B. Mills, A. B. McGregor, W. A. Bragdon, E. L. Brooks, J. B. Miller, H. V. Conant and Bradford S. Turpin. They did a lot of hard work, and their awards were well received.

Among those present at the trials were: Dr. A. C. Heffenger, Stephen Decatur, W. A. Bragdon, Chas. P. Wendell, L. Pope, Jr., Portsmouth, N. H.; A. B. McGregor, Middleton, Mass.; John M. Goss, Newmarket, N. H.; O. F. Joslin, Oxford, Mass.; E. O. Brown, Newton, Mass.; H. A. Follett, Miss Follett, J. B. Miller, Diamond Hill, R. I.; A. B. F. Kinney, Worcester, Mass.; E. L. Brooks, Vernon, Vt.; B. P. Williamson, Green Harbor, Mass.; Hollis White, Braintree, Mass.; L. H. Parsons, Philadelphia, Pa.; Geo. E. Carr, O. P. Thompson, Holliston, Mass.; S. B. Mills, Needham, Mass.; R. D. Perry, E. J. Hill, Phillipston, Mass.; P. J. Robinson, A. Chevalier, Chicopee Falls, Mass.; T. S. Winston, Apple Grove, Va.; R. S. Stebbins, Monson, Mass.; C. L. Wellington, Waltham, Mass.; C. E. Taylor, Woburn, Mass.; H. V. Conant, Dedham, Mass.; J. H. Gafney, Petersham, Mass.; Bradford S. Turpin, Roxbury, Mass.

Dan, the winner of highest honors, is a Walker hound, well built, with the best of legs and feet. He showed endurance and good hunting qualities, with an excellent nose, good voice, and fair speed.

Jonah II. is a racy-built, short-coated hound of the Virginia type, with great speed and a good nose.

Dot II. is an unusually good specimen of the native type of hound.

Shine is a tall, light-built July, while Vigilant is the best bench dog of the lot, and probably the only one that would get a place in a hot class.

Monday.

President Heffenger presided at a business meeting of the club on Monday evening. Lemuel Pope, Jr., Portsmouth, N. H.; Lewis H. Parsons, Philadelphia, Pa.; H. V. Conant, Dedham, Mass., were elected to membership.

The Norton Q. Pope Memorial cup was presented to the club. It is a large and handsome loving cup of silver with three stag-horn handles, and it is safe to say that no hunting club possesses a more beautiful trophy. The following resolutions were passed:

Whereas, An all-wise Providence has seen fit to remove from our midst our esteemed fellow member, Norton Q. Pope, be it

Resolved, That in his death the Brunswick Fur Club and the hunting field in general, loses one of its truest friends and most earnest supporters. During his membership he held many offices from the Presidency down, and in his administration of them ever proved himself loyal to the best interests of the club.

Resolved, That these resolutions be spread upon the records of the club and a copy transmitted to his widow.

The entries for the Derby were then made, and the meeting adjourned.

DERBY ENTRIES.

Vigilant—Dr. A. C. Heffenger's b., t. and w. dog (Big Strive—Grayback), 15mos. old, Walker strain.

Gamester—Dr. A. C. Heffenger's b., t. and w. dog (Brook—Primrose), 14mos. old, Kentucky-Maryland cross.

Satan—B. P. Williamson's b., w. and t. dog (Shine—Ruth), 17mos. old, July-Goodman cross.

Climber—B. P. Williamson's w. and lem. dog (Shine—Ruth), 17mos. old, July-Goodman cross.

Pelter—R. D. Perry's b., w. and t. dog (Dan—Flirt), 16mos. old, native strain.

Patch—R. D. Perry's b., w. and t. dog (Dan—Flirt), 16mos. old, native strain.

Song—L. H. Parson's b., w. and t. bitch (Songster—Annie Dance), 15mos. old, English-Wild Goose cross.

STUDENT—C. P. Wendell's b., w. and t. dog (Dock—Linda), 12mos. old, Walker strain.

Tuesday—The Derby.

The morning was clear and calm, but the ground was very dry, no rain having fallen for a couple of weeks or more, and scent lay badly. It was 6 o'clock when the party left headquarters, and a half hour later when the hounds were cast off at the well known starting point just back of the Rowell farmhouse, they went off well packed and were quickly lost to sight in the neighboring pines. Drawing these blank, they streamed out into a large pasture, where a cold track was found and slowly picked along. But it was too old to be carried, and the hounds were soon scattered. Satan and Climber worked back to the pines. Mr. Perry's hounds swung off to the right and the others trailed slowly to the west. Now and then one or another gave tongue, but the scent grew rapidly worse and all the hard work amounted to nothing. Several times the hounds packed up and drew new ground, but all in vain. They could not make a start, and no one was much surprised when some of them took to rabbiting. The master of hounds put an abrupt end to this, and again the dull hunt went on. Finally at 2 o'clock the horns were sounded and the hunt for the day was over.

It would be unjust to blame the hounds for this lack of sport. They, with one or two exceptions, were busy all the time, packed and barked well, and showed themselvss to be most promising youngsters. As no start had been made, it was deemed best to run the Derby hounds with the All-Age hounds on Wednesday, and continue to run the two classes together till the judges had decided upon the winners in the Derby.

The entries for the All-Age stake closed in the evening with twenty-six nominations.

ALL-AGE ENTRIES.

TRAVELER—J. U. Goss's b., w. and t. dog (Redstone—Nell), 3yrs. 6mos old, Kentucky strain.

TRAMP—J. U. Goss's b., w. and t. dog (Redstone—Nell), 3yrs. 6mos. old, Kentucky strain.

DAN—A. B. F. Kinney's b., w. and t. dog (Boston—Nell), 4yrs. 1 month old, Walker strain.

BUCK—A. B. F. Kinney's b., w. and t. dog (Logan—Aggie), 2yrs. 4mos. old, Pooler strain.

SLIDE BOY—R. D. Perry's tan dog (Yellow Boy—Fannie), 2yrs. 6mos old, Ohio strain.

CLINKER—R. D. Perry's b. and t. dog (Fox III.—Fannie), 7yrs. old, Avent strain

ORATOR—R. D. Perry's b., w. and t. dog, 4yrs. old, native strain.

DASH—C. P. Wendell's b , w. and t. dog (Dock—Snow Drop), 2yrs. 2mos old, Walker-English cross.

SIM—O. F. Joslin's b., w. and t. dog (Jake—Cricket), 4yrs. old, Walker strain.

BEN HUR—O. F. Joslin's b., w. and t. dog (Rock—Juliette), 2yrs. 3mos. old, Kentucky-July cross.

SHARPER—L. H. Parson's b., w. and t. dog (Clay—Sunmaid), 3yrs. 5mos. old, Goodman-July cross.

SHINE—B. P. Williamson's w. and lem. dog (Grant—Shiney), 3yrs. 10mos. old, July strain.

RUTH—B. P. Williamson's b., w. and t. bitch (Ben—Maud), 5yrs. 2mos. old, Goodman strain.

WALKER'S LOUIS—B. P. Williamson's b , w. and t. dog (Brewer—Mollie), 2yrs. 7mos. old, Walker strain.

ROB—W. K. Stebbin's tan dog, 4yrs. old, July strain.

JEFF—W. K. Stebbin's tan dog, 4yrs. old, July strain.

JONAH II.—T. S. Winston's t. and w. dog (Jonah—Lilly), 5yrs. old, Virginia strain.

TILDEN—T. S. Winston's b. and t. dog (Winkle—Lucy), 2yrs. old, Virginia strain.

NIP—T. S. Winston's b. and w. dog, 4yrs. old, Kentucky strain.

NED—P. J. Robinson's blue mottled dog, 6yrs. old, native strain.

DOT II.—C. L. Wellington's lem. and w. bitch (Hunter—Dot), 3yrs. 4mos. old, native strain.

VIGILANT—Dr. A. C. Heffenger's b., t. and w. dog (Big Strive—Grayback), 1yr. 3mos. old, Walker strain.

GAMESTER—Dr. A. C. Heffenger's b., t. and w. dog (Brook—Primrose), 1yr. 2mos. old, Kentucky-Maryland cross.

HUNTER—C. E. Taylor's w. and lem. dog, 4yrs. old, native strain.

SPORT—J. H. Gafney's w., b. and t. dog, 3yrs. old, native strain.

GOSS—J. H. Gafney's b. and t. dog, 4yrs. old, native strain.

Wednesday.

The hunting conditions were no better than they were on Tuesday. No dew had fallen, and a strong east wind made the day raw and disagreeable, and rendered it difficult to keep in with the hounds.

The programme for the day included an early start, and day was just breaking when the hunters left the hotel. The combined packs of All-Age and Derby entries numbered thirty hounds, and were cast off at 5:30 west of the reservoir, on the Petersham road. A fox must have ju t passed by, for the pack began to trail at once, and within ten minutes the game was afoot. Scent lay fairly well, and the fox was hustled along at a great clip for a few minutes. Clinker led the pack till the fox was lost in a dusty road about an hour after the jump. Tilden, Song, Vigilant, Jeff, Jonah II., Buck and Nip were close up during the race, and many other hounds were in, but well strung out. After the fox was lost most of the pack swung back toward Sherman Hill, and were soon broken up into various divisions, working a number of different trails. There was no lack of foxes. Buck soon had one running by himself and carried him through the thick cover in a workmanlike way. On the north side of the hill Sim, Vigilant, Traveler, Ben Hur, Dot II. and one or two others were pressing a fox toward the east. He led straight away and an hour later crossed the Burnshirt River not far from Williamsville. Here Sharper, Sim, Traveler, Climber and Ben Hur were close at his heels, but when he returned from making the next turn, Sim was in the lead, with Ben Hur and Traveler not far behind, and the rest nowhere. Sim was running in beautiful style and carried the fox away to the north, where he was either lost or driven to earth.

By 10 o'clock the driving for the day was over. Many of the hounds still kept at work, and a number of them trailed into the Thousand Acre Swamp, but though they seemed to have a good track, they failed to made a start.

The cold northeast wind was constantly gaining in power and the cloudy sky threatened rain, but, to the disappointment of the hunters, not a drop fell.

While the scent lay somewhat better than it did on Tuesday, yet the day, from a hunter's point of view, was a bad one for sport. With plenty of foxes and as fine a pack as ever ran in New England, it was a great disappointment to have such wretched hunting conditions.

Though the work for the day was unexciting and at times very dull, yet the judges were able to cut off the pack a number of times while the hounds were driving and gain many valuable points regarding the relative merits of the entries. At a meeting held in the afternoon it was decided to order out all the hounds on Thursday morning.

Thursday.

The day was even more unsuited for hunting than those which had preceded it. The east wind blew harder and the ground, if possible, was drier than before. Still, those who followed the chase had some sport to pay them for their trouble. Scent lay well in the swamps, and there were one or two bursts of sharp driving which gave the first real music of the week.

It was 5:55 when the pack was cast off at the Rowell farm. All the hounds were present except Dash, Hunter, Satan and Climber, who had not yet returned from yesterday's run. At the send-off the pack streamed through the pines and into the open fields, where a trail was found. It was carried with difficulty, and when the hounds swung up to the road all were ready to seek a more promising track, with the exception of Dot II. She led it off alone to the neighboring swamp, and when her tongue showed that the scent was better, most of the other hounds harked to her. Scent lay well in the lowlands, and it was not long before reynard was up. He made several turns in the swamp to the best music of the trials, and then finding the pace too hot, he headed for the open fields, where he easily got a lead over the hounds. After running for more than an hour, he succeeded in throwing off the pack in a clearing on the side of Sherman Hill. Song, Sharper, Vigilant and Dot, with others, tried to recover the line, but made a failure of it. Then, a quarter of an hour later, Goss came upon the track, and with scarcely a break in his tonguing drove the fox far to the westward and out of hearing. At noon he was still driving. This was as pretty a piece of work as ever was seen at a hound trial.

This was the principal run of the morning, but it was not the only one. Where foxes are so plenty, a pack becomes broken up sooner or later. Two or three other foxes were started. At 7:00, Shine, Rob and another hound were driving a fox in a swamp to the westward of Sherman Hill. Scent lay well there, and the game was driven so hard that he soon sought refuge under ground. While this was going on Clinker started a fox, and with Sim and Buck, drove him over the hill to the reservoir. There in the open fields scent refused to lie, and the fox was lost. Meantime Jonah II. was in full cry, and it was not long before Clinker harked to him, and later Sim joined in the race. These three fine hounds hustled the fox away to the southward. When the trio reached the old dam at the mill-pond, Jonah II. was well in the lead, with Sim second, and Clinker a couple of minutes in the rear. There was a slight check there, but Jonah, casting prettily, hit it off, and maintained his lead till the fox threw off the pack in the dusty road. He ran with great speed, and carried the trail beautifully over the open pastures.

The running to-day was the best of the week, and the judges had a number of chances to score the work of the hounds. At their meeting in the afternoon a number of the entries were spotted out, and the following hounds were ordered out for the last day's hunt: Traveler, Buck, Clinker, Dash, Sim, Ben Hur, Sharper, Shine, Rob, Jonah II., Nip, Dot II., Vigilant, Hunter and Goss.

The judges also made the awards in the Derby. These young hounds had now been run three days, and a careful consideration of the work which they had done resulted in giving first prize to Song, second to Vigilant and third to Satan.

SUMMARY.

BARRE, Mass., Oct. 19-21.—The Derby, open to all foxhounds whelped on or after Jan. 1, 1896; entry fee $2; eight starters:

First—L. H. Parson's Song (Songster—Annie Dance).

Second—Dr. A. C. Heffenger's Vigilant (Big Strive—Grayback).

Third—B. P. Williamson's Satan (Shine—Ruth).

SPECIAL PRIZES.

The R. D. Perry cup and the club medal to Song.

In the evening, Mr. Perry described in a very interesting way his trip to Greenland the past summer with Lieut. Peary.

Friday.

The day was clear and cool, with an easterly wind. The ground was still dry, and no dew had fallen during the night. Scent lay badly, and what little sport there was was all over by 7:30 o'clock. It was the intention of the M. F. H. to cast off the pack for their final run at the Rowell farm, but before that point was reached the hounds were tugging eagerly at their leads, as they winded a trail near the road. It was decided to cast them off at that place, and at 5:30 they were loosed. It was still dark, and as they swept over the open fields it was difficult to distinguish one from another. At first the hounds trailed in two packs, but the scent was bad, and there were soon a number of stragglers. As usual, the hounds swung toward Sherman Hill, and as they neared their goal, a good track was found and the fox was quickly up. Running to the north, he was pressed by Clinker, Vigilant and Dot, with others close behind them. The chase then swept around Sherman Hill, and when next viewed Jonah was in the lead, running in beautiful form. Other hounds harked to the runners, and as the pack rushed along another fox was jumped and driven to the North by Clinker. The chase on Sherman Hill was meantime growing more interesting as the pack grew larger. The judges were able to score the hounds a number of times, as most of the work was in the open, and the circles made by the little vixen which led the chase were short ones. Jonah was seen in the lead and cast well and usually successfully, when there was a check. Dot II. also caught a turn or two. But unfortunately the fox was headed. The hounds overran, and before the line was recovered the fox was far away, with a comfortable lead over the pack. They did not again get on running terms with him. While this chase was on Shine ran on to a fox and went off with him to the westward, showing speed in his work and using his beautiful voice to the best advantage. This finished the work of the day. Though the hounds continued to hunt they could not make a start, and the rest of the morning was extremely dull.

The judges held a meeting in the afternoon and made the awards, as given below in the

SUMMARY.

BARRE, Mass., Oct. 20-22.—All-Age stake, open to all foxhounds; entry fee $3; twenty-six starters:

Hunting—1st, R. D. Perry's Clinker; 2d, O. F. Joslin's Sim; 3d, C. L. Wellington's Dot II.

Trailing—1st, C. L. Wellington's Dot II.; 2d, O. F. Joslin's Sim; 3d, J. H. Gafney's Goss.

Speed and Driving—1st, T. S. Winston's Jonah II.; 2d, R. D. Perry's Clinker; 3d, B. P. Williamson's Shine.

Endurance—1st, O. F. Joslin's Sim; 2d, Dr. A. C. Heffenger's Vigilante; 3d, T. S. Winston's Jonah II.

Tonguing—1st, B. P. Williamson's Shine; 2d, R. D. Perry's Clinker; 3d, O. F. Joslin's Sim.

SPECIAL PRIZES.

The *American Field* cup and highest general average medal, O. F. Joslin's Sim. The Norton Q. Pope memorial cup and O. F. Joslin's speed and driving medal, T. S. Winston's Jonah II.

Dr. A. C. Heffenger's hunting medal, R. D. Perry's Clinker.

Noel E. Money's trailing medal, C. L. Wellington's Dot II.

W. A. Bragdon's endurance medal, O. F. Joslin's Sim.

At the close of the trials Jonah II. was purchased by Mr. Perry, and Dash by Mr. Joslin. On Saturday morning the last of the hunters left for home. P. A. B.

Champion Patti Croxteth T. (10,128), whelped Dec. 28, 1886, died on Oct. 12, the cause of death being milk fever and difficult parturition. She was owned by Mr. A. B. Truman, of San Francisco, and was bred by Mr. C. M. Munhall. As a bench show competitor, she had an extraordinary list of winnings to her credit on the Pacific Coast, and she was also known in field trial competition.

WORMS IN PUPPIES.

PHILADELPHIA.—*Editor Forest and Stream:* I have been an amateur breeder of dogs in a sort of irregular way, and I have suffered great losses from death caused by worms in puppies. Early death is the fate of so many well-bred puppies that, after noting the immunity of the cur or native, from worms and disease in general, I have come to the conclusion that the modern well-bred dog has physically degenerated, and that even his mentality is of a lower order than that of his healthier though less pampered brother. As a matter of course, the breeders of such dogs as have pedigrees which include high-priced sires and dams, deny that their stock is more predisposed to disease than is any other. They strenuously maintain that, their stock being so costly, any losses are noted, while the losses of the cur or native from death, though equally as great, cause no comment. This seems to have a convincing tone to it, but is it true? Those who make that assertion know no more about the mortality of curs and well bred natives than do many others who have never thoroughly investigated the subject. As a matter of fact, curs and well-bred native dogs as a rule are healthy, vigorous of constitution, strong of body and reasonably free from disease. When they have disease, their constitution being vigorous, they have it in a milder form or throw it off entirely. The degenerated well-bred dogs succumb quickly to any severe disease, and if they recover, their recovery is but partial. Wrecked constitutions and feeble bodies often result from disease.

And yet there is no comparison between the care bestowed on the well-bred dog and that which is bestowed on the native; none, because it is all care for the well-bred and none for the native.

If we can prove beyond a reasonable doubt, from physical degeneration, caused by in-breeding to excess, or from excessive pampering and the unnatural conditions to which the dog is subjected in kennel life, or from both together, that the dog is physically degenerated, we here find a cause for the frequency of worms in puppies, for it is a well-known fact to us of the medical profession that worms attack only weaklings. In strong, vigorous puppies of good digestion worms cannot live. The worms themselves are digested.

Out of the thousands of puppies which are whelped every year, the mortality is remarkably great among the well-bred. Out of the thousands of degenerates, a few will survive, the conditions being favorable, and some moreover, though degenerate, will be sufficiently strong to live. If the owner of the fortunate ones has given them a dose or two of worm medicine he is quite satisfied that he did the right thing and saved the puppies' lives.

What I desire to show is, that the frequent occurrence of worms in well-bred puppies and the deaths which are apparently caused by them, come from general degeneration. The worms are only an incidental feature of the general trouble. The low vitality of the puppies gives the necessary conditions for the worms to thrive and destroy. They no doubt hasten the puppies' death once they infest them, but they never would have such opportunity were the puppies naturally vigorous.

When we find all well-bred setters and pointers so subject to attacks from worms and death during puppyhood, and when we find native setters and pointers, or ones not in-bred, so free from them, we must look elsewhere than in "blue blood" for the cause. Of course, even among the strongest families there will be found some weaklings, as among the weakest families there will be found some strong individuals.

The true remedy for worms in puppies is to breed healthy puppies, and then there will be no need of doses of santonine, areca nut, etc. In addition to worms might be mentioned the predisposition to distemper, chorea, epilepsy, and organic diseases manifested by puppies of the well-bred kind, but I wish to discourse of the commonest and worst evil from which they suffer, the attacks of worms. M. D.

Monongahela Valley Association Trials.

PITTSBURG, Pa.—The headquarters during the field trials will be at the Pogue House, Jefferson, Greene county, Pa., where the drawing will take place Monday night, Nov. 1, at 9 o'clock. Jefferson can be reached by railroad to Waynesburg or by boat to Rice's Landing. In going by rail present special-rate card to ticket agent at Union Station, which will entitle you to a round trip rate of $3. Card can be obtained of secretary. The trains leave on week days at 7:30 A. M. and 2:55 P. M., city time. There are no Sunday trains. Consult time tables, as a change of time may occur.

In going by boat purchase round trip ticket to Rice's Landing. The rate is $1.50 round trip—meals extra. There are two boats daily, one leaving at 9 A. M. and one at 3 P. M. during the week, and at 8 and 8:30 A. M. on Sundays. The boats leave the Monongahela wharf, between Wood and Smithfield streets.

Those who have dogs to run should go by rail if they leave on Monday, as the Monday boats will not reach Rice's Landing that day in time for the drawing.

Conveyances will be arranged for to meet both boats and trains to convey guests to Jefferson. Excellent accommodations can be secured at the Pogue and Parkinson houses at $1 per day.

Arrangements will be made by the secretary for wagons to carry dogs during the trials. Those wishing saddle horses or conveyances during the trials can have them secured by writing to the secretary, care the Pogue House, as he will leave for headquarters on Thursday, 28th.

The Pennsylvania Company has kindly instructed their baggage agents to convey all dogs to and from Waynesburg during the trials free of charge.

If special rate cards are desired they can be secured from Mr. W. S. Bell, 431 Wood street, after Oct 28.

S. B. CUMMINGS, Sec'y, 113 Wood street.

An Ecclesiastical Strain.

THE Dean of Rochester told this story at the English Church Congress: "A country clergyman went away for his holiday, and a benevolent neighbor, who had a curate, took his Sunday duties. After he had preached his first sermon, he remarked to the clerk in the vestry: 'I am sorry that I gave you such a short discourse, but the reason is that a dog got into my study and tore out several leaves.' The clerk gazed wistfully upon the speaker, and said: 'Oh, sir, do you think you could spare our parson a pup?'"

The annual meeting of the New England Beagle Club will be held at Oxford, Mass., in Bacon's Hotel, Nov. 1, at 8 o'clock, P. M.

EASTERN FIELD TRIALS CLUB.

GREENFIELD HILL, Conn., Oct. 24.—*Editor Forest and Stream:* The Eastern field trials will be run at Newton, N. C., beginning with the Members' Stake, Saturday, Nov. 13, followed by the Derby, All-Age and Subscription Stake. Every effort will be made for the comfort of all in attendance. It is especially desired that all owners be present to see the running of their dogs. Rooms at the hotel and saddle horses can be had at reasonable rates. By writing me, I will engage for rooms and horses and teams, etc.

Passengers purchasing tickets for Newton over Southern System R. R., by paying full fare and taking certificate from agent, will be entitled to return free.

ALL-AGE STAKE.

Of the entries there are eleven pointers and twenty-one setters:

ELGIN DASH—F. W. Dunham's pointer dog (Kent Elgin—Mack's Juno).

QUEEN OF MONOCACY—J. R. McSherry's pointer bitch (Kent's Boy—Sue Naso).

KENT OF GRACE—R. A. Johnson's pointer dog (King of Kent—Queen Grace).

VICTOR HUGO II.—Tyro Kennels' pointer dog (Mainstay—Jessica Dortch).

YOUNG RIP RAP—Charles B. Pineo's pointer dog (Rip Rap—Pearl's Dot).

RIPPLE—H. S. Smith's pointer bitch (Rip Rap—Pearl's Dot).

VON GULL—J. J. Odom's pointer dog (Kent Elgin—Fanny V. Croxteth).

OLD MARK—J. S. Fish's pointer dog (Lap of Pearl—Gracefull II.).

PRINCE GEORGE—Andrews & Davenport's pointer dog (Duke of Hessen—Lady Bessie).

CINCINNATUS PRIDE—Edward A. Burdett's setter dog (Cincinnatus—Albert's Nellie).

ANNIE OF ABBOTSFORD—Edward A. Burdett's setter bitch (Gladstone's Boy—Bohemian Girl).

PIN MONEY—Charlottesville Kennels' setter bitch (Count Gladstone II.—Daisy Croft).

SHADOW—Charlottesville Kennels' setter bitch (Count Gladstone II.—Daisy Croft).

RUSH MARK—W. B. Meares's setter dog (Gath's Mark—Countess Rush).

MOLLIE B.—Dr. J. Spencer Brown's setter bitch (Roderigo—Lillian B.).

BRIGHTON TOBE—Dr. J. Spencer Brown's setter dog (C. Locksley—Liddesdale II.).

MONTCLAIR—Dr. J. Spencer Brown's setter dog (Rap—Lady Grace).

SAM T.—Del Monte Kennels' setter dog (Luke Roy—Bettie B.).

RODFIELD'S BOY—J. T. Mayfield's (Agt.) setter dog Rodfield—Sue Gladstone).

TONY'S GALE—Eldrid Kennels' setter dog (Antonio—Nellie G.).

ANTONIA—Eldrid Kennels' setter bitch (Antonio—Miss Nellie Y.).

VIVIAN—Eldrid Kennels' setter bitch (Gath's Mark—Gossip).

DAVE EARL—Fox & Blythe's setter dog (Count Gladstone—Dan's Lady).

SARAGOSSA BELLE—P. M. Essig's setter bitch (Gleam's Pink—Maud E.).

COUNT GLOSTER—P. Lorillard, Jr.'s setter dog (Eugene T.—Gloster's Girl).

SARSFIELD—Geo. E. Gray's (agt.) setter dog (Rodfield—Opal).

HUSTBOURNE ZIP—D. E. Rose's (agt.) setter dog (Tony Boy—Dimple).

CHRISTINA—D. E. Rose's (agt.) setter bitch (Blue Ridge Mark—Lou R.).

WINKEE—S. D. Rippley's setter bitch (Count Gladstone II.—Tory P.).

TORY LUNA—Avent, Thayer & Duryea's setter bitch (——— — ———).

PECONIC—Avent, Thayer & Duryea's setter dog (Count Gladstone II.—Hester P.).

ELGENE—Avent, Thayer & Duryea's pointer bitch (——— — ———).

SUBSCRIPTION STAKE.

The Eastern Subscription Stake, open to all pointers and setters; subscription $50, payable Oct. 1. Each subscription entitles the bearer to start any dog he pleases, whether his property or not. It is transferable to any person not objectionable to the club. Conditions for running the stake: The first round will consist of a two-hour heat; afterward at the discretion of the judges. All entries must be filed at 9 P. M. on night previous to running of stake.

Owners of subscriptions as follows: J. J. Odom, Alabama; H. B. Ledbetter and George E. Gray (agt.), Missouri; P. Lorillard, Jr., New York; Fox & Blythe, Pennsylvania; Eldrid Kennels, New York; W. A. Wimsatt, District of Columbia; Del Monte Kennels, Mississippi; Charlottesville Kennels, Virginia; H. B. Duryea, Long Island; Edward A. Burdett, New York. S. C. BRADLEY, Sec'y-Treas.

U. S. F. T. WINTER DERBY.

SETTERS.

SPORT'S BELLE—H. B. Ledbetter's b., w. and t. bitch (Marie's Sport—West Wind).

KING VICTOR—W. T. Hunter's b., w. and t. dog (Victor—Petrel).

SPOT'S GIRL—J. A. McLeod's lem. and w. bitch (Spot Cash—Nannie B.).

GLEAM—H. K. Deveraux's lem. and w. bitch (Spot Cash Mattie Berwyn).

PEARL R.—Dr. Rogers's b., w. and t. bitch (Sam Gross—Donna Inez).

SPORT McC.—J. J. Odom's b., w. and t. dog (Tony Boy—Blue).

NIMROD II.—D. E. Rose's (agt.) o. and w. dog (——— — ———).

GOLDEN ROD—W. H. Dye's o. and w. dog (Rodfield—Kate N.).

MISS MISCHIEF—R. Bangham's b., w, and t. bitch (Antonio—Patty).

DICK BLAND—W. G. Graham's b. and w. dog (Sam Gross—Madir Rogers).

VAL'S DEXTER—E. M. McKenney's b., w. and t. dog (Val Lit—Cam Ling).

ROMANCE—Avent, Thayer & Duryea's b., w. and t. dog (Topsy's Rod—Novelist).

ORLANDO'S GIRL—Avent, Thayer & Duryea's b., w. and t. bitch (Orlando—Dolly Wilson).

SAM T. II.—George Richards's b., w. and t. dog (Sam T.—Belle Gladstone).

WHY NOT—P. Lorillard, Jr.'s, b., w. and t. dog (Eugene T.—Miss Ruby).

WISE CHILD—P. Lorillard, Jr.'s b., w. and t. dog (Eugene T.—Maiden Mine).

MAIDEN MODESTY—P. Lorillard, Jr.'s, b., w. and t. bitch (Eugene T.—Maiden Mine).

LORETTE—P. Lorillard, Jr.'s, b. and w. bitch (Loris—Rosalie).

LENA BELLE—P. Lorillard, Jr.'s, b., w. and t. bitch (Sam—Mamie B.).

TURNAVO—C. A. Sheldon's b., w. and t. dog (Antonio—Laska).

LARISSA—Constance Parsons's b., w. and t. bitch (Antonio—Laska).

TORY SILAS—F. R. Hitchcock's b., w. and t. dog (Count Gladstone IV.—Tory Luna).

TORY NOVEL—F. R. Hitchcock's b., w. and t. bitch (Topsy's Rod—Novelist).

ALICE K.—L. C. Bacon's b., w. and t. bitch (Anto Gladstone—Speckle Gown).

MADERA—Fox & Blythe's b., w. and t. bitch (Dion C.—Hopeful).

BELL—W. G. Brokaw's lem. and w. bitch (Edgemark—Bell).

TONY'S BEN—W. S. Thompson's b., w. and t. dog (Tony Boy—Bonnie Bell).

TOBASCO BUTTERFLY—Tobasco Kennels' lem. and w. bitch (Antonio—Minnie T.).

HURSTBOURNE JOEL—Tobasco Kennels' b. and w. bitch (Tony Boy—Bonnie Bell II.).

PIN FEATHER—Charlottesville F. T. Kennels' w. and b. bitch (Harold Skimpole—Daisy Croft).

PIN TAIL—Charlottesville F. T. Kennels' lem. and w. dog (Harold Skimpole—Daisy Croft).

MINNIE'S GIRL—Del Monte Kennels' o. and w. bitch (Antonio—Minnie T.).

LIBERTY—Del Monte Kennels' w. and b. bitch (Sam T.—Gath's Dora).

POINTERS.

SHOTMASTER—J. S. Crane's l. and w. dog (Chum II.—Bar Maid).

YOUNG JINGO—G. E. Gray's l. and w. dog (Jingo—Pearl's Dot).

JINGO'S SON—G. E. Gray's l. and w. dog (Jingo—Pearl's Dot).

SILENT—G. E. Gray's l. and w. dog (Jingo—Pearl's Dot).

YOUNG RIP RAP, JR.—G. E. Gray's b. and w. dog (Young Rip Rap—Castaway).

BOY OF HESSEN—Tobasco Kennels' b. and w. dog (Hessen Boy—Lady of Rush).

HAMP S.—H. Smith's l. and w. dog (Von Gull— ——).

CHISHOLM—Dr. Chisholm's l. and w. dog (Von Gull—Croxie).

TICKLE—George Eubanks's b. and w. bitch (Tick Boy—Ruffle).

GHOURKA—Charlottesville F. T. Kennels' l. and w. dog (Delhi—Selah).

BEGUM—Charlottesville F. T. Kennels' b. and w. bitch (Rip Rap—Queen III.).

SEPOY—Charlottesville F. T. Kennels' l. and w. dog (Rip Rap—Queen III.).

TICK BOY, JR.—Del Monte Kennels' b. and w. dog (Tick Boy—Jilt).

DEL MONTE—Del Monte Kennels' o. and w. bitch (Tick Boy—Lulu K.).

FURY—Del Monte Kennels' b. and w. bitch (Tick Boy—Topsy Kent).

COUNT M.—J. M. Avent's b. and w. dog (Choy Shock—Dime).

CHIC—Hawkeye Kennels' l. and w. bitch (Jingo—Ightfield Dove).

GREENBRIER ROSE—Greenbrier Kennels' b. and w. bitch (——— — ———).

DR. TASSIE—Wm. Elliot's l. and w. dog (Hal Pointer—Kent's Star).

WILD JOANNA—N. B. Nesbitt's l. and w. bitch (Jingo—Goldie Croxteth).

NUBBINS—N. B. Nesbitt's l. and w. dog (Jingo—Rooney Croxteth).

CLEG—N. B. Nesbitt's b. and w. dog (Jingo—Dolly Shaw).

LEEB—N. B. Nesbitt's l. and w. bitch (Jingo—Rose of Hessen).

SAM BOW—J. R. Daniels's l. and w. dog (Plain Sam—Dolly Dee II.).

MARK TAPLEY—J. M. Scudder's b. and w. dog (Rip Rap—Bel e of Ossian).

SUCIE—C. A. Cooledge's l. and w. bitch (Rexfast—Patty).

MONOCACY—J. R. McSherry's l. and w. dog (Springside Faust—Diana Kent).

GIRL—J. F. Shepley's b. and w. bitch (Leo—Belle).

FRILL—H. S. Smith's l. and w. bitch (Tick Boy—Ruffle).

DOCTOR—J. M. Avent's (agt.) l. and w. dog (——— — ———).

Continental Stakes.

PITTSBURG, Oct. 19.—*Editor Forest and Stream:* Allow me to call attention to the closing date of the Excelsior Stake (All-Age) of the Continental Field Trial Club's trials to be run at New Albany, Miss., which close Nov. 1. This is also the date for the payment of the second forfeit in the Blue Ribbon Stake (Derby).

The Continental trials, Jan. 17, are to be followed by the Champion Stake on the Monday following the conclusion of the Continental Club's trials. The Champion Stake is to be run on the New Albany grounds, which are conceded to be the best grounds in the South. These two events should draw a good attendance. I have advice from the locality surrounding New Albany which indicates that birds are reported very abundant. This will insure successful meetings. W. S. BELL.

The New England Kennel Club.

BROOKLINE, Mass., Oct. 25.—*Editor Forest and Stream:* At a meeting of the executive committee of the New England Kennel Club, held Oct. 22, the following members of the club were elected to serve as the bench show committee for the fourteenth annual show of the club, to be held at Boston, February, 1898: James L. Little (chairman), Bulkeley Wells, T. Clarence Hollander, Samuel Hammond and Jean Grosvenor. JAMES L. LITTLE, Sec'y.

Canadian Kennel Club.

A MEETING of the executive committee was held in Toronto on Oct. 12, the president, Mr. G. B. Sweetnam, in the chair.

The following gentlemen were elected to the executive for the current year: Mr. T. A. Carson, Kingston; Mr. H. P. Thomas, Belleville; Dr. J. S Niven, London; Dr. Webster, Toronto; Rev. Thos. Geoghegan, Hamilton; Mr. F. M. Gowans, Cobourg; Mr J. G Kent, Toronto; Mr. C. A. Stone, Toronto; Mr. R. G. Steacy, Brockville; Mr J. A. Pitt, Montreal; Mr. A. F. Gault, Montreal; and Dr. Boultbee, Toronto.

The following officers had already been elected by acclamation: Pres., Mr. G. B. Sweetnam, Toronto; First Vice-Pres , R McEwen, Byron; Sec'y-Treas., H. B. Donovan, Toronto; Vice-Pres., Leslie Gault, Montreal; F. T. Miller, Trenton, Ont.; W. B. Wells, Chatham, Ont.; G. B. Bruce, Calgary, N.W. T.

A communication from Mr. A. P. Vredenburg, Sec'y A. K. C., was read, which notified the club that the wins at Toronto of the greyhound Wild Rose and the bull terrier Nonpariel in challenge classes were cancelled, for failure to specify on entry forms sufficient wins to qualify for said classes. The deposit, $25, was declared forfeited for failure to publish in catalogue the proper win of the pointer Shotaway, and date of birth of the collie Rona, both having been correctly given on entry blanks by exhibitors.

The secretary was instructed to write the A. K. C. "that, without prejudice to our claim that we are not in any case liable to the forfeit of the $25 deposit, we would point out that no harm has been done any one by the errors, which have been merely clerical, and that we ask a reconsideration of the imposed penalty."

Metropolitan Kennel Club.

The club will open classes for any recognized breed of dogs not already classified in the premium list, provided there be not less than five entries of such breed. It will also make puppy classes for any breed should there be three or more entries; and will divide by sex and breed for which but one class has been made in the premium list, should there be not less than five entries of each sex.

The Pointer Club of America offers $5 for the best heavy-weight pointer dog, best heavy-weight pointer bitch, best light-weight pointer dog and best light-weight pointer bitch; open to members only. The Boston Terrier Club offers a club cup for the best Boston terrier, another for the best puppy, also one each for the best dog and best bitch entered in the open classes; open to members only. C. A. Lougest, Esq., offers a gold medal for the best bloodhound, under certain restrictions. An admirer of the old English mastiff offers $25, cash or plate, for the best mastiff. The Bull Dog Club of America offers a club medal each for the best American-bred bull dog and best American-bred bull bitch; open to members only.

Work is progressing very satisfactorily for the coming show. Premium lists have been sent to all known exhibitors; still the demand from new ones is continuous, which shows that interest is aroused and augurs well for success.

Mr. Perry Tiffany, New York, will judge bull terriers; Mr. Henry C. Beadleston, bull dogs; Mr. J. F. Holt, Boston terriers. JAS. MORTIMER, Supt.

New England Beagle Club.

Editor Forest and Stream:

Nominations to the New England Beagle Club's fifth annual field trials closed Oct. 15 with the largest entry ever yet received, as follows:

Class A—All-Age, dogs and bitches, 15 to 13in. in height: Franklin Field Trial Beagle Kennels' Belle Summers and Summers's Fly; William Saxby's Dime and Doubtful; John Helding's Lady Wedgwood; John Mullane's Prince; H S. Joslin's Trick; Howard Almy's Lewis and Miss Quinn; Geo. F. Reed's Scorcher and Driver; John G. Reed's Splitter; A. J. Purinton's Millard R.; A. D. Fisk's Phantom; Hempstead Beagles' Parson; A. Parry's Nellie Bly.

Class B—All Age, dogs and bitches, 13in. and under, in height: William Saxby's Bessie; Franklin Field Trial Beagle Kennels' Prinnie and Stump; George F. Reed's Snifter R; H. S. Joslin's Cora J.; Mrs. A. H. Morse's Ida Novice; A. Parry's Belle of Franklin.

Class C—Derby for dogs and bitches, 15 to 13in. in height: Franklin Field Trial Beagle Kennels' Summers's Sailor and Maggie S; William Saxby's Doubtful; Howard Almy's Buckellew and Blitz; John G. Reed's Splitter; N. A. Baldwin's Lancer; A. D. Fisk's Scamp; Hempstead Beagles' Parson.

Class D—Derby for dogs and bitches, 13in. and under, in height: H. S Joslin's Cora J.; E. C. Cook's Slouch; A. D. Fisk's Queenie. W. S. CLARK

POINTS AND FLUSHES.

The following instance of sagacity is recounted in *Our Dogs:* Mr. Quirk, of Peel (Isle of man), sends us particulars of remarkable maternal sagacity in a collie bitch on the island. This bitch, who had her full liberty, was in the habit of having a litter of puppies about every six months, and as her owner did not care to rear any of them, the pups were as regularly drowned. On a recent occasion, however, the bitch, with the evident intention of defeating her owner in his practice of destroying her offspring, whelped away from home, where, her owner could not tell. The bitch went away for periods, returning home for her food. This went on for a fortnight or so, when the owner was determined to watch the bitch in her movements. He followed her, but the bitch returned. Again she was followed, but deliberately eluded the vigilance of her owner for two hours, when at length she was tracked to an old rabbit burrow in the hills. Here she was seen to enter, and on reaching it, situated in a secluded and sheltered spot, it was found that she had scratched the sandy hole sufficiently large in which to make a bed, and there the bitch had deposited her young. What followed our correspondent does not relate, but such strong maternal attachment to her offspring deserved rewarding, if only for the remarkable intelligence displayed for their preservation.

At a meeting of the executive committee of the American Spaniel Club, Messrs. R. P. Keasbey, S. J. Bradbury, H. K. Bloodgood and Marcel A. Viti being present, it was decided to offer at the Brooklyn Show, the St. Lawrence Trophy, for best brace of cocker spaniels, and the Field Spaniel

Trophy for best field spaniel, in addition to the prizes of $5 or a club tankard for best brace of Clumber or Irish water spaniels; $5 or club tankard for best brace of field spaniels; and $5 or club tankard for best brace of cocker spaniels.

The National Beagle Club's trials began on Monday, the 25th inst. under most unfavorable weather conditions. The Futurity Stake had five starters. Notwithstanding the bad weather, the competition was good. The annual meeting was held on Monday evening and the following list of officers was elected: President, George B. Post, Jr.; Vice President, Herrmann F. Schellhass; Second Vice-President, George W. Rogers; Third Vice-President, James L. Kernochan; Secretary-Treasurer, G. Mifflin Wharton. Additional executive committee, John Bateman H. L. Krueder and A. Wright Post. Official judges, George B Post, Jr., W. S. Clark, Herrmann F. Schellhass, James W. Appleton, George F. Reed and Bradford S. Turpin. Delegate, Herrmann F. Schellhass.

In our advertising columns this week Riverside Kennels, Riverside, Ind., announce that they will board dogs. H A. Estabrook, Fitchburg, Mass., offers pointers. W. E. Ritch, Bridgeport, Conn., offers broken setters Nettleton Pharmacy, Nettleton, Ark., offers setter puppies. Box 19, Lawyers' Club, New York, wishes to purchase a bull dog. W. P. Austin, Mansfield, Pa., offers pointers.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirabl

THE CHAINLESS BICYCLE.

THE expected has happened. The latest in the development of the wheel came before the public as a tried, approved and adopted mechanism on the 21st inst. It is now offered as the wheel of 1898, and is formally on the market. A number of the great firms of the United States, probably ten or twelve, will make it a leading style of their 1898 product. As one firm has quietly secured all the patents covering the chainless mechanism, the other makers using them will manufacture under the conditions of a license or royalty.

In all the essentials of frame, wheels, etc., and general appearance, the chainless bicycle does not differ materially from the chain wheel. The changed mechanism involves no new principle. Instead of a chain and sprocket wheels, a shaft and bevel gears are used to transmit the power. The shaft has a bevel-geared wheel at each end, one of which engages in the bevel gear of the sprocket wheel of the pedal shaft, the other in the bevel gear of the rear sprocket wheel.

While there have been rumors of the coming of the chainless wheel for some months, the makers did not feel warranted in presenting it to the public before it had been most thoroughly tested and perfected by exhaustive trials. To attain this end they have been experimenting with it and trying it during the past two years, with the result that they maintain it is the simplest, safest, cleanest and most durable wheel, in that the mechanism is the most economical and wears better than the chain. More specifically, it is claimed for it that it has no teeth or links to catch in the clothing, or other things; that it is much easier to keep clean; that every movement is immediate or positive, there being none of the lost motion or loose play as when a chain is used; that it will go faster and further with less effort on the part of the rider; that the driving mechanism is always thoroughly lubricated; that its driving mechanism is not affected by rain, sleet, mud, dust or weather; that its bevel gears improve with use while a chain deteriorates from the beginning of use, and that it saves repairs, work and money, and increases the safety and delight of the riders.

The four cog-wheels and shaft are inclosed in cases which protect them from weather, dust and wet, although why this cannot be done equally with the chain mechanism is not made clear.

The new wheel will weigh about 26¼lbs. for men's style, and ¼lb. more for women's style with the drop frame.

It is conceded that there is little more to accomplish in the way of novelty or improvement in the chain bicycle, hence one may infer that novelty is the chief characteristic of the new mechanism. It is claimed that there was a world of difficulty to contend with in making the bevel gears, since the spaces between the teeth and the teeth themselves must be perfectly alike, else there will not be perfect work; and to the great difficulty of making the bevel gearing, the makers feel warranted in charging the price asked—$125. And yet the theoretical knowledge of the principles involved in making geared wheels of all kinds, and the practical skill in their construction have been in existence for ages. They are in constant use throughout the mechanical world. The real reason for the high price is the novelty, the something that is new, to attract the buyers who are always ready to purchase something new and something different from everybody's else. After this class is satisfied, the makers will discover that they can make chainless wheels quite as cheap as they can the chain wheel. No doubt the last two years, so painstakingly devoted to perfecting the chainless wheel, were also devoted to waiting till the output of chain wheels became so great that a drop in prices was inevitable, and a novelty, one excluding competition, was desirable. The advent of lower prices, and the advent of the chainless wheel, is a striking trade coincidence. It is also strange that there should be such enormous difficulties and expense in making a bevel-geared wheel for a bicycle, when in mechanics it is not difficult at all.

Medical View of Bicycle Riding.

UNDER date of July 26, Consul Keenan sends to the State Department the following from Bremen:

At a meeting of the medical society in Berlin, January, 1896, Dr. Mendelssohn, professor in the university, read a paper on the medical view of bicycle riding, which was published in the *Deutsche Medical Wochenschrift*, No. 18, 1896. More recently it has appeared in the *Centralblatt für allegemeine Gesundheitspflege*, and it is now being discussed in the German press in general. The chief points of the paper were:

The advantages of wheel-riding may be inestimable, if practiced intelligently and with moderation, but harmful or absolutely dangerous if carried to excess or in cases where riding should be prohibited. The advantages accruing to riders are obvious, since the wheel affords exercise and recreation to the mentally overworked, and as an independent and inexpensive means of locomotion it is ideal. The danger of the wheel may consist of injuries from accident, inflammation of the knee-joint resulting from overwork, inflammation of both male and female pelvic organs resulting from pressure of the saddle, etc. Another danger is in the constant excessive exertion, which can produce an increased atomic and molecular change throughout the body, especially in the vital organs, to such a degree that a general weakening of the individual and especial susceptibility to infectious diseases may result. The tendency to catch cold is proved by experience to be great. The heart is subject to the greatest danger in cases of excessive cycle riding. A large number of sudden deaths have already been recorded, due to excessive strain on the heart.

Cases where wheeling should be prohibited are as follows: (1) Existing heart lesions, (2) arterial calsification, (3) albuminuria, (4) old age, and (5) childhood.

Cases where bicycling is beneficial are: (1) When excessive uric acid and gout exist, (2) in certain mild forms of chronic disturbances in the pelvic organs, which are thereby subjected to a certain degree of exercise, which has an effect similar to the gymnastics and massage of the Thur Brandt method; (3) when there are slight disturbances in the respiratary organs, except absolute lung dilatation.

It can be said that important points relating to the advisability of bicycling by girls and boys of certain temperament, as well as by certain neurotic women, are not observed in the foregoing remarks, but it must be conceded that the conclusions stated by Dr. Mendelssohn are true.

As to Expense.

BICYCLING is one of the most expensive or the least expensive of pleasures, accordingly as one makes it. Some riders will use a wheel a whole season with little or no outlay for repairs, since none are needed. Careless, heedless or reckless riders have frequent need of repairs, which adds to the expense. Some riders in their tours carry their lunches and observe the same economy that they practice at home; while others will patronize the best hotels, even if the tour be but for a day, and fritter away money at every turn. To blame the wheel for the rider's extravagant habits is to mistake cause for effect. Bicycling is the cheapest or the most expensive habit, whichever the bicyclist chooses to make it.

The Scorcher.

From the standpoint of those who enjoy sensible recreation and have a proper consideration for their own safety and the safety of others, the scorcher is justly considered an unmitigated nuisance and a dangerous menace. The scorcher, nine times out of ten, is pitifully egotistical, for out of his strained, set eyes, glaring out of a head carried lower than his seat, can be seen a look of inquiry as to whether the people he passes are admiring him quite as much as he deserves and as he admires himself. The whole class of scorchers who frequent the regular thoroughfares are detestable egotists, who would not scorch for a moment if there were no beholders or no possibilities of notoriety, yet some are far worse than others. They will ride within an inch of man or woman as they fly by without any sounding of warning bell, and enjoy the alarm they have caused. The more pinch-faced, narrow-chested and wheel-backed is the scorcher, the more is he given to pander to his morbid vanity, till the time comes when he believes he is a being of such superior swiftness and nerve, that he can even defy the bicycle policeman; and then when the latter is really in pursuit of him, the chicken heart, which was so brave in imperiling women and peaceful men, flutters and funks, and the invincible rider of fancy generally succumbs to the officer after a ride of a few blocks. If the scorcher would only smash his own wheel, or twist his own neck into proper place, or have his face properly reset in a collision, all would be well; but it is generally the innocent party who is the greatest sufferer. To his other weaknesses, the scorcher adds that of cowardice; for, the damage done, he generally forthwith runs away. The street scorcher is a combination of pitiful vanity, cowardice and malice.

About Chain Protectors.

Now that the chainless wheel has been presented for public acceptance, with the driving machinery protected thoroughly from wet, dirt, etc., the makers of chain wheels are bestirring themselves to provide a casing for the chain and sprocket wheel, an improvement which, so simple and so necessary, should have engaged their serious attention long since. The ordinary cases so far adopted are heavy cumbersome affairs, weighing about 5lbs. The latest device for protecting the chain is in the form of a rubber band, which incloses the chain except where it comes in contact with the sprocket wheels. No protector can be a success which does not protect both sprocket wheels and chain.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE subject of a new rule for the smaller classes has been under consideration by the British Y. R. A. for some time. The special committee appointed by the Council held a meeting on Oct. 14, at which it was decided to recommend the following rating formula:

$$\frac{L.+2\,B.+G.}{2}=\text{Rating},$$

the dimensions L., B. and G. being measured as at present. The class limits of 36ft., 30ft., 24ft. and 18ft. to become 33ft., 28ft., 23ft. and 18ft., to suit the altered rating values. A minimum limit of displacement (without crew) of 15cwt. for any yacht to be measured by the Y. R. A., was also adopted for recommendation.

THERE appeared to be some doubt as to the success of the proposed new 51ft. restricted class, the requisite number of subscribers not having yet come forward. Some such class as this is greatly needed, and we hope that the scheme may not fall through.

THE meeting on Oct. 30 in New York promises to result in the accomplishment of the object in view, the organization of a national yachting association. The general plan of organization has already been published in our columns, and this will no doubt be adhered to, but it is impossible to foretell what may be done in the way of details. As to the measurement rule, there is no definite proposition before the meeting for action.

THE interesting and valuable paper by Assistant Naval Constructor Hobson, U. S. N., on the construction of Defender, makes public for the first time many very important details of this wonderful yacht. The whole subject of aluminum in naval construction is dealt with most exhaustively by Assistant Constructor Hobson in the continuation of the paper.

APROPOS of the yarn about Defender racing in the Mediterranean, which, in spite of the plain tool marks of the international nautical fake mill, is being treated seriously by most American papers, the New York *Tribune* sums up the probabilities of the case in very practical and sensible shape. Who *would* race Defender in European waters, and why *should* anyone do so?

THE work of the Massachusetts Y. R. A. in the annual amendment of its rules was by no means as thorough and perfect as it might and should have been. The raising of the class limits and the recognition of a larger class were both necessary changes, but the former was almost defeated, and when finally passed, no action was taken to allow time to existing yachts in the new classes; a plain matter of justice. This omission necessitates a special meeting. The work of defining a cabin yacht, quite a responsible task, was left to the executive committee, instead of being carefully discussed by the Association. One change of the racing rules was made which might well have been left to the future; especially when really important matters were not settled for lack of time. The rule relating to two yachts converging was changed to give the right of way to the leeward instead of the windward yacht. There is no serious matter of right or wrong involved in this rule, and even if there were, it should not be changed unless in concert with other yachting bodies. The great point, to which all are now working, is to secure uniformity in rules and usage. The action of the Massachusetts Y. R. A. puts it at variance with established custom in yacht racing, and to no good purpose. If really good reasons can be advanced for the change, no doubt it could be made by all clubs together; but its mere adoption in advance by one club or association will tend to prevent this.

Society of Naval Architects and Marine Engineers.

THE fifth general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city, at 10 A. M., Thursday, Nov. 11. Through the courtesy of the president and managers of the American Society of Mechanical Engineers, the meetings will be held in the auditorium of No. 12 West Thirty-first street, the sessions continuing through Thursday and Friday, Nov. 11 and 12.

There will be a banquet at Delmonico's at 7 P. M., Friday, Nov. 12, to which members and their guests are cordially invited. Tickets, exclusive of wine, will be $5 each, and they can be obtained by applying to the secretary.

Notice is given that, in general, seats will not be reserved, and tickets must be presented. It is requested that members obtain tickets as early as practicable.

Members intending to propose candidates for membership are requested to notify the secretary, in order that the necessary blank forms of application may be forwarded and properly filled out.

LIST OF PAPERS TO BE READ BEFORE THE SOCIETY OF NAVAL ARCHITECTS AND MARINE ENGINEERS AT ITS FIFTH ANNUAL MEETING.

Thursday, Nov. 11.

1. Watertight Bulkhead Doors; the "Long-Arm" System on the U. S. S. Chicago. By Wm. Barnum Cowles, Esq., member.
2. Regulations for Loading Vessels. By Lewis Nixon, Esq., member.
3. Torpedo-Boat Design. By Ass't Naval Constructor H. G. Gillmor, U. S. Navy, associate.
4. The Commerce of the Great Lakes. By C. E. Wheeler, Esq., member.
5. Progressive Trials of the Guardian. By Prof. C. H. Peabody, member.
6. An Experimental Study of the Influence of Surface upon the Performance of Screw Propellers; preliminary paper. By Prof. W. F. Durand, member.

Friday, Nov. 12.

7. Some Notes on the Speed Trials and Experience in Commission of our New Battleships. By Chief Constructor Philip Hichborn, U. S. Navy, vice-president.
8. Performance of Scotch Boilers and their Durability under Forced Draught. By Edwin S. Cramp, Esq., member.
9. Use of Water-Ballast for Colliers in the Pacific Coast Trade. By Wm. P. Frear, Esq., member.
10. Estimated Weights of Machinery. By Prof. Geo. R. McDermott, member.
11. Navy Yard Expenses. By Naval Constructor W. J. Baxter, U. S. Navy, member.
12. Pneumatic Steering Gear as Applied to the U. S. Monitor Terror. By H. A. Spiller, Esq., member.

Massachusetts Y. R. A.

THE annual meeting of the Massachusetts Y. R. A. was held at the American House, Boston, with President Clark in the chair and twenty-two delegates present. The following classification was adopted finally, after the proposal to raise the class limits had been once voted down:

Class A—Cabin yachts, 35ft. maximum measurement.
Class B—Cabin yachts, 30ft. maximum measurement.
Class C—Open yachts, 25ft. maximum measurement.
Class D—Cabin yachts, 25ft. maximum measurement.
Class E—Open yachts, 21ft. maximum measurement.
Class J—Open yachts, 18ft. maximum measurement.
Class L—Open yachts, 15ft. maximum measurement.
Class K—Knockabouts, 21ft. under K. A. Rules.

All classes but Class K are measured on L.W.L. with crew on board. The 35ft. class is a new one. No action was taken toward defining a "cabin yacht," or to amend the existing prohibition of allowance after Dec. 31, 1897, so as to give time to yachts now in the new class, but under the new limits. Some minor changes were made in the racing rules and one very important change, the rule relating to two yachts converging being altered to give the right of way to the leeward instead of the windward yacht. The meeting voted to send three delegates to the New York meeting and in favor of joining the National Association. It was decided to hold another meeting within two weeks to consider the matter of allowance.

A special meeting of the Council of the Sound Y. R. A. was held at the Fifth Avenue Hotel on Oct. 18, with President Cromwell in the chair. The proposed articles of association for the new association were presented by Mr. N. D. Lawton, and approved by the Council, which will be represented at the meeting of Oct. 30. The question of the number of races during the season was discussed.

Notes on the Yacht Defender and the Use of Aluminum in Marine Construction.

BY RICHMOND PEARSON HOBSON, ASSISTANT NAVAL CONSTRUCTOR, UNITED STATES NAVY.

Reprinted by permission from the Proceedings of the United States Naval Institute.

Copyrighted by the U. S. Naval Institute.

No craft in the annals of yachting centers about herself such features of general interest as the yacht Defender. Perhaps the greatest series of races in these annals is the one that represents in its sphere the great fact of modern times—the greatest fact, it may prove to be, of all time—the rise of the New World, a rise to greatness that has reached, and in some respects has passed the point of successful rivalry with the Old World.

Among the yachts connected with the series of races for the America's Cup, Defender is in many respects unique, standing head and shoulders above all the distinguished number.

The last races came at a time of high tide in yachting interest both abroad and in the United States, when rivalry was keenest and the evolution of the racing craft seemed to have reached its maximum. The determination to win back the lost trophy was made years in advance, and one can

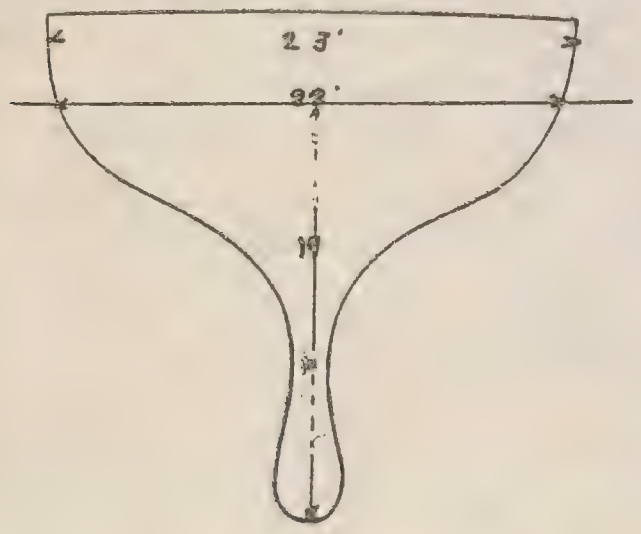

FIG.

trace the course of deliberate, scientific, tireless effort to this end, till at last it seemed, with great reason, that invincibility had been reached in Valkyrie III.

It was immediately recognized in America that the defense of the Cup could not be left to any yacht yet built; moreover, the time after challenge would be too short to permit experment. Valkyrie III was the successor to a dynasty that reached its climax of perfection before the challenge was sent; while the American champion might be expected to follow the line of its predecessors, and might be expected to be the climax of a sequence of representatives, yet there was but one chance of producing the climax.

The sense of danger aroused the American yachtsmen to the necessity of coöperation. Effort combined and centered upon producing a single craft. The order was placed with Herreshoff Bros., of Bristol, R. I., and cost and all other considerations were subordinated to the one object—speed. The yacht built must win.

It was natural, under these conditions, to expect boldness, for the builders, though sure in execution, have been characterized by boldness in design.

The shape this boldness took for realizing a maximum of power was along the line of weight distribution, for lowness of center of gravity, rather than along the line of maximum metacentric radii, or power of form. The advantage of excessive lowering of the center of gravity, instead of the raising of metacenter, becomes apparent, without further explanation, from reference to the fact that power of weight, determining the position of the center of gravity, does not incur, as does power of form, determining the position of the metacenter, the increase of head resistance and frictional resistance that sets in when the vessel heels or is in a seaway.

The method adopted for lowering the center of gravity consisted not only in placing a maximum weight of lead on the deep fin-keel, as found also in the challenger and other yachts, but also in reducing to a minimum the upper weights, the saved weight appearing in the form of additional lead on the keel, being equivalent in effect to a transference of weight downward through a great resistance.

The reduction or economy of weight, particularly of high weights, which thus constituted the characteristic feature of the yacht, places her construction alongside of marine construction in general, and of naval construction in particular, where weight of hull and fittings affects intimately the limit of the military qualities themselves.

This coincidence of purpose alone would make the yacht an interesting study for the naval architect, but the form the purpose took enhances the interest, makes it general and intense, for it adopted a new material—aluminum—which, from its extreme lightness, has been offering great hopes to the naval architect, but which, from its corrosion in salt-air and salt-water, has checked, if it has not effectually shattered these hopes. Moreover, the conditions were peculiarly such as to constitute a severe test of the virtues and failings of the new metal.

In view of this similarity of purpose with naval construction, particularly the bearing on torpedo-boat construction, and of the value of experiment with aluminum, the Navy Department directed an inspection of the yacht and a report on her "method of construction." This report is given in Part I. practically as it was made after inspection at Bristol just before the yacht left the builder's hands.

In August, 1896, more than a year afterward, a second inspection was made at New Rochelle, through the courtesy of C. Oliver Iselin, Esq., to determine the conditions of preservation and the conduct of the new material in the face of the deteriorating conditions of service. Since it is on the question of corrosion that the use of aluminum for marine purposes hinges, an effort was made to throw, if possible, some additional light upon the subject, particularly at the present time, when, notwithstanding the advantage it offers, aluminum has been unfavorably passed upon, both abroad and in this country, upon grounds that appear to be incomplete Samples of corrosion taken from Defender, also a sample of a corroded aluminum plate, together with a sample of the salt water in which, in a closed vessel, the corrosion took place, the latter furnished by Prof. A. H. Sabin, were sent to the chemist at the Navy Yard, New York, with directions for a qualitative and a quantitative analysis, with a view to determining the phenomena of corrosion in the particular case, the attacking agents, the soluble and insoluble products.

The value of an intimate knowledge of the phenomena is evident, serving as it would as a basis for research and experiment to find preventative preparations.

A sequence of heavy pressure in the chemical laboratory has prevented as yet the analyses, and effort to hasten them since the writer's detachment from the New York Navy Yard has been of no avail. Only an incomplete, preliminary analysis of the corrosion from Defender has been reported, an analysis so incomplete as to be of no material value.

It has therefore been decided to give in Part II. the result of the study of the subject of the adaptability of aluminum for marine construction, without the original data hoped for on the question of corrosion.

PART I.—THE METHOD OF CONSTRUCTION OF THE YACHT DEFENDER.

1.—Preliminary Description.

The boat was examined while afloat at anchor. Her general form is indicated in Figs. 1 and 3. Her approximate hull dimensions are as follows: Length over all, 122ft. 3in; length on l.w.l., 90ft; maximum beam, 23ft.; beam at l.w.l., 22ft; draft, extreme, 19ft.

The idea that gives the distinguishing feature to this advance type, as will be seen below, is the realization of extreme sail-carrying power from a great metacentric height, initial and under inclination, realized from the disposition of weights. Though realizing a high position of the metacenter from an elevated position of the center of buoyancy and long metacentric radius, the extreme is reached in the low position of the center of gravity.

The great metacentric height and consequent sail-carrying power is derived more from the element of weight than from the elements of form.

The method adopted in realizing the low position of the center of gravity is that of reduction in weight of hull and fittings and the addition of weight to the keel, weight being taken from the upper portions and added to the lowest point.

The method of realizing a reduction of high weights is the use of light materials, of light scantlings, with a light method of construction and fastenings.

The reduction of frictional resistance and of liability to deterioration are sought in the use of bronze, manganese bronze, for water-washed portions.

The features of the distinguishing methods thus identify the construction, in the objects sought, with the construction of vessels of war, particularly torpedo vessels and torpedo boats.

2. The Method of Construction.

Referring to the sketch of the midship section, Fig. 3, the construction is as follows:

1. THE SKELETON.—A steel angle, 4in. × 4in., closed to the angles of the waterlines, from ¼in. to ¾in. thick, forms the stem and binds the ends of the shell plating, with double riveting, rivets of bronze for the bronze plating, diameter ⅝in., and of aluminum for the aluminum plating, diameter ½in.

A bronze casting, 4in. deep by 20in. wide, of the form indicated in sketch, forms the keel. On its under side is attached the lead, shaped to the form indicated, secured by bronze tap bolts 8in. long by 1¼in. diameter. The bronze shell plating extends to cover the lead, reducing the frictional resistance, and giving additional support, securing to the lead by bronze taps 5in. long by ¾in. diameter.

The frames are steel angle bulbs made in two parts between the keel and topsides, strapped and riveted as indicated, spaced 20in. throughout, an angle being substituted for the bulb at the forward extremity, frame No. 1. They stop at the keel, which is spanned by floor plates of ¼in. bronze plating, 12in. high, secured to the frame on each side by five rivets of ⅝in. diameter. Alternate frames have in addition deepened floor plates, of 7-32in. steel, extending, as shown, to the angles uniting the frames at about one third their height from the keel. These angles are steel, 2in. × 2in. amidship, and 1¾in. × 1¾in. forward and aft. The frame angle bulbs are 1½in. × 2in. amidship. The following is their scantlings throughout, beginning forward: Frame No. 1 is an angle, as stated above; from frame No. 2 to frame No. 9 the angle bulbs are 2½in. × 1½in.; No. 10 is 2¾in × 1¾in; from No. 11 to No. 24 they are 3in. × 1¾in.; from No. 25 to No. 44 they are 3½in. × 2in.; from No. 45 to No. 58 they are 3in. × 1¾in; from No. 58 to stern they are 2½in. × 1½in. The dimensions for the bulb of the frame angle bulbs, 3½in. × 2in., are ⅞in. × 9-16in.

About 4½ft. above the steel angles that bind the two sides of the frames are wooden beams, 3¼in. × 1⅛in., secured to the frames, adding stiffness and forming support for the platform or lower deck.

The beams of the upper or main deck are aluminum angle bulbs, 5in. × 2in., spaced 40in., fitted to only alternate frames, the frames without beams ending without fittings under the deck stringers. The beam arms are secured to the frames against which they sit back to back by three rivets of ½in. diameter and by a single strip of aluminum plating 24in. long, 4in. wide and ⅜in. thick, forming a triangle with the frames and beam arm, secured by three rivets at each end of ½in. The two beams between which the mast is strapped are of steel, 4¼in. × 2¼in.

A bilge stringer, steel angle bulb, 3½in × 2in., extends throughout the entire length on each side, at the height indicated in the sketch. A corresponding inverted steel angle bulb, 3½in. × 2in., extends under the main deck beams in the position indicated in sketch along the whole length on each side about 4ft. from the central line.

The bilge stringer angle bulb and the inverted angle bulb under beams on each side are connected by fourteen struts made of iron piping, 1½in. amidships and 1¼in. forward and aft, spaced five frame spaces. These pipes have forgings welded in their ends and flattened to lie on the backs of the angle bulbs, to which they are secured by three rivets of ½in. diameter.

A deck stringer plate of aluminum, varying from 28in. to 24in. in width and 5-16in. thick, extends over the beams from end to end. On this stringer plate, along its outer edge, extends an aluminum angle bulb, 5in. × 2½in., which receives the upper edge of the shell plating and forms the upper ending of the hull at the sides. The deck beams are strapped in addition by diagonal plates of aluminum, ⅜in. thick, varying in width from 5in. aft to 7½in. forward, the four converging on the mast being 10in. wide. The length of these strapping plates and their disposition are indicated in sketch, Fig. 4.

Thus the skeleton consists of a steel angle stem, a bronze keel, with lead underneath, steel angle bulb frames, with floor plates of alternating heights, of bronze at the bottom and steel above the bronze, with steel angles binding the frames on the two sides, wooden deck beams for the lower deck, and aluminum angle bulbs for the main deck beams, fitted only to alternate frames, steel angle bulb bilge stringers, one on each side, inverted steel angle bulbs on under side of main deck beams, one on each side, two rows of inclined struts between bilge stringers and inverted angle bulbs under main deck beams, one row on each side, spaced every five frame spaces, aluminum deck stringers and angle bulbs at sides of main deck, and diagonal strapping fore and aft.

2. THE COVERINGS.—The shell plating is on the raised and sunken system, with liners behind frames under outside plating, secured to frames by a single row of rivets of ½in. diameter. All butt straps are double riveted.

Strake No. 1, covering the lead and overlapping the keel and lower part of frames, as indicated in sketch, Fig. 3, is an outer strake of manganese bronze, 5-16in. thick amidship, secured to the lead by bronze taps ¾in. diameter and 5in. long. The lap with strake No. 2 is secured by two rows of rivets of bronze ⅝in. diameter.

Strake No. 2 is an inner strake of 5-16in. manganese bronze. The lap with strake No. 3 is double riveted, ⅝in. bronze rivets.

Strake No. 3 is an outer strake of ¼in. manganese bronze. The lap with strake No. 4 is single riveted, ½in. bronze rivets.

Strake No. 4 is an inner strake of 7-32in. manganese bronze. The lap with strake No. 5 is single riveted, ½in. bronze rivets.

Strake No. 5 is an outer strake of 7-32in. manganese bronze. The lap with strake No. 6 is single riveted, ½in. bronze rivets.

Strake No. 6 is an inner strake of ¼in. manganese bronze. The lap with strake No. 7 is single riveted, ½in. bronze rivets. The L.W.L. falls on this strake near its upper edge, between the water line and the aluminum plate above.

Strake No. 7 is an outer strake of ¾in aluminum. The lap with strake No. 8 is single riveted, ½in. aluminum rivets.

Strake No. 8 is an inner strake of ¾in. aluminum. This strake is the highest. The upper edge secures to the back of the angle bulb, forming the top line. The lower ends of the strips securing beam arms, fall on the lower part of this strake.

The decks are of wood, 2¼in. thick for the main deck, and ⅞in. thick for the lower deck. Liners are fitted over the beams of the main deck between the strapping plates. The deck planks are secured to each other by horizontal nails, in addition to being secured to the beams. Around the mast a steel tie plate, 5ft. 3in. × 3ft. 4in. × ⅜in., secures the ends of the strapping plates and the four beams in the vicinity.

Thus, the coverings consist of manganese bronze for the water-washed portions of shell plating, and aluminum for the top sides, with wood for the decks, and steel for special plates.

3. FITTINGS.—The socket for stepping mast is made of steel angle bulb, 5in. × 2½in., bent to the form of a circle, with the ends welded and strapped. The flange, which is on the exterior, sits on a foundation plate of steel. The stepping is stiffened by a partial vertical keel or keelson, and by special floor plates on the frames adjacent, with angles 4in. × 4in. on one side and 2in. × 2in. on the other, with vertical angles 2in. × 2in.

The pin rails are of steel piping. The rigging on each side is secured to steel eye bolts attached to five chain plates, about 4½in. wide and ⅜in. thick, extending down to the lower deck, riveted to the shell plating.

The jibboom is guided by two main straps of bronze about 1ft. long with flanges at the ends, and by an additional narrow strap of simple bronze plating.

The fid is of aluminum, in the form of a yoke, which receives tie rods which are of one piece bent around the stem, and, passing through the ends of the yoke, are set up by nuts, which permit of an adjustable strain on the single jumper or martingale of steel wire secured to the stem a short distance above the water line. There is no lateral support of the jibboom.

The standing rigging and topping lifts are of light steel wire. Blocks are of Oregon pine or spruce, with straps and sheaves of aluminum. Cleats are of hard cast bronze. Eye bolts are of steel. The spars are of Oregon pine and spruce. The internal fittings are of light wood with minimum thickness. Partitions and partial bulkheads are of canvas, held by a light wood framing. The water-closet fittings are of aluminum, with small pump of aluminum. The bunks for the crew are of ½in. gas tube frames, 6ft. × 23in., covered with canvas, hinged lengthwise to the side, and folding or dropping down. They are three tiers deep, with about 20in. vertically between the bunks. They are secured in the horizontal position by straps from the reverse angle bulbs under the main deck beams.

Thus the fittings are of steel, bronze, aluminum or wood, according to the requirements.

3. CONCLUSIONS.—The method of construction as above described presents three prominent features, namely:

1. Simplicity and directness of construction.
2. The use of new materials and their combination with steel.

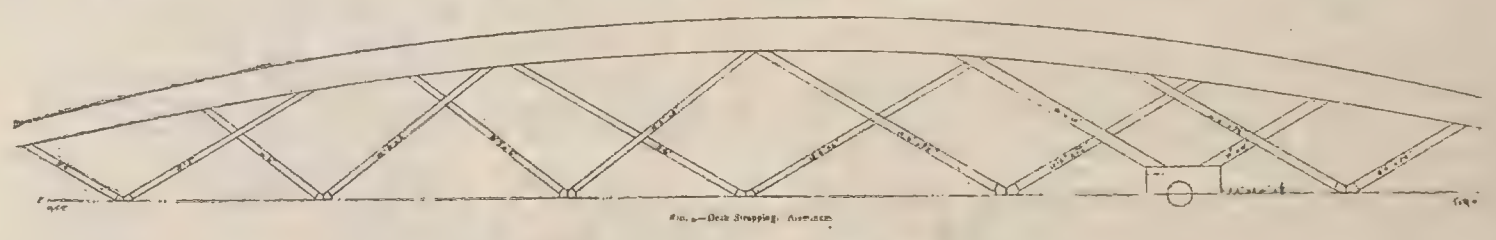

FIG. 4. ARRANGEMENT OF ALUMINUM DECK STRAPS.

3. Lightness of scantlings.

The complex nature of the forces to be resisted, the combination of pronounced twisting and a heavy thrust of mast with the usual forces, would lead to the expectation of complexity, whereas examinations show an entire absence of redundant parts, and even of parts found in usual construction.

The examination of the parts, in view of the forces to be resisted, shows a singular directness of purpose for each part or piece that enters the construction. These characteristics, simplicity and directness, are so evident from the sketch of the midship section that they need not be pointed out in detail. Notice should be taken, however, of the use of angle bulbs instead of simple angles or combinations of angles. The sectional moment of inertia being greater for the angle bulb, there is a gain in stiffness, or a saving in weight for the same stiffness. Notice should be taken also of the simplicity of fastenings, the economy of rivets.

Special attention should be given to the system of struts, which, though exceedingly light, give to the transverse section a girderlike nature hitherto unattempted afloat. Special attention should be called also to the disposition for insuring continuity of resistance in the main deck, to the longitudinal angle bulbs under the deck beams, and the combination of angle bulbs and wide deck stringers at the sides, but especially to the diagonal strapping which opposes itself directly to the twisting forces referred to above, note being taken also of the fastenings of deck planks to each other.

It may be added that the characteristics in question appear in full relief when the boat is conceived inclined under the great localized forces; when the parts are conceived distributing these forces and transmitting them to the resisting forces without, the structure will be seen to present remarkable stiffness of form, remarkable resistance to deformation, combined with the simplicity of structure described above.

In sum, the boat is an architectural departure, and is an interesting study for all architects. For the marine architect the study is of practical value, for the departure is along the line of his constant effort to realize a maximum of resistance to complex forces with the minimum of weight.

The realization of this main object, however, is not confined alone to the disposition of the material, but extends also, with even more marked characteristics, to the selection. The lightest strong metal known to architecture is used whereever characteristics other than weight do not prevent. The shell plating of the topsides, the main deck beams and strips securing them to the frames, the deck stringers and topside angle bulb, the deck strapping plates, and various fittings,

enumerated above, are of aluminum. The builders claim a gain or saving of ten tons over steel construction as used in the yacht Colonia of nearly similar build. The transfer of this weight from the topsides to the keel, through a vertical height of about 21ft., causes the distinguishing characteristic referred to at the beginning, that of a lowness of center of gravity which places this boat apart from all other products of marine construction.

This use of aluminum presents particular interest from the effort it represents to realize not only a gain in weight, as yet moderate in quantity when compared for simple strength with steel, but also the more pronounced advantage afforded by a more efficient disposition of metal, a section of greater inertia, and consequent greater stiffness, than can be realized with the smaller quantity of the heavier and stronger metal.

In addition, in view of service and deterioration which sets in from the surface, and which may be looked upon as penetrating readily a certain distance and then ceasing, the thicker plate of the lighter metal offers decided advantage over the thinner plate of the stronger metal, assuming equality of strength when first built. These features are important ones in maritime construction, particularly in naval construction.

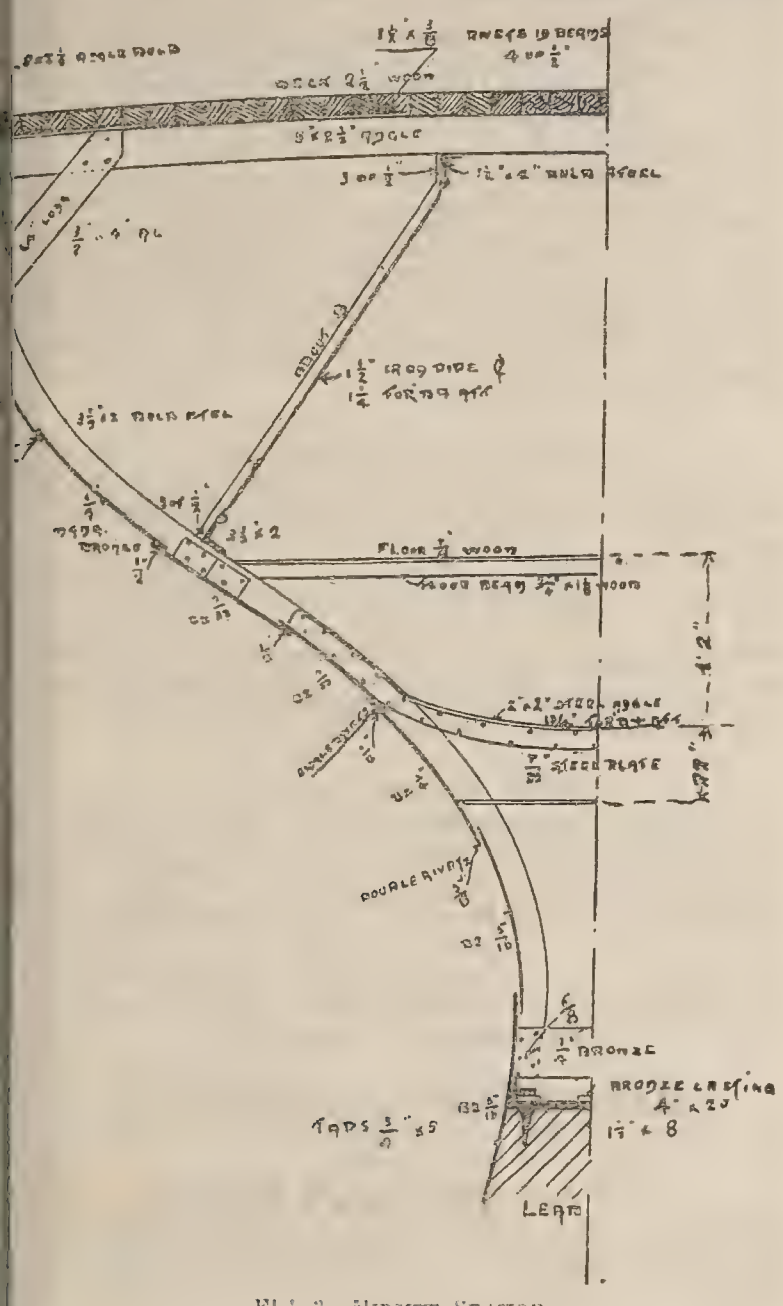

FIG. 3. MIDSHIP SECTION.

The last feature is of particular importance in torpedo-boat construction, which requires the use of plates of extreme thinness.

The advantage of taking weight from lower portions and putting it on the keel is less pronounced than for the case of the upper portions. Further, a special bronze alloy, stronger than steel, though heavier than aluminum, offers, when, polished, pronounced advantage over all painted or varnished surfaces, according to the experience of the builders, in smoothness of surface.

The water-washed portions of the shell plating are of manganese bronze, from which results of ultimate strength are realized about 12 per cent. in excess of the results of steel used for the same purpose. In view of the additional fact that the under water parts are for the most part on the compression side of the hogging girder, and will consequently be less called upon for resistance within tensile elasticity, and of the fact that bronze offers advantages in maintenance of smoothness, according to the builders, and decided advantages in resistance to deterioration, this feature is one of particular interest in naval construction, particularly in the case of torpedo boat construction, where deterioration is most injurious.

In sum, the construction of the boat seeks to realize the advantages offered by two materials that may be considered new, and presents for study all the interest that attaches to the experiment of these materials in the new field of hull construction.

But in seeking to realize the advantages of the new materials the builders have not lost sight of the advantages still offered by the old. For the frames and floor plates and for special fittings like the tie plates around the mast and the chain plates and, in general, the parts where the advantages offered by aluminum and bronze are less in evidence, and where special strength without special stiffness is desired, use is made of steel, with evident advantage. It should be noted that the lower parts of the floor plates, 12in. in height, which are liable to corroding effects of bilge water, are made of bronze.

In sum, the boat seeks to realize the advantages offered by all three of the materials, aluminum, special bronze and steel.

Though aluminum boats have been built abroad, and though bronze has been previously used by the builders in conjunction with steel on Vigilant, the combination of aluminum, bronze and steel has never been attempted. In material, as in architecture, the boat stands apart. But, further, simplicity and directness of construction and new materials and new combinations of materials are not the only characteristics of this remarkable boat.

An examination of the scantlings as described above, and as seen on the sketch of midship section, shows throughout a lightness that is remarkable when it is remembered that the boat is essentially a structural experiment on untrodden ground. This lightness of scantlings is most marked in the region of the mast. It is true that here are found the maximum dimensions of pieces, the heaviest scantlings of outside plating, that the two beams between which the mast passes are of steel instead of aluminum, that the deck strapping plates are increased in width, and that a special steel tie plate binds up the four beams, and the ends of the four strapping plates, but even with these special dispositions the provisions do not appear commensurate with the local strains, particularly on the weather side, that the structure will undergo by reason of the narrow spread of the stays, introducing an enormous thrust of the mast and crushing force between the sides due to the enormous spread of sail and the great height of the center of pressure. Notwithstanding the special provisions enumerated, it appears not improbable that a heavy wind, particularly if applied suddenly, will cause the structures in the region of the mast to spring, if not to give way, it being assumed that the mast is sufficiently robust not to give way beforehand. In view of the experimental nature of the boat, this feature of lightness, particularly in the region of the mast, is second in its striking nature only to the features described above, and offers an interesting field for the calculation of the strains to which the materials are liable to be subjected. This feature has not been included in the present examination of the "method of construction," but a summary investigation leads to the conclusion that the scantlings are such as to bid fair to afford a conclusive, if not crucial, test of the strength of the new materials.

But the test of strength is not the only test in store for the new materials; the test of endurance will also be conclusive. The materials are in a combination that will produce serious effects of galvanic action, if such action is liable to take place under the conditions of service. The aluminum and bronze are not only in contact with each other, but are both in contact with steel, and this contact is most intimate in the case of rivets passing through two or more different materials, as in the case of rivets between frames and shell plating. It is to be noted that methods have been used to obviate as far as possible the liability to this action, such, for instance, as the avoidance of the use of aluminum below the water, the use of bronze for the bottom of the floor plates where liable to be in contact with bilge water. The conditions of service will test the efficiency of these methods.

The test will extend to the use of bronze for the water-washed surfaces, to the extent of the advantage it offers for the resistance to deterioration and to fouling, and, if possible, it should be made to extend to finding the extent of the advantages it offers in frictional resistance, the increased smoothness compared with painted and varnished surfaces.

Thus, in sum, the Defender, while presenting a remarkable study of simplicity of construction and efficiency of distribution of materials, embodies two new materials in such light scantlings as to offer a test of their strength, and in such combination and disposition as to offer a severe test of their qualities of endurance, of resistance to deteriorating influences.

The objects throughout, that of realizing a maximum of strength, with a minimum of weight, particularly in the upper parts, of realizing a minimum of skin resistance, are identical with the objects in naval design, more particularly in torpedo boat design, while the methods adopted, the use of three materials, two of which are new, in a combination which seeks to realize the special advantages of each, and the means resorted to to prevent the bad effects liable to the combination, are all steps across the border at which torpedo boat construction has arrived into the fields beyond.

This interesting production has sought to realize the extreme of sailing advantages along the road that torpedo boat construction must follow in coming developments of hull construction, and the conditions are peculiarly favorable for its cutting away many of the obstacles and indicating what changes in direction are best for entering the new ground.

To realize the advantages of the experiment, investigation should extend to cover the behavior of the new materials under the tests of strength, during stress and after repeated stresses, and under the tests of endurance and resistance to deterioration.

Seawaren Land and Water Club.

THE Seawaren Land and Water Club held its last naphtha launch race for the season, over the 11-mile club course on Staten Island Sound, on Saturday afternoon, Oct. 23, for a handsome silver-mounted, cut-glass claret pitcher, presented by H. G. Seguine, as first prize, and a second prize presented by C. M. Cooper, chairman of the regatta committee. The first prize was won by Lispeth (30ft., 4 h-p.) Wm. M. Ballard; elapsed time, 1h. 21m.; corrected time, 1h. 9m. 30s. The second prize was won by Hazel (30ft., 6 h-p.) Mrs. H. G. Seguine; elapsed time, 1h. 20m. 50s.; corrected time, 1h. 11m.

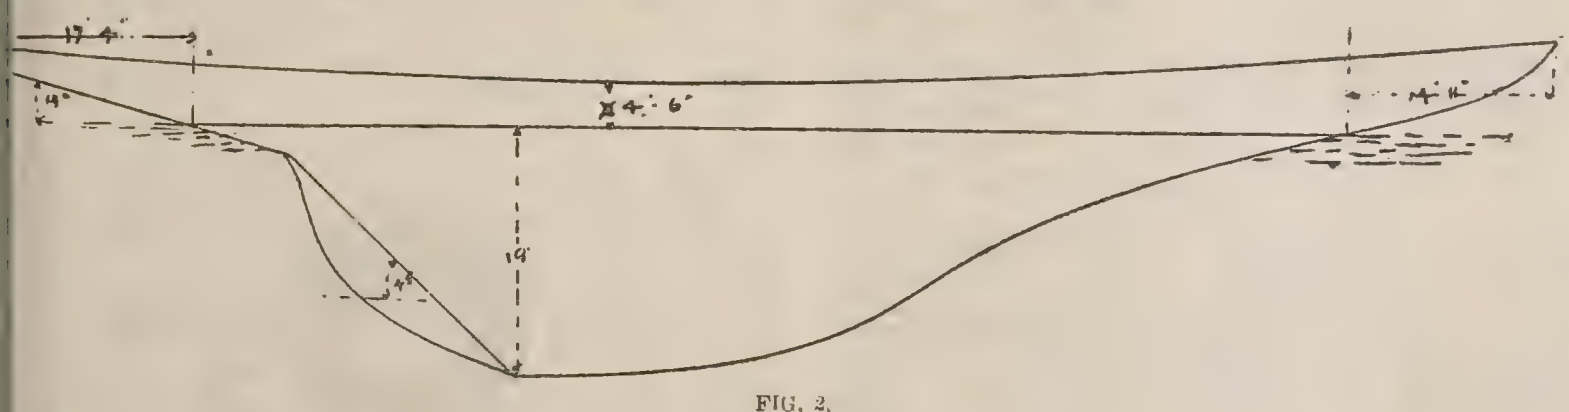

FIG. 2.

YACHTING NEWS NOTES

The Lawley & Son Co. has now under way a new Buzzard's Bay knockabout for Joshua Crane, Jr., from designs by B. B. Crowninshield. She will be 32ft. 4in. over all, 21ft. l.w.l., 9ft. 2in. extreme beam, 8ft. 8in. l.w.l. beam, 3ft. 5in. draft, with a knife centerboard housing in the keel. The construction will be specially light, with bent main keel 2½in. deep, steamed frames each in a single piece from wale to wale. Amanita, as she will be called, the name of a poisonous mushroom, will swing an English lug mainsail, made by Lapthorne & Ratsey; trying this in alternation with the ordinary gaff mainsail. She will be in all respects as much of a racing machine as the class restrictions will permit.

Capt. H. J. Copley, of Oshkosh, Wis., has in hand an order for a schooner for W. C. Reinig, of Fond du Lac, to be 65ft. over all, 45ft. l.w.l., 16ft. beam, and 4ft. 6in. draft, including an iron keel. Capt. Copley will also build for C. A. White, Fond du Lac, a 21ft. l.w.l. sloop of 9ft. beam and 2ft. 6in. draft, including an iron keel.

The steam yacht White Ladye, well known in this country through her several visits when under charter to the late Ogden Goelet, is offered for sale at auction by Messrs. Thompson & Campbell, in London, on Nov. 24. The firm has issued a most elaborate catalogue of the yacht, giving arrangement, plans and complete inventory.

A meeting of the New York Y. R. A. was held on Oct. 15 with Com. Prime in the chair. The report of the regatta committee on the Labor Day regatta was presented and accepted. The Jersey City Y. C. was dropped from membership and the Nyack Y. A. was elected. Capt. Joe Ellsworth was elected a delegate to the meeting of Oct. 30.

The Penatoquoit Cor. Y. C., of Bayshore, L. I., is preparing to establish a one-design class of skipjacks, from a design by C. G. Davis, to be 13ft. 6in. over all, 4ft. beam, with 144sq. ft. of sail. It is expected that eighteen boats will be built.

The Philadelphia Y. C. proposes to establish a one-design class of 20ft. yachts, and they will probably be built by Thomas Webber, from a design by C. G. Davis. The dimensions are: 26ft. over all, 17ft. l.w.l., 8ft. 6in. beam, 1ft. 2in. draft of hull, sail area 525sq. ft., with Tobin bronze board of 300lbs. weight. They will also carry an outside lead keel of 1,000lbs. The club has just secured from the U. S. Government a lease of six and one-half acres of land on Tinicum Island in the Delaware River, where it will establish a station, with railway, etc.

The fifth annual meeting of the Lake Sailing Skiff Association of Lake Ontario was held at Hamilton on Oct. 16 with Pres. World in the chair, the delegates being: G. R. Judd, J. H. Fearnside, R. H. Y. C; F. E. Walker, G. F. Birely, V. Y. C.; Messrs. Riley and Whinton, National Y. and S. C.; D. World, R. T. S. S. C. The Parkdale S. C was admitted to membership, with R. Osborne as delegate. The limit of membership for clubs eligible to the Association was made fifteen, instead of twenty. It was decided to extend the beam measurements in the different classes as follows: 20ft. class, not less than 5ft; 18ft. class, not less than 4½ft.; 16ft. class, not less than 4ft. This amendment not to be retroactive. It was decided to abolish allowance in the different classes. An amendment was passed providing that a skiff must not go out of her own class, except in cup races, when there will be a class allowance. A committee was appointed to arrange about a presentation to the president and secretary for their past services. The following officers were elected: F. E. Walker, Hamilton, pres.; G R. Judd, vice-pres.; L. J. Levy, sec'y-treas.; Executive Committee—G. R. Judd, G. F. Birely, R. T. Cuff, W. A. Watts, T. Riley. Pres. Walker donated a cup to be competed for annually by all classes. After the meeting the delegates were entertained to dinner at the St. Nicholas Hotel.

Last week the yachting community suffered a loss through the death of Mr. T. B. C. West, who has been a most ardent yachtsman since he first took up the pastime twelve years ago. Among the many successful craft which Mr. West owned and raced, two stand out prominently—the 10-tonner Queen Mab and the 40 rater of the same name, and the almost phenomenal success achieved by this pair was only approached by the fine performances of his 40-tonner May. All his racing craft came from the board of Mr. G. L. Watson, and at the time of his death he owned the once famous cutter Vanduara, now known as the Madrigal, and which still looks a smart and modern craft, though it is seventeen years ago since she left the stocks. Mr. West was an active and liberal supporter of every movement connected with the improving of yacht racing, and, as a proof of his being a practical sailor, he held a master's certificate, and was the author of various charts.—*Field, Oct. 16.*

H. C. Wintringham, the yacht-designer, who has designed several large tugboats which have proved very successful, has in hand a new tug 162ft. long, 29ft. 4in. beam, and 19ft. 3in. depth, to be named Gypsum King.

On Oct. 18, the schooner Belle, owned by Edward Coles, of New York, while bound from Huntington Harbor for Bridgeport, about 11 P. M., struck some floating object and made water rapidly. With Capt. Fred Stillman and a seaman, was Mr. John Damers, of New York. The three launched the yacht's yawl just before the vessel sank, somewhere in the middle of the Sound between Eaton's Neck and Sheffield Island. As there was half a gale blowing, they had a very serious time of it before reaching South Norwalk at 5 A. M.

A special meeting of the Atlantic Y. C. was held on Oct. 19 at the Waldorf, with Com. George J. Gould in the chair. The report of the special committee was received, and plans were accepted for a large new club house, work on which will be commenced shortly on the club's new property at Sea Gate, Norton's Point.

Canoeing.

American Canoe Association.

WITH the meeting of Oct. 16, the A. C. A. starts on its nineteenth year under conditions which are very plainly shown by our report of last week. While there is not the old-time enthusiasm for either the Association or for racing that its friends would like to see, at the same time it is on a very satisfactory financial basis and has an active and enthusiastic board of officers and a good working membership. The probabilities for the near future are that this membership will increase, and that the meets will continue with an attendance of at least 200 persons, and with a fair amount of general racing, but little keen competition for the principal prizes.

The question of site, in spite of all opposition, settled quietly down to the immediate vicinity of Grindstone; no other location was seriously considered. The Association has traveled about a great deal, it has tried both Lake George and Lake Champlain a number of times, and the general feeling is against a return to either place. The strongest advocates of the lakes this year were from the Eastern Division, on the score of convenience and expense to them; but the fact is, the Eastern Division has been conspicuous only by its absence at the Champlain meets planned specially for its benefit—even in its own particular year it mustered but a corporal's guard, and it sends more men to a meet on the St. Lawrence River than it does to Lake Champlain. The trip from Boston to Clayton is a tedious one for the Eastern men—not only expensive, but troublesome in the night changes of trains—but for the other three Divisions the St. Lawrence is far more convenient. Even the New York men find that the odds in time and expense between Clayton and Plattsburgh are not worth considering.

While there is quite a strong feeling against going repeatedly to the same spot or the same general locality, it has not manifested itself positively in the proposal of any new and promising location; this feeling, in connection with the turn of the Atlantic Division, has produced nothing more than a vague mention of Port Jefferson, on the Long Island shore, as a site for a second salt water meet; a place that is practically accessible only by canoe or special steamer, there being no regular rail or steamer communication worth speaking of. The proposal to discuss sites in the Atlantic Division met with no response.

The fact is that the site question has been reduced to very

narrow limits; Lake George, with its hotels on every hand, its hordes of professional tourists and its squally winds, offers few inducements, besides being so well known to many. Lake Champlain offers broader waters and better winds, with chances for the desired degree of seclusion and isolation, but the proximity of the Adirondack Mountains makes the climate damp and uncertain. The idea of a meet on salt water is approached with apprehension by every executive, after the successful failure at Jessup's Neck, it is felt to be a very risky experiment, as canoeing is to-day. Such a locality as Chesapeake Bay, however promising, is too far from the practical center of the Association. If there are other practicable localities as yet unknown, such as any of the inland lakes of New York, the sooner they are discovered and introduced to the attention of the Association the better.

The St. Lawrence River is likely to be the scene of the majority of A. C. A. meets in the future, but even there the advance of civilization has been strongly marked since the first Grindstone meet of 1884. The available localities are even now limited; and whatever the opinion may be as to the desirability or the reverse of a permanent camp site owned by the Association; and of the continuance of the avowed policy of the past, to have no permanent connection with any one locality or particular place, but to change each year; the requirements of common prudence indicate the desirability of speedily securing a site, if one be still available, that the Association can control positively for the future.

As between Grindstone and Stave Island, the real choice this year, we have frequently discussed the good and bad points of both. The camp site of 1889, on Stave Island, selected for the meet of 1898, was with one exception the worst on which an A. C. A. meet has ever been located. A different arrangement of the camp will be tried this coming year, and some of the old drawbacks, such as the absence of a camp dock and the long walk through the fields from the landing to the camp, will be removed. At the same time, speaking from our recollection of 1889, the location has other serious objections which cannot be remedied.

One of the most important pieces of work which comes before the annual meeting is the amendment of the racing rules; and this work can never be done at one meeting alone, much less in the two or three hours at most that can be spared for it out of a busy day. In order that the work shall be satisfactorily done, two things are necessary: In the first place, the racing men, or those interestsd in the racing rules must exert themselves in advance in studying the subject of amendments, in discussing it with others, and in framing amendments in exact and definite language. From the racing men, above all others, the suggestions for the amendment of the racing rules must come; and if they neglect the matter they can rightly find no fault with such action as may finally be taken.

In the second place, the proposals, as they come from different quarters, must be carefully considered and caucussed by some committee, being put in final shape and so presented as to be taken up, discussed and voted on in proper order. Unless this is done, the time of the executive committee is wasted in pointless and fruitless discussion.

The constitution of the Association designates as the proper persons for this task of preparing and presenting the amendments the retiring regatta committee, a body that is presumably, by virtue of a year's experience, fully competent to deal with all such matters. It has been contended at times that the incoming committee was the one to do this work, as it would be charged with the carrying out of the rules; but against this is the plain fact that the new committee has just been elected and seldom organizes before the executive committee meeting, its troubles (let us hope, its joys as well) are all before it, and unless it be composed of men who have previously held the same position, it has not the experience of the old committee.

The work of preparing the amendments being completed, the constitution further says that the report of the committee, embodying all changes and suggestions, shall be published in the official organs of the Association at least two weeks in advance of the meeting. It is then, on the basis of this publication, the duty of the members of the committee to make themselves familiar with all matters which will come before them for action, in order that discussion may be condensed to the main points and only the best action taken.

This year, as is almost invariably the case, nobody did anything in advance of the meeting. Such proposals for amendment as were made were nearly all in crude shape, and amounted to little more than mere suggestions, requiring careful work on the part of some one familiar with all the points involved before they could be submitted to the vote of the executive committee. A number of them were published well in advance, but apparently attracted no notice from those directly interested in them. The regatta committee declined to express any opinions, and simply dumped them down *en masse* on the executive committee. The only wonder, under the circumstances, is that any amendment was adopted, and that the entire undertaking was not a failure.

The limitation of war canoes proved to be a fruitful bone of contention, both parties apparently having a valid ground of argument. The proposal of the Northern Division, for a length limit of 35ft., was made public at the meet, and it should have been discussed by the advocates of the 30ft. limit during the intervening two months, and some amicable arrangement reached with the other side. Instead of this, no notice was taken of it until the afternoon of the meeting, when it was met with a hearty onslaught from the advocates of the 30ft. canoes. That a basis of compromise was finally reached after valuable time had been wasted, was due to the efforts of those not directly interested in the question, the commodore and others.

The one direct and specific proposal before the meeting for the amendment of Rule I. was published in the FOREST AND STREAM a month in advance, and special attention was then called to it, with a request for objections and discussion. In spite of this notice, it was quite evident that some who opposed it had never read it through and did not understand what they were arguing against.

The rule as it now stands seems to embody the gist of the sentiment expressed during the year as to amendments. The sailing canoe is still limited to 30in. extreme beam, as before, no proposal for the enlargement of this limit having been made. Canoes of less beam may enter the sailing races, as before, but none are likely to. A greater beam may be taken, in a specified ratio, by decreasing the length from 16ft.

In the paddling races no canoe of under 30in. beam (with ½in. allowed for variation in building) may enter, but canoes of over that beam may enter, as practically they could in the past in a certain case (if less than 16ft. length). Now any canoe not over 16ft. length and under 30in. beam may enter, but of course a man who elects to paddle a 33 or 36in. canoe against one of 30in. cannot expect to win much but hard work.

The most important of the various amendments was that restricting the trophy race to service canoes. The arguments against this were well set forth in the two letters published last week from Detroit, copies of which were sent in advance to every member of the committee. Some of these arguments, or rather insinuations, were in bad taste and unfounded in fact, but that has nothing to do with the case. Granting that the main arguments, as to the usage in sports at large, and rowing in particular, were well grounded, there is still another side to the question, with which the A. C. A. is directly concerned. It has for years given full scope to the wishes of the paddling racers, and has kept all limits off the canoes in the trophy race, and at times in other important races also. This has been done largelv in deference to the demands of the Northern Division, which has always led in the paddling, and which has claimed that the Association should recognize the racing shell paddling canoe, and establish records of times.

The result speaks for itself; the character of the competition, the attendance at the meets, the number of competitors and the nature of the racing machine itself, have all fallen far below what might have been expected. Some of the canoes produced for this competition have been the flimsiest of traps, fairly falling to pieces under working strain; the trophy has gone begging with but one contestant at the line; the men who have won it once have taken no interest in the Association or the camp at any time, and none in the trophy after their names were once on it. We can say without hesitation that the racing-shell canoe, after a full ten years or more of trial, has been a complete failure.

The new amendment by which the regular A. C. A. limits extend to the canoes in the trophy race is designed to encourage the entry of good service canoes. Like every other rule of racing it will be evaded to a certain extent, and it may even fail entirely of its purpose, as other good rules have; but on the other hand it will for a time at least give a fair fighting chance for the trophy to any good man in an honest service canoe, of not under 30in. beam nor under 45lbs. weight of hull with 5lbs. of ballast. It would certainly seem that under these restrictions there exists little inducement to build anything flimsy and unduly fragile, while the provision as to beam measurements tends to prevent a V-shaped shell.

The war canoe question has been settled by a compromise by which the length of new canoes is limited to 30ft., that of many existing ones in the Eastern Division, while the old 35ft. canoes in the Northern Division will still be free to enter. There is no special injustice in this, as it has been the custom to race together any and every size of so-called "war canoe" from 20ft. to 35ft., as occasion demanded. The strong rivalry of the Divisions awakened this year should lead to some good racing at Stave Island. It may be that there will be several of each size of canoe present, so that races between boats of the same length may be possible. For Association racing, at least, where facility of transportation counts for so much, the 30ft. canoe is by far preferable.

An English View of American Canoeing.

From the Field

WE are never surprised to see, but indeed always expect to see, the acme of common sense in the editorial writings in relation to canoeing in the American FOREST AND STREAM; and we personally know the editor as a practical canoeist and an expert naval architect. It is, therefore, with the greatest interest that we have overhauled his review of canoe racing in America for 1897, five columns in amount, in the FOREST AND STREAM of Sept. 18. He gives valuable criticism on canoeing as it exists, he states the cause of its late down trending in plain words, and he forecasts distinctly that a period of renewed prosperity is before the American Canoe Association.

There are, however, many points in the FOREST AND STREAM article which are of the utmost importance to English canoemen, or at least to such of them as have the whole sport of canoeing at heart, rather than the personal conveniences of a small local group of canoemen, and we will mention those points. But, on the other hand, we are somewhat surprised that America, usually credited with go-ahead notions and prompt action toward improvement is actually lagging behind English action, and apparently about to plunge into another season, 1898, with admitted faults and no attempt made to remedy the evil.

We should have thought that, with the experience of the 1897 season's racing in England before them, the American legislative body would, at any rate, have placed on the agenda paper, for the meeting on Oct. 16, motions for the discussion of the question of the adoption of some scheme similar to the English two-class classifications, which have proved so successful in reviving canoe racing this season in England; but not a suggestion appears as yet to in any way check that devastating pestilence, the racing machine. The action taken in the Royal C. C., when experience showed beyond doubt that the racing machine was to a grave extent damaging the general prosperity of the sport, was most thoroughly fair to both sides; the racing machine was not to be killed, or even curtailed or limited in any way as to its classification rule; but it was henceforth to share the enjoyment of the racing, challenge cup and all, with a larger and more powerful class of useful canoe, which in its turn was to be carefully restricted and limited so as to prevent its harboring or encouraging a useless type of canoe racing machine nature. Now the racer and the cruiser thus put to sail together have so evenly divided the racing honors this season that those who have sensible heads can plainly see that it is no longer absolutely necessary to have a racing machine for the enjoyment of racing. They race together, and the first in wins first prize, and the second prize goes to the first canoe in of a different class to the first in. It so happens that a "cruiser" has thus far won a majority of the season's races, but a racer has won the important cup race.

The result of any change must be gradual where a sport is tackled at rather low ebb, but revival of canoe sailing is undoubtedly going on, and the entries for the autumn races, commencing to-day, show a marked increase, and the increase is nearly all on the large, useful canoe side. The Royal C. C.'s rules of classification for the two classes of canoes have been most carefully thought out, and as they at present stand, the one produces an out-and-out racing machine and the other, the cruising class, produces a comfortable, roomy canoe, capable of almost any work that a canoe can be put to in cruising, and at the same time a canoe equally successful at racing with the up-to-date machine, sailing level, that is, without any time allowance or silly handicapping, and after experience of the working of the rule, now thoroughly well tested, we are of opinion that there is not a word or dimension in the cruiser rule of classification which needs alteration or can be safely or usefully altered.

Turning now to the article in FOREST AND STREAM, the causes contributing to the late low-water state of canoe racing in America are ably set out, and after mentioning many side shows, such as golf, cycling and small-rater sailing, which have no doubt drawn men away, the article goes on to describe the unhealthy state to which canoe sailing itself has drifted, thus: "It is no wonder that there is so little interest in the trophy and the unlimited sailing races, as the successful canoe in this work must be a fearful and wonderful machine, comparatively costly, only to be obtained by hard work on the part of her owner, and of no use whatever except for a few days' racing at the most." Of course, that is exactly the case so long as there is only the racing machine class allowed in the competition, but if a carefully guarded class of cruising canoes were allowed to sail for the trophy, on a level footing, no time, no favor, with the machines, would not the entries and the interest immediately jump up, just as they have done in England? And one step further: if those races could once again be internationally contested, as in 1886 and 1887, would not the competitors and the campers be trebled from that cause alone? And once the ball of keen rivalry is set rolling anew it would take a lot of stopping.

But the rules of the two countries as to classification differ so widely in each class that there is absolutely no chance of any English canoeman putting himself exactly in the hole mentioned in the lines we quote above. We would not go the length of suggesting to America that she should exactly copy the Royal C. C. classification rules, though we doubt not it would have a grand effect toward the revival of her canoe sailing, and that it would at once open the door to further international racing; but we can easily go so far as to suggest that the Canadian canoe clubs, and which form a branch of the American association, should consider the matter, and if necessary adjourn the A. C. A. meeting on Oct. 16 for the further consideration of the classification question. The Canadian clubs would more properly follow the lead of their parent English club, and no doubt an application from Canada to remodel the classification would be successful and be accepted by the American divisions.

FOREST AND STREAM unfortunately holds the opinion that "the present A. C. A. rules in the main are very satisfactory; the great trouble is that men will not build and race under them." Well, the probability is that it is just the unsatisfactory state of the rules which puts men off building or racing in America as it did in England. The sailing canoe, if not built too small, crank and flimsy, and not too large, heavy and unportable, can completely furnish the acme of single-handed sailing; the canoe can safely do all the sailing cruising which a single-handed small yacht usually performs; and from the portable side of the question, she is far easier to transport, to house, and to move under manual labor; and, finally, her cost of production and maintenance is about half that of the small yacht or sailing boat.

In the modern cruising canoe it is easy to sail two people, and, if necessary, to carry camp gear for two; and further than this, two men can strip the boat of her gear and carry her any short distance, as is often requisite during a lengthy cruise. As to the canoe-yawl or the small yacht, the latter quality does not exist. The class gives a good all-round sailing canoe, almost as securely safeguarded as a "one-design one-class" rule could supply, but with freedom as to model and improvement of rig and fittings which that straight-jacket the "one-design" class prohibits.

British Canoe Association.

THE officers of the British Canoe Association, elected at the annual general meeting at the camp, Dromineer, Ireland, on July 26, are: Com., T. H. R. Bartley; Vice-Com., Ernest Kipling; Rear-Com., A. E. Wale; Hon. Sec'y-Treas., George Huntley, Redheugh Bridge Works, Gateshead-on-Tyne, Eng.; Hon. Auditor, R. M. Richardson. Three localities have been suggested for the 1898 meet—Kerrara Island, Oban, Scotland; Sneekemeer, Freesland, Holland; and Mulroy Bay, N. W. Ireland. Sneekemeer was the favorite in an informal voing in camp, but the final decision will be made by the general committee prior to March 31.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Calumet Heights Rifle Scores.

CHICAGO, Ill., Oct. 17.—Below are the scores made to-day at the regular weekly rifle contest of the Calumet Heights riflemen. The wind blew strongly from the left quarter and the sky was overcast. Scores:

Oct. 20:

Davis	2318256867—48	Paterson	2439525040—34
Norcom	0000021141— 9	Whitman	1506030961—34

On Oct. 3, with a clear sky and light wind, the following scores were made:

Men's contest, 200yds., off-hand.

Harlan	4	4	9	3	3	9	5	4	5	6—52
Booth	2	5	2	1	2	4	6	5	6	3—36
Davis	3	6	5	7	5	6	4	7	7	3—53
Hobbs	5	4	7	10	5	5	9	4	4	8—61
Schmidt	3	5	3	10	0	1	4	5	5	2—38
Norcom	0	2	8	2	2	7	4	1	3	1—30

Ten shots, 100yds., ladies' medal contest:

Mrs Schmidt ..... 3435353730—36

A. C. PATERSON.

Pittsburg Rifle Shot.

PITTSBURG, Pa., Oct. 23.—Inclosed you will find a target which was shot by Mr. Harry Sperling, it being the cleanest score made during the tournament at the recent Exposition here. Mr. Sperling shot exceedingly well, considering the disadvantage that he had: his rifle was accidentally let fall, which in some way injured the firing pin; and I venture to say that he would have given them all a good race had this accident not happened.

In the shoot-off between Phillips and Ingersoll of 25 shots—5 on each

MR. SPERLING'S SCORE: 10 10 10 10 10—50.

score—Mr. Phillips accidentally shot in the wrong target, making a dead center, but lost the shot and medal also, which you will see by his score.

I send you the following record of the shooting contest held for one week at my shooting gallery in the Pittsburg Exposition:

C P Mayer	100	100	100	100	100—500	W B Pierce	95	95	95	95	94—474
R F Phillips	100	100	100	100	99—499	Mr Lyon	96	95	94	94	93—472
F Ingersoll	100	100	100	100	99—499	Mr Stoner	93	93	93	93	92—464
H Sperling	99	98	97	97	97—488	Mr Calvert	96	94	91	91	90—462
Galbreath	97	97	96	96	96—482	Mr Dimling	93	92	92	92	91—460
DocEweng	97	97	96	96	95—481	W C Bedell	91	89	83	87	85—440
Capt Staib	96	95	95	95	94—475	L A Smith	87	84	81	81	77—410

Three very fine medals were awarded to the best marksmen making the best score out of a possible 500 points, under the following conditions: Off hand, distance 50ft., 22cal. rifle, any weight of rifle and trigger pull allowed, any sight except telescope sight permitted; the standard target used, 10 shots to a score, best five scores to a count

The first prize was given to C. P. Mayer. The second prize was a tie between Mr. Ingersoll and Mr. Phillips. The third prize was given to Mr. H. Sperling. The tie for second was settled by shooting 25 shots apiece, the score being as follows:

Ingersoll.....48 47 49 46 49—239 Phillips.....38 49 50 50 50—237

J. F. SLAPNICK.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 6.—CHICAGO, Ill.—Gilbert-Elliott match for the Kansas City *Star* cup.

Nov. 6.—PHILADELPHIA, Pa.—Seventh monthly contest of the Philadelphia Trap-Shooters' League, under the auspices of the Silver Lake Gun Club. Coaches meet cars from the city at Second and Mifflin.

Nov. 16-19.—DES MOINES, Ia.—Tournament under the management of Mr. W. E. Kessler. First two days, open to amateurs only; last two days, open to the world. Added prizes each day. Live birds on the afternoons of Nov. 17 and 19. For programmes address W. E. Kessler, 1105 Maple street, Des Moines, Ia.

Nov. 25.—BUFFALO, N. Y.—Thanksgiving Day tournament of the Bison Gun Club. Sweepstakes and merchandise events. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo, N. Y.

Dec. 8-10.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Dec. 10. Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Nov. 30, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y

1898.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Mr. Royal Robinson, secretary of the Limited Gun Club, Indianapolis, Ind., writes us that his club will hold a live-bird tournament Dec. 8-10. On the first day there will be four events at 20 sparrows, entrance $6 in each event, including sparrows. Class shooting; 10 per cent. of the net purses to be paid as average money to the five high guns shooting through the four events, 30, 25, 20, 15 and 10 per cent. Balance of each purse to be divided 35, 30, 25 and 15 per cent. On the second day there will be two events: No. 1, 7 birds, $7, birds included; No. 2, 10 birds, $10, birds included. Divisions of each purse will be to the five high guns, 30, 25, 20, 15 and 10 per cent. Third day: the Grand Central Handicap, 25 pigeons, $25, birds extra, $10 payable on or before Nov. 30, post entries $30. Distance handicap 25 to 32yds. It matters very little whether the Limited Gun Club's tournaments are at targets, sparrows or pigeons. The boys know that the appointments at the club's grounds are just about perfect, and that those who attend the tournaments are well looked after by the members of the home club. Mr. Royal Robinson, too, is a hustler, and has a personality that helps a great deal when he undertakes the task of drawing shooters together. The shoot next December should be a lively one.

The exhibition given at Kansas City, Mo., on Friday last by Fred. Gilbert and Jim Elliott was a most remarkable one. A total of 249 out of 250 shot at, only 1 bird getting away (although 6 fell dead out of bounds) is something we are not likely to read about again for some years. Gilbert's pluck in plugging away when everything was going in favor of Elliott fully deserved the victory he won. Elliott was straight up to the 80th round, while Gilbert had 3 dead out of bounds. Still, Gilbert did not give up, and the unexpected happened. Elliott lost his 80th, following it up with two more losses, his 91st and 96th, both dead out of bounds. This made them a tie, as Gilbert was still killing them all. At the 100 mark they were tied with 97 each. The shoot off was most exciting. Both men killed straight up to the end of the 23d round. Then Elliott had the misfortune to see his 24th bird go out of bounds before falling. Gilbert killed his next 2 birds and won by 1 bird in a race of practically 125 birds per man. Who says that Gilbert has no nerve? Also, who says that he has no cups? The E. C. championship cup at targets; the Kansas City *Star* championship cup at live birds, and the Du Pont championship cup at live birds. Meanwhile the Cast-Iron badge and its honors remain "outer sight."

Last week we made a note in Drivers and Twisters concerning Mr. Higgins, the secretary of the Laflin & Rand Powder Co., and his intentions of doing up Ed Taylor on targets. It now looks very much as if Mr. Higgins meant what he said when he made the declaration referred to. On Thursday last, Oct. 21, Mr. Higgins and Mr. Rasmus, the latter a member of the Crescent Athletic Club, of Brooklyn, N. Y. (of which club Mr. Higgins is also secretary), went down to Bay Ridge for a little practice at targets. They took Old Reliability along with them to act as a coach. Prior to commencing work, Mr. Taylor made the following speech: "Gentlemen, the targets are flying nicely; your guns and ammunition are of the best; the day is perfection. You will now break targets, or take to the water." A recent interview with Ed Taylor has elicited the fact that he does not believe either Mr. Higgins or Mr. Rasmus can swim, judging from the way they went after the targets. He also informed us that neither party will get any further coaching from him. It looks as if he was "skeered."

Arthur Bunn, proprietor of Bunn's Hotel, Singac, N. J., has the reputation of furnishing some of the fastest birds in the country. Although we have never been able to get to Singac when one of Bunn's handicaps was set for decision, we have heard a great deal about the class of birds provided. We have noticed also that percentages are never very high, even when the best shots stack up against the Singac birds. In connection with the above, we would say that Arthur Bunn announces a handicap, 25 birds, $10, birds extra, for Thursday of this week, Oct. 28. The hour set for commencing the event is 12 sharp. Trains leave Chambers street for Little Falls at 10:30 and noon; or shooters can take the trolleys from the Erie depot in Paterson direct to Singac.

A dispatch from New Haven to a city daily, dated Oct. 15, gives the following information in regard to the intercollegiate trophy: "The shoot to decide whether Yale or Princeton shall keep the intercollegiate trophy will be held this autumn at the grounds of the New Haven Gun Club, or at Baychester, N. Y., on a date yet to be decided. The trophy was offered on the condition that it should become the property of the college that first wins it three times. Yale and Princeton have each won it twice, and the place of the deciding shoot was left to Yale. Harvard has won it once. In this dual shoot each man on the team of five will shoot at 60 birds, instead of 30 as in the regular shoot. Preliminary practice for the trials to determine the make up of the Yale team will begin the first of next week."

Charleston, W. Va., is to have a shoot on Thursday of this week. The programme consists of ten 15-target events, $1 entrance, with three moneys under twelve entries; four moneys, twelve entries or more. There will also be an extra event at 25 targets, $1 entrance, with a Winchester repeating shotgun as the prize; it takes ten entries to fill this event. A handicap is attached to winning first money in any event. The programme states: "Winners of first money shoot from two known (?) traps, known angles, in next event." The shoot will be managed by Dr. John Bishop, of Charleston, and by J. L. Pentz and Dr. T. C. Stotler, of Harper's Ferry, W. Va.

C. C. Beveridge, the "dominie," shot like a crackerjack at the Brooklyn Gun Club last Saturday afternoon. He broke 25 straight in the club shoot, and then ran another 24 straight before he missed. A run of 49 straight on the grounds of that club, stamps the "dominie" as something rather warm.

The Baltimore Association's tournament, Oct. 19-22, was a pleasant gathering. Somehow these Baltimore shoots are always enjoyable; the grounds are not so very accessible, but once there, everything is very comfortable, and the Baltimoreans make you feel at home every time.

We heard of Old Hoss last week. It seems that the Flicker's Nest, Hoss's sanctum, is just the same as ever. When we saw it last it was full of curios and things; among the latter were several medals that Hoss won a few years ago when he, Jim Crow and Elmer Shaner were the crackerjacks of Pittsburg. Old Hoss has expressed his determination of being present at the next Grand American Handicap, and promises to be the first *bona fide* entry on the list. "I want to make a new record," said he; "I want to be the first to enter, the first to shoot and the first to be out of the race. If they'll let me shoot first, I can easily make the record, and it'll be a hard one to beat."

The seventh monthly shoot of the Philadelphia Trap-Shooters League will be held Nov. 6, on the grounds of the Silver Lake Gun Club, Point House road and Pennsylvania R. R. Co. Two sets of expert traps will be used. Sweepstake shooting commences at 10 A. M.; team race at 2 P. M., sharp. The grounds can be reached from the Pennsylvania and the Reading railroad depots by taking Market street cars to Second; down Second to Mifflin, where coaches will convey shooters to the grounds. Coaches leave Second and Mifflin at 9:30, 10:30 and 11:30 A. M., and at 1, 1:30, 2, 2:30 and 3 P. M. The sweepstakes are open to all.

The programme for the Itasca Gun Club's tournament, Oct. 29-30, was received too late for us to give any extended notice of the same. From the list of merchandise prizes offered for competition, it looks as if the shoot ought to be a success, if "plunder" is any sort of a drawing card in the vicinity of Grand Rapids, Itasca county, Minn. Professionals being barred, the amateurs cannot have any kick coming if they don't all get that they want. The purses will be divided into four moneys under the Rose system.

The Glenwood Gun Club, of Newburgh, N. Y., is a lively young organization, and manages to throw a lot of targets nowadays. On Oct. 14 it held a shoot on its grounds, the main event being a handicap, the number of targets allowed ranging from 25 to 40. There were twenty-eight entries in this race, the prizes being merchandise. A total of twenty-eight shooters is something for any club to be proud of getting together as things are now. Jesse Rhodes, of Fishkill Landing, N. Y., led the band with 28 out of 33.

Another programme that arrived too late for any advance notices was the one prepared for the tournament of the Maple City Gun Club, Norwalk, O., Oct. 27-28. At this tournament the old percentage system of dividing purses will be used, and "droppers" will forfeit their entrance fees. All targets at this tournament will be thrown from a magautrap, and will consequently be bluerocks.

Noel E. Money, secretary of the American E. C. & Schultze Powder Company, Limited, sailed for England on Wednesday last, Oct. 20. He expects to be away until after Christmas, and will put in a good part of his time renewing his acquaintance with English partridges and pheasants; he will also manage to take a day or two now and then with the hounds. He is, in short, taking a well-earned vacation.

Harry Thurman and Vandergrift shot a tie race for the Keystone Shooting League's trophy on Saturday afternoon. On the shoot off Father Time won, Vandergrift failing on one of his five tie birds. The club shoot is at 10 birds. Among those who took part as guests of the club were Will King, Bessemer and McPherson, of Pittsburg, Pa. Between them they scored 28 out of 30 shot at, McPherson, who was far from well, dropping both the lost birds.

We learn from W. H. Huck, secretary of the New Jersey State Sportsmen's Association, that the tie between the Boiling Springs Gun Club's No. 1 team and the East Side Gun Club, of Newark, will not be shot off this week, as originally announced. The postponement is made necessary by the absence of one of the members of the Boiling Springs Club (Noel E. Money) in Europe.

W. H. Wolstencroft, of the Keystone Shooting League, Holmesburg Junction, Pa., retains the title to the Austin expert rules cup won by him on Labor Day at Marion, N. J. The race on Saturday was a run away affair; Wolstencroft scored 83 to his opponent's 67. We won't say who his opponent was just at present.

Elmer Shaner and "Our Jim Denny's dog Rupert" are now out in the fields and woods making it warm for quail and ruffed grouse. It isn't often Elmer gets a chance to steal away from the Smoky City, but he does it as often as possible.

With four days in Baltimore last week, and one in Philadelphia, Drivers and Twisters are likely to be scarce this week. Not but what there were plenty at Baltimore; there were—and several of them got away. Likewise a few at the Keystone Shooting League's grounds on Saturday!

Rolla Heikes is certainly a wonder. He not only made high average on both of the target days, but he made a record of 71 out of 72 on the two live-bird days. On targets, it was Heikes first and the rest nowhere, when it came to figuring up the general averages.

The Brooklyn Gun Club's field day next Thursday, Oct. 28, promises to be a pleasant affair. John Wright says that everything will be done to make the boys have a good time; and when John says so—it goes.

U. M. C., Jr., is the title now worn by John J. Hallowell. The mantle of U. M. C. Thomas has been left in Mr. Hallowell's charge during Mr. Thomas's absence in Europe.

The regular monthly shoot for the E. C. cup will take place on the grounds of the Bergen County Gun Club, Hackensack, N. J., Saturday next, Oct. 30, at 2 P. M.

U. M. C., Jr., is taking part in the tournament of the Rochester, N. Y., Rod and Gun Club this week. The dates of the shoot are Oct. 26-27.

OCT. 26. EDWARD BANKS.

Inter-Mountain Sportsmen's Association.

CRIPPLE CREEK, Colo., Oct. 18.—The first annual tournament of the Inter-Mountain Sportsmen's Association ended Saturday, Oct. 16. The tournament was held on the Cripple Creek Gun Club's ground, at Mt. Piska Park, which has an elevation of 9,918ft. above sea level. From this point you can get as good a view of the Rocky Mountain scenery as can be obtained anywhere; and also the wonderful gold fields of the district can be viewed with amazement.

We expected a large attendance, but were disappointed, as no State was represented except Colorado; and only a very poor attendance from it. Our Association includes Colorado, Utah, Wyoming, Arizona, New Mexico, Kansas, Nebraska and Missouri. We expected delegations of shooters from Ogden, Utah; Telluride, Colo.; and Leadville, Colo.; but owing to the snowstorm in the mountains they did not come. The grounds were fixed up in good shape through the untiring efforts of our committee, Messrs. Mason, Macaffree and Garrett, and everything moved along very smoothly, not excepting the bluerocks, which were thrown from a magautrap, and which were thrown hard.

First Day, Oct. 14.

The first day opened clear and pleasant, but with a strong breeze, which made the shooting hard. Funk and Mason were high in the average with 163 out of 180; West and Macaffree, with 160 out of 180. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12			
Targets:	*10*	*15*	*20*	*10*	*10*	*20*	*15*	*15*	*10*	*10*	*15*	*30*	Shot at.	Broke.	Av.
Funk	9	13	18	8	7	19	15	15	9	8	14	28	180	163	90.5
Mason	9	14	17	10	10	17	14	14	9	9	12	29	180	163	90.5
West	9	14	18	9	8	17	15	13	9	6	15	27	180	160	88.8
Macaffree	8	15	19	8	8	17	13	15	10	7	14	26	180	160	88.8
Garrett	8	12	16	9	8	18	15	13	9	8	13	29	180	158	87.8
Cawthorn	8	10	17	6	10	17	14	14	9	9	11	24	180	149	82.8
Mathews	8	12	15	9	6	18	13	11	7	7	..	..	131	106	80.9
Pickett	5	7	15	..	..	17	14	11	..	..	..	..	95	79	80.2
Elliott	..	..	9	9	6	..	11	10	..	9	8	..	80	62	79.8
Wilcox	6	12	11	4	..	13	10	..	..	..	..	..	90	56	62.2
Deibert	8	7	8	8	5	..	..	..	..	..	..	..	65	36	57

Second Day, Oct. 15.

The second day was very cold and disagreeable, with wind all day and snow in the afternoon. Nine men shot the day's programme. Funk took the lead to-day on high average with 164 out of 175; Mason second with 162; Macaffree 161. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12			
Targets:	*10*	*15*	*10*	*10*	*10*	*10*	*20*	*15*	*20*	*10*	*15*	*30*	Shot at.	Broke.	Av.
Funk	9	14	10	9	10	9	19	14	20	10	14	26	175	164	93.7
Mason	9	15	9	10	8	9	18	14	18	10	14	28	175	162	92.5
Macaffree	9	14	10	8	9	10	19	14	18	10	13	27	175	161	92.1
Garrett	8	13	10	9	8	9	19	10	17	9	15	26	175	153	87.4
Deibert	8	15	9	7	9	10	17	15	16	8	15	22	175	151	86.7
West	9	14	8	9	8	9	13	14	18	9	14	25	175	150	86.2
Mathews	7	13	6	9	9	8	15	13	19	8	14	25	175	146	83.4
Pickett	5	8	8	7	8	10	19	15	14	9	13	28	175	144	81.7
Cawthorn	10	11	6	8	8	9	14	11	16	8	14	25	175	140	80
Elliott	..	..	..	9	7	7	15	14	..	..	13	..	75	65	86.6

Third Day, Oct. 16.

The third day was a rough one, a heavy snow falling and blowing from the north, which hindered the shooters from making good scores. The snow fell all day and the air was very cold. Only six shooters reported on the grounds, although there were several new ones who came the night before, but thought the weather too bad to shoot. Funk and Mason tied again to-day with 131 each out of 145, Macaffree 130 out of 145, and Garrett 127 out of 145. Following are the scores for to-day:

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*20*	*15*	*10*	*10*	*10*	*10*	*20*	*15*	*20*	*15*	Shot at.	Broke.	Av.
Funk	17	14	10	6	10	10	18	15	19	12	145	131	90.4
Mason	19	14	7	9	10	9	18	13	18	14	145	131	90.4
Macaffree	16	14	9	10	10	8	16	15	17	15	145	130	89.9
Garrett	19	15	10	10	9	7	19	10	18	10	145	127	87.7
Deibert	14	13	10	9	8	10	18	12	19	13	145	126	87
Cristy	13	14	..	8	7	..	..	..	..	..	55	42	76.2

The Association had a badge made of Cripple Creek gold, valued at $50, to be given to the shooter making high average for the three days' shoot. This was won by C. L. Funk, of Pueblo, who led by 2 birds. Mason, of Cripple Creek, was second. Taking all in all, the altitude, weather, and the way the targets were thrown, the scores made were very good, although there were but four men who shot through the entire programme. Following are the scores for the three days and averages:

	1st day.		2d day.		3d day.		Totals.		
	Shot at.	Broke.	Shot at.	Broke.	Shot at.	Broke.	Shot at.	Broke.	Av.
C L Funk	180	163	175	164	145	131	500	458	91.6
W G Mason	180	163	175	162	145	131	500	456	91.2
D L Macaffree	180	160	175	161	145	130	500	451	90.2
J W Garrett	180	158	175	153	145	127	500	438	87.6

AN EXTRA EVENT.

After the programme was finished on the third day, Mason, Garrett and Frank shot a 100-bird match, winner taking the pot, loser paying for all birds. Following are the scores:

C L Funk.....1111111110111111101111111111111111011111110111111—46

CRIPPLE CREEK.

IN NEW JERSEY.

DAYTON VS. TRENTON.

Oct. 18.—In a recent match between ten men of the Trenton Gun Club and a similar number of the Dayton Gun Club, the Dayton team won by 24 targets. The match took place at Monmouth Junction on the grounds of the Dayton Gun Club. E. C. Hutchinson did the best work for Trenton team, breaking 25 out of the 30. F. Rose followed with 24, and Charles Allen with 23. C. McDonald and P. Emmons, of the Dayton, carried off the honors of breaking more than any shooter on either team, only missing 4.

Scores, Dayton vs. Trenton, 10-men teams, 30 targets per man:

Dayton Gun Club

EAST SIDE GUN CLUB.

Oct. 21.—Below are the scores made to-day at the regular monthly shoot of the East Side Gun Club. The weather was all that could be desired and the attendance was large, several visitors being among the crowd. The birds were A No. 1, and the traps were in splendid working order. In fact, everything passed off in a most satisfactory manner. At the conclusion of the shoot an excellent collation was enjoyed at Henry Henry's hotel. Scores in the live bird events were:

	No. 1.	No. 2.	No. 3.
Waldman	1012000—3	1012212—6	.....
Hassinger	2011221—6	1022221—6	110

SECRETARY.

Trap at Towanda, Pa.

TOWANDA, Pa., Oct. 14.—The live bird shoot held to-day at Ward's Shooting Park, was a great success, nineteen shooters taking part in the programme events.

The shooters were: H. Ripley, G. B. Tracy, G. H. Pumpelly, W. W. Borden, Geo. Wood, Zim Strong, Chas. Baylor, Mr. Day, of the Owego Gun Club; Dick Browning, Will Worthing and Frank Allis, of Rome, Pa.; Will Terrell, Orwell, Pa.; John Hamer, Dushore, Pa.; Chas. Armstrong, Canton, Pa.; Al Budd, Troy, Pa.; Fisher and Nelson Welles, Wyalusing, Pa.; Del. Higgins, Sayre, Pa.; Frank Kerrick, Durrell, Pa.; Brooks Kerrick, Asylum, Pa.; also Frank Montayne, Geo. McCabe, Willard Shiner, Jay L. Ward, Towanda, Pa.

The grounds are located two and one-half miles south of Towanda, on the bank of the picturesque Towanda Creek. The weather was fine and everything in apple-pie order when the 11 A. M. train arrived with the sportsmen. Immediately an event was arranged, with Frank Montayne as referee. It is a regular chestnut to say that the birds were good ones, but the scores will show that they were:

Nos. 3 and 4 were miss-and-outs.

J. L. WARD, WILLARD SHINER, } Committee.

Elliott's Challenge for the Du Pont Cup.

CHICAGO, Ill., Oct. 25.—*Special to Forest and Stream:* Elliott has challenged Gilbert for the Du Pont cup. The Kansas City men informally prefer the following schedule: Du Pont cup race, Chicago, Dec. 7; *Star* cup, Dec. 9; intercity team shoot, Dec. 10-11. This schedule is impossible, as the *Star* cup's time elapses on Dec. 7. Kansas City has listed fifty-six men for the inter-city team race; the committee meets at the Winconsin Club, Kansas City, on Wednesday evening to select twenty men out of the above fifty-six. The ten men to represent the city will be selected from the twenty just before a start is made for Chicago. A strong delegation is to come from Kansas City with the team.

E. HOUGH

1206 BOYCE BUILDING, Chicago.

The Baltimore Tournament.

THE tournament of the Baltimore Shooting Association, Oct. 19-22, was not favored with the best of weather. The first day, it is true, everything was about perfect, so far as weather conditions go; but the second and third days, and the forenoon of the fourth day, were enough to discourage anybody but the most inveterate trap-shooter. As a result, the tournament was a disappointment in point of attendance. The Baltimore Shooting Association added $150 a day on each of the two target days, and then added $200 in cash to the purse in a 25-bird race on the fourth day; this made a total of $500 added money. Yet the largest entry in any one event on the first day was thirty; thirty-three was the sum total of all the shooters on the grounds. On the second day there were twenty-four entries in events 9 and 10, twenty-six being the number of shooters who took part in one or more of the events on the programme. In the Maryland Handicap, the 25-bird event on the fourth day, to which the Association, as stated above, added $200, there were only twenty-four entries, just four more than were necessary to fill the *guarantee* of $500. With the $200 added, this meant $700 among the four high guns.

The figures given above show plainly that the Association did not meet with anything like the support that its generosity deserved. It seems hard to explain this apparent apathy on the part of the shooters. Was it the fact that all purses in the target events were to be divided under the old system of 40, 30, 20 and 10 per cent? Or was it because they figured out that the game would be a hard one anyway, the list of crackerjacks who were likely to attend growing daily, particularly in the imagination of the local reporters, or of their informants? Prior to the opening of the shoot, they had about every shooter of renown as either in town or on his way to Baltimore. Jim Elliott, Charlie Grimm, Fred Gilbert and a host of others were ready to make things hot for the boys. Did this keep the nearby shooters away? As a matter of fact

THE COMPANY WAS HOT.

There were Rolla O. Heikes, of Dayton, O., and Ferd Van Dyke, of Dayton, N. J., the representatives of the Winchester Repeating Arms Company, of New Haven, Conn.; John J. Hallowell, now known among the boys as U. M. C. Jr., representing the U. M. C. Co. of Bridgeport, Conn.; W. F. Parker, a member of the firm of Parker Bros., Meriden, Conn., and O. R. Dickey, a representative of that firm; E. D. Fulford and B Leroy Woodward, the latter from Campello, Mass., both of them shooting Remington guns; Capt. A. W. Money, of the American E. C. & Schultze Powder Company, Limited; H. P. Collins, the Baltimore and Southern States representative of the Du Pont and Hazard Powder Companies; T. H. Keller, representing the King Powder Company and the Peters Cartridge Company; Harvey McMurchy, of the L. C. Smith gun; Jack Fanning, the representative of the U. S. Smokeless (Gold Dust) Powder Co.; Sim Glover, shooting a Parker gun and Schultze powder; J. L. Brewer, shooting a Francotte and Schultze well to the front on the first day at targets, and on the last day at live birds; etc.

There were others, too, who helped to make it warm; Charlie Young, of Springfield, O., was among the number. Hood Waters and Hawkins, of the home club, ably seconded by C. A. Macalester and Hobbs, did much to sustain Baltimore's reputation. Billy Wagner was on hand the first day, coming over from Washington, D. C., to show the boys that he had not yet forgotten how to break targets. W. Allison, a member of the Hingham (Mass.) Gun Club, and G. W. Clay, of the Hill Top Gun Club, of Austerlitz, Ky., were also among the number of those who shot along through the programme. Col. J. T. Anthony, of Charlotte, N. C., one of the most popular trap-shootors in the country, and Col. Thos. Martin, of Bluffton, S. C., a close second to Col. Anthony in the race for the popularity medal, both arrived too late to shoot through every event; but it is safe to say that from the moment they struck the grounds, about 1:30 P. M. on the first day, neither the one nor the other allowed a single opportunity to go by them, whether it was expert rules, reversed pull, or miss-and-outs. C. B. Hutchings, of Galveston, Tex., an enthusiastic shooter, arrived on the second day, but had the misfortune to break his gun, thus depriving him of the chance of showing what he could do in the Land of the Terrapin.

As spectators on the last two days of the shoot, two prominent figures were Captain J. A. H. Dressel, of the U. M. C. Company, and Jno. L. Lequin, secretary of the Hazard Powder Company. Captain Dressel and Mr. Lequin are respectively the president and secretary of the Interstate Association. Additional arrivals for the last two days were Phil Daly, Jr., of Elkwood Park, and Walter Patten, of Pleasure Bay, N. J.; Messrs. Armstrong and Parke, names assumed by two prominent amateurs, were also on hand for the live birds. From Pittsburg, Pa., came J. E. Bessemer England, W. S. King and Sandy McPherson, otherwise S. H. Vandergrift.

ARRANGEMENTS WERE GOOD.

Jim Malone, manager of the Baltimore Shooting Association, has had enough experience to know just what is wanted in the way of arrangements for a large tourn ment. Two sets of traps were in position. No. 1 set was composed of five bluerock expert traps; this was the regular club set of traps, and all shooting at these traps was done under the shed roof that covers the platform. No. 2 set of traps was located on the far side of the club house; down the hill, in fact. This set was made up of three bluerock expert traps, set Sergeant system. As will be seen by a reference to the daily reports and daily scores, this set was a Jonah for most of the shooters. The background on both sets of traps was by no means good; there was far too little skyline and far too much of woods and barns to make it easy to get on to the targets. On the No. 1 set of traps targets were thrown both far and at varying angles, the targets looking smaller than usual; on the lower set, the targets were thrown at even greater variations as regards elevation, but they went far enough to please anybody. It was really hard shooting on No. 2 set, and very seldom have such low averages been made when such a warm crowd was present to shoot through the tournament.

THE OFFICIALS.

In the cashier's office, Mr. D. W. Brawner bore the brunt of everything. On the first day he was assisted by Mr. Stanley Baker, a gentleman who has had considerable experience in this line; on the second day, in place of Mr. Baker, who was unavoidably detained in the city, Du Pont Collins was Mr. Brawner's aide; on the last two days Will K. Park gave his time and energies to helping in the cashier's office, Mr. Collins being absent, owing to sickness in his family.

George Brown, better known to the Baltimore boys as "Brownie," was puller on No 1 set of traps, Bob Scharff taking charge of the scoring at this set; on No. 2 set Noah Walker had charge of the scoring, while L. Fix did the pulling. It is only fair to say that every official who was acting under Jim Malone's orders at this tournament did everything they had to do in a thoroughly satisfactory manner. The refereeing was in charge of so many different people, that it would take quite a list to mention them all. Mr. John Buck looked after the gate, and was courteous and obliging to all who had a right to enter the shooting grounds.

The story of the four days' shoot may now be told in sections, day by day:

GENERAL AVERAGES.

It is not hard to account for Rolla Heikes's position as head of the list of general averages. Gilbert holds the championship of the world at inanimate targets, it is true; and it is also true that he won it on his merits with a magnificent total that may not be surpassed for many years. But Rolla Heikes, with his new '97 model Winchester repeating shotgun is shooting so far ahead of all his competitors in the East, that it looks as if even Gilbert would have to saw wood if he met Rolla in open sweeps just now, if he wanted to keep on top. An average of over 93 per cent. for two days, in such weather, with such a background and such hard targets to go up against, is little short of phenomenal. Heikes's strongest point is his even shooting; he seldom, or never, we might say, makes a skip. Here in the East at least he is easily king of them all.

Fulford's great finish is characteristic of the man. He is shooting his Remington remarkably well. He has a good gun, and it fits him; and with it he is likely to do more than hold his own. To tie for first average on such a day as Wednesday was is no small feat, particularly when the scores of so many good men were away below him. Fulford can be proud of his position as second on the list for the two days.

Sim Glover shot into third place of the general averages by virtue of many a 15 straight. It almost seems as if Sim had a cinch on such things. A glance at his scores will show what he did on No. 1 set of traps, where the 15-target events were decided. He, of course, was shooting his Parker, and but for a couple of bad skips would almost certainly have taken second place.

Hood, a local man, who shoots under his first name, his surname being Waters, won fourth place by consistant shooting on both days. A loss of 7 targets in event No. 8 on the second day might easily have been materially reduced had he taken any ordinary care. Hood knows, none better, that he might have broken more had he tried to do so, instead of playing and calling "Pull!" in a falsetto voice that does not belong to him. His position as fourth on the list was received with an expression of good feeling by the other shooters, that plainly showed how popular "Hood" is with his fellows:

Dickey got off badly, but finished strongly, and ended only one behind Hood. Fanning and Banks were 7 targets behind Dickey, while Parker and Young were just at the 300 mark. Charlie Young was not shooting his gait, and the same may be said of a whole lot of others. G. W. Clay, a new face in the East, can break more targets out of 350 than he did at Baltimore; but, being a stranger, he had new conditions to buck up against, and the result was very often—lost bird.

The list of general averages follow:

	1st Day.	2d Day.	Shot at.	Broke.	Av.
R O Heikes	164	163	350	327	93.4
E D Fulford	156	163	350	319	91.1
S Glover	159	158	350	317	90.5

B Leroy	147	142	350	289	82.5
J J Hallowell	142	142	350	284	81.1

First Day, Oct. 19.

The first day of the Baltimore tournament gave us a glorious example of early fall weather. There was enough snap in the air when we went out to the grounds to make light overcoats quite necessary for one's comfort. Given such fine weather, it was a wonder that more shooters did not show up. Thirty three made up the list for this day, the big majority of these being members of "the old guard." Col. J. T. Anthony, of Charlotte, N. C., and Col. Martin, of Bluffton, S. C., were unfortunate enough to arrive on a train that reached Baltimore four hours late. As a result of this dilitoriness on the part of the railroad (due to the quarantine conditions in the extreme South), these two gentlemen did not arrive on the grounds until after 1 P. M., at which hour the first eight events on the programme had been disposed of.

As stated earlier in this report, two sets of traps were used; one, the regular set of five bluerock expert traps of the club, the other set being the three-trap system devised by G. W. Sergeant, of Joplin, Mo. The five trap set was No. 1; the three-trap set, No. 2. On No. 1, the 15 target events were decided, the 20s being shot over No. 2 set. It was hard shooting, and straights were scarce. Targets from No. 1 set went far and *looked* very small; from No. 2 set, they were thrown at all kinds of angles and elevations, while the background and the slope of the field in which the shooting was done, made it exceedingly difficult to gauge the flight of the targets. The walk from No. 5 position to No. 1 was an uphill climb of a decidedly heavy grade. Thus, at No. 1 score the shooter seemed to stand *above* the traps, while at No. 5 he was *below* them. The ground sloping downhill sharply from left to right, left-quartering targets appeared to have far less elevation than they really had; and, of course, right quartering targets, which had the ground falling away from them, appeared to be rising faster than they were. The dark background also kept everybody figuring, and straights were very scarce indeed, particularly on No. 2 set. On this set, the first 20 straight was made in event No. 6; Heikes followed suit in No. 8, Dickey getting them all in No. 10. In the five events shot on this set of traps there were 138 entries, yet only three straights were made! In the five 15-target events shot on No. 1 set of traps there were also 138 entries, yet only fourteen straight scores were recorded. Of this fourteen, Glover was responsible for four, Heikes and Hood making two each; thus, three men made eight out of the fourteen straights!

Heikes shot up to the front as usual, finishing with 11 lost out of 175, an average of 93.7; this was really great shooting when all the conditions are taken into consideration. Brewer shot very well, and landed in second place, just 4 targets behind Heikes. Glover and Hood both had a couple of poor scores, but finished third and fourth with averages of 90.8 and 90.3, respectively. Fulford was fifth, only two breaks below the 90 mark; Fanning, Hawkins, Dickey and Banks were bunched closely for the next four places. Scores follow:

Entries	25	27	27	28	28	29	28	25	30	28	Average 27.6.		

Total number of targets in the programme events was 4,830.

Two extras were shot after the programme had been finished. The results in these events were as below:

No. 1, 20 targets, unknown angles: Fulford and Banks 20; Leroy, Glover, Van Dyke and Hawkins, 19; Hood, Young, Hayward and Hobbs, 18; Dickey, Heikes, Fanning and Smith, 17; Clay and Martin, 16; Hallowell and Anthony, 15; Collins, 12.

No. 2, 25 targets, expert rules: Fanning, 23; Hood, Dickey, Heikes and Banks, 22; Van Dyke, 21; Martin, 20; Leroy, Fulford, Glover and Anthony, 19; Hayward and Hawkins, 18; Hallowell and Young, 17; Franklin, 13.

When the expert rule race was finished it was almost too dark to see a target. Fanning had to break his last 5 targets to win; and he did it.

Second Day, Oct. 20.

Rain started in to make itself felt about 10 P. M. on Oct. 19, and fell practically all day to-day. The wind, too, blew at times with the force of a fifteen-miles an hour breeze. It was coming from the eastward and blew right in the faces of the shooters, driving the rain in under the shed roof that covered the platform at No. 1 set of traps. This made it hard for anybody to shoot with precision, but was particularly severe on those who had to wear glasses. Heikes and Fulford were the bright stars of this day's shooting, tying for first and second averages with 163 breaks out of 175 shot at. Glover and Dickey tied for third and fourth places on 158 breaks out of the same number shot at. These four were the only ones to score over 90 per cent. Parker, Young and Hood shot well up, while McMurchy improved considerably upon his work of the previous day.

The unpromising weather conditions had much to do with the poor attendance, although the crackerjack nature of the majority of those on the grounds helped to keep the entry lists down to a low mark. Only twenty-six shooters took part in the ten programme events.

Owing to the rain at the start only No. 1 set of traps was used; No. 2 set was not worked until No. 4 event was called. During the day no less than eighteen straights were recorded in the 15-target events, Dickey making three of them, while Heikes, Glover and Fulford each had two. In the first 20-target event, which was shot on No. 1 set of traps, Heikes and Fulford each went straight. On the No. 2 set of traps, in the four 20-target events shot on this set, Fulford and McMurchy were the only men to make a straight 20, McMurchy just coming in with his straight in the last event. Fulford made a long run to-day, scoring nearly 80 straight in events 4-8. Scores follow:

SCORES OF OCT. 20.

Events:	1	2	3	4	5	6	7	8	9	10

Total number of targets thrown in the programme events was 3,945.

Two extras, both at 20 targets, reversed pull, were shot after the programme had been finished. The wind, rain and extremely hard angles, added to a fast growing darkness, made the breaking of targets extremely difficult. In No. 1 Hawkins was high with 17; in No. 2, Col. Martin lost his first bird from No. 1 trap and then ran 19 straight. Scores:

No. 1: Hawkins 17, Heikes, Hood, Glover and Hutchings 16, Young, Fanning, Dickey and Hallowell 15, McMurchy, Banks, Bond and Anthony 14, Fulfurd, Allison and Keller 13, Hayward and Leroy 12, Martin 11, Money 9.

No. 2: Martin 19, Heikes and Hawkins 17, Glover and Fanning 16, Banks and Fulford 15, Allison and Hood 14, Young and Dickey 13, Hallowell and Hutchings 12, Anthony and Hayward 11, Money 10.

Third Day, Oct. 21.

This was a cold, dull day, without a ray of sunshine to make things look cheerful. It didn't rain, however, so we had something to be thankful for. The lack of a strong breeze to aid the birds was an unfortunate thing—for the birds at least. Some remarkably fine shooting was done by many of those present, but Captain Money was the head of all, with a run of 76 straight; his first miss for the day was made on the last bird he shot at. Rolla Heikes killed all his birds, 43 in number, while Bessemer, Armstrong, Hood, Glover, Dickey, McMurchy, Fanning, Van Dyke, Brewer, Fulford, etc., all did excellent shooting.

The programme consisted of three events, a 7-bird and two 10-bird, races. All events were "high guns to win." No. 1, the 7-bird event, $7 entrance, had twenty-four entries. This event was shot on No. 1 set of traps, while a miss-and-out was being decided on No. 2 set. Of the twenty-four entries, fifteen killed straight and divided the purse, each man drawing out $7.80 for his $7. Birds were included in the entrance money, and everybody stood at 30yds.

No. 2 was 10 birds, $10, birds included, 30yds. rise. This event also had twenty-four entries, ten men going straight; eight out of the ten had run straight in No. 1. The ten straights drew $16.80 each for the $10 they had paid into the purse.

No. 3 was another 10-bird race of the same kind, but it was also a handicap affair. Twenty-seven put in their $10 and thirteen out of the twenty-seven went straight. Of the above thirteen straights five men (Glover, Dickey, Money, Heikes and Hood) had helped to divide the purses in events Nos. 1 and 2. Straights in this event paid a fraction over $14.50 for an outlay of $10.

Although shooting did not commence until a comparatively late hour, it was kept up as long as anything like a bird could be seen leaving the traps. A total of over 1,000 birds were trapped during the day. It might not be out of place to note that the birds seemed to fly much better from No. 2 set of traps, the ones "down the hill," than from No. 1 set, which were placed on the plateau in front of the club house. In events 2 and 3 on the programme, the 10-bird events, the shooters shot in squads of six, each man shooting 5 birds on each set of traps. This permitted the running off of these events much more rapidly than if only one set of traps had been used; it also kept the shooters together, saved much "squad hustling," and was far less tedious to either watch or take part in, than the usual way of "1 bird and retire" until all had shot a bird. There is one objection, however, to this system, and that is "the luck of the draw;" one squad may get a crate of screamers, the next squad get a lot of duffers. In Nos. 2 and 3 the first 5 birds were shot on No. 1 set, the last 5 on No. 3. Scores follow:

	No. 1.	No. 2.	No. 3.

* Reëntry.

Another $5 miss-and-out resulted as follows: Martin and Jamieson 7, Fulford 6, and Money 5. (Note.—Money's loss in this miss and-out, which was the last event of the day, was his first miss; his run was 76 straight.)

Fourth Day, Oct. 22.

The morning of the fourth day of the shoot was dull and raw. Scarcely any breeze was on hand to aid the birds, but still there were some good hard ones trapped in the 25-bird race. Later in the day, that is toward 1 o'clock P. M., the sun came out, and the birds seemed to appreciate the change for the better in the weather. There were only twenty four entries in the big event; this made the purse one of $800, $700 of which was to go to the four high guns; the Association added $200 to the guaranteed purse it must be remembered. All surplus was to be added, but no provision was made in the programme as to how any surplus of over twenty and under thirty entries should be divided. It was finally agreed that the $100 derived from the four entries over twenty (the number necessary to fill the guarantee) should be divided 50, 30 and 20 to the 5th, 6th and 7th high guns.

Five men killed 25 straight, and according to the above agreement, these five men divided $750; this left $50 to be divided among the four 24s. The five straights were: J. L. Brewer (32), R. O. Heikes (30), C. A. Macalester (29), Hood (28) and W. S. King (29). The guns and loads of the above were as follows: Brewer—Francotte gun, 4drs. Schultze, 1¼oz. No. 7 shot, U. M. C. Trap shell. Heikes—Winchester repeating shotgun, '97 model, 44grs. E. C., W. R. A. Leader shell, factory-loaded ammunition. Macalester—Churchill gun, 51grs. Schultze, 1¼oz. of

7 and 6½ in U. M. C. Trap shells. King—Scott gun, 45grs. Du Pont, 1¼oz. 7½ and 7, W. R. A. Metal lined shell Hood—L C. Smith gun, 3½drs. Schultze, 1¼oz. No 7, U. M. C. Smokeless shell.

Of the four 24s, two at least had hard luck Jack Fanning lost a bird dead out of bounds that cost him some money, while Bessemer went along up to the 23d round before he lost a bird that put him out of the main portion of the purse. This bird of Bessemer's was a left-quartering incomer that he shot rather far back with his first barrel; his second barrel seemed to be both below and behind the bird, which went out of bounds only to fall dead about 20yds. behind the dead line. A little more care with that second barrel would have placed Bessemer among the 25s.

The full score, showing the flight of each bird, and also telling how the race progressed, is given below in detail:

Maryland Handicap, 25 birds, $25, birds extra, $500 guaranteed to the four high guns, and $200 added by the Baltimore Shooting Association, making a total purse of $700 guaranteed by the Association to the four high guns; all surplus added, and divided among the next high guns in certain ratios set forth in the programme. Handicaps to range from 33 to 26yds. Handicap Committee: Capt. A W. Money, C. A Macalester and Jacob Pentz. Referees: No 1 set, John J. Hallowell; No. 2 set, Harry Ducker.

* Re-entries.

Heikes was the only man out of the eight entries to drop a bird before the event was stopped in order to commence the main event No. 2 was divided between Macalester, Ducker and Parke. No. 3 was divided between Anthony, Money, Ducker and Parke.

PERSONAL AND OTHERWISE.

We are indebted to Messrs. Bob Scharff and Noah Walker, the scorers at No. 1 and No. 2 set of traps, respectively, during the Maryland handicap, for the full score of that event, showing the flight of each bird. FOREST AND STREAM's trap-score type is the best system yet devised for reporting live-bird contests, but had it not been for the courtesy of the two gentlemen above named we could not have given the story of the Maryland handicap in a nutshell as it appears in our columns this week.

Capt. Money made the great run of 76 straight in the live bird events shot on Oct 21. He lost his 77th bird, the last bird he shot at in the last miss-and-out, just when it looked as if he was going to make a clean score for the day.

Rolla Heikes "pumped" shot into the pigeons at Baltimore in a manner that made it quite apparent that his new gun, the '97 model, suited him to a T. On the first live-bird day he killed all he shot at—43 birds. In the miss-and out shot on the second live-bird day before the Maryland handicap was started, he lost his fourth bird; then he ran 25 straight in the big event. His score on live birds for the two days was 71 out of 72.

Col. Martin's was a new face at a tournament so far North as Baltimore The Colonel made many friends, and showed that "an old field shot," who gets next to no practice on targets and live birds, can pretty nearly hold his own with the best of them His best shooting was done in the last extra on the second target day. This was at 20 targets, reversed pull. Col. Martin missed his first target; he was standing at No 5 and failed on No. 1, like so many others we know of; then he ran the last 19 straight; 17 was the next highest total to his. On the evening of the first live-bird day he offered to make a small wager that there were not as many 25 straights in the Maryland Handicap as there were 27 straights in the three programme events on that day. As it happened, he would have lost, for five men made 25 straight in the Maryland Handicap, and just that number ran straight in all three events on the programme for the first live-bird day.

Col J. T. Anthony, Col. Martin's side partner, was greeted with evident delight by every shooter who had the pleasure of his acquaintance. If there is a more popular man in the trap-shooting world than Col. Anthony, we'd like some one to trot him out for inspection. As it was, those who were at Baltimore found that the two colonels were a good pair to draw to. And what they did to some of us "was a plenty!"

Jack Fanning says he has a hoodoo in 25-bird races just now. At Clifton, N. J., he ran 24 out of 25 in the Jersey Handicap, and didn't get a cent back out of his entrance money. Here at Baltimore he scored another 24, but got back $12.50 for his total. In both of the above cases he killed every bird, but lost 1 each time dead out o bounds.

The Maryland Handicap was started promptly at 11 o'clock; by 2:10 it was all over. That is to say that 489 birds, not including "no-birds," were trapped in ten minutes over three hours on two sets of traps

Charlie Young had bad luck in losing a bird early on in the Maryland Handicap. He stuck it out, however, and landed with 24, getting back a little more than one third of his entrance fee Parke ran straight up to the 22d round, but lost his bird in that round. He also finished with 24, and drew down $12.50 of his $32 50.

Jack Brewer had a close call for his straight in the big race. In the 23d round, he drew an incomer that towered slightly. He hit it with his first barrel, but not enough to stop it, and then apparently didn't do it any harm with his second barrel. For about a second or two Jack had heart failure, as the bird kept on for him and the deadline Suddenly it saw Jack's look of horror (so the boys say), and turned right round when almost over the deadline, and fell dead a moment later—"dead bird" In the 24th round Jack's nerves had not quite recovered, for he drew an outgoer to the left that kept on flying after both barrels had been fired; it looked as if it was a goner. Then it concluded to stop in bounds. Jack went out for it himself, and did the sneak act on hands and knees amid Indian warwhoops and cheers.

Hood got a nice mark, considering how well he shoots live birds and targets. His 28yds., however, was due to the fact that he has never shot in a big race before. His first essay may, therefore, be said to have been a good one.

Tom Keller was, as usual, the life of the shoot. His cry of "Pay de man!" was heard many a time and oft. It never failed to draw a smile, even when the victim had lost a bird that meant a good deal.

E. D. Fulford made the longest run on targets, scoring something like 80 straight on the second day E. D is shooting targets very well and always manages to get up somewhere near the top.

G. W. Clay, one of "the Clay Brothers," of Austerlitz Ky., was present at the Baltimore tournament last week. He shot through the target programme, but was unable to do himself or the Hill Top Gun Club justice. Being from Kentucky, Mr Clay is naturally all right, and made many new friends among those whom he met in Maryland. He shot well, but lost a target or two just when it would have done him much good.

EDWARD BANKS.

Western Traps.

GILBERT WINS THE DU PONT TROPHY

CHICAGO, Ill., Oct. 23.—Fred Gilbert, the innocent-looking Iowa boy, yesterday, for a second time this month, visited Kansas City, and for a second time defeated the most redoubtable shooter of that city and one of the most dangerous opponents whom at this time the entire country could have produced. Elliott has been in superb form this year, more especially this summer, and when he started out for a little fun with the boys, the knowing ones tipped him on form to beat the best of them. He has not disappointed his friends, nor do his scores in the last two events at Kansas City show that he is yet going out of form, or is becoming anything but a winning shooter so far as high scores are concerned. The only trouble about Jim Elliott in these races has been that his competitor was in just a shade better form than he, in a trifle better luck, perhaps—only a hair breadth the better this time—and so won by that narrow majority which means victory for one man, disappointment to another, and a rattling good spectacle of shooting to every witness of the event It is not likely we shall soon see again the record of so close a race as that of yesterday for the Du Pont trophy, a tie on 97 at the end of the 100, and 24-25 at the close of the 25 tie birds; totals of 124 and 125 out of the 125 each killed, 6 birds dead out of bounds between the two shooters, and only 1 bird out of 250 missed by the two guns in the entire race! Such shooting as that is more wonderful than any man except a good pigeon shot can appreciate. It betokens a steadiness of nerve a perfection of arms and ammunition, and a personal skill bordering on the marvelous Had such perfection been shown by but one of the men, it would not have seemed so wonderful, no matter which man it had been, but that two men should shoot practically the same race, in open and hot contest, where the energies and determination of each were wrought to so high a pitch, is as singular a thing as is apt to happen for a long day at the traps of any country. Mr Gilbert won, and it was not a hollow win His opponent deserves as much credit as himself. In such a race the chief credit is to have competed, as none would be quicker than Mr Gilbert to admit, and the victory was the toss of a straw either way.

Without having witnessed the race, it is not fair to say anything about its conditions. It will be guessed by every shooter, however, that the birds could not have been difficult, for no matter what the skill or who the shooter, 122 out of 125 is beyond championship form on stiff birds. The flight must have been duller than one would care to see, but the skill on even such birds was the same. Had the birds been tied fast, such scores would still be wonderful. It would be a good feat that very few men could kill so many with both barrels, even were the birds actually tied.

Only 1 bird was actually missed, Elliott's 80th bird, which was apparently unhurt Three each fell dead out of bounds in the race. Gilbert thus lost his 21st, 53d and 72d birds. Elliott started out in splendid style running 79 birds without a break in the utmost ease, and was picked for a winner under pull. He, however, met the fatality which may befall any shooter in this risky game of birds. He lost dead out his 80th, 91st and 96th birds, thus finishing tied with the Spirit Lake boy instead of beating him out, as it seemed sure he must. Then came the tie on 25, and Gilbert scored them all You can't beat a man when he scores them all. Jim had the hard luck to lose his 24th bird dead out of bounds, and though he killed his last bird clean, he thus went out one bird behind. What the excitement must have been along in the last stages of this phenomenal match only those who have seen close pigeon matches among the good ones can imagine. It was a race worth going many miles to see, and if these boys can do that again they can draw any kind of a crowd they want—even in Chicago, where shooting crowds are small. The hum of surprise which went over Chicago shooterdom this morning on learning the results was something more intense than has been known here for many moons over any shooting matter The reputation of neither man is injured yet by such races as these two have made, and the partisans of the one or the other have as yet no reason and no disposition to change their original beliefs. Only one thing would make the odds go in Gilbert's favor for the coming Chicago race for the *Star* cup—Dec. 6—and that would be the fatality which has always attended Elliott here, where he has rarely been at his best, and the fact that he was long considered practically invincible on his home grounds at Kansas City. At the latter spot Gilbert has succeeded in attaining his wish of making it "rather two straight than one each"! He has been to a shooting match, however, and he will be at another here on Dec 6. Neither of these men will quit, nor is it likely that either will keep on beating the other all the time, for the records of live bird shooting do not indicate that any man remains long in such form that he can be called the champion of them all. Gilbert has now in hand the *Star* cup, and the Du Pont trophy again, and appears to have a personal fondness for keeping one or both of these by his own fireside. The Cast-Iron badge he will hardly go after, for reasons which space is too valuable to mention. Both Gilbert and Elliott have gone a long way to the front this month in the estimation of the shooting public. They have got together like men and shot clean, workmanlike races for clean trophies, wasting no time about preliminaries, and using none but open and manly methods. This sort of thing raises the standard of trap-shooting, and we cannot have too much of it. The participants in yesterday's race will be welcome in Chicago and in every city of the land where shooters meet. Following are the scores:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co

Elliott.....2 2 2 2 2 1 2 2 2 2 1 2 2 1 2 2 2 2 2 2 2 2 2 2—25

2 2 2 1 2 2 2 1 1 1 1 2 2 2 2 2 2 2 2 2 2 2 2 2—25

1 2 • 2 2 2 2 2 1 1 1 2 2 2 2 2 2 2 2 2 2 • 2 2 2—23

2 2 2 2 2 2 2 2 2 2 1 2 2 2 2 2 2 2 2 2 2 2 2 2—25—97

Tie:

Elliott.....1 2 2 2 1 1 1 2 2 2 2 2 1 2 1 2 2 1 1 2 2 1 1 • 1—24

Gilbert.....1 2 2 2 2 2 2 2 1 2 2 2 2 2 2 2 2 2 1 2 2 2 2 2—25

Long runs were: Gilbert 20, 31, 18 and 53, including the 25 in the ties; Elliott 79 and 10.

Later.—From a gentleman just returned from Kansas City I learn that the birds were held to be good ones, the flush ropes being used in only three instances.

During the race Elliott, though shooting in grand form, appeared to be just a shade nervous. He noticed things about the score, and once asked spectators to step back from the front of the score. He watched a free bird which hovered about the score. Once when his gun was at his face he lowered it to wait till the heads of some jockeys who were passing on the near by race track had passed out of line. These facts were cited to show that Elliott was nervous. The man who can kill 79 straight is in a pretty good sort of nervousness, it would seem. Yet the fact remains that in the last fifth of his race, when he was three birds in the lead, he let his man creep up on to the tie at the 100th bird

The utmost good feeling prevailed on both sides, and the race was pleasant throughout.

TRAP AT CHICAGO.

At Watson's Park the approaching Kansas City-Chicago festivities are stirring up a lot of shooters who have been allowing the spiders to build webs in their guns. Quite a little amount of practice shooting has been going on within the past week. The weather has been windy, and the birds have been hard Fred Gilbert says he has had some shooting at this park, the past week or so, as hard as any he has ever known The wind has prevailed from the east, and the birds have averaged right-quarterers To day a goodish little aggregation put in the afternoon at Watson's. Following are scores of the past few days:

NO TEAM YET.

The shooting committee in the inter-urban team race has not yet formulated any report or made up any conclusions in regard to the choice of men. It has not seriously gone to work yet in the process of sifting, but to-day announced that it would hardly be likely to come to any conclusion until late in November. This may be a matter of precaution on its part, but it will need to be mighty careful if the newspaper men do not get wind of its probable selections before that time. As yet, however, any announcement of a team for Chicago would be mere faking and founded only on guess work.

NO CLUB SHOOTS.

No regular club shoots were held in Chicago to-day, the season having been closed at the principal grounds. The weather has, however, been so fine to-day and for several days past that a few men may have wandered out to have an hour or so of individual sport at the traps, though no competitions have been on hand.

CALUMET HEIGHTS CLUB.

At Calumet Heights Club the weekly shoots have been in progress, with more or less good attendance. The duck season has come on apace, and as many as four ducks having been reported as seen in the vicinity, the club has turned out to pursue them to the bitter end. On the train last Monday morning, I saw some of the members of this club just coming home. Sam Booth had three or four ducks and a nice looking bunch of jacksnipe, and Dick Turtle had two brace of mallards and a teal. The club has been well patronized, and the surroundings at this season are exceptionally pleasant. Following are the more important recent scores:

Oct 8.—Turtle won in Class A, Norcom in Class B, and Harlan in Class C. Scores:

Booth (A)	0101011011100111111111110 —18
Turtle (A)	1110110111111111111111111—23

Oct. 20.—The Calumet Heights Club held its regular weekly contest to-day, with a moderate attendance. There was an overcast sky and a very strong wind in the face of the traps; a straightaway target would soar skyward to a height of 75ft. and invariably be undershot. This fact accounts largely for the ordinary scores following.

Twenty-five targets, known traps, unknown angles; classified:

Paterson (A)	101110111011101111101111—20
Lamphere (A)	100111111001111010111101 1—18

Davis (C)	100001011000000011100C000— 7

THE COOK CO LEAGUE E. C. CHALLENGE CUP

The following communication is at hand from Mr. A. C. Paterson, who has just challenged Mr. W. R Morgan for the E C. challenge cup, for a date not yet fixed. Mr. Morgan has accepted Mr. Paterson's challenge, and the date will soon be set for the race, which is anybody's event at this writing, as both men are in good fettle. Mr. Paterson is of the belief that, as the cup was put up originally for the shooters of Cook Co., it should be open only to those shooters, even in case of the disbandment of the League, which is a matter not yet in the least foregone. There is no talk yet which warrants the statement that the Cook Co. League will disband. The year has been one of very general satisfaction. Mr. Paterson says:

"CHICAGO, Oct. 23.—I notice an article published in this week's issue of the *American Field*, which relates to the challenge cup donated last year by the E. C. Powder Co. to the Cook County Trap-Shooters' League, and which was shot for and won. The conditions at the time of donation were that the winner of the cup would be subject to challenge by any member of the League. The item now published as showing the conditions is, in one instance, to the effect that 'in the event of the disbandment of the League, the cup should be open to the challenge of any person in the State of Illinois.'

"It seems to me, as a member of three clubs of the League and a director of the League, that as the cup was donated to the League of Cook County, in event of the disbandment of the League (which is not, however, now evident or anticipated) the cup should be subject to challenge from any member in good standing of a club of Cook county, and not of the State of Illinois at large. A. C. PATERSON."

INDIANAPOLIS HANDICAP.

The date of the big Indianapolis live-bird handicap sweeps, set for Dec. 7 and 8, will probably be set forward to Dec. 9 and 10, in order to avoid conflict with the dates of the Kansas City Chicago team shoot. Many shooters are expected to go to Indianapolis from Chicago after the Carnival here.

IN TOWN.

Mr. W. Fred Quimby, of New York, is in town this week, feeling the pleasurable sensation of being in a real city for a while. He is doing fairly well. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Wolstencroft Still Holds the Cup.

THE shoot for the Austin cup at the Keystone Shooting League's grounds, Holmesburg Junction, Pa., Oct. 23, resulted in the easiest kind of a win for W. H. Wolstencroft, the holder, who broke 83 (and might have broken more had he needed them badly) to 67 on the part of the challenger. For the latter's score we have no excuse to offer. It is true that the light was bad; the targets thrown at varying heights and distances; the background puzzling; and that rain was falling, with a northeast wind blowing. But then it was the same for all, and Billy broke them, while the other didn't.

When watching or taking part in sweepstakes at expert rules, we have often seen a mistake made in pulling the traps, the same trap being pulled twice in the series of five. Under expert rules, one man up, a shooter is always sure of his last trap, if he has kept tab on the others which have been pulled. In our fourth series of five in this match the puller made a mistake on the last trap, pulling No. 5 when he should have pulled No. 4. Thoroughly astonished at getting a sharp left-quarterer when we were looking for a comparative straightaway, we hesitated, and then went after it, with a view to protecting ourselves in case we had made the error. After losing the target, we instantly made a claim for a balk, stating that as we had kept count, No. 4 should have been the trap, and not No. 5. An examination of the score showed that we were correct, and Referee Hallowell ordered "another target from No. 4 trap." As, however, some of those present thought that as we had fired, the result should be scored, we waived our claim and took a back seat. Our claim was based on the "balk." Rule 19, A. S. A., Section I., Subsection C., says: "If the contestant is interfered with, or balked, or there is other similar reason why it should be done, the referee may allow another target." Section 2 of the same rule says: "When the shooting is at known *angles*, he shall have another target from the same trap; but if the shooting is at unknown *angles*, he shall have another target from an unknown trap, to be decided from the indicator, except it be the last trap, when the shooter has the right to know which trap is to be sprung. In this case he shall have another target from the same trap." In quoting the above rules we have purposely italicised the word "angles;" our reason for doing so is that we have always construed this word as a misprint for "traps;" no other construction of the rule appears to us to be possible. Under the rules as above we have no hesitation in stating that (although we were an interested party) Mr Hallowell's decision of "another target from No. 4 trap" was quite correct.

Looking at it from a commonsense point of view, consider how a puller could rattle a man by pulling wrong traps, that is, by pulling the same trap twice in a series. Again, look at it another way: A puller could favor another shooter very much by pulling No. 5 trap more than once in the same series. We have, therefore, for the above reasons, always held that when a wrong trap has been pulled when shooting under expert rules, or for the matter of that under any other rules, it should be "another target, whether broken or lost." We are always open to conviction, and should like to hear from the other side.

Returning to the match itself, Wolstencroft made a capital run of 45 out of his second and third series of 25 targets each. He shot quite slowly, but probably his time was better under the circumstances than if he had shot faster. As for his opponent, he had no sort of time at all and, speaking feelingly, couldn't hit a barn. The match was capably refereed by John J. Hallowell. Scores follow, the order in which the traps were pulled being also given. (N. B.—Five gun wads were used as the indicator, being marked respectively with the numbers of the five traps. This indicator was worked by Harry Febiger of the Keystone League.)

* Disputed bird.

Wolstencroft lost No. 1 seven times; Nos. 2, 3 and 5 three times each; No. 4 twice. Banks lost Nos. 1 and 2 eight times each; No. 3 twice; No. 4 four times; No. 5 eleven times. EDWARD BANKS.

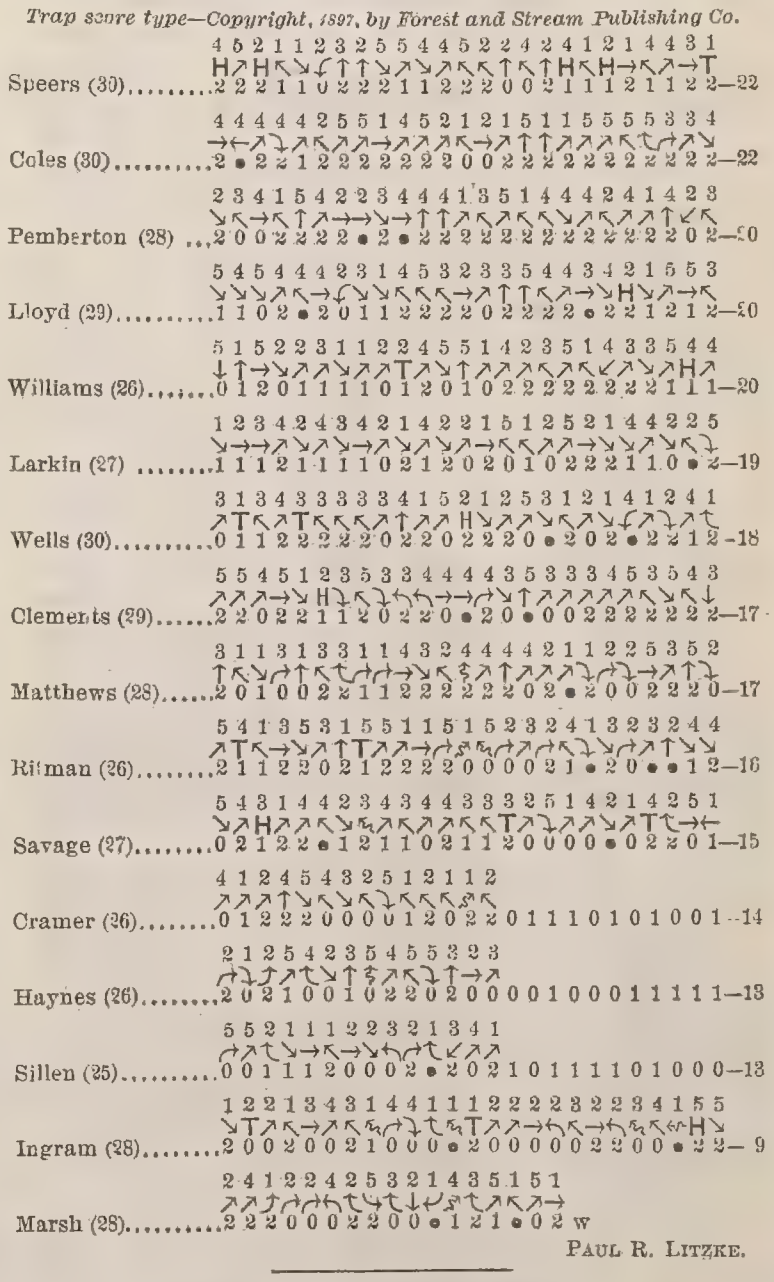
Jefferson County Fair Association Handicap.

PINE BLUFF, Ark., Oct. 21.—As an incentive to draw visitors to the fair, as well as to add to the attractions, the Fair Association hung up a purse of $100, to be used as added money in a shooting contest. This amount had been turned over to the local gun club with instructions to arrange such contests as would prove the most attractive. As the last tournament of the Arkansas State Sportsmen's Association was held here, and was strictly a target shoot, it was decided to make this a live-bird shoot, a handicap event of 25 birds, $10 entrance, high guns, not class shooting; half the number of high guns as there were entries. There being sixteen entries this made eight moneys, as follows: $50, $45, $40, $35, $30, $25, $20 and $15; this made up the purse of $260.

As there were not any crackerjacks present, this was a hot contest among amateurs of the simon pure quality, with plenty of interest in the race, though it was expected that Speers and Coles, who took first and second money, would be near the top at the finish. These two tied on 22 and took $55. There was not a 21, so Pemberton, Williams and Lloyd, who scored 20, took third, fourth and fifth money, $105, which netted each $35. Pemberton started rather poorly, as he only scored 6 out of his first 10. Then he made a run of 13 straight, which was also the best run of the shoot. The loss of his 24th cost $5, for at this time it looked as if he had a cinch on third money. Williams also started badly, but finished strongly, killing his last 11 in good time. Larkin was the only one to score 19, which gave him sixth money, $25. Wells, with 18, got seventh, $10, while Clements and Mathews divide eighth, $15. Thus nine of the sixteen contestants got part of the purse.

The birds were only an ordinary lot, but this must be attributed more to the weather conditions than anything else. There was not a breath of air stirring, while it was extremely hot for October. Mr. Lloyd, the manager of the shoot, had secured the best birds that money could buy, and all of them were old, strong birds, but the elements affected their quality, and no one could guard against this. The shoot passed off very pleasantly, and, with the exception of one, everybody was satisfied with their handicap; and as the party referred to landed a winner, there seems little grounds for complaint. Taking it all in all, the handicap committee did its work very fairly and equitably.

The local club was well represented, for no less than eight of the entries were from the city. The out-of-town delegation was not very large, but the little town of Stuttgart had seven representatives entered, a very creditable showing for a club that has only recently been organized. This delegation consisted of E. Haynes, D. L. Cramer, Wm. Ritman, S. M. Savage, C. W. Sillen, W. D. Matthews and R. W. Larkin.



Little Rock had but a single representative, John M. Pemberton. John J. Sumpter, Jr., of Hot Springs, was entered, but by a peculiar combination of circumstances was prevented from being present. John intended to arrive on Wednesday evening, but was detained on official business. It was yet possible for him to get to Pine Bluff by leaving at 5 A. M. Thursday. But to reach Pine Bluff from Hot Springs necessitated two changes of cars. When he arrived at Mabrun he found the train on the main line two hours late. This precluded the possibility of making connection at Little Rock, and it was impossible for him to reach Pine Bluff before 6 P. M. Under these circumstances his entrance money was refunded. It looks very much as though this cost him $50, especially as he scored 24 out of 25 from the 33yds. mark on the day previous and 22 won first money here. True he would have been scratch man, but the handicap committee had treated him very fairly, placing him at 31yds. John is easily the best pigeon shot in the State.

The handicap committee consisted of J. T. Lloyd, E. A. Howell and J. B Speers. Mr. Harris was referee, while Mr. Howell, the club's efficient secretary, was official scorer. The appended score shows the number of the trap, the flight, and the result. Cramer, Haynes and Siller were delayed, as their train was late. When the others had finished they had shot only 14 birds each. At this point the shooting had to cease, as the races were due to begin. They shot their final birds between races, but at this time I was off getting something to eat, and for this reason failed to get the number of the trap or the flight of these final birds.

The Ingram whose name appears in the score is the champion tarpon catcher. He is the man who made the big record at Aransas Pass this summer. He is not quite as handy with the gun as with the rod, and frankly admits it.

Geo C Low (28)	2011112121—9	U S Grant (26)	0101010111—6

DAVID C. BREWER.

Charlie Floyd and G. E. Loeble, both members of the Emerald Gun Club, enjoyed a couple of days recently in Connecticut circumventing the ruffed grouse and quail of the Nutmeg State. Loeble is an enthusiastic hunter, and so is Floyd's pointer dog, Corbett. So enthusiastic are this pair, that they went out together almost before it was light on the second morning of this trip. Floyd was in bed at the time, being rather great at dozing. In one of his catnaps he heard the bang bang of both barrels of Loeble's gun. The rest of the story about the resemblance between guinea hens and hawks can best be learned from either of the three parties above named.

ON LONG ISLAND.

EMERALD GUN CLUB.

Oct. 19.—The regular monthly live-bird shoot of the Emerald Gun Club was held at Dexter Park this afternoon. There were twenty four shooters on hand, but only two (Dr. Hudson and F. W. Place) were able to score their 10 birds. The birds were rather above the average, the wind, however, making the majority of them left-quarterers.

Club shoot, 10 live birds, handicap rise:

Dr Hudson (28)	1222112122—10	E Weiss (25)	2201020011— 6

SECRETARY.

Answers to Correspondents.

No notice taken of anonymous communications

J. L S., Danbury, Conn.—Does the fish called the mullet inhabit the waters of the Mohawk and Hudson rivers? Ans. No.

C. M. GAGE, Huntingdon, Pa.—How long have you had your gun? And what is the maker's name? In regard to proportions of nitro powders to black, send to the Hunter Arms Company, Syracuse, N. Y., for one of its catalogues, which contains a table of such proportions.

S. H., New York City.—The gun you mention is manufactured by a reliable firm, which has a reputation for building good guns; its guns of the grade you mention are safe and reliable with suitable loads of nitro powder. You had better write to the firm; tell it what grade gun you are going to buy, and ask it to name the proper quantity of each nitro powder you may desire to use.

J. T., Montezuma, Ind.—Some few weeks ago I procured the *Game Laws in Brief* from you, to especially note the laws in this State. Last week some of our local shooters began to kill quail, and they say they are strictly in the right to do so, claiming the last Legislature changed the time, so that from Oct. 10 to Dec. 20 is the open season. If you can enlighten me on this subject I will be very thankful. Ans. The last Legislature did not change the quail season; it runs from Nov. 10 to Jan. 1.

L. H. S., St Paul.—The old technical classifications are more interesting than practically useful, as many of them are of obsolete usage. They run:

A covey of partridges.	A cast of hawks.
A nide of pheasants.	A trip of dottrell.
A wisp of snipe.	A swarm of bees.
A flight of doves or swallows.	A school of whales.
A muster of peacocks.	A shoal of herrings.
A siege of herons.	A herd of swine.
A building of rooks.	A skulk of foxes.
A brood of grouse.	A pack of wolves.
A plump of wild fowl.	A drove of oxen.
A stand of plovers.	A sounder of hogs.
A watch of nightinales.	A troop of monkeys.
A clattering of cloughs.	A pride of lions.
A herd or bunch of cattle.	A sleuth of bears.
A flock of geese.	A gang of elk.
A bevy of quails.	

PUBLISHERS' DEPARTMENT.

Like Winking in a Dark Closet.

MARLBOROUGH, Province Assiniboine, Canada, Oct. 13.—A common expression in the Northwest is, "What do you know?" Well, I know that we have killed a lot of Canada geese. That last night we got the first snowstorm (squaw winter), and many left. That I have found a hunting coat at last water and wind proof; no seam in shoulder, and when you are bundled up until you are like a cotton ball with the middle band of it as easy as a night shirt. The makers do not advertise in FOREST AND STREAM, and they are much like a man winking in a dark closet; *i. e.*, he knows what he is doing, but no one else. That we are to have more fun than a barrel of goats, and are going to take it all in. PINK EDGE.

Lincoln Park, Chicago,

ONE of the beauty spots of Chicago, is described in a most beautifully illustrated book of ninety-six pages, now being distributed by the Chicago, Milwaukee & St. Paul Railway Company. It is full of the finest half-tone pictures of one of Creation's most charming places of resort for citizens of the Great Republic. Every one who has ever visited the park will appreciate the souvenir, and for those who have not, it will be a revelation of what is to be seen in Chicago. It can only be procured by inclosing 25 cents in coin or postage stamps to George H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

Savannah, Augusta and Florida.

THE Southern Railway offers the most magnificent service between New York and the resorts of Florida and the South. Its peerless Washington and Southwestern Limited leaves New York daily at 4.25 P. M., with through sleeping car service New York to Tampa; and the United States Fast Mail, 12:10 night, with through sleeping cars New York to Jacksonville.

For information regarding the South, call on or address Alex S. Thweatt, Eastern passenger agent, Southern Railway, 271 Broadway. —*Adv.*

Quail Shooting in Carolinas.

THE Southern Railway Passenger Department issued a circular to all agents making inquiries regarding game for the coming season.

The reports from all parts are that game is more plentiful now than it has been in many years.

Parties desiring information regarding the hunting ground of the South, will apply to Alex. S. Thweatt, Eastern Passenger Agent Southern Railway, 271 Broadway, New York.—*Adv.*

AT HOME AND ABROAD.

IN times past the pot-hunter was held up for the execration of those who were believers in sport pure and true. While there was then no efficient legal restraint governing his market-hunting purposes, there was a strong public sentiment against the killing of game as a regular business occupation. It was the common property of the people, and, by the industrial and capitalist classes, the men who worked and the men who planned and invested—it was considered a common property for their legitimate sport in the few days which could be spared by them from toil or business. The pursuit of game was their pleasure and recreation.

The pot-hunter was a man whom they considered as one who was looting the common property and means of recreation. Often he had no social or business standing, and as a class they were not of such personal attainments as would atone for any transgressions in respect to public opinion and property.

But gradually the loose and ineffective tenets of public opinion on matters pertaining to game protection took the more efficient form of more efficient statute law. One would naturally expect that the pot-hunter of the old school, he who shot not from wantonness but from motives of gain, he whose station in life made him indifferent to either financial, social or legal responsibilities, he whose one ambition was to make a living in the laziest, easiest and most thoughtless manner, would be the man of all men to break the modern game laws. His plea was the vulgar plea of killing for the pot. He pleads his necessities. He was, in his irresponsible way, endeavoring to make a living. He had no opportunity to study the nicer points of the subject, and no capacity for it. He was dealing in a simple way with the problem of making a living.

But keeping in view the denunciation of the pot-hunter by all true sportsmen, what can be said of a class of men, whose station, birth, fortune and associations in life are of the best, yet who deliberately and with premeditation violate the game laws in their letter and spirit, and who further violate the laws of humanity and common decency by the wantonness and cruelty of their acts? To some the term *noblesse cblige* seems to be meaningless. Rank, station, fortune and character are but means to a life of sham respectability. Let the orderly country gentleman visit the city wherein his doings will be unknown to his kith and kin, and his character undergoes a revolution. Let the city gentleman go into the country, and again on occasion there is a change.

There is a class which by habit, self-interest and the necessity of living up to an established character in a certain environment, lives much alike one day with another, but out of this environment, and the extraneous restraints of it being absent, they soon demonstrate that they have lived a false character if the proper occasion presents itself.

From Mr. E. Tinsley, Chief Game Warden of the Province of Ontario, comes a complaint to us against a young lawyer of Syracuse, N. Y., who is alleged to have killed two moose and numberless game birds in Ontario, in violation of the laws of the Province. The recountal of his shameful misdeeds was presented in the columns of a contemporary as the doings of an accomplished sportsman, a college graduate, with a shooting experience on two continents, a skillful hunter and a gentleman. Were terms ever more misused in the cant of him who seeks to make law-breaking and wanton killing deeds of high sportsmanship?

From Maine there comes to us a letter of hot protest against the wholesale destruction of big game by visiting sportsmen. A clipping was inclosed with it which relates a grewsome story. Information reached Hon. L. T. Carlton, chairman of the Board of Game and Fish Commissioners of Maine, that a party of sixty sportsmen from Ohio had been scattered about in camps near Jackman, and had been hunting there during three weeks. Game Warden C. C. Nichols was sent to investigate. He captured four large boxes of game, ready for shipment, immediately on his arrival. The report says that the ground around the camps he found covered with carcasses of deer, partridges, loons, hawks, etc., and that there were scores of partridges killed and thrown away lying about rotting. An examination of the rotting deer showed that the best parts only had been taken for use and the rest thrown away. In the other camps of the party the warden believed that the destruction and waste were quite as great.

It is regrettable indeed that there should be men who profess to be gentlemen and sportsmen, and who, while living up to the character at home, yet when abroad should be so prone to break the laws and identify themselves with sneaks, ruffians and law-breakers. There is no difference in principle between stealing from the public and stealing from the individual, although there is a vast difference in the courage required for the one act as compared with that of the other. The cowardly character chooses the course of least danger.

A gentleman is a gentleman at all times, and a sportsman is a gentleman. Neither is compatible in character with ruffianism and law-breaking. And the whole basic principle of conduct and sportsmanship is found in the Golden Rule, a rule equally forceful at home or abroad.

BULLET-PROOF HUNTING COATS.

THE Zeglen bullet-proof cloth, which has for some time past engaged a certain degree of official interest in army circles, was again submitted by its inventor to a number of tests against rifle and pistol bullets at the United States Armory, Springfield, Mass., last week.

As a whole, the cloth withstood the tests but partially, and thereby fell short of the inventor's claims for it, and his anticipations of its success.

The cloth's resisting powers were tested in three ways, namely, when suspended loosly as a curtain; when fastened by its four corners to a frame and stretched in it, and lastly, with a board backing. The rifles used in the test were the new .30 Springfield magazine rifle using the steel-jacketed bullet, and the old .45 Springfield using the soft bullet. At five hundred yards the cloth resisted the bullets successfully, though at three hundred yards it was a partial failure. At the latter distance, without the board backing, it was pierced several times by the steel-jacketed bullet, while the .45 bullet was only partially imbedded in it. With the board backing, it was not wholly pierced by the steel-jacketed bullet, but at the point of impact the board was shattered to such a degree that, on picking out the splinters, a hole was made through it. The .45 bullet, under the same conditions, rebounded from the cloth. Mr. Zeglen declared that this piece of cloth was imperfect from injuries received in former tests, and a new and lighter piece of cloth was substituted, with better results. It entirely resisted most of the bullets at fifty yards range, and none entirely pierced it. Yet in the tests in which it had a board backing, the shock of the bullet was so great that the board at the point of impact was shattered throughout its thickness, thus demonstrating that a powerful shock would be communicated to any solid backing of the cloth, which offered a resistance to the bullet.

In the tests against pistol bullets at twenty-five yards the cloth proved successful. The pistols used were the new .38 and the old .45 army revolvers. Placed on the chest of a dummy soldier, the cloth was but slightly penetrated by the .38 bullet, while the .45 was deeply imbedded in it. Tested with a board backing, it was not wholly pierced by the .38 bullet. Reinforced with the board backing, the .45 bullet rebounded from it. While the bullets thus failed to pierce the cloth, the tests demonstrated their powerful impact and the terrific shock consequent to it. The .38 bullet made a dent in the board an inch wide and two-tenths of an inch in depth, while the .45 demonstrated its greater momentum and greater shocking powers by making a dent one and five-tenth inches wide and three-tenths of an inch in depth at the point of impact.

Hence, while the cloth would shield a body from being pierced by a bullet, it would not prevent the terrific shock which the backing body would receive, one similar to the shock given by a hammer blow.

In devoting all his energies to perfecting his bullet-proof cloth for military use, Mr. Zeglen proves himself no student of the dangers of society in time of peace, and the consequent need for some such protection as he is endeavoring to perfect; for the growing horde of irresponsibles who cannot distinguish between a man and a deer once they are in the woods with a deadly weapon in hand, and the growing numbers of the didn't-know-it-was-loaded class, and the equally culpable class who do not think or who do not care, render an efficient safeguard a necessity.

The best safeguard would be to hold the offender legally responsible for his misdeeds. A gun in the hands of a man may be discharged by accident, but a death resulting from such discharge is no accident, for the reason that there is no justification for having the gun pointed at any one at any time.

Only a few days since the lives of two people, Mr. A. B. F. Kinney, of Worcester, Mass., the well known sportsman of national fame, and Miss Nellie Thomas, were gravely imperiled by the criminal carelessness of a salesman who was exhibiting a rifle to a customer in Mr. Kinney's store. The rifle was discharged, carelessly or accidentally, the bullet striking the edge of the showcase on which Mr. Kinney's arm rested, severely shocking his wrist, then barely missed his body, thence touched the young lady's jacket and barely missed her neck. While the accident might or might not have been prevented by proper care, there was absolutely no excuse for having the gun pointed toward people at any time.

Death or injury resulting from such carelessness is not death or injury resulting from accident. Calamities which result from neglect of common precautions, which are within common foresight, which have been earnestly inculcated by precepts for years, whose need has been demonstrated by tragedies innumerable, are not accidents.

The best bullet-proof protection in time of peace is a sound public opinion on these matters, reinforced if need be by legal penalties.

SNAP SHOTS.

France presents a curious anomaly in the practices of her farmers and sportsmen with respect to song and insectivorous birds. The French sportsman who pots little birds would excite ridicule and contempt in this country; it is the foreigner with French proclivity to make pot-pies of our small birds who taxes the vigilance of game wardens in the vicinity of American towns. On the other hand, the French were the first to have an intelligent appreciation of the value of the insectivorous species as aids and allies in agriculture; and bird protection was a feature of domestic economy in France at an early date. Interest in the subject is lively just now. An international congress for the protection of insectivorous birds will be held in the town of Aix, France, on the 9th of this month, under the management of the Ligne Ornithophile Française. The programme provides for discussion of these subjects: "(1) The scientific demonstration, with figures in support, of the injury done to international agriculture by the destruction of insectivorous birds, several species of which have already completely disappeared from certain regions. (2) The absolute prohibition, by special laws and severe penalties, of killing or capturing birds in large numbers where they alight in the course of their migrations. (3) To urge all the European governments to take measures and pass laws for the repression of poaching, or capture by traps, nets, and other devices, of all species of birds feeding on insects."

At a meeting of the New York Fisheries, Game and Forest Commission last week, Mr. A. N. Cheney submitted newly compiled figures, showing the killing of deer in the Adirondacks for the year 1896. As in previous years, more deer were killed in 1896 by hounding than by night-hunting and still-hunting together; the ratios were three thousand four hundred and sixty-one by hounding, one thousand five hundred and ninety-nine by night-hunting, and one thousand two hundred and eighty-six by still-hunting, a total of six thousand four hundred and six. This exceeded by one thousand five hundred and six the total of four thousand nine hundred for 1895.

The American Express Company report that they shipped in 1896 six hundred and thirty-six carcasses, one hundred and thirty-nine saddles, one hundred heads, of a total weight of eighty thousand six hundred and fifty pounds. The National Express Company report that they shipped two hundred and thirteen carcasses. As they give no weights, we may estimate each carcass at one hundred and twenty-five pounds, or total of twenty-six thousand six hundred and twenty-five pounds, or grand total by the two companies of one hundred and seven thousand two hundred and seventy-five pounds. Of course the saddles are but a portion of the weights of the carcasses they represent, but here are one thousand and eighty-eight deer in 1896 as against eight hundred and seventy-four by the same companies in 1895. These shipments of deer by express are those of deer accompanied by their owners. The year 1897 will of course show no such numbers of deer killed, since the law now forbids both hounding and night hunting.

The Sportsman Tourist.

PACK-BASKET, RIFLE AND ROD.

Part II.

—"Wouldst thou rest
Awhile from tumult and the frauds of men?
These old and friendly solitudes invite
Thy rest." —*Bryant.*

MORNING in the Adirondacks! A time which has its own peculiar charms, and a place where, by contrast, they may be most enjoyed. Instead of the steam-whistle, the call of the kingfisher by the lakeside; instead of the carpenter's hammer, the tapping of the woodpecker on the dead hemlock; instead of the rumble of traffic over granite streets, the whimper of the forest brook over its pebbly bed; instead of an atmosphere of dust and smoke, the exhilarating ether of the forest. The balsam bed is sweet, but the air outside of camp is sweeter still. It does one good to drink it, to bathe in it and to flood his system with it, while his mental machinery runs down and cools off.

L. and Martin were still asleep when I stepped out of doors, but the camp squirrel was awake, sitting on a limb and embroidering the edge of a piece of flapjack which he held in his paws. I took the Bristol rod and went down to the lake to see the sun—and the trout—rise. The water lay like a black mirror, save where the level border of lily-pads covered its surface. I paddled over to the west shore, and making fast to a snag, lighted the old briarwood and took an observation. There were other early risers besides myself. A big fish hawk rose from a rock and flapped lazily away to the upper air. A flock of ducks got up with a great clatter, and after taking a turn around the lake, as if to get their bearings, set out over the top of the forest for some other quiet bit of water which they knew of by instinct or experience. Among the hemlocks on the bluff above me some partridges left their roost, and the persistent screaming of several bluejays in the swamp near the inlet suggested that a deer was probably working back to the mountain. The rosy fingers of the morning touched the pond lilies and received their offering of incense; the sun shot his javelins over the top of Blue Mountain, and they pierced the shadows of thicket and glen. It seemed strange, and not altogether right, that I should be the only one to enjoy the things which were happening in this wild and beautiful place.

A swirl in the water near the lily-pads sent my thoughts flying in another direction and, casting there, I hooked and landed a half-pounder. Within a half-hour five other beautiful fellows, wearing colors as vivid as an Italian sunset, came into the boat. Then I stopped fishing, not because there were no more trout, but because I had enough for breakfast, and wanted that in a hurry. I found Martin building the fire, and before the last fish caught had been dead five minutes the sextette were sizzling in the frying-pan. If some of our urban friends, who do not like trout, could have breakfasted with us, they would have realized the difference between camp trout and the restaurant variety.

That day we had lady visitors, who had walked in four miles to pay their respects and bring us our mail. They brought a love offering, too, in the shape of some delicious mushrooms, great bunches that looked like snow-white coral, and which, when separated and fried in butter, made a gastronomic dainty that would have tempted an anchorite to forswear his faith. I wonder how many people have gone hungry in the woods with this toothsome and nutritious food close at hand. Verily the wilderness is a land flowing with milk and honey for those who know enough to "take the goods the gods provide."

We spent several days still-hunting in the mountains, and, in view of the multitude of signs, it is remarkable that we saw so few deer; but this was probably due largely to the denseness of the undergrowth, which prevented our seeing the deer before they heard or minded us. L. got one fair shot, and we had several glimpses of disappearing flags. But if we did not kill any more deer during our stay at Lake McCavanaugh we certainly derived profit and enjoyment from our mountain hunts. We explored some wild country and saw some things which are not always on exhibition; deer-beds on the tops of the mountains, scarred saplings where the bucks had rubbed the velvet from their antlers, the home of the eagle among the cliffs, and bear signs in abundance. On one occasion Martin, who was out with a shotgun after partridges, saw

CAMP SAINT'S REST.
Amateur photo by A. D. Risteen.

a fair sized bear on the side of the mountain above him, and within easy rifle range. I shall not attempt to quote Martin's remarks on the relative merits of rifles and shotguns in a country where there is big game.

We found a big hemlock on which a bear had left the marks of his claws, and the amplitude of his reach would have furnished the bear correspondent of the New York *Sun* with material for a thrilling tale.

The tendency of a man to travel in a circle was satisfactorily demonstrated to us. Martin had taken L. out hunting, and left him posted in a favorable spot half a mile from the lake. After sitting some time without seeing anything, L. started for camp, and after traveling some distance came around to the identical stump on which he had been sitting! Fortunately, he had a compass, and got back all right, but with very unsettled notions as to when the sun would be apt to rise next day.

Illness in his family called L. home a few days before we had intended to leave, and we broke camp with regret, but brought away with us enough pleasant recollections to carry us through the winter.

The next day Martin and I turned our attention to the Burnt Ground, a 1,200 acre tract over which fire swept a few years ago and which is now covered with a dense growth of weeds and bushes. There is something almost uncanny in this forest of dead and charred trees, and on a windy day it is full of strange noises; the creaking of dry joints, so to speak, the rattling of loose bark, and the occasional crash of a falling tree that has long been tottering on its weakened foundations. But it is a fine feeding ground for deer, and one cannot haunt it long without getting a shot. A faint trail leads part of the way through it, and late in the afternoon Martin and I seated ourselves on the further side of this weird hunting ground. No deer came my way, but just before dusk I heard three quick shots from Martin's .30-30. Two deer had come in together, and he fired at both, hitting at least one of them, as spots of blood on the bushes showed; but it was getting too dark to follow the signs, so we started for the hotel, realizing that to be caught in the Burnt Ground at night was no joke. Nevertheless, that is exactly what happened, and I hope I may never repeat the experience. In five minutes we were hopelessly off the trail, which is none too good in the daytime. There was nothing to do but crash our way out, through bushes and briars, over boulders and fallen trees, to the destruction of our clothes and the imminent danger of wounding our flesh or putting our eyes out on the sharp stubs of the dead timber. It was the first time I had ever found the stars of practical use, but we needed them that night. After an hour or more of the toughest scrambling a man is capable of, we struck the road, reaching home at 10 o'clock.

I suppose there are those who would say that this sort of thing "doesn't pay," and fail to understand how a man can voluntarily undergo such unnecessary hardships. One cynic has gone so far as to say that "in war, hunting and love, for one pleasure there are a hundred pains"; but I surmise that he would have made neither a good soldier, husband nor camp companion. Is it not true that the difficulties and misadventures of a forest outing are remembered with scarcely less pleasure than the successes and the hours of ease? Certainly they make a man resourceful and self-reliant, and often give him an insight into things which he would not otherwise have gained. For instance, if we had not stayed too late in the burnt ground that afternoon, I would not have had my first view of a flock of partridges going to roost. They came one after another at short intervals, to a low hemlock a few yards from where I sat, making very little noise in their flight and arrival, and hopping up from limb to limb like hens. As nearly as I could distinguish, each selected a separate perch close to the body of the tree, and on the side least exposed. When I left my stand they boomed off into the dusk, and I presume when they got together next day they held a debate as to the nature of the terrible forked animal that had so nearly invaded their sleeping apartments.

The last days of my vacation were to be spent on the St. Regis River, at the foot of the Sixteen-Mile Level. Leaving my very good friend Mr. R. and Martin to pilot the ladies and little folks to camp three miles away, I struck out for the river in the hope of taking trout enough for supper, by fishing up stream to camp. It was a perfect afternoon, and when I reached the falls and took in the wild surroundings, I thought I had never seen a lovelier spot. The water tumbled part way down over the ledges, and slid the rest of the way over a smooth incline of rock into a great foamy pool below. The wide, boulder-dotted expanse of the rapids further down glittered and sparkled in the sunlight, and here and there was a swirling eddy or a quiet pool, in which the sky and the shores were mirrored. A pair of little sand-pipers were dipping and running along the pebbly beach, and a blue-coated kingfisher "sounded his rattle along the fluvial street." It was a sight to rest the eye and delight the soul, and stir the angler's heart.

I had been warned that few trout had been taken by the party last in camp, and that they were not rising to the fly; but some one has said that any man can catch fish if he puts his heart on the hook. Mine was already there, but I also took the precaution to loop on to the leader a Montreal, a brown-hackle and a silver-doctor. The first cast at the top of the falls met with a quick response, and

CAMP SIXTEEN.
Amateur photo by A. D. Risteen.

a fair-sized trout came to the basket as the result of his call on the doctor. In the sluiceway of rock, where the water from above ran swift and smooth, another met the same fate; and as before, the silver-doctor was the Lorelei which lured the victim on to the rocks. It began to look like having trout for supper. Half a dozen more 8in. fish were flopping in the basket when I reached the level slide of water near the foot of the falls. Here the water, although not more than 7 or 8in. deep, ran so fiercely that it nearly swept me off the slippery incline; but the coveted position enabled me to lay the flies in one of those spots where, by some occult sort of revelation, the angler knows to a dead certainty a trout is lurking. He was there sure enough, and I caught a glimpse of a broad tail and a glint of red as he missed the lure at the first rush. The second cast was more successful, and the reel sang a falsetto as the fish rushed down stream. He was finally coaxed around into the quiet water of the big pool, but made a good fight; now boring for the bottom, now breaking the surface, and again making a desperate effort to reach a big boulder whose top showed above the water. I had no landing net, but the taut line finally wore him out, and he joined his smaller brothers in the basket. How much did he weigh? Something under a pound, I suppose; but you must remember that this fish didn't get away! If he had, I don't know what proportions he might have assumed in my imagination as time went on. Well, they kept coming, until they didn't have far to fall when

A BLUE MOUNTAIN DEER.
Amateur photo by A. D. Risteen.

slipped into the basket; thirty-three in all, and almost every one of them on the silver-doctor. That fly is now fast in the top of a dead cedar hanging over the river, and I wonder how many hungry winter birds will have a peck at the gaudy and delusive insect with a barbed sting in its tail. There were trout galore for supper, and for breakfast, too; and there was also the ineffable satisfaction of having taken fish when people said they couldn't be caught.

We stayed three days at Camp Sixteen. The weather was perfect, the spot an ideal one, and a more harmonious party never camped together. When Mr. and Mrs. W. Clark, of Moira, came to visit us our satisfaction was complete. There are few more enthusiastic or successful sportsmen than Mr. Clark, and his knowledge of the French Canadians and imitations of their dialect would delight the heart of Rowland Robinson. Mrs. Clark is also an ardent devotee of the rifle and rod, and has a fine buck to her credit this season. The ladies organized a cooking school, which, considering the material they had at hand, would have caused the laurels of Miss Parloa to wither and fade. Any man who thinks that women in camp are merely for ornamental purposes would change his mind if he could have seen two of our party cutting up a dead spruce for firewood with a cross-cut saw.

While I fished the rapids, Mr. R. and Martin hunted the Burnt Ground. Martin brought in one deer, but up to the time I left Mr. R. had failed to get a shot. Later on, however, he killed his legal quota—the just reward of patience and skillful hunting. Whether a deer possesses any sense of humor or not I am uncertain; but it is a fact that while Mr. R. and other guests of the hotel were scouring the mountains miles away for game, two or three deer came into the garden one night and ate a lot of Day's turnips. Whereupon he remarked that it was a little tough on him to board the hunters and the deer too.

Very early on the morning of the day I was to leave the woods Martin paddled me up the river for a farewell hunt. It was still dark when we left camp, and threatened rain. Not a breath was stirring, and the silence of the forest could almost be felt as we glided up the winding lane of black water. Martin's paddle was as noiseless as the wings of the belated owl that flitted past us, and once when rounding a bend we ran fairly into a flock of ducks before they knew they had company on the river.

Past grassy point and wooded slope, over long-leaved grasses that waved in the current, and fields of lily-pads that softly grated against the keel of the boat, we glided on and on. I was so absorbed in the charm and novelty of that early morning hour that I was hardly thinking of deer, when on turning a sharp curve in the river, we came into full view of a magnificent buck standing in the shallow water near the opposite bank, and looming up, in the uncertain light, like a gray horse. Martin and I saw him at the same instant, and I needed not the information and command: "There he is—shoot!" I have never had buck fever, and I didn't get it then, but I did have mental pyrotechnics, if I may be allowed to coin the expression. As nearly as I can remember, about forty things flashed through my mind in a second or two, and these were some of them: That's the sort of deer you've been looking for during the past five years; shoot him in the head! You lost a deer last year by hitting him in the body! This is your last chance this year! You've got to get him! You need that head in your dining-room! If you miss him your reputation is gone to— Take your time, and be quick about it! When the sights are— Crack! clinkerty clink; crack! clinkerty clink! No need to shoot again! He's down, and the placid river where he stood breaks into a geyser of water and mud.

When we got to him we found a prize indeed, "a regular old horse," as Martin is wont to say. In fact, our united efforts failed to get him into the boat, and Martin had to get overboard and tow him ashore before we could load him. The first shot went in one eye and out the other, and the second passed through his liver, as we found later on. The trip down the river was in the nature of a triumphal journey, and when we had the buck hanging up in the morning sunlight he looked bigger than ever He was in the "blue" coat, weighed 226lbs. and carried twelve points on his head. We got him out to the hotel in the afternoon and shipped his head to Saranac that night to be mounted.

So ended another delightful outing in the Adirondacks, and when I left the woods it was with the comforting sense of having gotten all that I went after, and, as usual, a great deal more.

THE KID.

Editor Forest and Stream:

There is a boy up in the Adirondacks who is a woods lad; blue-eyed, agile, but quiet. His playground is the woodland, his games are played with wild creatures, and his toys are deadly weapons. He went to school at Northwood, N. Y., and ran away, sometimes to go swimming, or fishing, or "just 'cause I wanted to." "Just 'cause I wanted to" meant that he would rather sit on a log down on the flats, or up in Johnny Waghorn's swamp, where he could watch a red squirrel shuck hemlock cones or a partridge scratch for beechnuts, than sit on a bench at school and look at school books. His desk at school was notched by a knife, and pictures of birds and beasts were drawn all over it with pen and pencil. Clean places showing where the teacher had caused him to rub out some picture or writing. Once I found him reading a Second Reader stretched out on the dry leaves, like a picture-book boy, while he waited for a hawk on a stub ten rods away "to wake up."

We call him the Kid, but his mother has a much more musical name which she calls him by—a name which goes sailing off across the flats and tossing along the hillside at dinner time, or when he's wanted, and leading those who hear it to say to the boy: "Hay, Kid! Your Ma's callin' like blazes fur ye!" Whereupon the Kid makes his way homeward slowly, or quickly, according to the doings or thoughts at hand. I've been sitting beside the Kid away down on the flats, a good three-quarters of a mile from where he lives, listening to the way he'd say: "Goll! Wish I'd see a deer!" when that call would come shivering faintly across the level like any other breath of nature.

"That's mamma," he'd say, "let's go." One time, though, there was a flock of sheldrakes away up the creek, and they seemed to be coming down slowly. We heard the call and he looked over his shoulder at the sun.

"'Tain't nothin' but dinner!" he said, "let's wait." And we waited.

I used to take him hunting, but he takes me now; and if there is any argument as to which way a rabbit will circle, I follow his leading, because he knows. It seems just as though he had laid out the route with the rabbit the day before, to see the way he leads away after one of the beasts, cutting across from runway to runway and to the sides of ridges, and heading the fugitive off. He shoots, too. He was brought up on a rifle, and uses the shotgun only occasionally. He is a dead sure shot with the gun on a running animal, and often lands bullets where many cannot hit with shot. Among the men he is counted a good shot, and the rifle he uses in his hands is very accurate and drives bullets as near the center as any.

The Kid had a dog. Any one else would have killed the beast, as it was homely and foolish to every one; but someway when the Kid took the dog hunting, and where the boy went the dog did, the Kid got game.

"He-ah!" the Kid would say to the dog, "le's go hunting," and the dog would stand on his hindlegs and act in a way no real hunting dog would do. On the way to the woods the boy and dog would run races, and the boy was almost as fast as the dog. After a run the two would have a talk about "raggits" (Northern hares), and woodchucks, and "patridges," not to say "b'ar" and deer. What the Kid would do if he saw a bear is a question. When he saw a deer he missed, but so does every one occasionally.

The two went fishing together, and the way they yanked trout out of little brooks was a caution. When the trout let go the hook and went two or three rods back in the woods or brush the dog would find it.

The Kid would rather hunt rabbits than anything he had ever seen. I'd been out all one winter morning and half of the afternoon. A good hound had chased about after rabbits, but I'd failed to get any, and the dog finally jumped a fox and followed it into the next township. I started for home, several miles away. About half a mile from my house I met the Kid in a swamp any ordinary hunter would have jumped over. The Kid was sitting on a log and picking No. 7s out of the hair of a big white rabbit. Another rabbit was on the log beside him and the dog was eating the heart of the one the boy had in his hand. The Kid had come out half an hour before and got the two rabbits in the swamp.

"How'd you get 'em?" I asked.

"Jumped 'em," he said. "This un I just got. Seen 'em under them roots and the dog tried to eat 'im alive. The rabbit run and I give it to him. T'other one I just happened to get; seen 'im jump an' then I fixed 'im. Le's go up to Ole Edwin's."

One day half a dozen of us had been out on a 6in. snow and were coming past the same swamp. The Kid said he reckoned he'd go and get another rabbit, and turned down into the swamp. We heard that dog yip before the boy was out of sight, and then the Kid's gun smoked. The Kid joined us within eighty rods and had another rabbit.

"I told you so," he remarked.

Did you ever see one of those prophetic hunters? A man who would say the night before that he would kill something next day and then do it? Well, the Kid is one of that kind. He tells about his luck beforehand once in a while, says he feels it in his bones, and we always laugh at him, of course, because we're not like him, and he laughs, too—and kills his game.

No one could tell all about such a lad—how the birds talk to him and of the leaves that sing in his ears, nor of the thoughts he has when he shivers, as the dogs bark on a distant trail. But I guess that every one who has hunted or fished properly knows such a boy, and dreams about him sometimes. If he don't he ought to.

RAYMOND S. SPEARS.

Pennsylvania Game.

EAST HICKORY, Pa., Oct. 28.—Small game in this section is quite plenty this season. Grouse are seen in the village nearly every day. A few days ago one killed itself by flying against a house; another flew into the saw-mill when it was running full blast.

Five miles above here a bear came out into a farmer's field and killed a calf, dragging it into the woods.

Bass fishing in the river has not been good this fall. Having had no rains, the river is very low and clear.

A trapper, who just came in, reports deer signs some ten miles east of here.

Our new game law, which prohibits the sale, has put a stop to market hunting, which has done so much toward making game scarce.

Do away with the market hunter, who hunts for the money there is in it, and in a few years we will have an abundance of small game.

PAPER SHELL.

Natural History.

THE INTRODUCTION OF EXOTIC SPECIES.

Editor Forest and Stream:

Readers of FOREST AND STREAM may remember an inquiry of mine some months ago as to the original prairie chickens of Martha's Vineyard and the numerous and most interesting communications which followed, not only in regard to the prairie chicken on Martha's Vineyard, but the general history of this most interesting game bird.

A gentleman who lives at Edgartown, on the Vineyard, and whose du ies cause him to take frequent drives over a good portion of the eastern part of the island, has lately given me his very interesting observations on the prairie chicken or "heath hen," as the old islanders call it. He not infr quently flushes individuals and sometimes coveys of these birds and distinctly recognizes the two varieties: the lighter and grayer colored one, the modern importation from the West; and the much more reddish or ruddy colored one, the aboriginal "heath hen" of the island. He says that he also sees the pheasants, which, he thinks, are increasing, and evidently bound to thrive in this locality.

I wish some one could give us full and reliable informa tion as to when the attempt was made to restock the island with prairie chickens, and by whom, and how many birds were liberated and from what source they were obtained.

This brings up the whole question not only of restocking depleted covers but of trans planting animal life of any kind, and especially of the great wisdom needed in managing any such experiment if it is to be done without injury to resident forms, and the danger of damage of this kind greater than the benefit sought. The striking instances of such damage recur at once, such as the introduction of the English rabbit into Australia, the mongoose into Jamaica, the English sparrow, the German carp and the gipsy moth into the United States, etc. But, I think, there is reason to believe that the introduction of any prolific form of life, animal or vegetable, into a regi n new to it is a very grave responsibility, and one that should not be taken without expert advice.

I could not help this reflection in connection with even so interesting a letter as that of S. H. Greene, in FOREST AND STREAM of May 22, describing the successful introduction of so many foreign song birds into Oregon. He tells of the successful work of a society for the introduction of foreign song birds into Oregon, which society in 1889 and 1892, imported 400 pairs of birds, comprising nineteen different sp cies. All these birds, and another importation received in 1893, were liberated in the vicinity of Portland, the expense to the society up to the last named date amounting to over $2,000. Special laws of the State protect these birds, and Mr. Greene reports "the most encouraging results."

Surely, if the sole result be to add to the singing birds of Oregon more songsters no one can fail to be pleased, but one cannot help a serious wonder whether among all these finches, starlings, thrushes, larks, etc, there are not some species which may in a new habitat multiply inordinately and in some way have a tendency to drive out the native birds of Oregon.

I do not know whether it was any special poverty of Oregon in the matter of native song birds that induced the formation of this society, but I do know that I should need to be very well assured that the importation would not be hostile to one single native songster in New England fields before I would consent to the liberation of those birds here Dearly as I love the nightingale I would rather still listen for him as I have done in England, or Germany, or Italy, than displease our humbler songsters. Perhaps there is not the slightest danger such as I have suggested, and that "laws restricting immigration" are as needless in regard to song birds as they seem to be futile in regard to human beings. But if so will not some of our leading students of birds reassure me.

One thing seems to be certain, that no end of irreparable blunders, often of the most serious kind, have been made through utter heedlessness in this matter of introducing to a region forms of life not native to it. Who of all the people who were a few years ago so eager to get into their waters the now loathed and detested German carp would not give a good deal if he could exterminate the species, at least in America? The English sparrow still has his friends and defenders I believe, and I will give him the full benefit of them and voice only my own great regret at his coming.

But the mention of Martha's Vineyard and the prairie chickens reminded me of Nantucket, and that recalled the testimony of several of my friends who in recent visits to the island have become aware of the nuisance which has come about through the multiplication of the prairie dogs, which some careless experimenter thought it would be a great scheme to liberate there. I understand that the little creatures have spread over a good part of the island, and that already their presence is a thing from which the inhabitants would be very glad to be relieved.

Not long ago there appeared in FOREST AND STREAM a summary of the twelfth annual report of the Wellington (New Zealand) Acclimatization Society, in which the steady decrease of the native birds of New Zealand was deplored, and it was stated that "great trouble is had on the island by farmers, poultry breeders and the society's aviary and fish ponds, from the depredations caused by the introduced ferrets and weasels. These vermin—introduced to destroy the rabbits and now protected for the benefit of the sheep growers—are rapidly increasing, and are likely to become a real pest."

Of course they will prove a pest. The history of Australia in these matters is, one would think, sufficiently convincing and at the same time melancholy.

It is pleasant to turn from this picture to that of the increase of native game in any part of our own country. It is certain that nearly all over the State of New Hampshire there are now signs of the return of the deer. In my native town of Boscowen, near Concord, deer have repeatedly been seen the past year, and I hear of them from many other parts of the State. Another item of interest is furnished me by Miss Crosby (Fly-Rod), viz: that the capercailzie which were liberated at New Sweden, Me., some time ago, and of which so much was hoped, have certainly been seen and have made a 'report of progress." Miss Crosby is informed that several times broods of young birds have been seen, and that the friends of the experiment are greatly rejoiced.

I do not know about the "black game" liberated at the same time with the capercailzie.

I confess to much interest in the introduction of capercailzie into Maine, where I have felt much confidence that it would thrive when once started, and where I hoped it would not harm our own native ruffed grouse.

Let me close with an appeal for information about the present condition of the game in the Corbin Park in New Hampshire, and the plans of the present owners in regard to the park. I am, of course, hoping that the park is to be maintained as a game preserve, but I hear an ugly rumor that this will not be done, and that in fact the elk are being sold off, and that soon the park, as such, will be a thing of the past.

C. H. AMES.

CURIOUS FREAK OF A MOOSE.

MR IGNATIUS SARGEANT, of Waltham, Mass, has just returned from Louis Ketchum's camp at the head of Nahmakauta Lake, where, with his wife and son, he has been spending several weeks. Mr. Sargeant is an ardent sportsman, but unfortunately crippled by paralysis so that he cannot walk This year he devised a novel way of getting around in the woods He had a guide, Manfred Priest, bring a horse from the settlements which was used to the woods, and take it around Passunduncook and Nahmakauta lakes to Ketchum's camp; then he could go in a canoe with Ketchum across the lake to carrying places, while Priest brought the horse around; then he could ride across the carry to where he could again take the canoe.

The party had been across to Pollywog, Wadleigh and the Musquash ponds, where Mr. Sargeant had been very successful, killing two deer from the canoe, while his son also shot two The party were returning, Mr. and Mrs. Sargeant and son being with Ketchum in the canoe, while Priest took the horse around to the carrying place. While crossing one of the ponds they heard some one in the woods shouting, and at first supposed it was some lumberman getting horses into the woods, but soon heard it was Priest shouting, "Bring a rifle! Bull moose!'

As the pond was flowed, the driftwood made landing impossible till they reached a regular landing, which took some time. Louis seized his Winchester and ran back and found Priest, but the moose had gone back. Louis took his track, but unfortunately started a cow moose and her calf, and they started the bull; and as Louis had his party to care for he could not follow. Mr Priest said that the first he knew the bull was following the horse. It several times came very close, when Priest got off and threw clubs at it When hit on the head it would throw up its head and snort, and as soon as Priest remounted, it would again follow the horse. It finally turned back just before Ketchum appeared.

Although a very singular thing, still this is not the only time a moose has been known to follow a horse. Only a few years ago one was shot by a boy in the town of Lowell, Me., while it was chasing a horse around in a pasture. In one case—and I think in both—the animals chased were mares.

* *

Crossing of the European Red Deer and the American Elk.

Editor Forest and Stream:

The October number of the *Century Magazine* contains a very interesting article on the Corbin game preserve, by Mr. G. P. Ferris, who makes one statement I would like to correct, namely, that so far as known, the American elk (*Cervus canadensis*) has never crossed with its European congener, the red deer (*Cervus elaphus*).

Various attempts have been made in Germany, where hunting and the propagation of game have been reduced almost to a science, to cross these two varieties, and one of these attempts at least has proved successful. The Duke of Pless, a great hunter and an enthusiastic sportsman, is one of the largest private forest owners in Germany. His domain contains many thousand acres of wild forest land in the mountains of Silesia, and is inhabited by great numbers of red and roe deer. The Duke conceived the idea of crossing these red deer with the American elk, and for this purpose imported a number of bull elk from this country. He introduced only bull elk into his preserve, as he was of the opinion that the bulls would be more likely to cross with the red deer if they had no cows of their own kind to associate with. I use the word preserve, although the domain of the Duke of Pless is not a game preserve in the accepted sense of the word, as the game is not held captive by any sort of fence or inclosure, nor is any special care taken of it, excepting that during protracted severe weather in winter, especially when a thick crust forms on the snow, food is placed where the deer congregate.

The red stag is considerably smaller than the bull elk, both as regards heighth and bulk of body, and in the size of the antlers. The antlers of the stag, however, are much more shapely, owing to the fact that while the prongs on the antlers of the elk are always set one above the other, the topmost prongs of the old stag form a "crown," as the German hunter calls it.

This crown gives the "royal" stag, as he is there called, a certain distinctive appearance of a monarch of the forest, which even the largest bull elk lacks. The idea of the Duke of Pless was that by "crossing" he could increase the size of the stag's antlers, but still retain their peculiar shape. In this he has been successful, as a number of stags have been shot in his forests whose antlers approached in size those of the elk, while the four upper prongs formed a distinctive crown. At the exhibition on antlers and roebuck horns which is now held annually in Berlin, the antlers of the "crossed" deer shown by the Duke of Pless were very much admired by all, and were without doubt the purest specimens in the exhibition, although they could win no prizes, as there was no special class for them. It is very encouraging to see that some of our wealthy men are establishing large game preserves, as these are the only means of saving the big game from entire extermination, although as yet the idea of a game preserve is not popular in this free country of ours, despite the warning of the last buffalo, which is ever before our eyes.

"Uncle Lisha's Outing,"

By Rowland E. Robinson, is now ready in an attractively-bound volume of 308 pages, the twenty-four chapters recounting thehomely adventures of those Danvis Folks with whom FOREST AND STREAM readers are so well acquainted. Sent postpaid on receipt of price, $1.25, by the Forest and Stream Pub. Co.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Game Bag and Gun.

THE WOODCOCK'S WINTER HOME.

IT is interesting and instructing to naturalist and sportsman to observe the habits of the different species of migratory game birds after the autumnal or winter flights have been made, and they have settled themselves down in their winter quarters.

Most of these after their arrival in their southern winter habitat frequent localities similar to those in which they have been bred further North, feed by daylight, and are just as easily come at for their destruction here as there. With the woodcock this is quite different. He finds when he arrives here an enrivonment so entirely different from the localities in which he has been reared, and the nature of this conduces to so great an extent to his safety and protection while among us, that some account of all this may not be uninteresting to our more northern brother sportsmen. These facts being known, it only remains with our northern sportsmen by the rigid enforcement of proper laws in the northern breeding ground for protection, to create a hope among all, that the continuance of the species will be long in the land.

The woodcock seems to prefer to all other localities for winter quarters, and to resort to in greater numbers than anywhere else, the alluvial lands of the lower Mississipi River.

From, and including portions of the State of Arkansas to the Gulf of Mexico, there lies on either side of the great river an alluvial bottom varying in width from twenty to sixty miles. This is connected in places with pine forests on the high lands running back in some localities hundreds of miles, and all forming the great forest belt of the southern United States.

These alluvial lands are covered everywhere more or less densely with an enormous growth of most of the trees found in the South. With the exception of the comparatively few plantations lying along the banks of the river and upon the bayous and lakes, where the land is high enough for cultivation, it is in reality an almost unbroken forest, for the extent of land cleared and under cultivation is small compared with that which is not.

All over this alluvial bottom are to be found growing on the higher and more open ridges, dense canebrakes, and where these do not occur, upon the lower lands are lakes, marshes, bayous, sloughs and ponds innumerable. Here are still abundant, bears and deer, some panthers and wolves, cats, otter, quite a number of beaver, and raccoons, and opossums without number. Of game birds, geese and turkeys and ducks are plentiful, and fish as the sands of the sea.

This country is not all nor always a swamp, by any means. When the floods recede, should there have been an overflow in the fall and winter, the land in a great deal of it becomes firm under foot, and then deer hunting with hound and horse can be enjoyed to perfection.

Into this locality, along all its extent, generally not until a black frost in December, one of the latest of our migrants, comes the woodcock. Almost without exception, he chooses for his quarters in daylight the densest canebrakes, in a growth a man can scarcely crawl through; it is often 20ft. high. Here he defies all-comers. Not until dusk does he sally out; and then the belated hunter, returning from an outing after deer or ducks, can see him against the after-glow of the departed sun, darting by like a bullet, and on his way to some nearby cottonfield marsh or lake shore, to feast and grow fat on earthworms until returning daylight shall drive him back to his canebrake.

I do not wish to be understood that this species in their winter quarters in the South confine themselves entirely to the lowlands, but that the greater number do. They are also found, not so abundantly, scattered throughout the uplands wherever suitable feeding and nesting places are found. Here, too, they take up their quarters in the canebrakes and briar thickets lying not far from the cottonfields, which seem to be their favorite feeding grounds. I knew of one gentleman in the State of Mississippi who kept a team of cockers for hunting them in the uplands, but he considered two and three brace a good bag for the day. On one occasion when I was out with a companion after partridges on the plantation of a neighbor, we followed some of the birds into a wood grown up with small cane and briars, and there came upon a larger number of woodcock than I have ever seen before or since. We succeeded in bagging fifteen brace before it became too dark to shoot, for we did not find them until quite late in the evening. Had we happened upon them earlier in the day the occasion would have been a memorable one, for we left numbers behind. Upon returning to the same place next day prepared to have it out with them, owing, I suppose, to a lowering of the temperature during the night, not a bird was to be found. All this occurred in Mississippi, near Natchez.

They are the same capricious birds in their winter quarters as further North, and except during the time of breeding and moulting, seem not to abide long anywhere. Of course, when there is a freeze they are compelled to leave, but they will often do so when there is no apparent cause for it, and often return in the same way. They are most probably influenced by some change of temperature, imperceptible to the human senses. The migratory habits of the bird are involved in a good deal of obscurity, as he never, to my knowledge, like his near congenor, Wilson's snipe, travels by daylight. He goes and comes by night, and, as remarked, in a very capricious way.

The largest numbers I have ever seen obtained at the South were killed at night on their feeding grounds, in the cotton rows of the alluvial lands, the shooter using a torch, carried by an attendant, and firing a squib-load of powder and No. 9 shot from a light gun, or preferably, an old-fashioned, smooth-bored, duelling pistol. The birds seem to be dazed by the light, and sit and stare at it until the shooter comes near enough to pot them on the ground.

The negroes in old times used to kill them, and perhaps do still, by going into the sugar cane and cotton fields at night in pairs, one carrying a torch and the other armed with a stiff cane stalk, stripped of all its leaves except a thick bunch at the end. As our readers all know, the habit of the bird when rising from the ground is to rise straight up before he goes off, and advantage was taken of this to whack him down with the cane as he rose from the ground.

In excuse for this poaching method, it may be said that when employed it was the only means of obtaining the birds where they were most numerous. The relatively small numbers bagged by these questionable methods bore but a small proportion to the unnumbered thousands all over the country which escaped.

Referring again to their unaccountable habits of changes of location, even on their winter habitat, I have observed that they make these changes as far South as I have studied them, in the neighborhood of Bayou Sara, La. I am inclined to believe that their furthest resort South, and probably their most important one, is the immense marsh country lying about the mouths of the great river, and west along the Louisiana coast. I am led to this belief from having been told by an officer of the U. S. army, that he had had fine woodcock shooting while stationed at one of the forts above the mouth of the river, at birds flying over the post at dusk on the way to their feeding grounds. The furthest West I have ever known the bird was here at San Antonio, where a solitary specimen was killed by a friend in the year 1882.

The food of the woodcock while at the South, I am led to believe, consists almost, if not entirely, of earthworms; for in the cotton and sugarcane fields these are very abundant, and the presence of the birds can always be detected by their innumerable borings for the worms.

Of the thousands that come South few are killed, their habits of feeding at night, and of selecting their quarters by day, being a protection to them. Were these conditions different, they would soon be exterminated.

In my opinion, there is no bird in America which approaches it as a delicacy for the table. When we get them here, they are full grown and in their best condition, and when properly served, to use the expression of Frank Forrester, are truly "a dish fit for the gods."

SAN ANTONIO, Tex. A. Y. WALTON.

REMINISCENCES OF AN OLD SPORTSMAN.—IV.

(*Continued from page 345.*)

IN the morning after breakfast, instead of sending his man, the Doctor drove around himself. As I took my seat beside him he explained that he had made up his mind to become a squirrel hunter, and thereupon had decided to accompany me home if I would take the dog and give him his first lesson. He added, with a sly twinkle in his eye, that according to the best light upon the subject he could obtain, he had never been squirrel hunting in his life. I was only too glad to agree to this, and we soon had Milo and the old gun in the wagon, and in a short time we were in the best locality for our game that I knew.

The day passed all too quickly for me, as I had never met so genial and agreeable a companion, and although I have since been afield with many scores of good fellows, I have met very few who could equal him in all that goes to make up a perfect companion, and his superior I have yet to find. This is not the snap judgment of a boy, for the Doctor was my companion on many glorious days afield each season for more than twenty years, and so long as he lived there was never a word nor deed to weaken the ties that bound us together. I have ever blessed the day that brought me to know him.

Although passionately fond of squirrel and rabbit hunting, I had devoted much time and ammunition trying to become an expert wing-shot, and at the time I made the acquaintance of the Doctor I could shoot fairly well, and I invited him to come up and have a try at the birds with me. Taking Milo we drove to a tract of country that was a perfect network of alder runs and birch-covered knolls, with an occasional bit of swampy ground—a favorite resort for grouse and quail, as well as woodcock in their season. Milo was a first-class squirrel and rabbit dog, and I had so trained him that he was a very killing dog among the birds. Our method was simple, but effective. I would place the dog at the mouth of a run and bid him stay there, while I would go up the run some 10 to 20 rods, and taking my stand in a commanding position I would whistle to him, when he would beat up toward me; and in this way I often had lots of sport and bagged a goodly number of birds. Milo was also so well up in the new business that when beating the ground in front of me he would stop when he winded birds, and with wagging tail wait for me to go round and get a good position, when he would come on at the signal and nearly always give me a shot.

Now the Doctor had never even seen a bird shot on the wing, but as I had showed him that it was not necessary to have a rest when shooting, nor to take a long aim, he had so far profited by my instructions the first day we were out that he brought down several squirrels as well and quickly as I could have done, and at least two of them were on the move when he fired, so I had some confidence in his ability to bring down a bird, especially as he was perfectly cool and collected under fire and appeared to feel no concern as to the result.

Placing Milo at the mouth of a run I bade the Doctor go up about ten rods to a knoll while I went up on the opposite side a short distance above him, and took position where I could overlook him and get a shot should he miss. When all was ready I signaled Milo, and he soon had a grouse in the air, which flew past the Doctor, and I was never more pleased at anything of this nature than to see the Doctor coolly bring gun to shoulder and kill that bird stone dead. Gathering it in and heartily congratulating the Doctor, I again set Milo, and moving on up the run we took up favorable positions when the Doctor again brought down his bird in capital style. From that day, so long as he lived, he was ever a cool and most excellent shot. Although I had greatly the advantage of him in practice, it was a year before I was his equal in skill except in dense cover. He was a natural shot, and a very good one from the very start, and although I have had a large experience with beginners, I have met very few who could at all compare with him for coolness, natural ability and skill.

My friend Harrington, the artist, was also a natural shot. The first time I was afield with him was many years ago, when both of us were younger. Mr. Ray, one of my shooting companions, had for his guest Col. Odell—since well known as a sportsman—and he invited me to spend the afternoon with them among the grouse. We found the birds not very plentiful for those days, but managed to secure several, and I have a distinct recollection that Ray was quite jubilant over the fact that his friend the Colonel had beaten us both; but I never laid up anything against him; in fact, I have always enjoyed going out with a man who could keep up his end of the stick, and have ever considered that the next best thing to making a good shot myself is to see some one else do it. During our drive home I proposed to take them on the morrow to Holland, my favorite stamping ground, and promised to show them some sport. We invited Mr. Harrington to make the fourth man.

The next day, after a thirty miles' drive, before noon our team was hitched under the shed, near what was known as the "south ground." Ray had nagged me several times about my defeat of the previous day, and finally proposed that he and the Colonel should shoot against Harrington and myself for a wager. Harrington—always dead game—refused the match unless they would make it a basket instead of a bottle, and the matter was settled on this basis. When we came to the cover, which is quite an extensive one, Ray and the Colonel took the right-hand side, while Harrington and I took the left. We had gone but a few steps, when my dog pointed near the edge of a dense alder patch. I bade Harrington go around to an open space, and as soon as he was in position I put up the woodcock, which flew in the right direction, and he brought it down in great style. Then setting the breech of his gun on the ground, with one hand holding the muzzle, he took off his hat and fanned his face, and as I approached him exclaimed: "That is the first bird I ever shot on the wing, but it will not be the last one, and I will bet two baskets on it!" Just then we heard from the other party, four times in quick succession, and a second or two later we saw a grouse well up in the air, coming straight for us at the rate of about four miles a minute, more or less. As this was one of my favorite shots, I dropped him, when Harrington exclaimed: "That settles it, and I am only sorry that we have no more on the match."

Working out the remainder of our share of the ground, I placed my companion in a favorable position at every point, and took no shots myself that were going his way, and right well did he acquit himself, scoring but four or five misses during the whole trip; and to this day he is always cool and collected when under fire and is still an excellent shot.

I well remember one incident that greatly impressed me as a wonderful exhibition of self-possession under rather trying circumstances. We were working along a little brook, when the dog pointed a grouse in a small thicket just at the edge of a ledge of smooth rock that was covered with green moss, the ledge sloping down to the brook at about the same pitch as the roof of a house. I took position near the dog, while Harrington went round and came out at the upper side of the ledge, some 50yds. above. As he stepped on to the rock the moss loosened beneath his feet, and he started to slide down the ledge just as the grouse flushed, when, as coolly as though he had been standing on firm ground, he raised his gun, and although by this time he was under pretty good headway, covered the bird and pulled trigger, and grouse and man landed in the little brook almost at the same instant.

Now, don't imagine that because I have wandered from the telling of our match that we were beaten; not a bit of it. When we reached home on the third day we showed up a total of fifty-six birds, and thirty-four of them counted on our side. But I deeply regret to add that to this day we are still anxiously looking for that basket of Mumm.

Cases like those of the Doctor and Mr. Harrington are extremely rare. Not but that there are many who are natural shots, and at inanimate targets can do first class work almost from the start; but when the first bird rises before them their nerves will not stand the racket and attendant confusion; and it takes more or less time and practice before they can acquit themselves even fairly well when among the birds.

A gentleman came to my home one evening, and told me that he had heard so much about me from a mutual friend, that he had come all the way from New York on purpose to go shooting with me. I gave him a cordial invitation for the next day. In the morning he came over before breakfast, saying that he wished to practice a little. Loading his gun—this was in muzzle-loading days—he laid it on the ground, and taking a couple of apples, threw them in the air in opposite directions; then picking up the gun, he hit them both before they reached the ground. He also accomplished several other difficult feats, handling his gun with an easy grace and quickness that was remarkable. After watching him a while, I decided that although at this time I was a capital shot, he was my equal, if not superior.

Woodcock were very abundant in those days, and my dog was on point almost as soon as we reached the cover, when I placed him in a good position, and flushing the bird for him, was greatly surprised to see him miss a fair shot with both barrels. I said nothing, however. Soon we had another point, and again I sent the bird to him, but the result was the same. After two or three more trials, without ever touching a feather, he owned up that he had never shot a bird in his life, and wished me to shoot so that he could see how it was done. I was greatly surprised to see so good a shot as he had shown himself to be unable to bring down his birds, especially as I had given him fair shots, and I advised him to leave the hammers down and practice taking aim when we should start a bird. This he did, and was greatly pleased with the result upon the first trial; then he said that he found no trouble in getting on, and thought that he had mastered the science and could kill the next one. But it was of no use, for, although he tried it a number of times, he brought down only one bird during the day. I never saw him again, but often heard of him through my friend, and learned that by considerable practice he finally came out a fair shot on some days, but as a rule the birds usually had the best of it. The trouble with him was that his nerves would not stand the strain, and the noise of the bird and the excitement broke him up.

I have since met a number of persons who were troubled in the same manner, and have taken a hand at trying to teach a number of them how to do it, but have never succeeded in turning out anything above a moderately fair shot, and without exception all were unreliable when there was an unexpected rise, or anything came up a little out of the ordinary run. SHADOW.

SPRINGFIELD, Mass.

A DAY'S STALKING IN SCOTLAND.

PETER and I left the castle early in the morning of Sept. 16, and drove over to Ardverkie in the dog-cart. Crearer met us at the farm, and when all was in readiness we started for the hill. Crearer led the way, using his spyglass every now and then, and I rode just behind him on a sturdy little hill pony. Behind me came Peter and the gillies with the pack-horses.

Not long after leaving the farm, we sighted game to the left of us, but upon examining the herd with the glass, found it was made up of hinds, and very young stags who had not yet arrived at the dignity of more than four points on their antlers. We hastened on, and did not go far before Crearer halted and took an observation with his spyglass, and discovered three old stags to the right and in front of us. They were some distance off, and lay quietly in the heather on the side of a hill overlooking the valley we were in.

The gillies were now told when and where to meet us with the pack-horses, the Winchester was taken out of his case, and a few extra .40-75's in my pocket, I followed Crearer off over the moor. We commenced to walk diagonally toward the deer, taking advantage of all the small hills and corries to keep out of sight as much as possible. The wind was just about as it should be for the stalk, and we cautiously tramped along, once or twice flushing a covey of grouse that flew up with a rush and a whirr that seemed enough to startle every deer within half a-mile, to say nothing of the anxious stalker, until we came to a stream which came down the mountain and passed close by where the stags were lying. The little rivulet had worn a deep ditch for itself in the black, peaty loam of the moors, and made a splendid trench up which to advance upon our game. We were not long in turning it to account. Into the stream we went on hands and knees, and as quietly as we could we worked our way along through the ice-cold water and slimy loam, until within about eighty yards of the stags. We then crawled cautiously from the bed of the burn, wormed our way up to a small tussock of heather and waited. The deer were still placidly chewing the cud, and all we could see of them above the heather was their antlers, and now and then a head. We lay there in the purple heather and admired the beauty of the hills, tumbled and tossed together like great billows on the sea The morning sunshine played among the peaks and corries, and with the aid of the soft white clouds made continual changes of light and shade among the greens and purples and grays of bog, heather, and rock. Suddenly an old cock grouse began to crow his warning "goback! goback! goback!" and the best stag of the tree, a magnificent fellow in beautiful blue coat, raised his head, gazed intently down the glen, and before it was possible to draw a bead jumped to his feet and trotted off around a shoulder of the hill, followed by his two companions. It was exasperating, to say the least, but there was no time to be wasted in lamenting, so we quickly scrambled back to the valley of the burn and ran along parallel to the ridge the deer were on, hoping, as they were not very much disturbed, to catch them

Everything went smoothly until, on peeping over the ridge again, we had the pleasure of seeing the old patriarch with one of his pals just about to cross the next ridge. I was out of breath with the run and my hand was shaking like a leaf, so I held my fire, and devoted my attention to one of the three beasts that had remained behind. For a time this one fed along the ridge and we crawled nearer and nearer to him, and then, just as we were within range he lay down in the tall heather, and we could only see his ears and antlers and the top of his back. By this time it was pretty well on toward afternoon, and we were beginning to feel rather hungry. I decided to risk a shot at his back, and try to get in another as he got up if I missed the first. Just when I was going to shoot, however, I found that the beast had caught sight of one of our ponies about three miles off down in the valley, and after flattening himself down in the heather once or twice so that nothing was visible but his antlers, he finally got up, and without offering me anything but a shot at his rump, crawled into a sort of cleft in the hillside. There was only one way to get at him now, and that was to crawl and slide down the face of the long hill or ridge on which we were and work along until nearly opposite the cleft. This I decided to do, although the hillside was covered with moss and small round pebbles, which, if started, would roll down the hill in a small avalanche. By dint of good luck, however, and very careful crawling, I finally reached a position behind a boulder on the hillside, from where I could see the head and neck of the deer, about seventy yards off. I aimed at the upper part of his neck, and as I fired he jumped to his feet and I fired again. There was no need for the second shot, however, the .40-75 expansive bullet had done its work, and the lurcher was ready to prevent his escape. After a few unsteady steps he reeled down the hillside, and fell dead almost at my feet.

The proper thing to do now was to wait for the pack ponies, which Crearer had signalled to make their way to us. When they arrived we gralloched the stag, had the customary dram, "more blood," and, as the gillies strapped the venison to one of the ponies, we ate a sandwich and were ready again.

This time we went higher up, while the pack train went back to the valley, and before long were threading our way through a rocky pass in a thick mist. The hoarse challenge of a stag rang out on our left just after the mist shut down, but it was too thick to see anything but the ears of our ponies, and we carefully picked our way along until the mist lifted a bit. As soon as it was clear enough, Crearer got out the glass and searched the surrounding country, but failed to discover anything but a large herd of hinds. We were just turning around to retrace our steps when we saw a small herd of stags and hinds just rounding a shoulder of rock, and we at once started after them. When we were pretty near the spot where we had last seen them, the mist shut down as thick as ever and we dismounted, left the ponies with Peter and went forward on foot. We were crawling along on our hands and knees when Crearer, who was in front, suddenly stopped, flattened himself down to the ground, and tried to wriggle backward, at the same time keeping the lurcher quiet and motioning me to move forward. I had not crawled ten yards before, through a rift in the mist, I saw a herd of four or five splendid stags and a few hinds directly in front of me. They all seemed on the alert, and in a glance I singled out the biggest in the herd, a beauty, one with ten points. He dropped as I fired, and I took a snap shot at the others as they dashed off down the glen, but missed. The one that was down was still struggling to regain his feet, having been hit rather forward and

high, when another bullet quieted him, and we then gralloched him and dragged him down to the ponies and started for home. By actual weight he weighed about 196lbs., while the beast shot in the morning weighed 175lbs.; both were in good condition and had splendid heads. As Peter and I drove back to the castle in the dark, we felt that our first day in the forest had been a great success.

STORLAX.

CHICAGO AND THE WEST.

The Saginaw Crowd.

CHICAGO, Ill., Oct. 28.—The special car W. B. Mershon, containing the Saginaw crowd, earlier specified in these columns as having departed for the Northwest on a hunting tour, reached Chicago last Saturday, after a very successful trip, as goes without saying in description of the doings of this redoubtable aggregation. Something of their character and their performances may be learned by the following note from Mr. J. J. Gokey, of Dawson, N. D., at which point the party stopped for a duck and goose shoot. Mr. Gokey says:

"The Saginaw crowd went home after having a good hunt and getting all the game they wanted. They are not game hogs, but gentlemen sportsmen, and they know when they get enough. Mr. W. A. Avery, of Detroit, and Mr. H. P. Dain had a little experience. They were out after a crippled duck in my boat, and they ran against a snag, and were going so fast that when they struck they tore a hole in the bottom of the boat, so large that it took three ducks to stop the leak when they got around to it. They were ducked in shallow water, but raised the boat to get ashore. They both said the water was mighty cold. Mr. Dain and his friend, Mr. W. P. Schultz, were goose shooting with me one afternoon, and I think they will say the geese were plentiful enough, for we got forty-two geese, though I don't know whether Mr. Schultz got his share or not. We have had some shooting here this fall, as you may see from the fact that I have loaded and sold 86,000 nitro shells this season.

"A great many shooters have been here at Dawson from all over the country. Last week the palace car Yellowstone, with Mr. Jerome Marble's party, was here with ten shooters, as below: Mr. and Mrs. Marble, of Worcester, Mass.; Mr. A. W. Gibbard and son, Mr. A. B. F. Kinney, Mr. and Mrs. V. D. Kennerson, all of Worcester; Mr. F. L. Sturtevant, wife and son, and Miss L. A. Putnam, of Quincy, Mass.; Mr. Lewis Eddy, of Dorchester; Mr. W. E Harman, of Lexington; Miss Helen S. Griffiths, of Lexington; Messrs. John M. Johnson and G. Pearce, of Norwich, Conn. All these had a fine time, and they got lots of game."

Colorado Utes Make Trouble.

Despatches of more or less inflammatory and probably inaccurate nature have been printed in Western papers this week since Oct. 26, touching upon an alleged Indian uprising in which the White River Utes are said to have fallen foul of the State game warden, with the result that firing ensued and that several Indians were killed. The first reports came in to the effect that Game Warden Wilcox attempted to arrest some of the Utes near Lily Park, Col., for violating the State game laws, and that he was fired upon by the Indians. His posse returned the fire, killing five Indians. The game warden, reinforced by several posses of officers and citizens, then pursued the Indians, who fled. The customary headlines about an "Indian uprising" were of course brought out. There is no doubt about the encounter, for it was known and announced some weeks ago that the warden would try to stop the big fall hunt of the Utes, and since then the Indians have been coming in over the line from their reservations in large numbers. They have never been any too amenable to discipline when it came to changing their plans in regard to their annual fall hunt on their old hunting grounds, and hence the resistance on this occasion. Of course the talk about an outbreak is of the customary sort, something very well known in the border country, where the grangers have a little hay which they could be induced to part with to the U. S. government for a consideration, in case it should seem necessary to send troops to the scene of impending disaster. Of course, the Governor of the State was telegraphed to send troops at once, but this he did not do. Gen. Otis, of the U. S. A., Department of Colorado, took the same view about ordering out troops from Ft. Duchesne, where some 110 men are stationed.

It was at first reported that several white men were killed in the mix up between the posse and the Indians, but this is denied in a despatch which was sent Gov. Richards by Deputy Sheriff Watson from Meeker, Col., Oct. 25.

To-day, Oct. 28, news comes from Rifle, Col., that Warden W. R. Wilcox has sent out by Boyd Vaughan, a Snake River Rancher, a despatch to the Governor dated Oct. 24, and also a letter to James Lyttle, warden at Meeker, which letter goes on to say:

BOYD VAUGHN'S RANCH, Oct. 24.—*James Lyttle, Game Warden, Meeker, Col.:* To day, with a party of twelve men, I tried to arrest a camp of Ute Indians. We used all patience, and they fired upon us and then we had to fight. On Snake River, five miles above Lilly Park, several Indians were killed and wounded.

I have riders to warn settlers in Lilly Park and elsewhere. The settlers are gathering at Vaughn's ranch and are much alarmed, and think you should turn out with what men you can to try and arrest the Utes. I believe that there were about sixty Utes in this camp, but late information shows at least 100 men, and some say 200. I have seen about forty, but they were at many places, and may retaliate; but if these Indians wish to, the settlers are entirely at their mercy. So you and the Sheriff of Rio Blanco county had better do what you can to protect the settlers. Yours respectfully, W. R. WILCOX.

Mr. Vaughan says that seven Utes were killed, but no whites; and this part of the long story seems not only very familiar, but very probable. Vaughan says an old squaw began the firing, and that the white men at once began firing into the camp, badly wounding several besides those shot fatally. Much indignation is expressed against the warden, who, it is claimed, should have known better than to try to arrest a whole camp of mountain Utes, numbering at least forty men. These Utes are undoubtedly bad men, and it is likely that they are about the worst game butchers on earth; but after all the facts are in—should it be possible that all the facts of a Western Indian uprising story ever could come in—we shall perhaps find that the Indians were not wholly to blame, or perhaps that they did not wholly understand what was wrong or what was wanted of them. They may yet retaliate on innocent settlers along the valleys of that region, but this is not likely. Should they so retaliate, they will probably be doing what they think is right. Should they not do so, they will perhaps go back home feeling that they have been grievously wronged and bitterly imposed upon. If in this case they resisted, it does not yet appear that they did so at the order of their responsible head, but only after the action of a woman had been answered by the law of firearms. Thus arise Indian troubles, when very often the Indians are not so deliberately mean and dangerous and misunderstanding as they are misunderstood and misrepresented. It will be well enough to wait till we have the other side of this, if there can ever be any other side in a case between Indians and white men. The chief drawback on the part of the Utes seems to be very likely the fact that they have no press agent, no associated press, and no stacks of hay ready to sell the army for a reasonable consideration.

Still Another Indian Trouble.

Yet another Indian difficulty over game-law matters comes from Minnesota in the dispatches of to-day from St. Paul. It is stated that a special telegram from Leech Lake reservation, in upper Minnesota, reports that a messenger had just arrived at the agency with news of a fight yesterday between some of the Indians and a game warden, two of the Indians engaging in the fight. It was stated that both these Indians and also the game warden were killed, and that an Indian woman was also killed. It would seem that modern advanced thought in regard to the sex has not missed the outlying Indian settlements, as witness this report and the one of the Ute squaw who began the last Colorado war. I have only this meager information at hand at this writing, and it is possible that this is a part of the same sort of thing in which two or three times there has been previously announced the death of Warden Stephens, of Detroit. It may very well be, however, that some trouble will ensue at the Minnesota reservations about the recent order issued by the Indian Department restricting the sale of game from Indian reservations. Leech Lake country is a great one for this game traffic, and if there has not something happened up there of serious nature, it may very likely occur almost any day, until the Indians get the correct situation into their minds. Brother Lo is not always easily defensible in his notions about game and the game supply. The Utes and Snakes have long been bad skin hunters, but the worst sort of Indian is the one who believes he has an inalienable right to hunt for the market the year round, as these Minnesota Indians have been doing. Indian hunting for Indian use never yet caused destruction of any local game supply. Indian hunting for white men's use will depopulate any game country on earth.

Season Dwindling.

Our shooting season for this part of the West seems to be dwindling, though it started out with promise. The weather has been splendid for anything but hunting or farming, the whole month of October for half a dozen Western States, having been gloriously clear and balmy. This has dried up the ponds and streams to a great extent, and has spoiled the shooting country over a wide area, beside retarding the south-bound flight of the wildfowl. Very few of the Northern birds have been reported as down in Minnesota yet, and we have had none of consequence in this part of the country, though the crop of local birds in Wisconsin was extraordinarily good. Low water and mild weather do not promise much for the Kankakee this fall, and we can expect very little shooting, except as a day or so at flight birds offers, there being no great body of good marsh anywhere in sight. A few scattering bags of snipe have been made, and these birds are coming well down. I should expect to hear of good shooting at ducks on all available waters of this region within a day or so now, for the blizzard of the past two days has reached not only Colorado, but parts of Dakota, and a colder wave is expected here soon. Under these conditions, we may get a few days fun at the lower Wisconsin grounds, those of upper Illinois and upper Indiana. Then attention will turn to the quail, of which there is a splendid crop in lower Illinois and Indiana. Nowadays we think nothing of a few hundred miles when we take into consideration the game supply of a given section. The Chicago shooters go over a wide strip of country. We hardly think of Illinois as a Southern State until we take down a map and see how far south it runs. Away down in Illinois, in that great corn country known as "Egypt," the conditions are practically Southern; and the abundance of game is almost Southern, quails especially being found there in great abundance. The lower third of this State and of Indiana, will be grand shooting fields this fall for upland game, though hardly for wildfowl.

Illinois Chickens.

It is an odd fact, and one hardly to be called widely known, that Illinois was this year about the best chicken country there was in the West. Of course, this is not true in any wide or general sense, but I mean to say that in Henry county, Ill., the bags of chickens made were larger than any of which I got track after a diligent hunt for the news out in Dakota and Minnesota. The birds were not disturbed very much on a certain narrow strip of country there, and the virtue of protection at once became evident. There is no trouble about having game, if a few simple problems in arithmetic be kept in mind, such as "One from one leaves naught," or "Naught from naught you can't." We used to do those things when we were boys, but we forget how to do them as we get older, it seems. The case in this part of Illinois was one which has not been infrequent in different parts of the West. The birds were shot out hard, and harried until they seemed not worth harrying any longer. Then they were passed over for a few years, in the belief that they were about exterminated. Then they were protected against indiscriminate shooting of illegal sort during their defenseless season. Gradually they changed their habits, learning new ways, such as taking to the cornfields for shelter and protection. In the course of years the local stock thus recuperated became full again, until its quality was again discovered. Next year we may not hear of quite so good a crop, but it is sure that the birds were not cleaned up there this year. The worst enemy of the game birds of this great and glorious land of the free is not the game hog, nor the market shooter, nor the farmer boy, nor any of those honorable agencies by which the game is ostensibly and customarily destroyed, but the most unfailing and relentless enemy is good old human nature. I have noticed large quantities of human nature hanging around the edge of a great many good chicken countries, and nearly always, by and by, there seemed to be, after a while, rather more human nature than prairie chickens left.

Warden Fullerton Assaulted.

There seems to be plenty of trouble over game law matters out in Minnesota this week. This time details come with the news, and it seems that it is the State game warden himself who has been assaulted this time. The dispatches read as follows:

"DULUTH, Minn., Oct. 28.—State Game Warden Sam Fullerton arrived here to-day from Detroit. While waiting at Detroit he saw a box addressed to a cold storage company at Chicago. Watching an opportunity, he opened it and found ninety-eight partridges in it. He attempted to seize it and was set upon by three expressmen and was kicked, beaten and choked. He declares that he will prosecute the express company to the fullest extent of the law."

This is about the only time that Warden Fullerton has, during the course of his work, been subjected to anything worse than threats and expostulations. He has once or twice come near to being fired upon, and has once been obliged to give up—under the cogent argument of the "drop," enforced by a shotgun in the hands of a fisherman—some illicit property he had seized. He has not before this suffered personal indignitiy at the hands of violators of the law, and perhaps the express company's agents did not know whom they were tackling. Mr. Fullerton will show them very conclusively about this part of it, and before he gets through with that particular outfit they will very much regret that they have taken the law into their own hands and committed the grave offense of resisting an officer in the course of his duties.

Texas and the Klondike.

It may be news to a good many Northern friends of Oscar Guessaz, the stalwart San Antonian, to learn that he will in the spring join the great army of enterprising men who are pushing on to the Arctic circle in the hope of finding fortune in the gold fields of the Klondike country. It seems much as I have said earlier, all the good men are going to Klondike, and we who stay behind are not much account. Mr. Guessaz writes me that his partner is to be Dick Ware, the U. S. Marshall of that district in Texas; a man who doesn't say much, but acts a heap. We will all wish them good luck, and the man who doesn't want to go along has something wrong about him. Mr. Guessaz leaves a good business behind him, but if he can scratch gravel in Alaska the way he can throw sand in Texas, he is all right.

For anyone wanting to get into the upper peninsula of Michigan, I would advise the vicinity of Iron Mountain, or better yet, Metropolitan. The latter is a terminus of a woods line, and last year was very good for deer. This is Chicago & Northwestern R. R. country. Each of the three lines mentioned hereinbefore can give full details about the game country along its lines. The Northwestern Road this fall got up a list of its game countries by means of inquiry among its station agents, and this list is offered FOREST AND STREAM for publication. I would advise that all these railroad lists of game points should be retained for reference the following year Of necessity they are not always exactly accurate, and the facts change in regard to local game supply from year to year; but these lists are approximately correct, and serve to land a man somewhere near the place where he wants to get, and he can do his own skirmishing when he gets that near. The Northwestern gazetteer covers many varieties of game beside deer, and is as follows:

ILLINOIS.

McHenry.—Ducks, geese, snipe. Prospects good. Hunting grounds, river one mile and lakes four to eight miles.

Richmond.—Ducks and rabbits. Fair prospect, November and December. Hunting grounds, two to four miles.

Ringwood.—Duck plentiful. Nine miles distant

Benton.—Snipe, ducks and geese. Good prospects November. Hunting grounds two miles distant.

WISCONSIN.

Ashland.—Ducks, partridges and deer plentiful. Grounds five to twenty miles away. Guides necessary and obtainable.

Monico Junction.—Deer and bear. Deer plentiful. Hunting grounds close to station. Guides can be obtained.

Manitowish.—Deer and ducks plentiful. About twenty lakes in vicinity with wild rice. Hunting grounds one to twenty miles distant.

McNaughton. Deer and partridge plentiful; some ducks. Hunting grounds three to twenty miles away.

Pelican Lake.—Deer, bear, ducks and partridges. Rice Lake, with wild rice for ducks. Deer most plentiful. Guides desirable and obtainable.

Pratt Junction.—Deer, bear, partridges, ducks geese; deer and ducks most plentiful. Rice Lake eight miles, Pelican one mile away, with wild rice for ducks. Guides obtainable.

Rhinelander.—Deer and partridge. Good prospects for deer. Hunting grounds anywhere outside of city limits. Guides, boats necessary and obtainable.

State Line.—Deer and ducks most plentiful. Duck hunting good in October Lake Bieux Desort supplied with wild rice for ducks Hunting grounds five to twelve miles distant. Guides desirable and can be obtained.

Summit Lake.—Deer, bear, partridges and ducks; deer and partridges most plentiful. A marsh about two miles from station, supplied with wild rice. Hunting grounds near.

Tomahawk Lake.—Deer, partridges, ducks; deer most plentiful. Hunting grounds nearby. Guides obtainable, desirable, but not absolutely necessary.

Favorable reports also received from Three Lakes, Hurley, Marathon City, Woodruff, Hatley, Hazelhurst Junction, Gillett, Elmhurst, Birnamwood, Little Chute, Marinette, Neenah, Wausau, Oconah, Norrie, Forest Junction, Embarrasss, Dane, Marshland, Midway, Necedah, Necedah Junction, Okee, Onalaska, Trempealeau, Waunakee, Calvary, Fond du Lac, Glenbeulah, Malone, Princeton, Rosendale, Fort Atkinson, Jefferson, Koshkonong, Milton Junction, Pleasant Prairie, Woodworth, Waukesha, Deerfield, Dousman, Green Lake, Pensaukee, Oshkosh.

MICHIGAN.

Wakefield.—Deer and partridges very plentiful. Hunting grounds two to four miles distant. Guides desirable and obtainable.

Robbins.—Deer and partridges; deer especially plentiful. Grounds about a half mile away. No guides.

Foster City.—Deer plentiful all around station. Guides not necessary.

Bessemer.—Deer and bear, some partridges Deer plentiful. Grounds about twenty miles distant, and guides necessary.

Swanzy.—Deer, partridges, ducks, spruce hens, etc. Deer and partridges especially plentiful. Grounds ten miles distant. Guides desirable.

Spalding.—Deer, partridges, ducks. Good deer hunting in November. All three kinds plentiful. Grounds ten to thirty miles distant, and guides not necessary.

Norway.—Deer, partridges and trout. Deer very plentiful. Grounds located three to twenty-five miles. Guides obtainable and desirable

Escanaba.—Deer, bear, rabbits and partridges. Deer and partridges especially plentiful. Fair sport with birds within a few miles; better ten to fifteen miles away. Guides not necessary.

Champion.—Deer, rabbits, partridges, ducks. Partridges very plentiful. Grounds eight to ten miles distant Guides not necessary.

Elmwood.—Deer, partridges, prairie chickens, rabbits. About twelve lakes, some of them supplied with wild rice. Deer and partridges most plentiful. Guides can be obtained.

Favorite reports also received from Crystal Falls, Amasa, Bagley, Loretto, Narenta, Metropolitan, Michigamme, Saunders, Daggett, Nadeau, Stager.

IOWA.

Delmar.—Prospect for prairie chickens good within three to four miles.

Moingona.—Prairie chickens, grouse, quail, rabbits and squirrels; the last three most plentiful within three miles radius.

Scranton.—Prairie chickens plentiful all through this vicinity.

Crescent.—Ducks, geese, quail, snipe; ducks and geese abundant. Lakes in the vicinity supplied with wild rice. Boats necessary for hunting on the lakes, but good hunting on the land.

Loveland.—Good prospects for ducks, geese, chickens, quail rab-

bits. Lake five miles distant supplied with wild rice. Boats, but not guides, necessary.

Missouri Valley.—Ducks, prairie chickens, quail plentiful; four to six miles.

Algona.—Prairie chickens abundant five miles away.

Schaller.—Prairie chickens, ducks and geese; ducks especially plentiful five to ten miles distant.

Laurens.—Ducks, geese, prairie chickens plentiful, two to ten miles.

Marathon.—Prairie chickens especially plentiful. Ducks in moderate quantities. Hunting grounds adjacent.

Favorable reports also received from Harcourt, Sioux Rapids, Gowrie, Dayton, Dakota City, Burt, Denison, Glidden, Grand Junction, Baldwin, Lyons, Onawa, Turin, Peterson.

Tracy—Ducks, prairie chickens, geese. Prospects for ducks especially good, and lakes within eight to ten miles supplied with wild rice for ducks.

Lake Benton.—Excellent prospects for ducks, geese, prairie chickens. Numerous lakes. Good duck shooting on Lake Benton, as well as surrounding lakes and towns.

Tyler.—Ducks abundant at Dead Coon Lake, eight miles north. Prairie chickens also plentiful. Guides not necessary.

Redwood Falls.—Ducks and prairie chickens abundant, four to fifteen miles. Guides and boats not necessary.

Morgan.—Good prospects for prairie chickens, ducks and geese, one to ten miles away.

New Ulm.—Prairie chickens and ducks especially plentiful, and lakes seven miles distant, supplied with wild rice.

St. Peter.—Prairie chickens and quail. Guides necessary and obtainable.

Favorable reports also received from Nicollet, Walnut Grove, Eagle Lake, Plainview, Essig, Claremont, Porter, Balaton, Kasota, Hankato, Smith's Hill, Owatonna, Douglass, Pine Island, Zumbrota.

SOUTH DAKOTA.

Clark.—Ducks, prairie chickens and geese. Ducks most plentiful. Hunting grounds three miles distant.

Elrod.—Ducks, prairie chickens, geese plentiful surrounding the station and beyond.

Wolsey.—Ducks and chickens one to ten miles distant. Plenty of lakes and sloughs. Guides, but not boats, necessary and obtainable.

Watertown—Prairie chickens, ducks and geese abound on several lakes within two to twenty-five miles, supplied with wild rice.

Volga.—Prospects good for ducks, prairie chickens and geese, especially ducks, within two to twenty miles.

Harrold.—Ducks and rabbits plentiful, one to ten miles distant.

Groton.—Good prospects for ducks and chickens.

De Smet.—Ducks and chickens abundant within five to eight miles.

Dempster.—Ducks, geese, prairie chickens abundant within four to fifteen miles. Plenty of lakes.

Favorable reports also received from Crandon, Castlewood, Bruce, Brookings, Athol, Aurora, Wakonda, Pierre, Condo, Gettysburg, Iroquois, Aberdeen, Yankton, Wessington, Volin, Northville, Monroe, Miranda, Lebanon, Kranzburg, Huron, Houghton, Hecla, Goodwin, Frankfort, Faulkton, Estelline, Esmond, East Pierre, Blunt, Broadland.

NORTH DAKOTA.

Oakes.—Prospect for ducks best ever known. Chickens and geese found in very moderate quantities. Plenty of lakes and abundant grain feed Hunting grounds about five miles distant.

Ludden.—Ducks, prairie chickens and geese abundant. Wild rice on James River and several small lakes. Guides and boats necessary and obtainable. Chicken shooting is very fine here and in this vicinity.

Yellow Jack and the Tourists.

Dr. L. W. Cock, of San Marcos, Texas, writes me from New Orleans that he is stopping at the latter city for a while, and that his hotel is nearly empty, no travel going on at all in that section on account of the yellow fever. Galveston, Texas, according to the report of yet another friend, is also paralyzed in business and tourist traffic. The same is no doubt true of many Gulf points, and it is very likely that the widely advertised fever scare will keep a great many sportsmen tourists out of that region this winter, although the natural season for such travel is not yet at hand.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

NEW ENGLAND NOTES.

BOSTON, Oct. 30.—Snaring and shooting partridges for the market are not done yet, not even in Massachusetts, where so much has been done for the enforcement of the statutes concerning fish and game, In the bottom of one of the wagons of a local express I saw, on Monday, more than fifty partridges. The express comes from the vicinity of Plymouth and Brockton. Not a bird appeared to have been shot, and yet all seemed to be fresh, as though recently taken. The Rod and Gun Club is after the snarers with several wardens. They have secured a number of convictions. I saw a bird the other day that had cost the snarer just $20.

Some good bags of partridges, woodcock and quail are being made in Hudson and north of that section. The other day four Boston gunners could stand the desire no longer; the flight of woodcock must be looked after. Procuring a team the night beforehand, they were off by 5 in the morning. Driving fifteen or twenty miles they came to the section they proposed to hunt; somewhere north of Peabody. Alas! a fire a few days before had burned the woodland all over, and there were no signs of birds, only smoking ruins. They did not even put out their dogs, but fed their horse and then drove a number of miles further to where they succeeded in getting a woodcock and a partridge. A few days before another Boston party of gunners secured eighteen birds—woodcock, quail and grouse—on the same ground. A gentleman writes me from Oxford county, Me., that there is not one partridge in the sections he has heard from where there were five last year. The Lewiston and Auburn gunners after partridges are returning empty-handed.

Messrs. I. S. Kelley, A. B. Kelley, A. T. Burbank, J. W. Carlton and Herbert Burbank have been into the Maine woods on a hunting trip. They secured three deer, and Mr. Burbank stayed behind the rest of the party with the full intention of securing a moose. Mr. I. S. Kelley had never been into the Maine woods after big game before. He is much pleased with his trip, though he did not secure a deer personally, getting only a couple of running shots. They went to Norcross, on the Bangor & Aroostook R. R., and from thence to Lake Pemadumcook, and to camps in that section. He mentions the shooting of a man who was gathering cranberries, by a New York sportsman who had never been in the woods before. The guide told the New Yorker to be careful, as there were cranberry pickers on the bog. But this caution did no good. The man stooping over was a deer or caribou to the inflamed imagination of the fellow who never ought to have been in the woods. The poor cranberry picker was wounded in the leg. The hunter gave himself up to the authorities, was brought out to Bangor, and put under heavy bonds to appear in court when wanted. At least ten cases of shooting men for big game in the Maine woods have already been reported—not many of them fatal, but bad enough.

Mr. Frank O. Hallowell, with a hunting friend or two, has been on a trip to the Maine woods after big game. They traveled a number of miles by canoe and on foot in the vicinity of Mount Katahdin; saw a great many deer, one of which they shot, but saw no moose. They might have killed a great many deer, but could not make any use of more than one. Transportation of big game would also have been almost impossible.

Mr. Heath, of Boston, has just returned from an extended hunting and fishing trip to Maine. With a friend he went into the woods above Moosehead Lake and up one of the celebrated hunting routes, going in before the close of the season on trout and remaining till the open season on moose. They found most remarkable trout fishing, claiming that they easily took five trout to one at the Rangeley waters, where Mr. Heath has fished many seasons. They saw 150 deer and took all they could use, which was only one or two. Nineteen moose they saw before Oct. 15, counting cows and all, but not a single bull moose did they see after the open season began. Mr. Heath feels certain that bull moose understand the game laws sufficiently to keep out of sight when they can legally be shot.

Now they are laughing at a Boston crack shot on coot and ducks. He claims that the sights of his rifle are wrong. On his Maine hunting trip, from which he has just returned, he did not get a deer, though having a number of good chances. He would shoot, but every time the deer up and away. At last the boys put him to a severe test. Two of them were out one day, one shooting a deer which they did not bring to camp that night. The next morning they were off to bring it in. They sent a couple of guides ahead with instructions. B. was invited to go along with the hunters; they "might see a deer." B. went with his rifle cocked. "Sh! There's a deer!" from one of them. "Where? Where?" whispered B. Quickly he saw it, and as quickly took aim and fired. The deer did not move. Again pump—bang! pump—bang! pump—bang! till the magazine of his rifle was empty. There stood the deer; hadn't moved a foot. The guides had heard of the dead one. B. was ruffled at first, but saw the joke, and, like the good fellow he is, joined in the laugh, then in the investigation to see how many shots had hit the dead deer. Only two had touched it, but the ground and the timber for a circumference of 8 or 10ft. around had suffered. B. will take lessons in shooting a rifle this winter.

SPECIAL.

A TWO WEEKS' HUNTING TRIP IN NORTHERN COLORADO.

IT was the first week in October that three of us started off to lay in our winter supply of meat. Our hunting grounds were to be west of the Rabbit Ear Range, near Steamboat Springs. The sixty miles' drive was made in two days. On the third day out we were on the hunting grounds, after a very difficult pull of a heavy wagon over an old, long-disused game road.

When we reached the end of this road, we found two outfits already camped there. They had done considerable hunting near their camp, and with good results. The six deer and four elk hanging up near their tents made our prospects bright.

But we thought that the country within a radius of four miles must have been already pretty well hunted, as these two outfits were old hunters and good walkers. Hence we decided to leave our wagon and most of our grub at the end of the game road and pack over some ten miles further west. We soon had our bedding, our provisions and cooking utensils packed, and leading our ponies we made the ten miles in about three hours. We pitched camp near a little stream which flowed into the Bear River, between two game trails and close to a much-frequented water hole. I say much frequented, for there were hundreds of fresh deer and elk tracks leading down from the range to it. This is always the kind of camp the Western hunter calls his ideal; for we had plenty of firewood, good shelter, lots of water, but the most important thing of all, plenty of fine feed for our ponies.

It was 3 o'clock in the afternoon when we left camp for our first evening's shooting. We made our way across the nearest hill or "hog-back," as they say in the West, to a large, wide, long park. This park was lined on either side with heavy timber, and through the middle of it flowed a cool, clear stream. Just the place for elk to come into when once the sun had gone down behind the mountains. For so shy are elk and deer that while the sun shines they keep in the thickest part of the timber, but when once a shadow falls upon the openings (or "parks" in Western language) they come out for water and feed. Hence the best chance a hunter has is to sit down along the borders of these parks and wait for the game to come in sight.

Accordingly, we took our position some 200yds. from one good water hole, and about 100yds. from another, behind a clump of bushes, and awaited the game. We had been there not ten minutes, when four large bull elk came out of the timber to drink at the further hole. Our rifles rang together and an elk dropped. A second one was badly crippled as it ran. Leaving the dead one, we started on the trail of the cripple. This was easily followed; but it is proverbial that an elk will often "carry his weight in lead," and hence you may often follow a wounded one for many miles. After two miles, we decided to give up the chase, as it was getting dark, and we were some two hours' walk from camp.

Our next move was to dress our dead elk. While about half a mile from where we had killed it, what was our surprise to see one of its band coming back to find out what had made the noise of our rifle reports. We immediately dropped into the willows and crept on our stomachs; but the inquisitive elk saw its dead companion, and smelling its blood darted into the thicket. This was the last we saw of him. In half an hour we had our dead bull cleaned, and in two hours more, after groping about in the timber, falling over dead trees and getting stuck in the swamp (for it was very dark), we reached camp. For supper we had elk liver fried, and a fine breakfast of the elk tongue, roasted in the hot coals over night.

The next morning saw us up early, for we had a good half-day's work before us. We saddled the horses, and in an hour reached the dead elk. After quartering it, our hard work began. One who has jacked meat on a frightened horse can appreciate our task. We first tried the blindfold, but the horses smelt the blood. Then we tied the front feet up to the horn of the saddle. This worked beautifully, and we were soon "all aboard" for camp.

But what was our horror when we reached camp to find a fresh forest fire raging some five miles off, with the wind blowing toward us. Camp had to be moved, and that quickly, we decided; for a man must not be long in the West before he learns of the great danger and rapid flight of a forest fire. After a hasty meal, we jacked our horses with bedding, grub, meat, etc., and hit the trail as fast as we could for our wagon. Once there we were safe, as the fire was working away from us.

The country we had just left was full of elk, but the deer had gone lower down the range. In fact, our wagon camp was as good a place as any to hunt from. The next few days we spent hunting deer. There were few does up so high as we were, but there were plenty of bucks. And they were big, fat ones, too, as the running season had barely begun. Three bucks and an elk were all we could haul out, for our wagon was heavy and the road was rough. In fact, we had on about 1,600lbs., more than enough for two small horses to pull over a bad mountain road.

We left a little earlier than we had intended, owing to the warm weather's bad effect upon the meat, and to the fact that we had enough of a load. But before we went we had one day's grand trout fishing. All I have to say about trout is that if once the Eastern fisherman fishes in the West, he will never be satisfied with Eastern trout fishing again. "Go West, young fisherman," if you want to win laurels over the finny tribe.

F. B. W.

IN PIONEER DAYS.

(*Continued from page 329.*)

THESE passages, from the private diary of a resident of Cleveland, O., have never before been printed. They have a doubled interest now as showing the wilderness conditions of Ohio and Michigan a half-century ago, when there were elk and wild turkeys and wolves, and when the home conditions of the residents were more primitive than those which prevail to-day:

Nov. 24, 1841.—In company with L., on his first deer hunt, we left Cleveland at 8 A. M. for Russia, Lorain county, O. At 12 M. we reached Avon in a heavy, but unusually warm, rain, got dinner and reached Eleria just after dark. Inquiring the road to Oberlin, we started on, when a most terrible thunderstorm came on. The rain fell in torrents, the thunder and lightning were truly awful, equal to any summer storm we ever experienced. The night was horribly dark, we got completely drenched and the houses were far between; we were continually getting off the muddy, rough road, and our horse being hardly able to walk. L. was anxious to stop at the first house we came to, but I, insisting in keeping on, we took turns in leading the horse and feeling the way. In this way we kept on seven miles through the woods until we reached Oberlin at 11 P. M. We stopped at a kind of a tavern, when, after finding a man, we gave him half a dollar to thoroughly clean and rub down my horse. The landlord made us a large fire in the kitchen and while we were drying prepared our supper; and by 2 A. M. we found ourselves dry and in bed.

In the morning the ground was well covered with snow. We took our rifles and carpet bags and started west, intending to stop at the first house that would keep us. At the first house the folks were all sick, but at the second one, owned by one Mr. Smith, no objections were made, and we stopped. Smith's house was made of logs and was very old, it had two small rooms partially partitioned off below, and an upper loft, which was entered by a ladder. His family was composed of himself, wife and nine children; he was dreadfully poor and the accommodations we got corresponded with his poverty. Deer and turkeys were abundant in every direction. In the afternoon we started and soon secured a fine gobbler from quite a large drove, which served for a feast all around that night. The next morning we were up early, but a slight crust on the snow made hunting with success impossible. After a two days' hunt we came in at night gameless, though we had seen many deer and shot at long range several times. L. soon came in dragging on the ground the fore-quarters of a fawn which he said he had killed. On my expressing to him my surprise that he should have left the skin in the woods and dragged in that part of the deer, he wanted to know "what part he should have brought in." I told him of course the saddle. "Well," said he, "I'll know better next time when I kill a deer."

Toward the next evening, while following the edge of a black ash swail, I noticed something walking along some eight rods in front. Soon I made out three deer, a doe and two fawns. It being too dark to sight on my rifle, I pointed it toward the doe and fired. I distinctly heard her fall, making a loud crackling in the brush As I was less than a mile from Smith's, I returned for supper, and when the moon rose, took two of Smith's boys and went after my deer. We found her about twenty rods from where I had shot her, and drawing her to the house, we hung her up and dressed her, cutting out some choice pieces for the family breakfast. Our log house was well crammed with occupants this evening, Mrs. Smith's sister having come on a visit with her entire family of five children. One of the visitors, a young damsel of seventeen summers, was quite pretty and intelligent. L. and myself being very dry from eating a great many hickory nuts during the evening, kept Miss D. and Catherine S. quite busy in handing us teacups of water.

Fifth day, L., caring little for deer hunting and getting none, turned his attention to smaller fare, and to-night brought in a possum and fifteen squirrels. The squirrels Mrs. Smith served up as a stew in a large iron kettle, which, with a fat roast of venison from the live coals of a huge wood fire, made a meal all enjoyed, and there was enough to go several times around. After supper I walked two and a half miles to Oberlin, got my horse and buggy, and drove back to Smith's. After settling for our board and lodging at 75 cents a week, we drove three miles beyond Amherst, or seven miles in all, and put up for the night, Smith's house being quite too crowded for a much longer stay.

Smith was born in the Catskill Mountains, N. Y., was very tall and slim, some fifty years of age, and wore a very long beard. He was a most industrious man, working hard on his clearing all day, and making boots and shoes at night for his neighbors and family. He showed us a vest and other clothes he was married in thirty years ago.

Remaining at our new camp two days only, we returned to Smith's. We found the deer had about all left the locality, having been hunted out by hound-hunters. There is nothing so bad in the woods for the still-hunter as the Indian with his cur dogs and the white man with his bellowing hound. The deer soon leave the locality, and those few that remain become too wild for the most quiet hunter to approach within shot.

At Mr. Smith's we were well received, and that night we went with the daughter Catherine three miles on foot through the woods, across lots, to a "spelling school."

Sunday we took my buggy and went four miles to Podunk Swamp (Amherst) to church. After church we returned home, but stopped on invitation on the way and took dinner at the "nearest neighbor."

Monday morning Catherine wanted to visit her sister, who resided six miles off. I told her she could have my horse to ride in case she would saddle and bridle it, informing her in the meantime that it was entirely new work for the animal. The harness bridle was soon in place, and for saddle a small coon skin robe was improvised and kept in place with the circingle. She mounted like an expert and was soon off at a hard, long gallop, while L. and myself

took to the woods with our rifles. We saw two flocks of turkeys and several deer, but got not a single shot. Were "cut out" three times to-day. It is not safe to hunt in this neighborhood, for the most of these fellows will shoot on first sight at anything that moves.

At the last "cut out," feeling very much vexed, I stood still, not knowing exactly what to do, whether to continue to follow on the track or give it up, when suddenly off to my right I heard the report of a gun. Running over in that direction, I very suddenly came on the track of a deer on a keen jump. Noting blood on its track and knowing it had just been shot, and feeling mad that I had so often been "cut out" in following my deer, I sprang on the track and followed it some four miles on as rapid a rate as I could go, when getting tired, and thinking the hunter, whoever he was, would give it up by this time, I went along more moderately, seeing the deer often, but afraid to fire, for fear of the hunter hearing the report of my rifle. Night now coming on and failing to get a shot, I gave it up, and went back to Smith's house, telling him about my deer chase. The next morning, taking his rifle and strap, Smith went out and soon found the deer, dead. It was a fine, fat doe, shot through the hip with a very small ball, which glanced into the body. I told Smith he might have the deer, but kept the circumstances, as related, a secret from him.

During the remainder of the day I saw several flocks of turkeys, one drove of seven deer, and seven singly and in pairs; but secured only a fine hen turkey. Returning to Smith's, I found Catherine, safe from her ride and vainly endeavoring to put the big iron pot on the crane, filled to the brim with venison, squirrels and wheat dough, for "pot-pie," as she named it. Of course, my gallantry was not lacking; so jointly we soon had the coming dinner over the fire, hanging by the iron chain and hook crane.

Thursday we devoted to repairing several old turkey pens and making trails of straw to them, but our labor was all in vain, as shack was so abundant that the turkeys paid no attention to them.

Monday L. and myself took the woods together, proposing to hunt along the "big wind fall," which was now well filled up with second growth timber. We soon separated, and each in a short time struck a drove of deer. In the course of an hour they finally came together, making in all sixteen deer in one bunch. We then followed them in company until 3 P. M., when they all struck off in a southerly direction. I then proposed to L that we return to Smith's, as it would now take us until dark to reach his clearing. Getting out my compass I told L. the course to take when I branched off from him, having thereby a better chance to see game. I traveled very fast and ran a portion of the way, but notwithstanding I did not get to Smith's till after dark. We waited a long time for L before eating supper. After this a neighbor came in who asked where L. was. I told him I had left him some six miles in the woods and I rather thought he had gone on the Henrietta road and stopped. "Well," says he, "it is such a cold and cloudy night if he does not get out of the woods by 10 o'clock he is a dead man."

Being quite sure that he had stopped on the Henrietta road, I felt very little alarm about him. About 10, hearing a noise at the door, I went and opened it, when in tottered L., his clothes all torn and himself looking the picture of despair. In a faint voice he eagerly asked for some rum. "Quick, some rum!" I got the jug and poured him out full half a glass, which he drank off at once. Then setting a chair back from the fire for him, he sank into it exhausted. A supper was prepared, which he ate with a ravenous appetite; after this he gave a short account of himself. He said: that after leaving me he had kept on his course to Smith's, when he came across a large flock of turkeys, and followed them till nearly dark. Coming to the pen which I made, he was in a quandary whether to go out to the Henrietta road, a mile off, and stay, or go three miles through the woods to Smith's. Deciding on Smith's, he started, and when, getting half-way, as he supposed, he fell down and broke the glass of his compass. He then continued in the direction he thought right till he came back to the very spot he had started from an hour before. Getting frightened, he took another direction and traveled on with all the speed he could make. Soon he became very tired, fell down often in the snow, sat down every few minutes on the logs, so tired he could hardly draw his legs after him. It becoming a little lighter by the breaking away of the clouds, he thought he could see an opening in the woods, which he steered for, and which luckily proved to be Smith's clearings.

Next day his face and legs were badly, and it was several days before he could walk. In the morning, out of curiosity, I took his track and followed it for some two miles. The steps were very short, and the spots where he had sat down were very frequent. He had taken five complete circles, each one gaining ground toward the east. He worked always to the right (L. is left-handed), which fortunately was the reason for his reaching Smith's clearing.

I continued to hunt for a few days until L. was sufficiently recruited, when we left for Cleveland. We will always remember the pleasant evenings spent in the Smiths' log home. Although poor in this world's goods, they were always healthy and cheerful, always ready to aid with the small means at their command. At night Smith would bring out a big wooden bowl of choice hickory nuts, and while we cracked and ate and told stories he would pound away industriously at his leather. Catherine, who seemed to be the belle of the wilderness, often invited her nearest female friends from three to eight miles away to make a visit and stay over night, so L. had many opportunities to study female human nature.

About the last turkey we killed in the Russia region seemed so uncommonly large that we weighed it on reaching home, when to our surprise we found it weighed exactly 32lbs. It was very fat, and so large that in order to cook it in the stove we were obliged to cut it in two. Notwithstanding it was well roasted, it tasted so rank and strong that none of the family could eat it.

New Jersey Shooting.

ASBURY PARK, N. J., Oct. 29.—Reports from all the game sections of Monmouth county are of the most encouraging order. This is particularly true of the quail supply; from every one the same reply comes: quail very abundant and well grown.

In consequence the shooter's heart is exceedingly glad, and already preparations are well under way. It is to be hoped that the system of posting, which was in vogue in many sections last year, will not confront us the coming season; for men who call themselves sportsmen to band together and have the owners of land consent to posting in order that the small cost of printing may be saved them, and thus bar their fellow-man from any share of the chase, while they (the sportsmen) have a clear field, flavors much of the game hog in a new guise.

Already the reports from Barnegat are good. Ducks and geese are dropping in, and some good bags have been made. Colder weather will undoubtedly improve the conditions, and we hope for a renewal of our old-time sport on these grounds.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Drummond.

DRUMMOND is a dog, an Irish terrier of the bluest blood, his pedigree running back, I judge from its length, to the time of the Irish kings. He was given to me by Dr. Drummond, of Montreal, president of the St. Maurice Club, and the first few months of his life were spent at the club house, and it is more than likely that he there heard more or less about the big trout that are caught in Wayagamack Lake, and perhaps that turned his thoughts to fish and fishing rather than to vermin. He is a dog of action instead of a dreamer, for he was traveling with a friend of mine, a conductor of an express train, and being in the baggage car, the door of which was open, something outside attracted his attention and he slipped his collar and took a header out of the open door. My friend is not yet sure whether "the little red devil wished to find out how quickly a train could be stopped or was simply looking for trouble."

With a member of the family he went into a store possessing an overhead trolley or railroad for conveying cash to a central station. He took the deepest interest in the arrangement the moment he saw it, and when a cash-box came flying along the line he made one bound into the lap of a lady to whom he had never been introduced, another to the top of a show-case, and a third at the whizzing box. He missed the box, but he landed all right on the head of one of the shop-girls that had never done a thing to him, and before her scream died away he had tackled that trolley system from three different points of vantage.

The family say that his eyes are almost human, and I do not dispute it. That he is affectionate, intelligent, and brave as a big lion there can be but one opinion; but it is only lately that I have discovered that he has a literary turn, and that his specialty is angling literature. In my absence my mail is piled up on my desk until it overflows the desk, and then it is massed on a couch in the library. Drummond investigated the mail one day lately while I was away from home, and there were letters and packages and papers galore; some in wrappers and some with none. There was foreign mail and domestic mail, and apparently he examined it all, and selected two copies of FOREST AND STREAM, supposed to be securely rolled and wrapped in a brown paper wrapper He took off the wrapper and chewed up the Sea and River Fishing department of both papers. It may be said that this was all chance, and I would admit it if his attention had been devoted to this department in one paper only, but how does it happen that he extracted the fishing department from both papers? The Kennel department does not appear to have interested him in the least. At first I did not know but he was trying to get even with me for certain arguments I have had with him by chewing up my "Angling Notes," but I had no notes in that issue, and I must assume that he was simply trying to improve his mind. That Drummond is a dog of excellent judgment is proven by the fact that there were a number of other papers in the bunch relating more or less to angling, but there is no evidence that he did more than examine their titles, and then fairly devoured FOREST AND STREAM, as the best of the entire lot.

Fish Poisoning.

It was on a railroad train that I read a newspaper item about Otter Creek, in Tremont, being poisoned with Paris green, with the result that many brook trout were killed. I made a memorandum of the matter with the idea of having some experiments tried with fish and Paris green, to discover exactly what would happen under certain conditions. When, a little later, I went into FOREST AND STREAM office, one of the first questions the editor asked me was what I knew about killing fish with this poison, and I told him that up to that moment I had never poisoned fish with any kind of poison, and knew nothing about it. A few days later I was at home again, and when I went to market I met a friend and neighbor who said: "I saw those trout that were poisoned." A few questions brought out the fact that it could not have been Otter Creek that was poisoned, as my newspaper clipping stated. My friend said Mr. Silas L. Griffith, of Danby, Vt., had constructed some breeding ponds to establish a fish hatchery. The ponds were about 10×16ft. square and 2½ft. deep. These ponds were fed by a stream through a 3in. pipe. Instead of there being thousands of breeding trout killed there were just sixty-two, the trout running from 3 to 5lbs. in weight each, with smaller trout in other tanks. These were the trout that were killed, and I can better understand how it was possible for a miscreant to poison fish confined in small space, comparatively, than, as the newspaper said, poison a stream of the size of Otter Creek. My friend, Mr. Lapham, tells me that Mr. Griffith is a public-spirited man, who has done much for the town in which he lives, having given it a free library or something of that sort, and being interested in fish propagation, he proposed to establish a hatchery for breeding trout artificially. If the man or men who poisoned the water could be sent to jail for life, to reflect over the fact that in killing a lot of fine trout they endangered human life as well, it would be common-sense justice, if not common law justice.

Eaves-Dropper by Force of Circumstances.

One never hears his name mentioned in a public place by strangers, I imagine, without one's getting a start, even if one has never committed a crime and is not a fugitive from justice. Last Saturday morning when the gentleman in the Empire State Express from New York to Albany read the FOREST AND STREAM of Oct. 23, and commended Mr. Cheney's "Angling Notes" to the lady on his left, and approved most heartily of what Mr. Cheney said under the title "One Man in One Day" in the paper which he held in his hand, I doubt if he noticed that the gentleman on his right, in the next chair, quietly folded his tent, as it were, and fled to the smoking compartment of the car; but he fled just the same, because he was the Mr. Cheney who was being commended. At this safe distance I can take off my hat, make a profound bow, and thank the gentleman for the pleasant things he said about the writer of these notes.

Canadian Game Laws.

In a letter from my friend, Mr. F. W. G. Johnson, manager of the St. Catherine street branch of Molson's Bank in Montreal, relating his success on a shooting expedition from which he had just returned, he has something to say about other matters than killing deer and grouse. Mr. Johnson is a conservative sportsman and believes in moderation in all forms of sport, and is a strict observer of the fish and game laws.

He says: "We killed no trout, as it was near their spawning time, but we killed enough pike and chub to satisfy our hunger for fish. I saw near a trout spawning bed in one of the lakes fully a cord of birch bark piled up on the shore of the lake to be used as torches by the festive habitant in spearing the trout off the bed, to be salted for winter use. On the train coming in I saw in the express car a small fawn of 1897 crop, that would not weigh over 30 to 35lbs., judging from her looks. Poor little thing! Such is protection of fish and game in the province."

What Mr. Johnson says of a remote lake in Canada, is probably true to a greater or less extent of all waters containing fish in what we have come to term the backwoods. It is a difficult matter for the law to reach these remote lakes and stop the slaughter of fish at the breeding season The people who spear trout on their spawning beds for food have always done it if we could but know the truth of the matter, and they will continue to do so until they are caught in the act and have to pay the penalty, and that may stop the slaughter so far as the particular individual is concerned, but there will be others. These people look upon the fish as food that they are entitled to take at any time, and any law which chances to interfere with the slaughter they regard as an outrage and oppression. They never once consider that they are cutting off their ultimate food supply, such as it is, by killing spawning fish by wholesale. The food is at hand, and they take it and chance being caught. The transportation clause in the New York law was passed to prevent the extinction of the trout, because it was almost impossible with the small number of game protectors to cover the great woods regions, and detect violators of the law in this respect. When the men who netted trout almost with impunity in the remote streams and lakes, found their market cut off by the transportation clause, which forbids the carriage of trout by public carriers unless the fish are accompanied by their owners, a check was placed upon the destruction of the trout in these far away waters. To my amazement, I learned within the past two weeks while driving in Fulton county with a sportsman, who has the welfare of our fish and game at heart, that it is a common practice for men to drive from place to place in that region, and buy trout and birds and convey them by wagon to the summer hotels, and thus evade the law. What we need, and what Canada needs, is more fish and game protectors to enforce the laws, and to educate the people by a few convictions that fish and game must be left to breed unmolested. In some sections it requires several convictions to bring about a change of heart, and in others one conviction will suffice.

It is only fair to say of the enforcement of the fish and game laws in Canada, that a brother, writing me from his camp in Canada—not a fishing camp, by the way, but a mining camp—commends the vigilance of the Canadian game wardens. He was surprised to find the wardens so active, and he put it down to the fact that Canada realized the importance of protecting her fish and game as a "valuable mine, to be worked for revenue from her own and visiting sportsmen." In New York State we have practically one fish and game protector and forester to every two counties, and the men, however active they may be, cannot cover the territory in their charge and do it as it should be done.

I happen to know something of how these protectors are supervised by the Fisheries, Game and Forest Commission, and if a man does not prove capable and competent he is removed without ceremony and another put in his place. If a man does good work he is retained, although he may not do all the work of detecting game violators in his district, simply because there is a limit to the powers of a man. If he does not do good work, and his reports are a pretty fair index of his energy in the prosecution of his duties, he is dismissed, no matter what influence may be brought to have him retained.

I travel over the State quite a bit and hear more or less of game and fish law violations that are not punished, and nine and nine-tenth times out of ten the people who tell me of the violations wish the offenders punished, but do not wish to give any evidence which will lead to their punishment. No one who has not engaged in a case of violating the game law can understand what convincing evidence must be forthcoming to convict in court. Sidewalk testimony and hearsay evidence, for some reason, will not convince a jury of the guilt of any man. The testimony must be given in court and under oath, and it must be specific, and even then it will not convince some juries. Apparently every one who knows anything about a bank burglary is willing to testify against the burglars, but when the crime is one of breaking a game law the witnesses have to be hauled to court by the scruff of the neck. The people, all of them at least, are not yet educated to the fact that both are crimes, the difference being in degree. There is so much to be said on this subject that it is better to stop before a simple note runs into a discourse.

Worn Salmon Flies.

It was at a New York club, and I was taking luncheon with my friend, Mr. Henry P. Wells, author of the "American Salmon Fisherman." We had arrived at coffee and cigars when I spoke of my experience with a salmon that rose short to a worn and bedraggled Jack Scott, and then refused several other flies of different patterns and different sizes only to rise again and take the original disreputable-looking Jack Scott. Mr. Wells said that his experience led him to believe that not over three or four types of flies were necessary to be successful in salmon fishing. Each type to be provided in different sizes. That when a fly became worn and tattered it was treasured above any new, bright fly, for when a fish rose short, and after resting refused other sizes of the same type, the worn and tattered fly was brought out and presented to the fish and, in a great majority of cases, it killed, when the new and perfect flies would not do the business.

Golden Trout at Sunapee.

A few days ago I wrote to a correspondent, who asked when the Sunapee trout spawned, that they spawned the last of October. My correspondent is a special State fish and game protector, and he desires to watch for the appearance of the fish which were planted in Lake George last year in November. I have not the date at hand, but I think I went to New Hampshire with the New York State fish car Nov. 3 or 4 and returned the 8th or 9th, and forty-two adult trout were planted the day the car returned to the State. Returning home after a few days' absence, I find a letter from Dr Quackenbos, dated at Sunapee Lake Oct 23. He has been watching for the trout to arrive on the shoals, where they spawn, and his letter fixes the date beyond question When the fish appear on the shoals they are caught by the hatching men with hook and line, or with nets, and confined in the cars in the stream below the hatchery until their eggs are taken. Dr Quackenbos's letter reads in part as follows:

"The aureolus charr appeared on the lighthouse shoal this morning. About 200 males came up from the deep water and spread themselves expectantly over the reef My little daughter Carrie promptly repaired to the sacred precincts with a washtub in her boat, the Day Dream and her first fish was a 6-pounder It would have done your soul good to see the child stand up to the rushes and *leaps* of that big charr, and finally bring him to net in exquisite style. No buck fever; no excitement; no giving slack I saw her take several others with a cast Skinner's fluted spoon No. 1. The only remark I heard her make was: 'This beats all the monkeys,' and she presented to the Fish Commission, with becoming pride, these first fruits of the October rise. One peculiarity I noted especially, viz., as soon as she struck the aureolus fish they leaped into the air and continued jumping after the manner of salmon. It required not a little nerve and skill to check the run of a large charr without splintering the rod."

Miss Carrie has my warmest congratulations, and I wish that I might have been there to see the battle royal and to take a part in it, too. I have never taken the Sunapee trout except in summer, and have never seen them leap when hooked, so the peculiarity is here noted for the first time. At the breeding season the golden trout is the most beautiful of the charrs, and to see one leap from the water in the sunlight is worth going far to see. That they fight well on the hook, with their big fins extended, I know from experience, and to all their other good qualities the leap being added, they are kingly fish on the hook. In another letter Dr. Quackenbos speaks of the work at the State hatchery, now in charge of two young men, Messrs James and Edwin Wentworth. Over 100 breeding landlocked salmon from 6 to 15lbs. each have been taken and placed in the breeding tank, and 125 brook trout from 1 to 5lbs. in weight. These young men, by honest attention to the business intrusted to them, have far exceeded the work of their predecessors in taking slack fish, and they are confident of taking 500 breeding golden trout, and there will naturally be a corresponding increase in the number of eggs laid down in the hatchery. The possibilities at Sunapee seem as great in the way of obtaining eggs of the best of the *Salmonidæ* that it has been matter for comment that the field has not been worked more vigorously. It is to be hoped that this is the turn of the tide. A. N. CHENEY.

MARYLAND TERRAPINS.

DR. GEO. W. MASSAMORE, secretary and treasurer of the Maryland Game and Fish Protective Association, sends us the following report of investigation of the Maryland diamond-back terrapin supply:

"I recently visited Crisfield, Somerset county, and spent several days investigating the causes that have made diamond-back terrapin so scarce in Maryland waters. More terrapins are shipped from Crisfield than from all other points in the State combined, I believe. At Crisfield are located the two largest terrapin ponds in the State, and perhaps the only ones of any size in Maryland. The impounding of terrapin is unquestionably doing more toward exterminating them than all other causes combined. Terrapins will not grow in confinement, or at least but very slowly; nor will they propagate. The largest terrapin dealer in this country is A. R. Riggin, Crisfield, whose pound at this time contains 20,000 diamond-back terrapins The sight was novel. I visited Mr. Riggin's pound just after the terrapins were fed. The scrambling after mashed hard crabs, upon which they were fed, was an interesting sight. The terrapins were so thick that they were crawling over each other; the pound was a moving mass that filled me with wonder and amazement. Think of 20,000 diamond back terrapins on the move at the same time, within an inclosure of about an acre. The time was low tide, affording a good view. The ditches, grass tussocks and mud puddles all seemed like a living, moving, conglomerate mass, struggling for life.

"The other pound in Crisfield is owned by A. L LaVallette, who is also an extensive dealer in diamond-back terrapins. Mr. LaVallette was the first man to introduce the impounding of terrapins as a business. The enterprise has, no doubt, proven profitable, and others have embarked in the same business. All terrapins caught near Crisfield are sold to these two dealers. Mr. LaVallette, I am told, has agents at different places in Maryland, who buy up terrapins for him. Mr. Riggin buys considerable of his stock in North Carolina. They are the exact counterpart of the Maryland terrapin, and it is claimed they are as fine in flavor. The pounds in which the terrapins are confined are inclosed with a tight board fence, 10ft. high, with wire screens across the openings where the water floods and ebbs in and out. The pounds are watched day and night by armed men to protect the terrapins from being stolen.

From all the information obtained during my stay in Crisfield, I am thoroughly convinced that the impounding of terrapins must necessarily result in their final extermination. It is a well established fact that terrapins will not propagate confined in pounds. Females lay from 12 to 20 eggs twice during the season for incubation. A fair estimate for each female would be 30 eggs. Take 20,000 female terrapins now held in confinement in the pounds at Crisfield (this number I am told is a modest estimate), and the result figures up the destruction of 600,000 young terrapins. These figures demonstrate very clearly the necessity for a strict enforcement of the laws against having in possession terrapins out of season.

"The impounding of terrapin is clearly a violation of the law, both of the general State law and the local laws of the several terrapin counties. The laws have been allowed to go by default, as had the game and fish laws, until the Game Warden, through his deputies has been rigidly enforcing them throughout the State during the past year. An enforcement of the laws at this time against parties who have thousands of terrapin impounded would be ruinous from a monetary standpoint. It would only be just to notify parties having terrapin impounded to get rid of their stock during the coming season, and at the same time inform them that after the expiration of the open season the laws will be strictly enforced. This will be my recommendation to the game warden, Mr. J. Olney Norris, and to the executive committee of the Maryland Game and Fish Protective Association.

"A new general law is much needed in this State, making the season for taking and having in possession diamond-back terrapins uniform. The State law permits taking terrapins from Nov 1 to April 1 The possession of terrapin at any other time is *prima facie* evidence of a violation of the law; penalty $5 to $10 for each terrapin. In Charles, Calvert and St. Mary's counties the open season is from Sept. 1 to May 1. Somerset, Oct. 1 to April 1. Penalty for having in possession terrapin at any other time from $5 to $25, varying in the different counties

"The State law is undoubtedly the best law, as five months (Nov. 1 to April 1) is long enough season for taking terrapins. It is hoped that all the counties having local laws that conflict with the State law, will agree to a uniform season. It will be better to repeal all laws and have a new one passed, making the season uniform, regulating the size of terrapins allowed to be caught the same in all counties, and imposing a uniform fine for violations of the law. The Maryland Game and Fish Protective Association will be glad to hear from parties throughout the terrapin districts of the State, giving their views on the subject, as the Association is anxious to assist in having a law passed that will redound to the best interests of all parties interested in the protection of diamond-back terrapins in Maryland waters."

THOMAS G. ALVORD.

Editor Forest and Stream:

HON. THOMAS G ALVORD, one of the oldest and most devoted disciples of Izaak Walton in New York State, died at his home in Syracuse Oct. 26, in his eighty-sixth year. He was widely known, and his excellent qualities of heart and mind, his genial, kindly nature and unassuming manner, endeared him to all who were fortunate enough to form his acquaintance.

His last public service was as vice-president of the Constitutional Convention three years ago. His record of fifteen terms in the Assembly is one that is rarely equalled. His activity in behalf of the salt interest earned for him the sobriquet of Old Salt.

For nearly four-score years Mr. Alvord devoted much of his leisure time to angling, and he was both proficient and successful in the art. He first began his piscatorial career in the waters of the Hudson River, nine miles above Albany, when young enough to be without great discretion, but old enough to hook a sunfish; and consequently came near, at one time, being drowned by falling from the dock into the water. His love for the sport followed him in his college life, and as frequently as possible he explored the waters of Long Island Sound for its blackfish, porgies, etc. He carried the taste with him to the Berkshire Hills, and in a sojourn of two years explored all of the trout streams and pickerel and bass ponds within a day's journey from Pittsfield, Mass. He divided his time for two years between Blackstone and his trout rod, on the edge and over the line between wilderness and semi-civilization at Keeseville, in Clinton county, N. Y.; and when a full fledged lawyer he had a right to stick out his sign, "Attorney-at-Law," there was quite often added at the bottom a temporary postscript: "P. S.—Gone fishing"

In 1852, Mr. Alvord, accompanied by his brother-in-law from Indiana, paid his first visit to the St. Lawrence River and the Thousand Islands, going to Alexandria Bay via Oswego. He was charmed with the river, and in after years passed a great deal of time there. In writing of his experience at the islands, Mr. Alvord once said: "I am a natural fisherman; given intensely, whenever opportunity permits, to entice and ensnare the cunning water dwellers. I have been a visitor to the St. Lawrence with but two exceptions (this was written in 1895) each returning season for over forty years, and during that period I have again and again traversed in its widest extent every nook and corner, islet and island, and mainland as well, every shoal and deep of the St. Lawrence from Chippewa on the north to the deep indentation at the head of Long or Wolfe Island, stretching up into Lake Ontario, called Reed's Bay. I have never been any day upon the water when my line has not been neglected for hours in order to drink in the invigorating and health-laden air, and the wondrous, indescribable beauty and sublimity of diversified island and encircling water. I generally captured all the fish I was entitled to, but, what was far better, I took in annually a load of health which has prolonged my life and made me retain the feelings of youth in spite of the increasing number of years added to my roll-call.

In an article which Mr. Alvord wrote two years ago, entitled, "The Men I Have Met Upon the Great River," he mentions the following as some of those with whom he came in contact during his visit to the Thousand Islands: Rev. Dr. Bethune, Seth Green, Hon. Roscoe Conkling, President Chester A. Arthur, Wm. J. Skinner, Gen. Benjamin F. Bruce, Franklin A. Alberger, Nathaniel S. Benton, Hon. E. Kirk Hart, R. H. Park, Hon. Wm Dewey, Hon. Wm. Butterfield, James Johnston, Col. W. W. Enos, Hon. Geo. E Yost, Hon. Chas. R. Skinner, Hon. Henry Spicer, Hon. Wm. M. Thomson, Hon. John D. Ellis, ex-Assemblymen Van Horn, Van Valkenburgh, Low, Burns, Duguid, Baker, Chickering, Congdon, Mooers, Kern, A. X Parker, and A. B. Hepburn; Hon. Warner Miller, Theodore S Faxton, A. D. Barber, Chief Judges Andrews and Ruger, Judges Calvin E. Pratt, Daniel Pratt, Geo. N. Kennedy, Charles Mason, Pardon C. Williams, Charles L Kennedy, Peter B McLennan, Homer A. Nelson, Jerome Fuller, and Judges Van Vorst and Smith, Charles G. Emery Rev. Dr. Reese, Rev. Dr. Calthrop, Hon David Gray Gen. Slocum, Gen. Gustavus Sniper, Gen. Davies, Gen. N. M. Curtis, Gen. Wylie, Wm. H Vanderbilt, Webster Wagner, Chris. Wolf, Messrs. Hicks and Selleck, Dr. J. G Holland, Hon James J Belden, Wm. C. Browning, E R. Holden, C H. and W B. Hayden, Geo. M. Pullman, Messrs. Wicks, Penn, Lee, Sprague, Grinnell, Haves, Van Wagonen, Bush, Scott, Morgan, Lovell, James Story, John H. Quimby, Chas. Gay, Wm. B Kirk, Lucius Moses and others.

Mr. Alvord at one time purchased Governor's Island, opposite Clayton, for $170, and it was subsequently sold to C. G. Emery for $5,000, and the former would cite this as an instance showing the increase in the value of property at the Thousand Islands during his acquaintance with them.

Two years ago last summer, while conversing with the writer of this article, Mr. Alvord said that he once captured three muskallonge in one day near Sabbath Day Point, St. Lawrence River, which weighed 35, 29 and 17lbs. respectively. He said he had caught large numbers of them at different times weighing from 17 to 35lbs. The largest muskallonge he ever caught weighed 40lbs. There were two of this size, one being taken in 1889 and the other about 1883. One of them measured 54in. in length. He said he once caught 312lbs. of fish in one day and 157 of them were black bass. When he first visited the St. Lawrence River the only hotel at Alexandria Bay was kept by Mr. Crossman, and the only island summer residence was a camp owned by Seth Green on what is now known as Manhattan Island. Mr Alvord was one of the charter members of the once famous Walton Club, the first organization of anglers formed for visiting the Adirondacks. W. E. WOLCOTT.

THE BANKERS OF NORTH CAROLINA.

THE people and ponies which live on the isolated sea beaches of eastern North Carolina are locally termed "bankers," though the term has a significance quite different from that of Wall street. Mr Hallock has procured for us, through an intelligent local school teacher, a very interesting description of them and their habits and industries, which will be new to most of our readers. The community of pious snuff-dippers which the correspondent describes afford a subject for contemplation.

"Bogue Banks," in Carteret county, N. C., comprise a strip of land between Bogue Inlet, opposite Swansboro, Onslow county, and Fort Macon, opposite Beaufort, Carteret county These banks are like all other banks lands on the seacoast, high and rolling, covered with immense forests of trees of various kinds, of which the pine and cedar are the most valuable. They are twenty-five miles long from inlet to inlet, owned by parties on the mainland, so said. They are from a half-mile to one and one half miles wide, abounding in various kinds of game, such as deer, coons, opossums, squirrels, rabbits, etc., but no foxes; and wild ducks are numerous in the ponds, of which there are many.

The Sound between the banks and main land is narrow and shallow in places, and abounds in geese, swans, a few, and ducks, brant, etc., plentifully. The redhead raft duck is most prominent or valuable. The Sound is filled with small islands, uninhabited save one, Long Island. On this lives one man only, with his chickens, ducks, hogs, etc. He is a Northern man, from New Jersey, he says. He has been living on this island for three or four years, all alone. Fish, clams, crabs, conchs, shrimp and oysters are in plenty all the year round, and are caught and shipped to the Northern markets by fish and clam hucksters. The citizens on these banks are all good, nice people, so far as they know how to be. Nearly all belong to the M. E Church, of which there are two, and two school houses also. The citizens live in two clusters five miles apart. They number 192. They are very sociable and kind, but almost entirely ignorant of things in the outside world, so to speak; have no education at all; not more than a dozen can read, and 75 per cent. don't know a letter in the book, as the saying is, although they have been having schools here for ages. They don't seem, or won't seem, to understand that education is useful. They won't allow their children to be corrected or taught right by a school teacher or preacher. They believe they know as much as you do and act accordingly, hence they are ignorant in many things. They fish, hunt and clam for a living. The women tend the gardens, corn and potato patches. They all go barefooted, women, men, children, and all, except in cold winter time; go to church and school barefooted, when they go at all. All use tobacco and snuff, the women and girls too. The smallest girls chew tobacco and smoke pipes. Out of the 190 persons here, there are two only, I think, who don't chew and smoke (both); one of these chews, and the other dips snuff. Their mode of living is simple. Bread and coffee are their principal diet twice a day; for dinner they have meat, clams, oysters, fish, etc., if they have them, and vegetables in season; if not, bread and coffee. Their mode of fishing is simple, also, with nets and seines. They use the plank skiff, from 12 to 20ft. long, to fish with, and a sharpie on the same order, only larger, to carry their fish and clams to market. The time to fish is all the year, but the principal time for making their money is in the fall, from September to Nov. 15 for mullets, and from December to April 15 for sea trout. Sometimes they fish outside in the ocean with seines and large sharp-ended boats called surf boats; this is done in October mostly. Their seines (for outside) are 1⅛in. mesh, about 200yds. long, generally. Inside (Sound), they use different sizes of meshes, from 1⅛ to 2¼in.; join several nets together, and go, as they call it, "snooks" all round.

The general lay of the banks is from east to west, twenty-five miles from Bogue to Beaufort inlets. I think this would be a great place for pleasure-seekers in the summer-time, and as it is very healthy and few insects to bother, I should not be surprised if in time Northern and Western tourists and pleasure-seekers would find eastern Carolina suited to their occasion and minds for rest, pleasure and recreation, especially Bogue Banks and vicinity. These good people have hogs, cattle and chickens, but no draught horses; what farming they do is with the hoe, except now and then one acts as horse to pull the plow, while another holds the plow handles. Tame Bank ponies roam over the islands and sounds extensively, and cattle by the hundreds are driven yearly on and off from the mainland for pasturage. Shooting sea loons is another sport; thousands of these large birds fly over here on their way north

in the spring, and the men and boys burn kegs of gunpowder shooting them. These lands are very fertile in the valleys and lowlands, and if cleared would produce good crops of corn, peas, potatoes, etc. There are lots of good pine timber and some cedar, dogwood, etc. These settlements are located some eight to fifteen miles westward of Bogue Inlet; no settlements on the east end till you reach Fort Macon, opposite Morehead City. A few fruit trees, plums and peaches thrive, but apples and pears don't seem to grow here much. They are now (June) catching clams to bed out for next winter's market. About 4,000 bushels are caught here in a month, selling now for 25 cents per bushel. If some pleasure-seekers want to see fun, we think they could see some by coming to Bogue Banks in the spring, summer or fall. G. W. WARD.

SWANSBORO, Onslow county, N. C.

CHICAGO AND THE WEST.

The Champion Fly-Caster.

CHICAGO, Ill., Oct. 23.—*Field Sports*, of San Francisco, has the following to say in regard to the appearance and style of Mr. W. D. Mansfield in the open contest at Stow Lake, 'Frisco, Oct. 9, at which time Mr. Mansfield again broke all existing records—even his own astonishing one made at Chicago this summer. On this last occasion Mr. Mansfield cast 113ft., easily over his 111¼ft. record at Chicago. In the way of personal description, the journal above-mentioned says:

"The appearance of Dr. Lowry on the platform brought another round of applause and all watched his performance with marked interest, as it was known that in practice he had been on all sides of the record mark. He made the splendid cast of 109ft., beating all records except Mansfield's Chicago record and the one just made.

"In appearance and manner of casting, the Doctor is the very opposite of Mr. Mansfield. Tall and lithe, he takes his position erect and with but little swaying of the body, his casts are gracefully executed with the arm movement. To see the two men together one would certainly expect more from Lowry than from Mansfield, just as one sees more in the grace of his execution, but when it comes to such extremely long distances as these men are casting, Mansfield's manner is surely productive of the better results. Watching the two men carefully and noting the position of the rod at every stage, and just wherein and at what points of its carriage the force which brings forward the long line is applied, it is easy to see why the body movement becomes so great an assistance to Mansfield. Not only is the same force and full spring of the rod given by Mansfield that can be given by the arm movement alone, but in carrying his body forward this full tension of the rod is maintained, while the butt passes at least 6ft. forward from the point where it is first applied, getting the line well under way before the spring of the rod is allowed to do its work. While the butt of the rod is being brought forward by the sway of the body and the outstretched arm, the rod is sprung to its fullest, and the reaction can only begin when this forward movement ceases, leaving the full spring of the rod to act on the line after the line is well started on its forward course by the sway of the body. As we remarked before, it is by no means so graceful as the arm movement, but when it is considered from the standpoint of the laws of mechanics, it is plain to be seen that the same individual can attain greater distances by the body movement than otherwise."

Possibilities in Wisconsin Bass Fishing.

The possibilities in Wisconsin bass fishing in some of the wild pine woods lakes have been the subject of frequent comment in these columns. Recently I made mention of some heavy bass fishing done by Messrs. Chas. Jernagin and Chas. E. Anthony, of Chicago, and below I give more detailed information of other and later scores made by the same fishermen in different waters of that region, the facts being taken from a letter written to a friend in this city. The bass of Roche Lake are spoken of as being very gamy savage biters and hard fighters. No especial merit attaches to the scores from a sportsman's standpoint, though I have earlier remarked that all fish except a few were returned to the water. The dates and catches were as follows: Sept. 27, Lake Elma, 44 bass; Sept. 28, Palmer Lake, 15 large bass; Sept. 29, Lake George, 27 bass; Sept. 30, Roche Lake, 205 bass, from 1 to 2lbs. each, in four hours' fishing; Oct. 1, Roche Lake, 137 bass, in two hours' fishing; Oct. 2, Roche Lake, 89 bass; Oct. 3, Roche Lake, 70 bass; Oct. 4, Plum Lake, 38 large bass; Oct. 6, Plum Lake, 33 large bass.

E. HOUGH.

1206 BOYCE BUILDING.

New Jersey Coast Fishing.

ASBURY PARK, Oct. 29.—Sea and river fishing has been completely at a standstill during the past week. The heavy winds and seas have made fishing an impossibility. Yesterday, however, the wind shifting to the west, sent the plaice shoreward with a rush, and some good catches were made. If weather conditions continue good, we should have the best of our fishing now. While the blues may be counted on as "departed," still the weakfish and plaice should be with us at least two weeks yet; and at this period they are at their best, both on the line and table.

The cod has put in appearance, and is taking the hook at points to the north along the beach. This argues much for us. While he never can be classed as a game fish, still, to the enthusiastic angler who takes him on rod and reel when there is but little else to claim his attention, he is most welcome, and will he enthusiastically received so long as he favors us with his winter presence. LEONARD HULIT.

A Gogebic Bass.

BALLENTINE, Mich., Oct. 26.—*Editor Forest and Stream:* I caught the largest black bass here in Lake Gogebic on Oct. 18, weight 7½lbs., and I still have him in a live box. It is rumored around that there is a prize offered for the largest bass in this lake. Please kindly inform me if it is so.

FRANK H. WOODS.

[We are not advised of a reward out for large Gogebic bass. Most folks would consider the taking of a 7½lb. bass its own reward.]

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

New Publications.

"THE STORY OF THE COWBOY."*

"THE Story of the Cowboy," by E Hough, far exceeds in scope what is implied by its title. It is the story of the beginning, progress and decline of the vast cattle industry which had its place in the immensity of area bounded by the Mississippi River, the Gulf of Mexico, the Rocky Mountains and British America. It is a story of the unfenced plains, where free grass tempted the cattlemen to face hardship, privation, peril and sometimes death. The contrasts of the nomadic life of the range with all its peculiarity of effort and incident are graphically described and contrasted with the conventional life of the fixed domiciles of civilization. Through it all is skillfully interwoven the story of the cowboy. Stoically habituated to the dangers and hardships of range life, constant in his fidelity to his employer's interests, energetic, untiring, a master in his calling, undaunted by its labors or its perils, he was the man who made the wilderness produce food bountifully for the civilization of the world; the same civilization which first made the cowboy a possibility and which later caused his undoing; the surging, restless civilization which encroached more and more on the wilderness and ran metes and bounds where once all was free and open.

In "The Story of the Cowboy," Mr. Hough touches on all the lights and shades of ranch life, on the practical, the pathetic, the heroic, the silent fortitude, which were alike a requisite in the monotonous drudgery or the greatest perils. He begins by describing the abandoned trail, The Long Trail, and there is a poetic touch as he says of it: "It was like a long rope thrown idly on the ground, abandoned by the hand that used it. Its strands are unbraided and have fallen apart, lying loose and forgotten upon the sandy soil. The wind is blowing dust across these disconnected threads, and the grasses are seeking to cover them, and the waters have in places washed them quite away. The frayed ends are disappearing. Soon the entire cords will have disappeared. The Long Trail of the cattle range will then be but a memory. The braiding of a hundred minor pathways, the Long Trail lay like a vast rope connecting the cattle country of the South with that of the North. Lying loose or coiling, it ran for more than 2,000 miles along the eastern edge of the Rocky Mountains, sometimes close in at their feet, again hundreds of miles away across the hard tablelands or the well-flowered prairies."

The origin of the cattle industry is ascribed to the residents of Mexico, who, nomadic in their way of life, drifted into the country of the Rio Grande, where the long-horn flourished and multiplied many years ago before the American cattle industry—as a distinctly American institution—was known. Thence it spread. The ranch in the South—with its quaint customs, its simple manner of life, its open hospitality and heterogeneous specimens of life, whose etiquette demanded that no questions concerning their past life be asked of each other—is most interestingly described. The ranch in the North—distinct from the South in its setting of arid plains, rainless climate and severe winters, yet in a land bountiful in the yield of its fattening grasses—is no less fully treated. A chapter is devoted to the cowboy's outfit: his saddle, bridle, hat, gloves, "chaps" boots, pistol and rifle; and the demon which he called by the generic term "cow-horse," broncho or cayuse, is well deserving of the chapter devoted to him.

The description of the breaking of this demon of the range has a thrill of interest. After having been saddled by craft and force, "He feels his head 'turned loose.' He hears a long, keen yell from a dozen throats about him, answered by a similar shrill yell, not of fear but of confidence, above him from this creature which is crushing his back, breaking in his sides. All the hate, the terror, the rage, the fear, the viciousness, the courage of this undaunted wild beast now become blended into a mad, unreasoning rage. He has fought the wolves, this pony, and is afraid of nothing. He will unseat this demon above him; he will kill him as he did the wolves; he will trample him into the dirt of the plains. Down goes the pony's head and into the air he goes in a wild, serio-comic series of spectacular stiff-legged antics. His nose between his knees, he bounds from the ground with all four feet, and comes down again with all legs set and braced, only to go into the air again and again. He 'pitches a-plungin'"—that is, jumping forward as he bucks, perhaps going 600yds. before he stops from lack of wind. Or he may stand his ground and pitch He may go up and down, fore and aft, in turn, or he may pitch first on one side and then on the other, letting his shoulders alternately jerk up and droop down almost to the ground—a very nasty sort of thing to sit through. He may spring clear up into the air, and come down headed in the direction opposite to that he originally occupied, or he may pitch 'fence-cornered,' or in a zigzag line as he goes on, bounding like a great bull from corner to corner of his rail-fence course of flight." After the horse is acceptably broken for the cowboy, he is but little less than a wild horse for all others.

Marks and brands, their uses in establishing and protecting ownership; the advent of the thief who flourished by changing or blotting brands, or stealing the cattle outright; the growth of protective associations as a measure of defense; free grass and waterfronts; the drive and its privations, hardships and perils; the round-up whereby the property rights were determined or the crop of beef harvested; the terrible drifts and stampedes, with their wholesale destruction of life; the commonplace life of the ranch; the cowboy's manner of diversion; society in the cow country; the nester; the rustler; the fierce wars of the range and the rapid changes made by the building of the railroads, are all set forth in a masterly manner, one which could only be done by one who had shared in the cowboy's life by actual experience as has Mr. Hough. Through it all, the cowboy is portrayed as a hard-working member of mankind, and there are many protests against the injustice done the real cowboy by the fictitious cowboy of the sensational type, who always rode furiously in a gallop, and whose diversions were the imbibing of great quantities of firewater and the promiscuous shooting right and left, whether in bar-room or street. The volume is a most thorough analysis of the cattle industry, fully delineating its origin, growth and decline. No feature of it is left untouched, and it is all treated in the skillful manner so peculiar to Mr. Hough's writings. The railroads, which brought so great prosperity to the cowman by affording him a means of transportation, in time worked his downfall; for while they took his cattle to market they brought back the people who wanted small holdings for purposes of agriculture; and the little encroachments made at first increased into great waves of humanity, which took up the land under forms of law and wiped out the free grass forever. With the free grass of the plains went the free, wild rider, the cowboy. Mr. Hough writes of this understandingly, as one who knows of his own knowledge the perils, hardships, fatigues and uncertainties of the cowboy's life, and of the sterling manhood which was necessary first of all to make the cowboy eligible to the name; he writes sympathetically of him as a man who has been misrepresented, misunderstood, and denied the place and appreciation justly his due as a useful member of a great industry, one which none but the brave, the enduring and the industrious could follow. To his physical capabilities was added a high standard of professional and personal honor, one which impelled him to shirk neither work, nor danger, nor personal responsibility. The unwritten code of the plains, crude and simple yet necessary and sufficient, demanded that he be a man amongst men; a code whose keynote was that one man was equal to another, and that everyone should mind his own business; the dangers and labors of his vocation were to be faced calmly and stolidly as a matter of professional routine, but a personal affront brooked no delay in meeting it. It was a matter for prompt, special attention. A few excerpts as to the cowboy's personality, character, etc., will best serve to illustrate Mr. Hough's masterly grasp of his subject: "The story of the West is a story of the time of heroes. Of all those who appear large on the fading page of that day, none may claim greater stature than the chief figure of the cattle range. Cowboy, cattleman, cowpuncher, it matters not what name others have given him, he has remained himself. From the half-tropic to the half-arctic country he has ridden, his type, his costume, his characteristics practically unchanged, one of the most dominant and self-sufficient figures in the history of the land. He never dreamed that he was a hero, therefore perhaps he was one. He would scoff at monument or record, therefore perhaps he deserves them. Either chiseled or written record may distort if it merely extol. For this central figure of the cattle days, this early rider of the range, it is best to hope that he may not commonly be seen as thrown up commonly on the air in a mirage, huge, grotesque, fantastic, but that he may rather be viewed clearcut against the western sky, a glorious silhouette of the open air. Before many years have passed, the original of such a picture will have disappeared. We shall listen in vain for the jingle of his spurs, or the creak of his leather gear, or the whipping of his scarf-end on the wind. Tinkle and creak even now die away in the distance beyond. An explorer, a guide, a scout, a fighting man, he passed his way. . . . Certainly the man aspiring to the title of cowboy needed to have stern stuff in him He must be equal to the level of the rude conditions of the life, or he was soon forced out of the society of the craft. . . . . He who sought to ride by the side of this new man, this American cowboy, needed to have courage and constitution, a heart and a stomach not easily daunted, and a love for the hard ground and the open sky. There were many who were

The cowboy.

From "The Story of the Cowboy." Copyright, 1897, by D. Appleton & Co.

* "THE STORY OF THE COWBOY," by E. Hough, author of the "Singing Mouse Stories," etc. Illustrated by William L. Wells and C. M. Russell. New York: D. Appleton & Co., 1897. Cloth, 350pp.

fit so to ride. Of these the range asked no questions. If there had been trouble back in the 'States,' trouble with a man, a sweetheart, or a creditor, it was all one, for oblivion was the portion offered by the hard ground and the sky."

Throughout the work are bits descriptive of the cowboy's character, all contrary to the common belief in respect to him. For instance: "Not having much to do of an evening he goes to bed. It is supposed by some misguided souls, that when the so-called wild cowboys of a ranch have met at night, after the close of their exciting duties, the scene at the ranch house is one of rude hilarity and confusion. Really, quite the opposite of this is true. The interior of a ranch house of an evening offers rather a quiet and orderly appearance. Liquor is something rarely seen there, because it comes very rarely and does not last long when it comes. As a rule, the cowpuncher is rather a silent man, though not so silent as the melancholy sheep herder, who rarely endures the terrible monotony of his calling for more than seven years without becoming insane. A cowboy who is very 'mouthy' is not usually in high repute at a cow-camp, and one disposed to personal brilliance or sarcastic comment on the peculiarities of his fellow-men, is apt to meet with swift and effectual discouragement. Rude and unlettered though he be, and treating his companions with a rough and ready familiarity, the cowpuncher yet accords to his neighbor the right to live the life and go the gait which seems most pleasing to himself. One does not intrude upon the rights of others in the cow country, and he looks to it very promptly that no one shall intrude upon his. In the cow towns, or at the cow camps, one never hears the abusiveness or rude speech common to the older settlements. On the range, especially in the earlier days, if a man applied to another an epithet, which in the States would be taken as something to be endured or returned in kind, the result would have been the essential and immediate preparations for a funeral. * * *. Under all the ills of life the cowboy ''quits himself like a man,' that is his standard. There are some who ask for the gallop of the cowboy, and not the quiet trot; some who think his crudeness and his wildness should be made his distinguishing features. Rather let us say that his chief traits are his faithfulness and manliness. There is his standard—to be a 'square man.' If you called him a hero, he would not know what you meant."

In short, if the reader wishes to know of the real cowboy, the one who lived and had his pains and pleasures, his hopes and realities; the one of flesh and blood, instead of the distorted figure of romance, he will find him in "The Story of the Cowboy," with a store of information concerning the cattle industry of which he never before had even a hint.

The illustrations, like the text, are the product of actual knowledge, and are excellent in their portrayal of stirring scenes of the ranch. Mr. Russel, a cowboy, whose home is a Montana ranch, and whose skill with the brush is winning him much fame, has put some of his best efforts in the illustrations.

PACKS OF HOUNDS IN THE BRITISH ISLES.

THE London *Field* annually presents its readers with a table showiug the packs of hounds, their masters, huntsmen, kennels, etc. The list generally appears about two or three weeks prior to the "opening day," the first Monday in November; it is of considerable interest, showing as it does the firm hold that fox hunting and other kindred branches of the sport have upon the people of the British Isles. This year the list appeared in the issue of Oct. 16, and from it I want to gather some material that may prove of interest to the hound men of this country.

Briefly summarized, there are 421 packs of hounds kept solely for hunting purposes in the British Isles. These packs are divided in the following manner: Staghounds 26; foxhounds 193; harriers 152; and beagles 50. The twenty-six packs of staghounds are made up of 1,262 hounds, an average of nearly fifty hounds to a pack.

Foxhounds are a prominent factor in hound figures. Of the 193 packs kept in the British Isles, 159 hunt in England and Wales; 10 in Scotland and 24 in Ireland. The 159 packs in England and Wales contain 11,838 hounds; the 10 packs in Scotland, 705 hounds; the 24 in Ireland, 1,763 hounds. The average number of hounds per pack in England and Wales is about thirty-seven or thirty-eight couples. Many packs, however, run above that number. For instance, the Blackmoor Vale, hunted by Mr. Merthyr Guest, has ninety couples on its list. The Badminton, hunted by the Marquis of Worcester, has seventy-five couples in its kennels, and these seventy-five couples, or 150 hounds, furnish material for hunting the Badminton country five days a week during the season. Other packs of considerable size are the Ledbury 65 couples, Belvoir 64 couples, Atherstone 63, Percy 62½, South and West Wiltshire 61, and Lord Fitzhardinge's 60. In Scotland, the Duke of Buccleugh's kennels contain 57 couples; in Ireland, the Meath hounds number 66 couples, the country hunted by them being given "nine days a fortnight and a bye day." The total number of foxhounds in the 193 packs given in the London *Field's* list is 14,306.

While there are many very large packs of foxhounds, there are also several small ones, all of which afford lots of hunting for their followers. The smallest pack in the list is Mr. T. Clennell's packs of seven couples, Mr. Clennell being both master and huntsman. The hunting days of this little pack are given as "uncertain." The Bewcastle hounds, a new pack this season, contains eight couples of hounds, the pack being hunted twice a week by Messrs. W. Routledge and J. Bell. This pack is "trencher fed"; that is, there are no regular kennels, hounds being gathered together the day previous to the hunting day. Another "trencher fed" pack is the Farndale, nine couples, hunted by Richardson Shaw under the direction of a committee. Another small pack that gives lots of sport is the Eskdale, nine couples, Mr. Thomas Dobson, master and huntsman.

In the Badminton *Magazine* last year there was an article from an able pen on the Staintondale hounds, a small pack that hunts a narrow strip of land along the rugged seacoast of Yorkshire from Whitby on the north to Flamborough Head (or thereabouts) on the south. Many good days on foot have I had with (then) trencher fed pack, in the years between 1875 and 1885. Living at the time in Scarborough, Yorkshire, before the Scarborough and Whitby railroad was in running order, we had many a long walk, necessitating a daylight start, if we wanted to meet the hounds before they were (literally) thrown off. The Falcon Inn, as I recall it, some eight or ten miles from Scarborough, was not too far for us to go on foot to meet the hounds by 10 o'clock in the morning. If we were lucky, and the hounds and their foxes—for there were plenty of foxes along the undercliff—made their way southwards to Hayburn Wyke or Cloughton Wyke, well and good; we would then have only about six miles to walk home in the dusk. At such times we'd get home in time for dinner at 7 P. M. But if the fox went the other way; well, then we'd be late for dinner, and pretty tired when we got home.

Still, I look back upon those days with the Staintondale, when Christopher Leadley was master and Tommie Harrison was huntsman, with the keenest delight. By the way, Tommie Harrison is still huntsman, but how old he is, I've no idea. The pack since I knew it has become rather dudish. A friend of mine, W. S. Tindall, is now the master, and the hounds are no longer trencher fed. Tommie does not have to go around on the afternoons prior to the hunting days and blow his horn near every farmhouse to call the hounds together. Neither are the hounds dismissed to their homes every evening after hunting is over. They go home together to their kennels now like the swell packs of the "grass country."

Of course, the country hunted by these hounds was no good for riding over. I very seldom remember seeing anybody mounted, except the master and Tommie, the latter on a $25 nag that could knock down half a stone wall and keep right on without a stumble. But as a rule Tommie would be off his horse as often as he was on it. Precipitous cliffs, with an undercliff like a bench, covered with blackthorn thickets, briers and rocks, great strongholds for the sturdy cliff foxes, don't make good ground for riding to hounds If a wanderer from Sir Harcourt Johnstone's territory happened to be found courting some fair Miss Reynard in Hayburn Wyke, then Tommie needed his horse to catch up with the hounds as they raced inland.

A very pretty sight was one often seen when the meet was near Cloughton or Hayburn Wyke. Standing on the edge of the cliff one could look down on the hounds as they drew the thorn thickets, Rake or Melody (twenty years ago, mind you,) giving tongue now and then. Watch the other hounds fly to them. Isn't that worth looking at? Now cast your eyes ahead to the "point," or headland that juts out and masks the end of this bay. Watch the paths that lead around it. Roger's Trod, for instance, a path half way up the face of the cliff, consecrated to the memory of a bold smuggler of early days. The man who first sees the little red rascal slipping away along one of those paths is a hero for the moment, even if he does wear knickerbockers and runs with hounds, instead of bestriding a $300 horse. Occasionally a fox is seen slipping around in the cover below. Eluding the hounds for a time, he takes to the cliff, jumping on a ledge where he can watch the hounds at his leisure and, probably, laugh at their efforts to puzzle out his line. I saw that happen once, in fact everybody out with the hounds, and who had stayed on the top of the cliff instead of following Tommie and his hounds, saw it. I remember how excited we got as the hounds gradually got the line straightened out and came out of the thicket on the trail of Master Fox. To reach his ledge the fox had taken two or three curious sidewise leaps, jumping from ledge to ledge. Then came the question: Would the hounds be able to oust the fox, which we saw by this time was getting quite uneasy, and which had apparently flattened himself out on the ledge? To make a long story short, one or two hounds that knew their business got so uncomfortably close to the fox that he made up his mind to fly. Down he went, apparently right in the midst of the hounds, which tumbled over themselves and him in their efforts to catch him. He slipped through them like an eel, got into the thicket again in a jiffy, and in less than five minutes came out again lower down and made all speed south, rounding the point and going to ground in a safe haven about a mile below. Such was part of the sport to be obtained with the Staintondale hounds twenty years ago. All of which goes to show, to my mind, that it is not necessary to have high-priced horses, twenty-five couples of hounds, level and clean-limbed, nor a grass country, to have good sport after the foxes of the Old Country

Returning to the list of packs of hounds for this season: The 152 packs of harriers (hounds kept for hare hunting) are divided as follows: 121 packs in England and Wales, 2 packs in Scotland and 29 packs in Ireland. The 121 packs in England and Wales contain 4,113 hounds; the 2 packs in Scotland 85 hounds; the 29 packs in Ireland 1,056 hounds. A total of 5,254 harriers are thus kept for the purpose of hunting the hare. Very often in certain sections of country where foxhounds seldom or never come, these packs give lots of fun after an outlying fox, and frequently account for them, too.

The British Isles have 50 packs of beagles that contain altogether 1,330 hounds. The hounds in these packs are described variously. Some are "pure beagles"; others "stud book beagles," "beagle harriers," "cross beagle and harrier," etc. Among the 50 packs of "beagles" are also 4 packs of pure Basset hounds: Delapre, 15 couples of Basset hounds; the Highworth (a new pack this season), 14 couples of 12in. Basset hounds; Mr Moss's pack, 14 couples of 12in. Basset hounds; the Walhampton pack, 16 couples of 12in. Basset hounds. In Ireland, the Scarteen beagles are described as 23in. pure Kerry beagles, black and tan. (Note: 23in. hounds seem large for beagles, but I note that the same pack seems to be also mentioned in the list of harriers in Ireland.)

A pack of beagles that I once took a little interest in is the pack known as the Trinity College, Cambridge, foot beagles, 16in. beagle-harriers. If anybody wanted a leg-stretcher over the Cambridgeshire fens, with their heavy holding ground and wide drains, he could always get it by following faithfully those 16in. hounds after a fen country hare. The hounds are hunted by an undergraduate master and undergraduate whips. The master was allowed to ride after them, so far as I can remember, but no one else, not even the whips. Now, 16in. hounds can run a little, and so can fen country hares.

From the figures given above, regarding the packs of different kinds of hounds, it will be seen that there are altogether 22,152 hounds kept in the British Isles for purposes of hunting either stags, foxes or hares. This is an enormous number, and one that will probably astonish many a fox-hunter of the United States. It may be noted, too, that of the above number, nearly 16,000 hounds belong to foxhound and harrier packs that are used for hunting purposes in England or Wales only. One can deduce from that fact that there is still some elbowroom left over there. One can also deduce the following comforting fact: Farmers and landowners cannot be very far apart in sympathy, since so many packs of hounds means just so much riding over the fields, and so much fence-breaking. Of course, the farmer gets some compensation in the ready sale of hay, oats and straw, to supply the needs of the horses kept for hunting purposes. A great factor, however, and one that is largely answerable for the continued popularity of all kinds of hunting with hounds, is the innate love of sport that is part and parcel of a farmer's character in the Old Country.

EDWARD BANKS.

WORCESTER FUR COMPANY'S MEET.

THE annual meet of the Worcester Fur Company was held on Oct. 26–27. Out of seven foxes started Tuesday, two were killed, John M. White, of Millbury, killing one at Cushing Swamp, the other succumbing to the skill of George R. Newton, of Worcester. The weather conditions were unfavorable for the sport, the weather being too dry, and therefore the dogs had great difficulty in trailing. However, up to 10 o'clock on Tuesday morning everything was going with dash and spirit, the dogs giving tongue melodiously in different directions, three different packs going on the hot trail of three foxes, and there were fully 100 eager hunters on the grounds, each willing to do his part if the opportunity offered. It was impossible to determine the exact number present, as they were scattered about over the grounds, but each one had several others in sight at all times, and they always knew where some of the hounds were at work. President John R. Thayer, O. M Ball, Webster Thayer, D. M. Earle, W. H. Sawyer, John M. White, J. E. Fuller and many others drove out in their own carriages, and others made use of the barges which left the Bay State House at 6 o'clock.

The dogs, some thirty in all, were started in at different points, some at Burncoat Hill, some at Greenhill, some at the south end of Bondhill, others at the east end of it, and some at Cushing Swamp.

A summary of the day is: The fox killed by Mr. Newton was started probably by B P. Williamson's dog Shine, and the trail was taken up by Buck and Dan, turned in by A. B. F. Kinney. Hard run, the fox passed near by the stands of Thayer, Webster and Knowles, but out of range of them. A fox chased by Wall's dog ran toward east ridge, where it escaped. Logan jumped a fox north of Shoemaker's, but lost it after a hard chase. Other foxes were started in the forenoon, but no one could determine where the chase began or ended. Some of the dogs undoubtedly behaved badly, notably one at the east end of Bond Hill when a hound gave tongue and ran a back track.

It was a day redounding to the credit of Southern hounds, as they were the ones which furnished the real sport, and the two foxes killed were chased by Southern hounds. Shine, a Georgia hound, owned by B P. Williamson, his Barre honors still fresh upon him, proved his merit by the skill with which he ran the fox from Bond Hill.

Logan proved himself a great dog, and where his voice was heard it was certain that he was after a fox. One of Mr. Thayer's dogs was severely cut by running into a wire fence. Members held the opinion that it would have added much to the success of the hunt if those who shot and missed would report truthfully, as it was only possible by full reports to discover what foxes were hunted and where and how they ran. There was a great deal of firing, but when the hunters were gathered the explanations of it were that there were bird hunters on the grounds, and yet there is no doubt but what much of the firing was done by the hunters. Mr. Bill was manfully frank in admitting that he shot at a fox and missed.

At 7:30 the members and guests were seated for the annual dinner, in the Bay State House. Over eighty persons were present.

The guests of the club were Mayor A. B. R Sprague, Rev. Dr. Almon Gunnison and Prof. E. Harlow Russell.

President Thayer had at his right Mayor Sprague, at whose right sat Prof. Russell. At the left of the president sat Rev. Dr. Gunnison. There were at the table also A B. F. Kinney, John T. May, E. S. Knowles, Hubert Clark, H. N. Kingsbury, O. M. Ball, L. F. Herrick and Ledyard Bill. There also were present: A A. Sibley, J. P Ashey, George Bancroft, F. W. Trask, George H. Waite. Dr. C. E. H. Higgins, F. E. Amsden, G E. Austin, L. D Kellogg, Fred L. Lee, James E. Fuller, W. R. Dean, B. P. Williamson, Frank T. Sirret, George F. Lyon, C. E. Perry, A. B. Fisher, Charles K. Pevey, Paul Wheeler, Arthur R. Taft, N. E. Mansfield, G. H Sargent, A. W. Walls, A. C. Moore, F. D. Houghton, C. A. Hutchinson, Dr. F. A. Hatch, C. Arthur Hanson, Herbert E. Kelly, H. W. Boardman, F. E. Allen, Charles S Bacon, Roland E. Howard, Harold L. Gulick, Clarence C. Dodge, Albert A. Barker, Charles I. Rice, A. G. Dodge, E. H. Cote, Capt. D M. Earle, S. C. Buckman, F. M. Lamb, D. S. Jackson, A. H Perry, William F. Hogg, Frank L. Dean, George F. Wall, Fred A. Mann, Charles F. Mann, E. W. Walls, Elmer D. Young, Henry H. Chase, C. W. Dodge, E. P. Bennett, C. B. Holden, E. T. Whitaker, William S. Perry, A. H. Henry, M. R. Watson, W. H. Haynes, R. W. Buffington, E. L. Buffington, J. H. Eldridge A. W. Hunt and Arthur Flagg.

President Thayer, before the speech-making began, suggested that the grounds for the next day's hunt be determined upon, and though the same ground was the popular choice, yet on the suggestion of Mr. Thayer, that if the same ground was selected John M. White, who exerted himself to the utmost in promoting the welfare of the club, and who, owing to poor health, would not be able to hunt on grounds other than the North grounds, the North grounds were selected.

President Thayer made a most pleasing speech, touching on the large number of good sportsmen present, the enthusiasm and interest manifested in the annual hunt and dinner, and the success of the day's sport and the general good-fellowship manifested. The annual gatherings were social functions in the main and not exclusively hunting. Their popularity was growing yearly from the circumstances mentioned. There were seventy-five members present at the dinner, where could seventy-five better be found? New members are acquired and the older ones stay in. Mayor A. B. R. Sprague, Rev. Dr. Almon Gunnison, A. B. F. Kinney, Mr. Way, Prof. E. Harlow Russell, Huber Clarke, Ledyard Bill, E. S. Knowlton, also made felicitous speeches.

The hunt of the second day was without any success so far as bagging a fox is concerned; but it was a success so far as delightful weather and good fellowship were concerned.

On Tuesday evening, twelve sportsmen signified their intention to participate in Wednesday's sport. The second day's attendance was so light, and the dogs so few, that there was serious intention to make the event for one day hereafter. A start was made about 6 o'clock, about twenty hunters proceeding at once to Bond Hill. The ground was so dry, that the hounds were thereby much handicapped. The first fox started was lost near the Locke place. The second afforded a good chase, the hounds following close up, making merry melody, but the fox was lost. John M. White's party succeeded in starting a fox early, but it, too, was lost. About 1:30, by common consent, the hunt was declared ended.

FIELD TRIALS OF THE NATIONAL BEAGLE CLUB.

THE eighth annual field trials of the National Beagle Club began at Hempstead, N. Y., on Monday, Oct. 25, and were brought to a successful conclusion on the following Friday. The number of starters was the largest in the history of the club, and the quality of the beagles entered was excellent, especially in the 15in. All-Age class. Most of the winners are already well known, but among those previously unknown which are worthy of especial mention are Stump, Sailor, Lancer and Another. The work of all was good, that of Stump and Sailor being especially keen and dashing.

The judges were W. S. Clark and Bradford S. Turpin, and their awards seemed to be generally approved.

Among those present were Geo. B. Post, Jr., H. F. Schellhass, Jas. W. Appleton, Jas. L. Kernochan, G. Mifflin Wharton, Geo. W. Rogers, John Bateman, A. P. Vredenburgh, U. A. Baldwin, D. F. Summers, H. S. Joslin, G. Muss-Arnolt, H. A. Purinton, Wm. Saxby, A. D. Lewis, E. W. Hazelhurst, James Watson and a number of others.

Monday.

A strong northeast wind, with frequent showers, made the day a disagreeable and unpromising one for hunting. The judges measured the beagles in the morning and in the afternoon two braces in the Futurity were run.

The Futurity.

First Series.

There were five starters in this stake and they were drawn to run as follows: Wharton Beagles' maltese, w. and t. dog Harkaway (Harker—Haida), whelped June, '96; handler, G. Mifflin Wharton, with U. A. Baldwin's b., w. and t. dog Lancer (Spark R.—Ada B.), whelped June, '96; handler, owner.

Franklin Field Trial Kennels' w., b. and t. dog Summer's Sailor (Sailor—Summer's Fly), whelped March, '96; handler, D. F. Summers, with William Saxby's b., w. and t. dog Doubtful (Harker—Dime), whelped January, '96; handler, owner.

Franklin Field Trial Kennels' w. and t. bitch Maggie S. (Sailor—Lucy S.), whelped April, '96; handler, D. F. Summers, a bye.

HARKAWAY—LANCER.—Down at 1:45 near the Lewis farm. Lancer hunted with more judgment than Harkaway, but after the rabbit was up the work of neither was good. Scent was very catchy, and a drizzling rain added to the difficulties of the beagles and the discomfort of the spectators. Two rabbits were started. Up at 3:43.

SUMMERS' SAILOR—DOUBTFUL.—This brace was cast off at 3:43, and at once showed greater speed and more hunting ability than the first brace. A rabbit was forced from a small thicket into the open, and the ensuing chase was in plain view of the spectators. The rabbit kept on the plowed land, where the scent was bad, but nevertheless the race was an interesting one. Sailor was a little too fond of his own voice and cast wildly at times, but he had the keener nose of the pair and showed himself to be the better of the brace. Up at 4:45.

HARKAWAY—LANCER.—This brace was put down again on the rabbit which the preceding pair had been driving. The race was a good one and all in the open. Lancer outfooted his rival and was a trifle quicker on the turn. The last part of the race was a sight chase, the rabbit searching cover only a few feet in front of the pack. Up at 5:50.

Annual Meeting.

President Schellhass called the annual meeting to order at 8:30 in the smoking room of the hotel. Routine business was quickly disposed of, and then the Produce Stake committee reported an entry of nineteen bitches and fifty-eight puppies. The committee on revision of the Bergh standard asked more time, which was granted.

The election of officers for the ensuing year resulted as follows: President, Geo. B. Post, Jr.; Vice-Presidents, H. F. Schellhass, Geo. W. Appleton, Jas. L. Kernochan; Secretary-Treasurer, G. Mifflin Wharton; executive committee, A. Wright Post, Geo. W. Rogers, John Bateman; official judges, Geo. B. Post, Jr., W. S. Clark, H. F. Schellhass, J. W. Appleton, Geo. F. Reed, Bradford S. Turpin; delegate to A. K. C., H. F. Schellhass. Adjourned.

A meeting of the field trial committee was then called, Mr. Appleton in the chair. All the entries filled except Wm. Saxby's Dime, Somerset Kennels' Garnet and Hempstead Beagle's Prudence. After the drawings were made the meeting adjourned.

Tuesday.

A clear, beautiful day. Scent, however, was bad. Rabbits were fairly plentiful, and the Futurity and Pack stakes were completed, and two braces in Class A were run.

MAGGIE S.—The bye was put down with Summers' Sailor at 7:25. Two rabbits were started, but scent lay so badly that neither could be driven any distance. Maggie took little interest in the chase, and failed to run in her true form. Sailor was easily the better. Up at 7:55.

Second Series.

DOUBTFUL—HARKAWAY.—Down at 7:58. The former did the better hunting, but the work of both was poor after the game was afoot. Scent was bad, and the race was a dull one. Up at 8:40.

DOUBTFUL—LANCER.—Down at 8:43. They ran a short race, in which Lancer showed himself the better, driving with more speed, and picking up the losses quicker than Doubtful. Up at 9:25.

SUMMERS' SAILOR—LANCER.—Sailor started a rabbit, and in the ensuing race showed a better nose than Lancer. He was also faster, but cast rather wildly on a loss. Down 45 minutes.

The judges then announced the winners: First, Summers' Sailor; second, Lancer; third, Doubtful; reserve, Harkaway. The value of the stake was $81.25; first prize, $32.50; second, $20.31; third, $8.12; to breeder of winner, D. F. Summers, $8.12; to N. B. C. $12.18.

Pack Stake.

This stake was open to all beagles 15in. and under, the *bona fide* property of party making entry at time of entry and starting class. There were four starters.

FRANKLIN FIELD TRIAL KENNELS PACK NO. 1.—Lucy S., Ringleader, Belle Summers and Pinnie constituted the pack which was hunted by Mr. Summers. There was a short run in which most of the work was done by Lucy and Belle. The other beagles ran shy of the briers and also showed inexperience in their work. Down 30 minutes.

N. A. BALDWIN'S PACK.—In this pack were Ada B., Lancer, Rocket and Another. Mr. Baldwin hunted them. They were under good control, harked to one another quickly and packed up well. They ran a sharp, snappy race in thick briers, working beautifully all the time. Down one hour.

HEMPSTEAD BEAGLES.—The pack was made up of Leader, Florist, Parson and Bashful, and was hunted by Mr. Kernochan. He had them under excellent control. After drawing many favorable places blank Bashful trailed to a start, and the others harking in drove to a loss in a plowed field. Down one hour.

FRANKLIN FIELD TRIAL KENNELS PACK NO. 2.—Summers' Fly, Summers' Sailor, Maggie S. and Stump, made up the pack which was hunted by Mr. Summers. Sailor started a rabbit that was driven for some time at a great pace. The beagles were running to kill, but they did not hark to one another readily, nor did they pack well. There was some fine individual work which, however, could not be credited in a pack stake. Down half an hour.

The judges awarded first prize to N. A. Baldwin's pack; second to Franklin Field Trial Kennels Pack No. 2; reserve to Hempstead Beagles.

Class A—15-13in.

First Series.

The drawing in this class resulted in running the ten starters as follows: Hempstead Beagles' b. and w. bitch Messenger (Monitor—Careful), handler, J. L. Kernochan, with Somerset Kennels' b., w. and t. bitch Juno (Frank Forest—Somerset Kennel), handler, Geo. B. Post, Jr.

Franklin Field Trial Kennels' w. and t. bitch Summers' Fly (Clover—Lucy S.), handler, D. F. Summers, with A. J. Purinton's b., w. and t. dog Millard R. (Millard—Haida), handler, owner.

H. S. Joslin's b., w. and t. dog Trick (Clyde—Lady Novice), handler, owner, with Franklin Field Trial Kennels' b., w. and t. dog Summers' Sailor (Sailor—Summers' Fly), handler, D. F. Summers.

Hempstead Beagles' b. and t. dog Tyrant (imported from Eaton pack), handler, T. Gibson, with Wharton Beagles' maltese, w. and t. dog Harkaway (Harker—Haida), handler, G. M. Wharton.

Hempstead Beagles' tan dog Pilgrim (Royal Rock—Pastime), handler, J. L. Kernochan, with Franklin Field Trial Kennels' b., w. and t. bitch Belle Summers (Clover—Lucy S.), handler, D. F. Summers.

MESSENGER—JUNO.—This brace was put down at 3:05 in scrub oaks. A rabbit was soon started and driven prettily by Messenger. Juno refused to hark and took no part in the run. Down 50 minutes.

SUMMERS' FLY—MILLARD R.—This fine couple ran an even, pretty race in cover and open. There was little to choose between them. Scent lay well and the race was the best of the day. Down 30 minutes.

Mr. Kernochan entertained the club at dinner in the evening, and the occasion will long be pleasantly remembered by all who were present.

Wednesday.

The day was warm and clear—a poor one for hunting. Game was hard to find.

TRICK—SUMMERS' SAILOR.—This couple was cast off at 7:55 at the Ladenburg nursery. Game was abundant, but scent lay badly on the cultivated ground, and it was deemed best to return to the grounds south of the town. At 8:40 the beagles were cast off there, and a rabbit was found immediately. Trick was superior to his rival in nose and judgment, and his equal in speed. Up at 10:05.

TYRANT—HARKAWAY.—The former was a stylish, careful hunter, but tonguey. Harkaway outfooted him in a straight drive. Neither was thought good enough for the second series. Down 30 minutes.

PILGRIM—BELLE SUMMERS.—After a long hunt a small rabbit was put up. Belle drove him well, working with snap and energy. Pilgrim ran mute and hunted poorly. Down 2 hours and 20 minutes.

Second Series.

MILLARD R.—TRICK.—The former was handicapped by a sore foot, and hunted badly. After the game was up, however, he drove well. They ran a long chase in cover so thick that their work could not be seen. Drawn away to new ground, game could not be found; and at 3 o'clock they were ordered up, to go down again later.

SUMMERS' FLY—MESSENGER.—The former was the better starter and hunter, and drove well at a great pace. Messenger has a fine voice, and is a true, steady driver, but is not Fly's equal in all-around qualities. Up at 4:05, after an hour's run.

SUMMERS' SAILOR—BELLE SUMMERS.—This brace ran a beautiful race on a rabbit, which led away like a fox. They drove in dashing style, and the run was the best of the week. Belle was the better of the two. She caught most of the turns and was Sailor's equal in speed. Down 10 minutes.

MILLARD R.—TRICK.—In driving, these beagles were about equal, but in hunting, Trick was superior to Millard. Down 25 minutes.

Thursday.

This was the best hunting day of the week. In the morning plenty of rabbits were found, and the sport was enjoyable; but in the afternoon game was scarce, and the hunt was decidedly dull.

TRICK—BELLE SUMMERS.—They ran a fast, snappy race on a small rabbit, which barely escaped with his life. There was but little to choose between the rivals. Belle was a trifle quicker on the turn, and was judged to be the better. Down 45 minutes.

TRICK—SUMMERS' FLY.—Two rabbits were run, and Trick won easily. Down 40 minutes.

The judges gave first prize to Belle S., second to Trick, third to Summers' Fly and reserve to Messenger.

Class B—13in. and Under.

First Series.

This class was open to all beagles 13in. and under that had not been placed first at a recognized field trial. The first prize was $20 and the second $10. The eight starters were drawn to run as follows:

N. A. Baldwin's b., w. and t. bitch Another (Bugh—Scorcher), handler, owner, with H. S. Joslin's b., w. and t. bitch Cora J. (Wanderer—Headlight), handler, owner.

E. C. Clark's b., w. and t. bitch Dixie R. (Rover—Dora), handler, H. S. Joslin, with Wm. Saxby's b., w. and t. bitch Bessie (Judge—Baby), handler, owner.

Hempstead Beagles' b., w. and t. bitch Tragedy (Royal Rock Brawler—Pastime), handler, T. Gibson, with Franklin Field Trial Kennels' b., w. and t. bitch Pinnie (Sailor—Minnie S.), handler, D. F. Summers.

Waldingfield Beagles' b., w. and t. bitch Blue Bell, handler, J. W. Appleton, with Franklin Field Trial Kennels' b., t. and blue ticked bitch Stump (Sailor—Minnie S.), handler, D. F. Summers.

ANOTHER—CORA J.—The former had it all her own way and drove her game to earth under a barn, Cora meantime hunting indifferently and refusing to hark. Down 35 minutes.

DIXIE R.—BESSIE.—This was another one-sided race. Dixie depended too much upon Bessie, and was content the greater part of the time to follow her mate and tongue lustily. Bessie ran at a great pace and drove fairly well. Down 45 minutes.

TRAGEDY—PINNIE.—This brace ran a small rabbit. Pinnie did all that was done, Tragedy taking but little interest in the chase. Down 40 minutes.

BLUE BELL—STUMP.—These "purple pups" were down for a half hour. Bell did nothing, but Stump drove in dashing style, showing good nose, great speed and excellent judgment in casting when at fault.

Second Series.

STUMP—ANOTHER.—This pair was down for nearly three hours and practically nothing was accomplished. Three small rabbits were started in briers so thick that the beagles could not hark to one another. Both hunted well, and Another showed a remarkably keen nose in trailing the leverets.

Friday.

Rain fell till about 11 o'clock, and the day was a decidedly disagreeable one for judges and handlers. The trials were finished at noon. Scent was none too good and rabbits were hard to find.

STUMP—ANOTHER.—This pair was run for twenty minutes on a rabbit which led a pretty chase through a grass field. Stump easily led, driving at great speed and catching the turns quickly.

ANOTHER—BESSIE.—Another trailed to a start and in driving was truer than Bessie and caught the turns quicker. In a straightaway run, however, Bessie easily out-footed her. Down 45 minutes.

The judges then awarded first prize to Stump, second to Another, reserve to Bessie.

Class C.—The Derby.

First Series.

This stake was open to all beagles whelped on or after Jan. 1, 1896. The first prize was $25, second prize $12. The eight starters were drawn and ran as follows: Somerset Kennels' b., w. and t. bitch Hilma (Pulboro Crafty—Cinderella), whelped July, 1896, handler, G. B. Post, Jr., with Franklin Field Trial Kennels' w., b. and t. dog Summers' Sailor (Sailor—Summers' Fly), whelped March, 1896, handler, D. F. Summers.

Franklin Field Trial Kennels' w. and t. bitch Maggie S. (Sailor—Lucy S.), whelped April, 1896, handler, D. F. Summers, with H. S. Joslin's b., w. and t. bitch Cora J. (Wanderer—Headlight), whelped June, 1896, handler, owner.

Wm. Saxby's b., w. and t. dog Doubtful (Harker—Dime), whelped January, 1896, handler, owner, with N. A. Baldwin's b., w. and t. dog Doubtful (Spark R.—Ada B.), whelped January, 1896, handler, owner.

Wharton Beagles' maltese, w. and t. dog Harkaway (Harker—Haida), whelped June, 1896, handler G. M. Wharton, with N. A. Baldwin's b., w. and t. bitch Another (Bugle—Scorcher), handler, owner.

HILMA—SUMMERS' SAILOR.—This brace was run on Thursday afternoon, but it is reported here for convenience. Two small rabbits were found and quickly lost, one taking refuge in a pile of rails, and the other throwing the hounds off in a cabbage-field. Sailor was easily the better of the pair, Hilma taking no interest in the work. Down 1 hour and 20 minutes.

MAGGIE S.—CORA J.—The latter trailed to a start, and drove her game for some distance, Maggie meantime running heel. Down 15 minutes.

DOUBTFUL—LANCER.—Two small rabbits were started, and neither could be followed in a satisfactory way. Lancer showed greater judgment and a keener nose than Doubtful, who was inclined to run mute when he found the trail. Down 2 hours.

HARKAWAY—ANOTHER.—Neither beagle hunted with much energy, and after the rabbit was up they drove poorly. Another did not show the life with which she ran in other races. Down 50 minutes.

Second Series.

LANCER—SUMMERS' SAILOR.—Two rabbits were started in an uninteresting race. Sailor showed himself superior to Lancer. Down 15 minutes.

DOUBTFUL—CORA J.—This brace ran for a long distance on a rabbit which took straight away across country. Cora started him and in the drive did a pretty piece of work in following the game across a large plowed field. Down 15 minutes.

This race ended the trials. The judges gave first prize to Summers' Sailor, second to Lancer and reserve to Cora J.

P. A. B.

Metropolitan Show Judges.

Editor Forest and Stream:

The complete list of judges for our coming show is as follows:

Mastiffs, Dr. Richard H. Derby, New York; St. Bernards, Mr. Robert H. Burrows, East Orange, N. J.; Great Danes, Mr. J. Blackburn Miller, Newburgh, N. Y.; deerhounds, Russian wolfhounds, greyhounds, Mr. H. W. Huntington, Brooklyn, N. Y.; pointers, Mr. Charles Heath, Newark, N. J.; all setters, Dr. H. Clay Glover, New York; all spaniels (except toys), Dr. S. J. Bradbury, Lynnbrook, L. I.; foxhounds and French bull dogs, Mr. James L. Kernochan, Hempstead, L. I.; beagles, Mr. Jas. W. Appleton, New York; fox terriers, Mr. Winthrop Rutherfurd; bull dogs, Mr. Henry C. Beadleston, New York; bull terriers, Mr. Perry Tiffany, New York; poodles, Mr. Chas. D. Bernheimer, New York; dachshunde, Mr. O. P. Amend, New York; Boston terriers, Mr. J. F. Holt, Fanueil, Mass.; Irish terriers and Scottish terriers, Mr. O. W. Donner, Milton, Mass. (we have not yet heard from Mr. Donner, as he has not returned from his European trip); pugs, toy spaniels, Yorkshire and toy terriers, Italian greyhounds, Mr. O. W. Lucy, New York; bloodhounds, collies, old English sheep dogs, Airedale terriers, Welsh, Skye, Bedlington, Dandie Dinmont and Black and Tan terriers, and miscellaneous, Mr. James Watson, New York.

JAMES MORTIMER.

Central Beagle Club.

SHARPSBURG, Pa.—*Editor Forest and Stream:* The following are the nominations to the Central Beagle Club's second annual trials, Derby and open classes. They closed on Oct. 27:

Class A—For dogs and bitches, 13 to 15in., whelped on or after Jan. 1, 1896:

McKeesport Kennels' b., w. and t. bitch Madge H. (Streamer—Blossom H.); b., w. and t. bitch Cobsy B. (Harker—Birdie S.); b., w. and t. dog Harker S. (Harker—

Birdie S.); b., w. and t. dog Spoty (Streamer—Blossom H.). Croker & Tomer's b., w. and t. dog Montane Lee (Ch. Paderewsiki—Beatrice). Mark Louis, Jr.'s b., w. and t. bitch Lucy L. (Ch. Raffler—Jessie). Franklin Field Trial Kennels' b., w. and t. dog Summers' Sailor (Sailor—Summers' Fly); b., w. and t. bitch Maggie S. (Sailor—Lucy S.). L. O. Seidel's b., w. and t. bitch Daisy S. (Ch. Lee II.—Molly Dean).

Class B—For dogs and bitches 13in. and under, whelped on or after Jan. 1, 1896:

A. C. Peterson's b., w. and t. bitch Chance (champion Frank Forest—Champion Snow), John W. Simpson's b., w. and t. dog Songster (Tiger—Music), Jim McAleer's b., w. and t. bitch Little Hornett (Sailor—Lucy S).

Open Class C—For dogs and bitches all ages, 13. to 15in. that have not been placed first in any all-age class in field trials.

Jim McAleer's b., w. and t. bitch Maywood (Ch Lee II—Pannic), McKeesport Kennels' b., w. and t. bitch Lady Linda (Driver—Copsy), Frank Golla's b., w. and t. dog Doc Weller (Sam Weller—Bellva Lockwood), Mark Louis, Jr.'s, b., w. and t. bitch Mollie L. (Don—Mollie); Franklin Field Trial Kennels' b., w. and t. dog Summers' Sailor (Sailor—Summers' Fly), b., w. and t. bitch Maggie S. (Sailor—Lucy S.), b., w. and t. bitch Belle Summers (Clover—Lucy S.), b., w. and t. bitch Summers' Fly (Clover—Lucy S.); R. C. Stinger's b., w. and t. dog Ramrod (Black Joe—Flora).

Class D, for dogs and bitches, all ages, 13in. and under, that have not been placed first in any All-Age class in field trials:

Jim McAleer's b., w. and t. bitch Little Hornett (Sailor—Lucy S.) and b., w. and t. bitch Kitty (champion Rowdy—Music); T. C. Moxham's b., w. and t. bitch Chippy (Bouncer E.—Anna T.); Franklin Field Trial Kennels' b., w. and t. bitch Pinnie (Sailor—Minnie S.); A. C. Peterson's b., w. and t. dog Sailor (Roal Forest—Beauty C.).

L. O. Seidl, Sec'y.

National Fox Hunters' Association.

The following circular has been sent out by the secretary, Francis J. Hagan:

"The National Fox Hunters' Association invites you to take part in its fourth annual meet, to be held at Cynthiana, Ky., commencing Nov 17. Hotel accommodations and saddle horses may be secured by addressing J. S. Huff, R. H Wills or J. D. Linehan, Cynthiana, Ky. Hotel rates will be $1.50, and for saddle horses $2 per day. The railroads have made a special rate of a fare and one-third. The field trials are open to the world, and will begin with the Derby, Wednesday, Nov 17; entries close Tuesday night, Nov. 16. All sportsmen will be heartily welcomed."

E. F. T. C. Entries.

Greenfield Hill, Conn., Oct. 25.—I left off one entry from the list I sent you. Tory Russett, owned by Avent, Thayer & Duryea Kennels. I start for Pittsburg Sunday evening.

S. C. Bradley.

POINTS AND FLUSHES.

The Peninsular Field Trial Club, whose official vision was such that, while looking at one fixed point of the compass, it thought that it saw the whole horizon, has announced that, owing to lack of interest, it is altogether likely that its trials of this season will not be run. This club religiously discriminated in favor of one sporting journal against all others.

A meeting of the Executive Board will be held in the A. K. C. rooms on Friday, Nov. 5, at 11 o'clock A. M.

The Poodle Club of America offer special prizes, to be competed for at the forthcoming Metropolitan Kennel Club's show, as follows: Best poodle $7; best of opposite sex, $3. Best American bred, $5; best of same, opposite sex, $2 Persons desiring to join the club should address the secretary, Mr. Z T. Baker, 13 William street, New York.

In our advertising columns F. L. Cheney, Pittsfield, Mass., offers setters, broken and unbroken Frank Kent, Monticello, N. Y., offers a setter and a pointer. Joe Lewis, Canonsburg, Pa., offers setter and Chesapeake Bay dogs. Wm. Walther, Ronkonkoma, L. I., N. Y. offers setters and a beagle. R. N. Warner, Middlebury, Vt., offers pointer.

Answers to Correspondents.

G C. H., New York.—Is there anything to prevent barnacles from accumulating on a boat, or wood of any kind lying in salt water. Ans. Patented compositions for this purpose are sold at all ship chandlery stores. We cannot recommend any special one.

J. S., Concordville, Pa.—I see by Oct. 23 issue that some hundreds of blackbirds were shot recently at Elkwood Park, from the trap. Is not the blackbird protected by law in New Jersey. Ans. No; the protective law excepts loon-blackbirds and red-winged blackbirds.

Yachting.

Owing to the fact that Forest and Stream goes to press a day earlier than usual this week, we are unable to give more than a brief outline of the organization of the new yachting union. We hope next week to give a more complete account of the business of the meeting, and also the articles and sailing rules as finally adopted. It is gratifying to be able to announce that a national organization has been formed, with a specially able and representative council and a total membership of at least 100 yacht clubs.

Our British exchanges bring the news of the formal organization of a new yachting society in London on Oct. 8, the International Cruiser Racing Association. The name indicates a very wide scope indeed for the new Association, but the exact intent of its promoters can only be understood when they announce their definition of a "cruiser." We doubt whether it is possible to go further in this direction than to require a midship section of such area as shall give adequate displacement and internal room, a strong and durable construction, and the carrying of reasonable equipment, furniture and galley fittings, with regular skylights and hatches. If the new Association attempts only this much and accomplishes it successfully, it will be of unlimited benefit to yachting.

In spite of the childish conduct of Mr. J. Arthur Brand in 1895, in trying to turn a fair defeat into a technical victory by absurd protests, and even his subsequent out doing of Lord Dunraven by the private circulation in England of a paper attacking American yachtsmen without allowing them the right of defense, we had hoped that a couple of years' experience had made a fairer sportsman of him; and that he would show himself in a better light in a second international contest. This, unfortunately, has not proved to be the case, his conduct in 1897 is as vacillating, childish and unsportsmanlike as in 1895.

On Sept. 17 he cabled to the Royal St. Lawrence Y. C.: "Challenge Seawanhaka cup, subject Minima, backing with syndicate." Such a message as this, by all yachting usage, demanded a speedy confirmation by mail in the form of a definite challenge from some recognized yacht club; failing this, it could claim no right to consideration. Instead of sending such a formal challenge, Mr. Brand apparently did nothing further in the matter until the Royal St. Lawrence Y. C. telegraphed on Oct 6: "Will Minima back challenge?" To this he answered: "Yes, if conditions are satisfactory, writing." The club waited until Oct. 23 and was then about to telegraph again when a letter arrived. In this Mr. Brand asked if the Royal St. Lawrence Y. C. was going to accept his challenge, and stated that if it would he would proceed to attempt to get up a syndicate to furnish the money for the venture, and to obtain the endorsement of the Minima Y. C. Mr. H. K. Sturdee, who represented Mr. Brand in 1895, has been requested to perform the same kind office this year, and has lately visited Montreal, but as he had no instructions or information from Mr. Brand he was unable to aid in breaking the deadlock.

According to the *Field* of Oct. 16, Mr. Brand will build a yacht of some size not yet known to race for the Seawanhaka cup; but from all appearances this latest challenge is just as vague and vapory as that of Mr. Brand immediately after his defeat in 1895, and again after the victory of Glencairn I. over El Heirie. At that time some of the American as well as English papers were deeply pained over the unsportsmanlike treatment of Mr. Brand by the Seawanhaka Corinthian Y. C. in not waiting for an indefinite time on the mere chance that he might find a syndicate and a club to back him. His present conduct, in practically claiming precedence as a challenger and yet failing to send anything approaching a challenge in due form, shows not only that no injustice was done him in either of these cases, but justifies the many criticisms of his general conduct as a sportsman.

It must be confessed also that the Minima Y. C. is not showing to remarkable advantage in connection with Mr. Brand, it tacitly at least lent its endorsement to his cowardly circular of 1895, and apparently in the present case it has little regard as to how its name is used by him.

The Fin in the Knockabout Classes.

Editor Forest and Stream:

It is to be hoped that yacht sailors and designers will avail themselves more generally than is their practice to discuss the conditions proposed for the new 25ft. l.w.l. cruiser knockabout class. As you know, I have tried the experiment of producing a very large boat on a small waterline, and during the past season sailed over 1,500 nautical miles in Akista in all kinds of weather. The experience so gained is my warrant for a number of the asertions which I shall make hereafter. In no case are these conclusions the result of a single observation, and so I feel safe in saying that in no case are the results attributed to erroneous conditions. I believe that I am entirely safe in saying that in no one of the yachts that I met in racing last summer and defeated, was there driven so great a number of pounds of displacement per square foot of sail area, nor was there in any of the yachts so met one in which the cabin accommodations were at all comparable. To further facilitate the discussion I send you herewith a sketch of as short and lofty a sail plan as is in my judgment practicable to be used, and under it place the typical keel knockabout sheer-plan and the one which I suggest. I also present midship sections which belong respectively to the two plans. While the rig is not the best perhaps which could be devised in its proportions, every criticism which is made of it applies with greater force to any other rig in which the boom is longer. Taking up now the headings in the order in which they are presented, let us consider:

Mast.—"The forward side of the mast at the deck must be not less than 6ft. from the forward end of the water line." The mast is so placed in the drawing given. It will be observed that complying with the requirements of the distribution of sail area, the boom projects beyond the end of the l.w.l. 12ft. as the minimum. For convenience of handling, reefing sail, etc., this requires that the after overhang shall be at least 8ft. This would leave the boom projecting 6ft. beyond the counter which is an awkward distance to reach in order to reef in a seaway. The jib for such a rig would be 14ft. on the foot and would require a forward overhang of about 9ft. 6in. The total overhangs would then amount to 17ft. 6in. and the length on deck 41ft. 6in.

Under these conditions the c. of e. would be 14ft. aft of fore end of l.w.l., and this makes it necessary that the c. l. r. should be considerably aft of the c. of g.; further exaggerating the long lean bow, producing the very characteristics of which so much criticism has been made, and in my judgment producing a bad sheer plan and unsymmetrical form.

Cabin House.—In my experience so wide a cabin house is decidedly bad. A width of cabin house equal to that of the cabin floor between transoms is sufficient for the cabin and leaves very desirable deck room available for handling sails, working around the yacht and stowing the yawl.

Head Room.—Anything less than 6ft. is a vexation of spirit. It can so easily be obtained that it should always be insisted on.

Fixtures.—6ft. 6in. in length of cabin is just as good as 8ft. If there is any spare length, it should be put in lockers and shelves.

Rudder.—The requirement of the rudder is bad on two accounts. First, because it bars out an extremely seaworthy and serviceable type; second, because the position of the rudder is such as to require a larger area and greater use of rudder than would otherwise be demanded. The rudder should be used simply to direct the boat, and should only change its direction of motion. When a rudder, however, is hung on an inclined sternpost, it not only does that, but also drags the stern of the boat down by its tendency to drag into the water for moderate heels, and lifts the stern for extreme heels. A boat can easily be designed in which, under all ordinary conditions, the rudder is exactly amidships; but such a boat cannot be sailed if the rudder is hung at the end of the keel.

Sails.—The prohibition of a bowsprit is, I think, bad, because it encourages a very long bow or an exaggeration of the V-section, and also because practically a bowsprit is very useful in keeping the anchor away from the hull, in adding to the shippy appearance of the yacht, and in eliminating the weight of the long bow, which is entirely worthless for storage.

The requirement of a windlass is one which can easily be omitted, as in my experience the windlass is only a nuisance.

The permission to have two professionals in the crew is, in my judgment, a great mistake. A yacht of this kind can easily be raced with a crew of three men, and with two professionals on board, in addition to the owner, it is a very simple matter for the owner to get sick as often as is necessary to surrender the wheel to the professional in order to win a race. Corinthian sailing is the thing we are trying to encourage, and that can be best accomplished by limiting the number of professionals to the absolute minimum. I think it would be easier to defend a clause prohibiting entirely the employment of professionals than one which permits of two.

Considering the general features, I heartily agree with the limitation of sail area, L.W.L., ballast, mainsail area, size of spinaker pole and limit of draft. I think, however, that an additional restriction should be made concerning displacement, fixing it, say, at 1,100 or 1,200lbs. To get good speed, however, it is necessary to reduce the wetted surface, to make the form as symmetrical as possible, and of such a character that it shall improve rather than deform with an increased angle of heel. All yachts of this type necessarily heel in order to get power. The foot-pounds of righting moment for the same angle of heel of the conventional type is 17,350, and of the suggested type is 19,250, a considerable increase in power. The actual beam of the yacht at the usual sailing angle is 6in. less for the conventional type than the suggested one, and the form of the suggested type is very decidedly better. As a consequence, the suggested form affords a displacement where it will do more good in the way of affording useful room, and at the same time gives greater power. As a consequence, it is a more roomy and safer yacht to have. One point, however, should be insisted on, and that is that the fin should be so proportioned that with the yacht on her beam ends, the deflection of the fin shall be inappreciable. This means that the fin shall be so strong that it can carry the entire weight of the yacht in case of need without deformation. Under such circumstances it is a simple structural matter to so design the hull that it shall be enormously increased in strength by the presence of the keel, instead of being weakened thereby. It is my belief, deduced from general considerations and strengthened by observation of all of the really successful yachts, that the best results are obtained in the way of speed from any hull by the greatest possible symmetry; that is, all of the centers should lie in the same vertical transverse plane. The lines of entrance and run should be practically the same and the form should be practically the same, regardless of the angle of heel. In Akista, all of these principles have been carried out to their logical conclusion; some of them against my judgment, and every one of them has been demonstrated to my entire satisfaction. It is perhaps too much to ask that every one should be convinced of the supreme merits under all conditions of the fin-keel type wherever the waters permit of its use; but with so many demonstrated facts of the remarkably good qualities of the type, I think it is but reasonable to ask that rules should be so drawn as to permit the designer to take any type he chooses. Certainly with ballast, draught, sail area and displacement fixed, there is no chance to produce a racing machine, while a glance at the sections presented herewith will, I think, show that the fin-keel type is much the more wholesome yacht of the two.

Geo. Hill.

Oct. 26.

[We are unable to reproduce Mr. Hill's diagrams this week.]

The North American Yacht Racing Union.

As the result of a long course of preliminary work, the new yachting body that will be known as the North American Yacht Racing Union was formally organized at the Fifth Avenue Hotel on the afternoon of Saturday, Oct. 30. The results of the labor of the organization committee during the past six months were recently published in the Forest and Stream in the form of proposed articles of association and sailing rules. The members of the committee were all in New York on Friday, and in the evening dined as the guests of Mr. N. D. Lawton, the chairman, at the New York Club. The entire evening up to 1 A. M. was devoted to a final discussion of the many points left open in the proposed articles and rules, and it was found impossible to arrive at a general agreement on many of them.

On Saturday the committee met at noon at the Seawanhaka C. Y. C. house for luncheon and a continuation of the discussion, adjourning at 3 o'clock to the Fifth Avenue Hotel. The general meeting of the delegates was called to order at 3:15 by Mr. Lawton, Mr. O. E. Cromwell being elected chairman of the meeting and Mr. W. P. Stephens secretary. After the roll of delegates was called, the proposed articles of association were read, as printed and later amended, and finally adopted after considerable discussion on certain points. After all were read, on motion of L. M. Clark they were formally adopted. Mr. Clark then moved that the meeting proceed to the election of a council, and that the chair appoint a nominating committee of three, which was carried, the committee as named including Messrs. F. T. Adams, Stuyvesant Wainwright and F. Bowne Jones. After a recess of five minutes the committee reported the following nominations: E. W. Radder, Æmilius Jarvis, J. M. Macdonough, A. J. Prime, A. T. Bliss, F. B. Jones, G. H. Duggan, N. D. Lawton, Oswald Sanderson, E. H. Ambrose, Oliver E. Cromwell, A. F. Bancroft, R. N. Ellis, L. M. Clark and J. A. Mollenhauer.

The sailing rules were then read and adopted after lengthy discussion. The question of a measurement rule was discussed, but the general opinion was against any attempt at immediate action. Mr. Cromwell announced that the Seawanhaka Corinthian Y. C. desired to extend the privileges of its town house to the council at all times for meetings, and a vote of thanks to the club was passed, after which the meeting adjourned.

Immediately after a meeting of the council was called, Mr. L. M. Clark being elected chairman, F. Bowne Jones secretary, and N. D. Lawton treasurer. Messrs. Jarvis and Macdonough had arranged to sail for England on the St. Louis on Nov. 3, and it was decided that they should be requested to confer with the council of the British Y. R. A. as to the possibility of future joint action in the matter of measurement and also of limitation of construction. We are unable to give the amended rules as finally adopted this week, but they will appear next week.

New York Y. C.

The fifth general meeting of the New York Y. C. was held on Oct. 28, Vice-Com. L. Cass Ledyard presiding. Messrs. S. Nicholson Kane, Lloyd Phoenix and G. L. Rives were appointed a special committee to draft resolutions of regret for the death of Ogden Goelet. Ex-Com. Brown offered a motion for the appointment of a special committee, to include the Vice-Commodore, secretary and treasurer, to arrange for a new town house for the club, the motion being carried. The following nominating committee was elected: Edward M. Brown, C. Oliver Iselin, Robert Goelet, Henry F. Lippitt, Henry C. Ward, Philip Schuyler, John G. Beresford, Chester Griswold, Oswald Sanderson, Arthur Ingraham.

The following members were elected: John M. Crouse, Henry E. Biscoe, U. S. N., S. H. Gardyne Stewart, Charles J. Clarke, Roderick P. Curtis, Edward M. Robinson, Bartow W. Van Voorhis, R. F. Poindexter, Chambers H. McKibbin, George A. Kimball, Thomas McKean, Frederick W. Lockwood.

Yacht Racing Union of the Great Lakes.

The suggested postponement of our annual meeting having been concurred in by the majority of the Council, I now beg to name 2 o'clock P. M., Saturday, Nov. 20, at the Cadillac Hotel, Detroit, Mich., as the place of meeting. This will give time for any amendments prompted by the meeting of the Yacht Racing Association of North America, to be held on the 30th inst. in New York.

Æmilius Jarvis,
Chairman Y. R. U. of Great Lakes.

Notes on the Yacht Defender and the Use of Aluminum in Marine Construction.

BY RICHMOND PEARSON HOBSON, ASSISTANT NAVAL CONSTRUCTOR, UNITED STATES NAVY.

Reprinted by permission from the Proceedings of the United States Naval Institute.

Copyrighted by the U. S. Naval Institute.

(Continued from page 355.)

PART II.—THE USE OF ALUMINUM IN MARINE CONSTRUCTION.

A NEW material enters the realm of structural usage by creating new fields or else by outstripping the occupants of old fields.

Broadly speaking, the field of marine construction is now occupied by steel, wood, and the alloys of copper. Aluminum must, in consequence, wrest from these older materials the foothold and territory it is to occupy.

A part of this field, associated principally with the motive power, is shut off from aluminum by an impassable barrier of temperature. A fraction of the temperature at which bronze and steel remain unmodified will overthrow the physical properties of aluminum. Roughly speaking, aluminum is barred from temperatures where human life cannot exist. Not far beyond the boiling point of water it loses half its virtues of resistance, and above 400° F. should not be subjected to strain.

In addition, by reason of its softness, aluminum is debarred from use as armor, which constitutes an important section of naval construction. Moreover, as will be seen below, its inability to extinguish sudden and violent dynamic forces excludes its usage for armor supports and fastenings.

Of the remaining fields not thus cut off, principally hull construction and hull fittings, the vast bulk is occupied uncontestedly by steel. Wood and bronze (the term bronze being used broadly to signify the alloys of copper) have only special provinces, wood finding its principal use where stiffness, not strength, is required, and where the service does not require a hardness of surface, but facility of working; and bronze finding its principal use where complexity of form requires special properties for casting, or where special corroding agents are to be resisted, or where a wearing surface is desired to save the usure of steel.

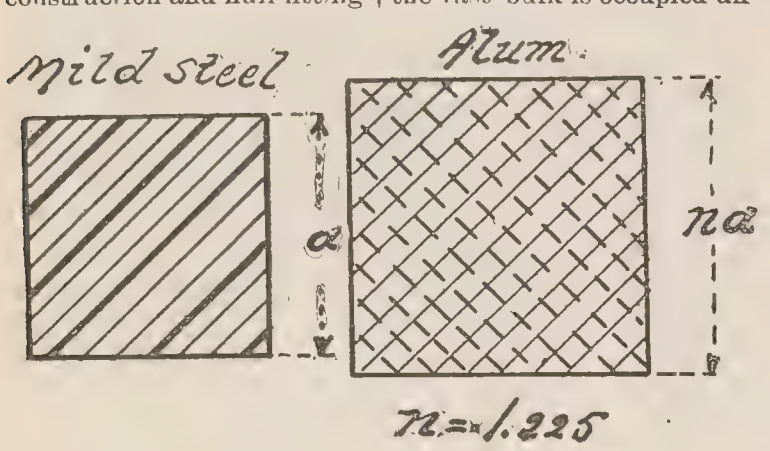

FIG. 5. Section of Equal Ultimate Tensile Strengths.

Even the special properties of bronze and wood may be considered as possessed, to a greater or less degree, by steel. Aluminum then will be made to measure properties with steel, the special properties of wood and bronze being considered only incidentally where they appear in the comparison with steel.

The factors whose product or resultant determines or measures the adaptability of a material for structural purposes are strength, weight and cost, strength and cost being used in their broad sense. The measure of adaptability for strength is the approximation to a maximum, and for cost and weight it is the approximation to a minimum. In marine construction the problem of design in general is to realize within a fairly wide range of cost a given or required strength with a minimum of weight.

The underlying object in general is to realize a maximum military efficiency for each unit of weight.

In the industries, however, and in general for land structures, the purpose of design is to realize a given or required strength with a minimum of cost, a minimum of weight in general accompanying a minimum of cost. The underlying object in general is to realize, within a wide range of weight, a maximum return for each unit of cost or capital invested.

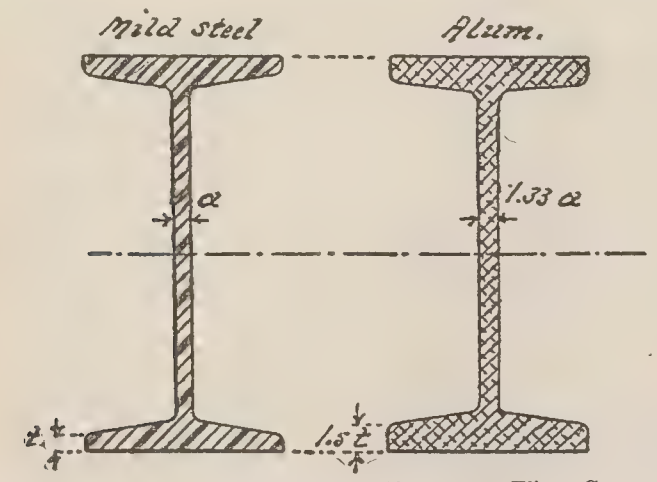

FIG. 12. Sections for Equal Bending Moments. Fiber Compressed to Elastic Limit.

For the present purpose, therefore, the comparison of aluminum and steel will be for strength and weight first, then for cost.

The question of endurance, or length of life, which will be seen to be of capital importance, is essentially one of cost, though intimately associated with strength, since the rate or rapidity of dissipation of strength determines the length of life.

The figures used in the comparisons of aluminum are the latest ones of the Pittsburg Reduction Company, for their best 5 to 10 per cent. alloys. These figures are probably a little high for the general status of aluminum at the present moment, particularly when the comparisons of simple strength are made with mild steel, mild steel being used throughout, as it is the most regular, and best illustrates, as will be seen, the great contrast of the two metals in their resistance to dynamic forces; but they have been retained in view of the present rapid state of progress in the production and manufacture of aluminum, a state corresponding to the stage of steel about ten years ago, when still on a steep rise far away from the proximity of the maximum in the curve of progress.

A.—COMPARISON FOR SIMPLE RESISTANCE.

1. In tension.

(*a*) Ultimate tensile strength.—Steel, 60,000lbs. per square inch. Aluminum, 40,000lbs. per square inch. Ratio, 1 to 1.5 or 2 to 3.

Cross sections for equal ultimate tensile strength, see Figs. 5 and 7.

Weights.—Weight of one cubic inch of steel, 0.283lb.; of aluminum, 0.094lb. Ratio, 1 to 3.

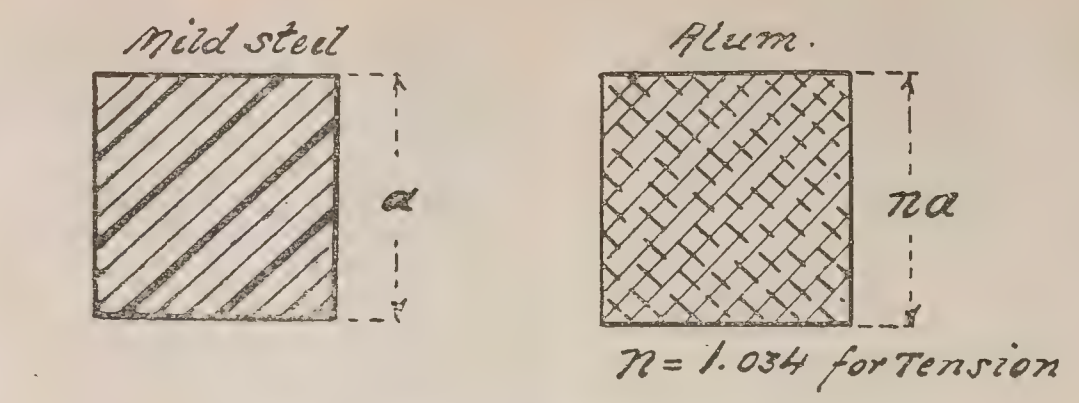

FIG. 6. Section of Equal Elastic Strength in Tension.

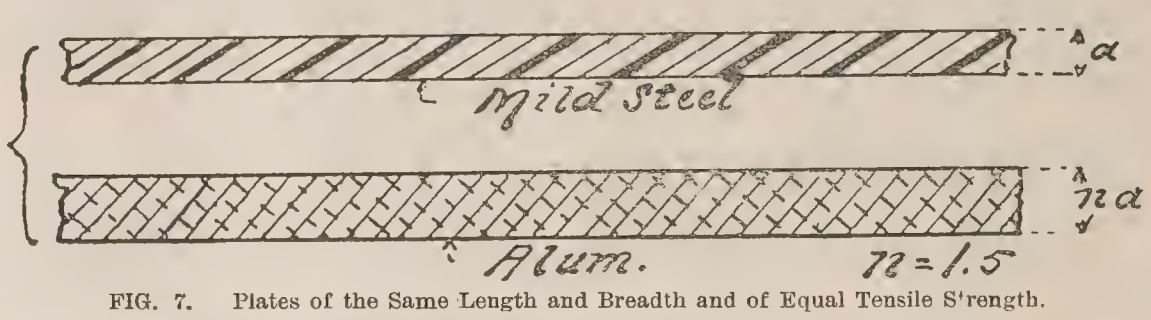

FIG. 7. Plates of the Same Length and Breadth and of Equal Tensile Strength.

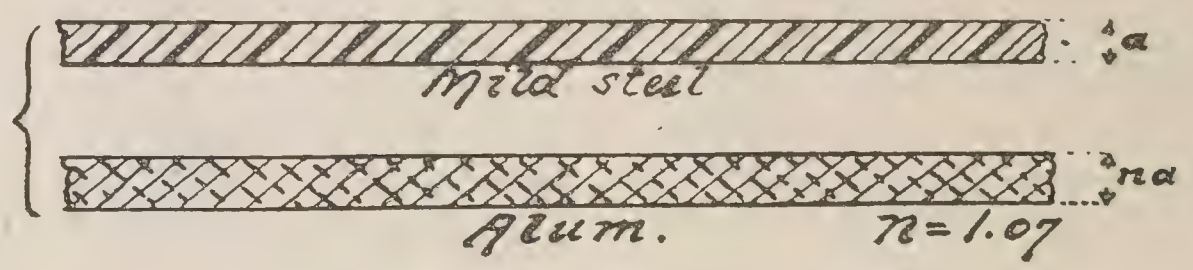

FIG. 8. Plates of the Same Length and Breadth and of Equal Elastic Strength.

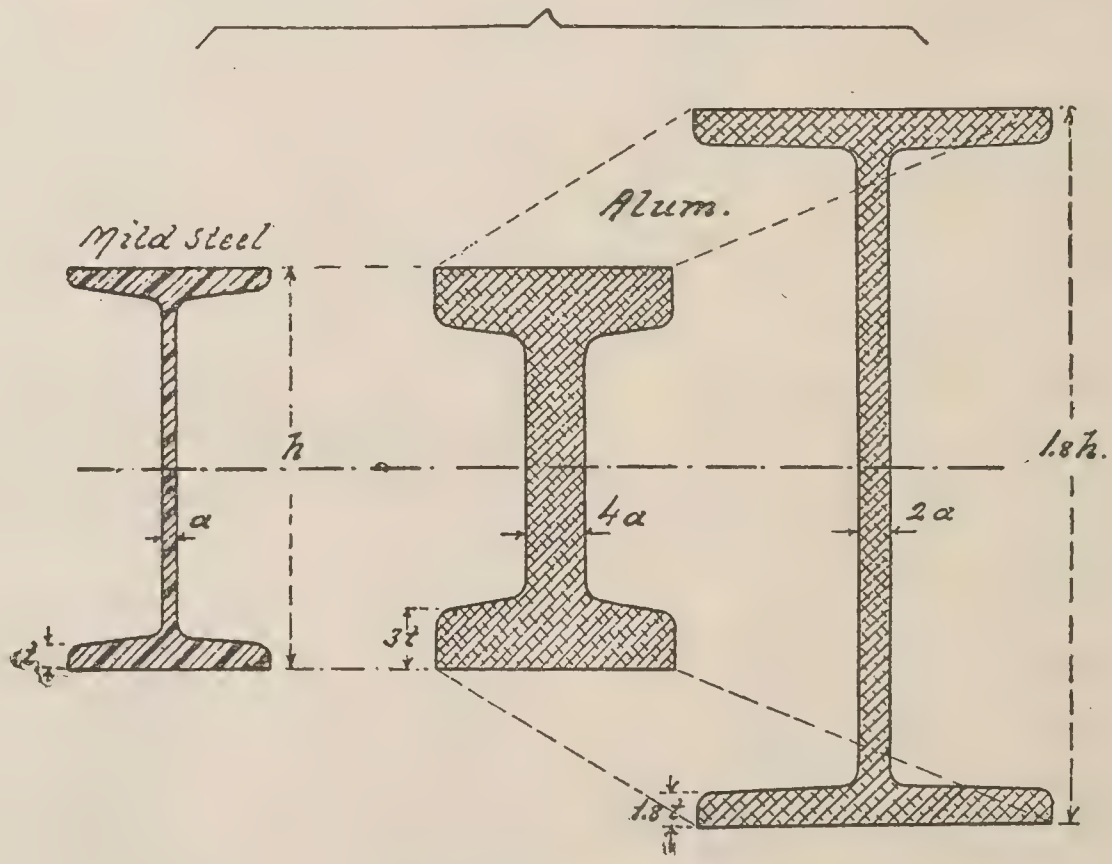

FIG 9.- Sections of Equal Weight.

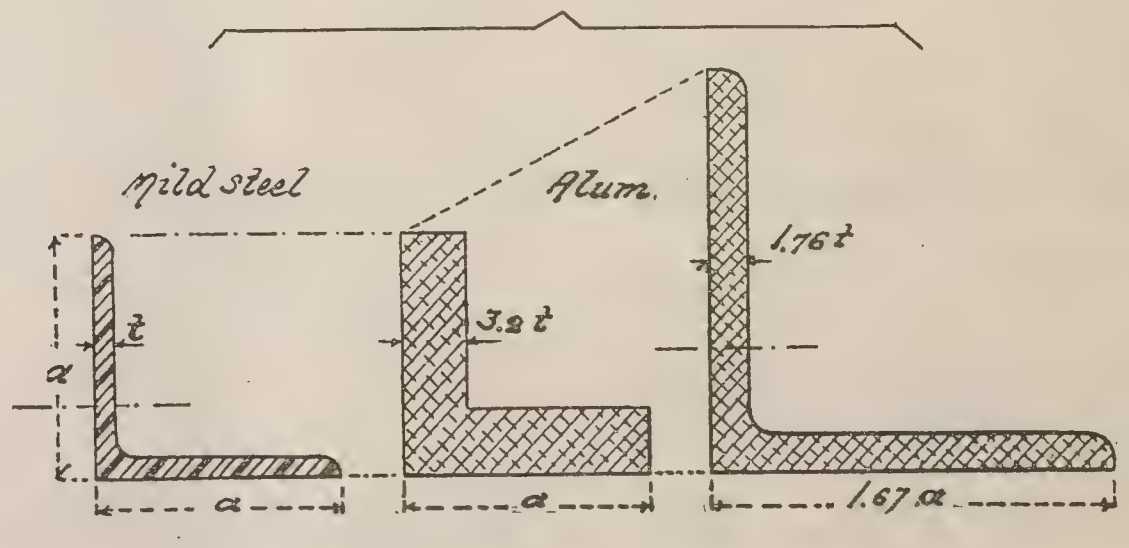

FIG. 10. Sections of Equal Weight.

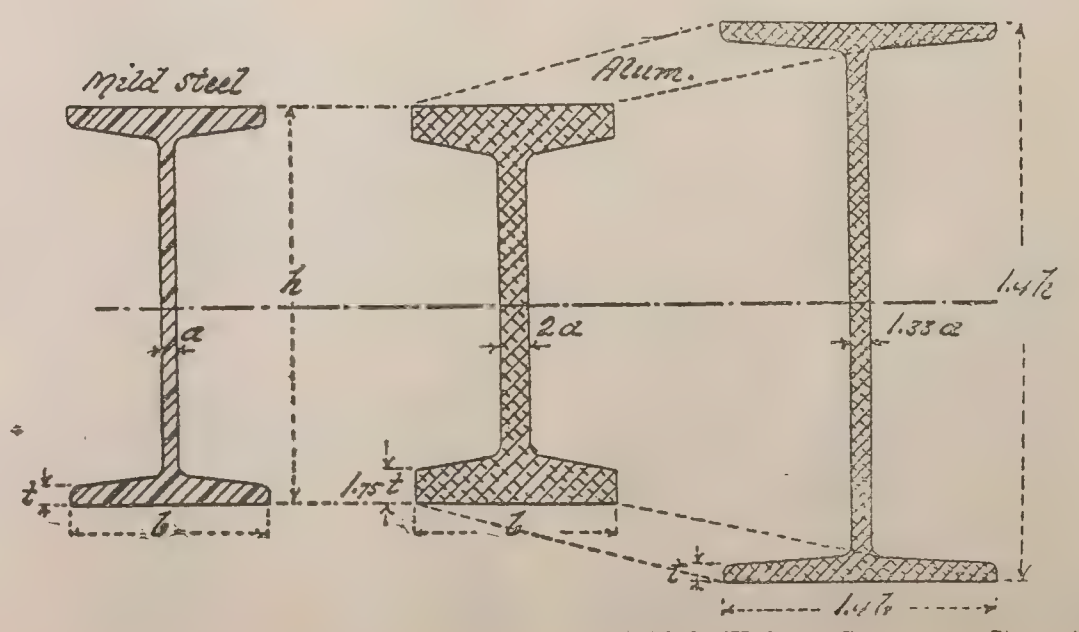

FIG. 11. Sections for Equal Bending Moments. Fiber Under Ultimate Compressure Strength.

Weights for equal ultimate tensile strength, aluminum 1, steel 2.

(*b*) Elastic strength in tension.—Steel, 30,000lbs. per square inch. Aluminum, 28,000lbs. per square inch. Ratio 14 to 15, or 1 to 1.07.

Cross section for equal elastic strength in tension, see Figs. 6 and 8.

Weights.—For equal elastic strengths in tension, aluminum, 0.356, steel 1, or 1 to 2.8.

2. In compression.

(*a*) Ultimate strength of compression.—Steel, 60,000; aluminum, 34,000. Ratio, 1 to 1.76.

Weights.—For equal ultimate strengths of compression, aluminum 1, steel 1.7.

(*b*) Elastic strength in compression.—Steel, 30,000lbs. per square inch. Aluminum, 26,000lbs. per square inch. Ratio, 1 to 1.15.

Weights.—For equal elastic strengths of compression, aluminum 1, steel 2.6.

3. Ultimate strength in shear.—Steel, 45,000lbs. per square inch. Aluminum, 28,000lbs. per square inch. Ratio, 1 to 1.6.

Weights.—For equal ultimate strengths of shear, aluminum 1, steel 1.875.

Double riveted joints.—Steel, 45,000lbs. per square inch. Aluminum, 24,000lbs. per square inch. Ratio, 1 to 1.875.

Summing up, for simple resistance, the comparison gives the following results:

1. For ultimate tensile strength, mild steel is half again as strong as the best aluminum alloy, but at the same time it is three times as heavy; in consequence, the same strength can be furnished by aluminum with half the weight that steel would require, or, with the same weight, aluminum would furnish double the strength.

2. For elastic strength in tension, aluminum is fourteen-fifteenths as strong as steel, and can supply the same elastic strength with but 0.36 of the weight required by steel; or, with the same weight, aluminum would furnish 2.8 times the strength.

3. For ultimate strength of compression, steel is 1.76 times as strong as aluminum, but to furnish the same strength would be 1.7 times as heavy.

4. For elastic strength of compression, aluminum is thirteen fifteenths as strong as steel, and to furnish the same strength steel would be 2.6 times as heavy.

5. For ultimate strength in shear, steel is 1.6 times as strong as aluminum, and would be 1.875 times as heavy. When the shear is that of a riveted joint, where the riveting is double, steel is 1.875 times as strong. The lower performance of the double riveted joint would indicate for aluminum a less perfect coöperation among the rivets. As will be seen later, this is no doubt due to the very small elongation in the aluminum, which is no doubt the case for shear as it is for tension, causing the shearing more in detail, the rivets most strained giving way before there is sufficient elongation to permit the full concurrence of the rivets less strained.

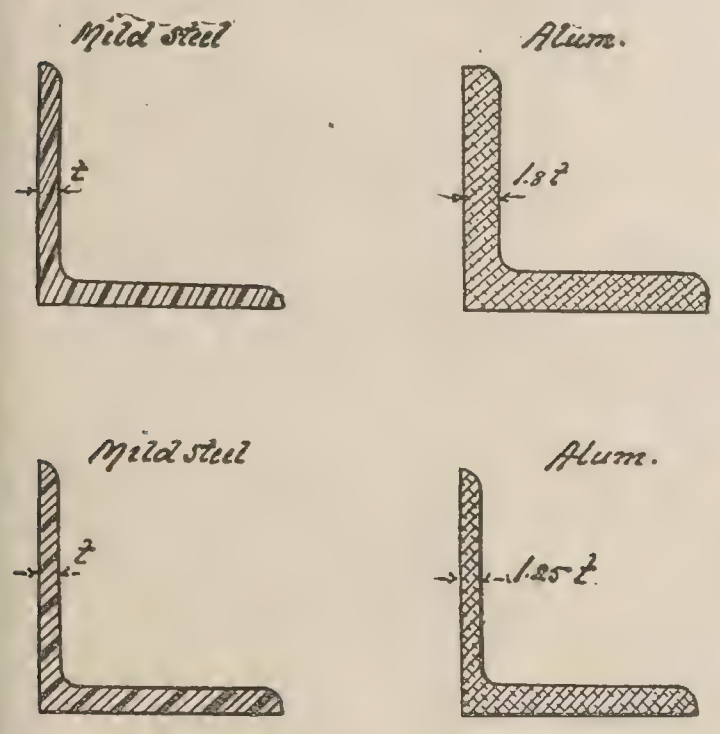

FIG 13. Sections for Equal Bending Moments. Fiber Under Compression Worked to Alternate Strength.

FIG. 14. Sections for Equal Bending Moments. Fiber Under Compression Worked to Elastic Limit.

6. In sum, for simple resistance, from the standpoint of strength and weight alone, aluminum has pronounced advantages over steel, advantages that are nearly double for ultimate resistance, and nearly treble for elastic resistance.

This result emphasizes a striking feature of aluminum, namely, the very large proportion of its total strength that is elastic. While this proportion for steel is half, for aluminum it is seven-tenths.

The consequences of this remarkable property will be seen below in comparison of resistance to dynamic forces; it will suffice for the moment to refer simply to the fact that the vast bulk of structural resistance must be elastic.

B.—COMPARISON FOR COMPOUND RESISTANCE.

For the present purpose, resistance to torsion need not be considered; moreover, there is lack of reliable data for the resistance of aluminum to torsion, and comparison would require an assumption of strength based upon the resistance to shearing. The comparison will therefore be limited to bending.

Recalling the formula, the bending moment,

$$M = \frac{sI}{h}, \qquad (1)$$

s being the stress per unit area of the fiber most strained, I the moment of inertia of the cross section, and h the distance of the fiber most strained from the neutral axis which passes through the center of gravity of the cross section.

Where the material has a different resistance for tension and compression, it is evident that with symmetrical cross sections, the fiber under the stress of the lesser kind of resistance will give way first, and would impose the limit to the bending moment.

It is also evident that the resistance of a given cross section for such a material is a maximum when the area is so distributed that the extreme fibers of tension and compression are distant from the neutral axis in the direct ratio of their respective resistances. When so distributed, the bending moment, $M = (s_c + s_t)\frac{I}{h}$, where s_c is the maximum resistance to compression, s_t the maximum resistance to tension, and h the entire depth of the beam.

In the cases of aluminum for ultimate resistance, the resistance to tension being 40,000lbs. per square inch, and the resistance to compression 34,000lbs. per square inch, the symmetrical section would have its limit imposed by the fiber under compression, and the ratio of the resistance of such a section to the resistance of a section designed to give a maximum resistance, if the moment of inertia is the same, is $\frac{34000}{\frac{40000+34000}{2}} = \frac{34}{37}$. For elastic resistance the ratio is:

$$\frac{26000}{\frac{28000+26000}{2}} = \frac{26}{27}.$$

With steel, however, the two resistances are the same and the symmetrical section realizes the maximum resistance.

The ratio $\frac{37}{34} = 1.09$ and $\frac{27}{26} = 1.04$ would represent the advantage to be derived from the best design for the aluminum section, provided the moment of inertia did not change.

It is evident, however, that the transference of metal from the side of tension to the side of compression will result in placing this metal nearer the neutral axis, and in consequence will reduce the moment of inertia. The two ratios, therefore, while remaining appreciably greater than unity, will be less than those indicated, 1.09 and 1.04, according to the form of the section.

Bearing in mind this small but appreciable discrimination against aluminum, it will suffice, for the sake of simplicity, to compare only symmetrical sections.

1. Comparison of usual sections designed for resistance other than bending.

(*a*) The case of square cross sections designed for tension or compression.

The ratio of bending moments, from equation (1), is:

$$\frac{M'}{M} = \frac{s'}{s}\frac{I'}{I}\frac{h}{h'}, \qquad (2)$$

the letters with the affixes denoting aluminum.

If the side of the aluminum section is n times the side of the steel section, $h' = nh$, or $\frac{h}{h'} = \frac{1}{n}$.

The areas of the cross sections being in the ratio $\frac{h'^2}{h^2} = n^2$ and the radii of gyration squared in the ratio $\frac{h'^2}{h^2} = n^2$, the moments of inertia are in the ratio $\frac{h'^4}{h^4} = n^4$ and $\frac{I'}{I} = n^4$,

$$\therefore \frac{M'}{M} \quad \frac{s'}{s} \times n^4 \times \frac{1}{n} = \frac{s'}{s} n^3. \qquad (3)$$

Take first the case illustrated in Fig. 5, of (1) section designed for equal ultimate tensile strength, designating by S and S' the two ultimate tensile strengths.

$$h'^2 S' = h^2 S \text{ or } \frac{h'^2}{h^2} = \frac{S}{S'} \text{ or } n^2 = \frac{S}{S'} \text{ and } n = \sqrt{\frac{S}{S'}}.$$

Substituting in equation (3), $\frac{M'}{M} = \frac{s'}{s} \cdot \left(\frac{S}{S'}\right)^{\frac{3}{2}}$.

Suppose first that the cross sections are worked to their limit of resistance to bending. It is the extreme compressed fibers of the aluminum sections which will break first when s'=34,000lbs. per square inch. The fibers of the steel section resist equally for tension and compression, both attaining 60,000lbs. per square inch, so that $\frac{s'}{s} = \frac{34000}{60000}$. The two ultimate tensile strengths S and S' being 60,000 and 40,000 respectively, $\frac{S}{S'} = \frac{60000}{40000}$ and $\frac{M'}{M} = \frac{34000}{60000} \times \left(\frac{60000}{40000}\right)^{\frac{3}{2}} = 1.04$.

Suppose next that the cross sections are worked only to the elastic limit of the most strained fibers.

The limit for the aluminum cross section is again imposed by the fibers of compression where s'=26000.

For the steel section the limit being the same for both fibers, s = 30,000 $\frac{s'}{s} = \frac{26000}{30000}$.

S and S' being the same as before,

$$\frac{M'}{M} = \frac{26000}{30000} \times \left(\frac{60000}{40000}\right)^{\frac{3}{2}} = 1.6.$$

It does not suffice in general to know simply the amount of resistance to bending. It is also necessary to know the effect of the bending moment, the amount of deformation or deflection produced. It is therefore necessary to calculate the resistance to deformation, to know the stiffness. The measure of stiffness is the amount of bending or the deflection produced by a given force. The amount of deflection, $f = \frac{K}{E.I}$, where E is the modulus of elasticity, and I the moment of inertia of the cross section as above, K being constant under the same conditions of bending moment and support. Therefore, the conditions being the same,

$$\frac{f'}{f} = \frac{E.I}{E'.I'} \text{ (5).}$$

Taking the modulus of elasticity of aluminum as that given by Hütte, 10,000,000, and the modulus of steel as 30,000,000, $\frac{E}{E'}$ 3. As seen above, for the case in question, $\frac{I}{I'} = \frac{1}{n^4}$, wherein = 1.225, $\frac{I'}{I} = \frac{1}{2.25}$. Substituting in equation (5), $\frac{f'}{f} = \frac{3}{2.25} = \frac{1}{0.75}$. Thus, for square cross sections giving equal ultimate strengths in tension, the deflection produced by the same force under similar conditions of bending is greater in the case of the aluminum section. The square steel bar is one-third the stiffer.

(2). Sections designed for equal elastic strength in tension, illustrated in Fig. 6.

By a similar process of reasoning,

$$\frac{M'}{M} = \frac{34000}{60000} \times \left(\frac{30000}{28000}\right)^{\frac{3}{2}} = .627,$$

when worked to the ultimate limit.

$$\frac{M'}{M} = \frac{26000}{30000} \times \left(\frac{30000}{28000}\right)^{\frac{3}{2}} = .959,$$

when worked to the elastic limit.

$$\frac{f'}{f} = \frac{3}{1.143} = \frac{1}{.381}.$$

(3). Sections designed for equal ultimate strength of compression.

When worked to the ultimate limit, $\frac{M'}{M} = 1.328$

When worked to the elastic limit, $\frac{M'}{M} = 2.031$

$$\frac{f'}{f} = \frac{1}{1.032}.$$

(4). Sections designed for equal elastic strength of compression.

When worked to the ultimate limit, $\frac{M'}{M} = .703$

When worked to the elastic limit, $\frac{M'}{M} = 1.073$

$$\frac{f'}{f} = \frac{1}{.441}.$$

(5). Sections of equal weight.

When worked to the ultimate limit, $\frac{M'}{M} = 2.94$

When worked to the elastic limit, $\frac{M'}{M} = 4.50$

$$\frac{f'}{f} = \frac{1}{3}.$$

b. The case of rectangular cross sections designed for tension plates of a given width.

Refer to Figs. 7 and 8.

The areas of the cross sections are bh' and bh respectively, b being the width; the radii of gyration squared are in the ratio of $\frac{h'^2}{h^2}$. Therefore, the moments of inertia are in the ratio of $\frac{h'}{h} \times \frac{h'^2}{h} = \frac{h'^3}{h^3}$, and the bending moments are in the ratio $\frac{M'}{M} = \frac{s'}{s} \times \frac{h'^3}{h^3} \times \frac{h}{h'} = \frac{s'}{s} \times \frac{h'^2}{h^2} = \frac{s'}{s} \times n^2$. (4)

(1). Sections designed for equal ultimate strength. Fig. 7.

When worked to the ultimate limit, $\frac{M'}{M} = 1.275$

When worked to the elastic limit, $\frac{M'}{M} = 1.94$

$$\frac{f'}{f} = \frac{1}{1.125}.$$

(2). Sections designed for equal elastic strength. Fig. 8.

When worked to the ultimate limit, $\frac{M'}{M} = .648$

When worked to the elastic limit, $\frac{M'}{M} = .99$

$$\frac{f'}{f} = \frac{1}{.408}.$$

(3). Sections designed for equal weight.

When worked to the ultimate limit, $\frac{M'}{M} = 5.1$

When worked to the elastic limit, $\frac{M'}{M} = 7.8$

$$\frac{f'}{f} = \frac{1}{9}.$$

2. Comparison of sections designed for resistance to bending.

a. Shapes having equal weight.

(1). I Beams. Fig. 9.

First, when the depth of I beams is limited, being the same for both sections

Ratio of moments of inertia, $\frac{I'}{I} = 2.36$

When worked to the ultimate limit, $\frac{M'}{M} = 1.43$

When worked to the elastic limit, $\frac{M'}{M} = 2.05$

$$\frac{f'}{f} = \frac{1}{.786}.$$

Next, when the depth is not limited, and the sections have proportioned dimensions.

Ratio of moments of inertia, $\frac{I'}{I} = 9.25$

When worked to the ultimate limit, $\frac{M'}{M} = 2.91$

When worked to the elastic limit, $\frac{M'}{M} = 4.45$

$$\frac{f'}{f} = \frac{1}{3.08}.$$

(2). Angle bars, ∠. Fig. 10.

First, when the depth of ∠ is the same.

Ratio of moments of inertia, $\frac{I'}{I} = 4.61$

When worked to the ultimate limit, $\frac{M'}{M} = 1.56$

When worked to the elastic limit, $\frac{M'}{M} = 2.4$

$$\frac{f'}{f} = \frac{1}{1.54}$$

Next, when the depth is proportioned

Ratio of moments of inertia, $\frac{I'}{I} = 6.91$

When worked to the ultimate limit, $\frac{M'}{M} = 2.35$

When worked to the elastic limit, $\frac{M'}{M} = 3.59$

$$\frac{f'}{f} = \frac{1}{2.3}.$$

b. Shapes giving equal bending moments.

(1). I Beams. Figs. 11 and 12.

First, when designed from the ultimate limit of resistance.

Fig. 11.—When the depth is the same, the ratio of cross sections is 1.67, the ratio of weights is 0.553 and $\frac{f'}{f} = \frac{1}{.59}$.

When the depth is proportioned, the ratio of cross sections is 1.39, the ratio of weights is 0.46 and $\frac{f'}{f} = \frac{1}{.82}$.

Next, when designed from elastic limit of resistance.

Fig. 12.—The depth being the same, the ratio of cross sections is 1.11, the ratio of weights is 0.37 and $\frac{f'}{f} = \frac{1}{.38}$

(2). Angle bars ∠. Figs. 13 and 14.

When designed from the ultimate limit, the depth being the same, the ratio of cross sections is 1.74, the ratio of weights is 0.58 and $\frac{f'}{f} = \frac{1}{.58}$.

When designed from the elastic limit, the depth being the same, the ratio of cross sections is 1.19, the ratio of weights is 0.396 and $\frac{f'}{f} = \frac{1}{.38}$.

The above comparisons for resistance to bending and for stiffness give the following results, namely:

1. For bars of square section, giving the same ultimate tensile strength, the ultimate bending moment that each can resist is practically the same, the aluminum bar giving 1.04 times the resistance of the steel bar, while the bending moment before the elastic limit is reached is half as large again for aluminum, the ratio being 1.6. On the other hand, the steel bar is the stiffer of the two, the deviation or flexion produced by the same force being but three-quarters that of the aluminum bar. Thus the aluminum bar, giving the same ultimate tensile strength, an equal ultimate resistance to bending, three halves as great an elastic resistance to bending, of three-quarters the stiffness, weighs half as much as the steel bar.

2. For bars of square section, giving the same elastic strength in tension, the aluminum bar gives 0.6 the ultimate resistance to bending and 0.96 the elastic resistance to bending, is 0.38 only as stiff, but weighs about a third as much as the steel bar, $\frac{1}{2.8}$.

3. For bars of square section, giving the same ultimate strength of compression, the aluminum bar gives 1.33 times the ultimate resistance to bending, and 2 03 times the elastic resistance to bending, is about of equal stiffness, and weighs about 0.59 as much as the steel bar.

4. For bars of square section, giving the same elastic strength of compression, the aluminum bar gives 0.7 the ultimate resistance to bending and 1.07 times the elastic resistance to bending, is but 0.44 as stiff and weighs about 0.38 as much as the steel bar.

5. For bars of square section of the same weight the aluminum bar, giving 2 times the ultimate resistance to tension, 2.8 times the elastic resistance to tension, 1.7 times the ultimate resistance to compression, 2.6 times the elastic resistance to compression, 1.875 times the ultimate resistance to shear, gives in addition 2.94 times the ultimate resistance to bending, 4 5 times the elastic resistance to bending, and 3 times the stiffness.

6. For plates of rectangular sections of the same width, giving the same ultimate strength of tension, the aluminum plate, of half the weight, gives 1.26 times the ultimate resistance to bending, 1.94 times the elastic resistance to bending, and 1.125 times the stiffness.

7. For plates of rectangular section of the same width, giving the same elastic strength of tension, the aluminum plate, of about one-third the weight, gives 0.65 the ultimate resistance to bending, 0 99 the elastic resistance to bending, and 0.41 the stiffness.

8. For plates of rectangular section of the same width, having the same weight, the aluminum plate, giving twice the ultimate resistance to tension, 2.8 times the elastic resistance to tension, gives in addition 5.1 times the ultimate resistance to bending, 7 8 times the elastic resistance to bending, and 9 times the stiffness.

9. For I beams of the same weight and proportioned sections, the aluminum beam gives 2.83 times the ultimate resistance to bending, 4.45 times the elastic resistance to bending, and 3.1 times the stiffness.

10. For angle bars of the same weight and proportioned sections the aluminum angle gives 2.35 times the ultimate resistance to bending, 3 59 times the elastic resistance to bending, and 2.3 times the stiffness.

11. For I beams of proportioned sections, giving the same ultimate resistance to bending, the aluminum beam has 1 39 times the area of cross section, has 0.46 the weight and 0.82 the stiffness.

12. For I beams of the same depth, giving the same elastic resistance to bending, the aluminum beam has 1.11 times the area of cross section, 0.37 the weight and 0.38 the stiffness.

13. For angle bars of the same depth, giving the same ultimate resistance to bending, the aluminum angle has 1.74 times the area of cross section, 0.58 the weight and 0.58 the stiffness.

14. For angle bars of the same depth, giving the same elastic resistance to bending, the aluminum angle has 1.19 times the area of cross section, 0.39 the weight and 0.38 the stiffness.

Of the above results, whose applications to marine construction are pointed out below, the most striking and most significant are those indicating the possibilities of strength with limited weight.

Thus, for equal weight, in the case of square sections not designed primarily for bending, whose simple resistance as seen is about twice as great for aluminum for the ultimate limit and nearly three times as great for the elastic limit, the resistance to bending is nearly three times as great at the ultimate limit and four and a half times as great at the elastic limit, with three times the stiffness.

This advantage of greater resistance to bending and greater stiffness, thus pronounced for square sections, is enormously greater for plating. With the same weight, the aluminum plate offers over five times the ultimate resistance to bending, nearly eight times the elastic resistance to bending, and is nine times as stiff.

These remarkable results flow from the great moment of inertia in the case of aluminum sections, the metal added to supply the increase of area of cross section acting with large leverage about the neutral axis. The aluminum plate being three times as thick, the moment of inertia is twenty-seven times as great. This enormous increase in stiffness, as will be seen below, is of great advantage in the case of thin plates, which are necessarily deficient in stiffness.

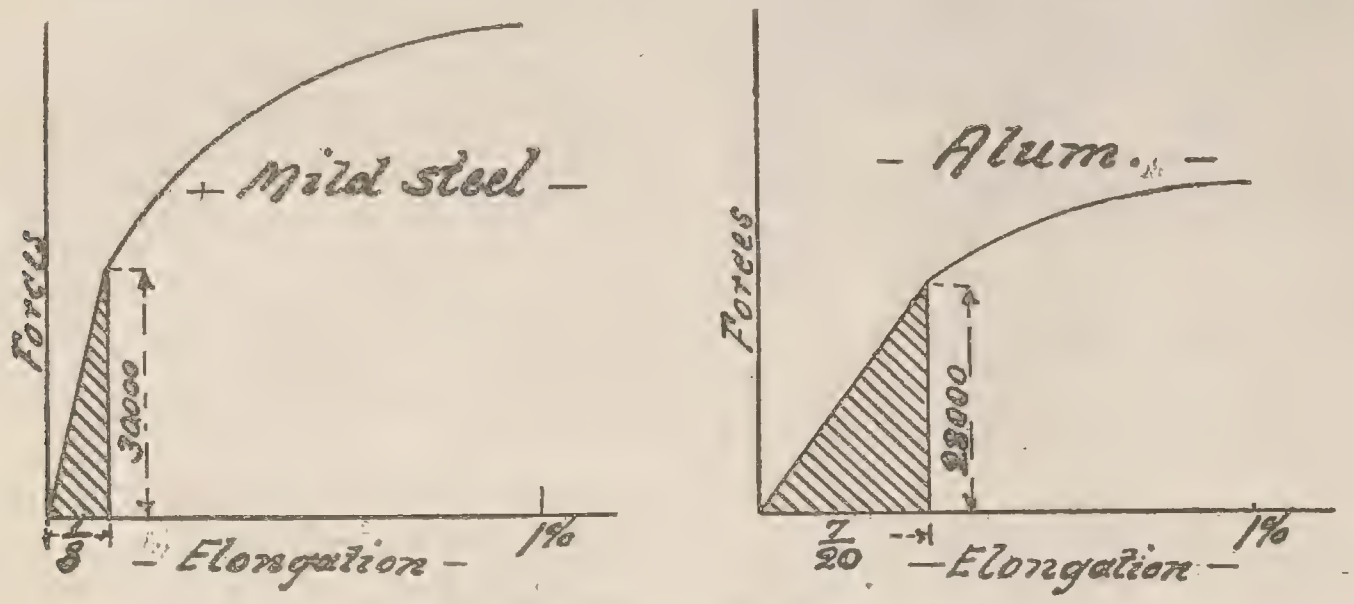

FIG. 15. Extinction of Dynamic Forces. Work Done Within Elastic Limit.

When resistance to bending and stiffness are themselves the objects of design, determining a form of section of large moment of inertia with the usual shapes, such, for instance, as I beams and angle bars, the advantages offered by aluminum are more pronounced than in the cases of simple resistance. With equal weight, it may be said broadly that the aluminum beam gives two and a half times the ultimate resistance, and is two and a half times as stiff. The effect of aluminum's high fraction of elasticity is again striking; when compared for elastic resistance, the aluminum beam gives about four times the strength.

Inversely, to produce a given ultimate resistance to bending, the aluminum beam has about half the weight, though it is not quite so stiff; and to produce a given elastic resistance, the aluminum beam has less than four-tenths the weight, but is only half as stiff.

The above comparisons for simple resistance, and for resistance to bending and stiffness, all so heavily in favor of aluminum, are not complete, however, for passing upon the two metals from the standpoint of strength; for the forces implied are statical, or else are applied gradually, while in the actual service of usual structures, particularly marine structures, the forces are dynamic, and are applied with full effect from the start. The comparison, to be complete, must therefore extend to resistance to dynamic forces.

C.—COMPARISON FOR RESISTANCE TO DYNAMIC FORCES.

Movement, wherever found, represents energy, and is the result of work done; and its destruction requires antagonizing energy, antagonizing work. A force, however great, unaccompanied by movement, generating no energy, doing no work, could extinguish no energy of movement. To extinguish energy, the antagonizing force must retreat, and the amount of energy extinguished results not only from the magnitude of the force, but also from the distance of its retreat. If the resisting force varies in magnitude, the antagonizing work done is the integral of the products of the successive forces by the elementary distances, or is equal to the product of the mean force by the distance.

For comparing the resistance to dynamic forces of steel and aluminum, it is thus necessary to determine or compare the mean force or resistance that each offers, and the distance through which the resistance acts. Taking for the purpose of the comparison the case of tension, the force within the elastic limit starting at zero, is proportional to the extension, so that the mean force up to the elastic limit is equal to half the force at the limit. This gives for steel a mean force of 15,000lbs. per square inch, and for aluminum a mean force of 14,000lbs. per square inch. The elastic extension for mild steel being taken at one-eighth of one per cent., the work done within the elastic limit is $15000 \times 0.00125 = 18.7$ foot pounds per square inch of cross section for each foot of length.

Data is lacking on the direct measurement of the elastic extension of aluminum, but according to Hütte, referred to above, the modulus of elasticity of aluminum is 10,000,000. The modulus for mild steel being taken at 30,000,000, the same force would produce three times more elongation in aluminum. If the elastic limit reached 30,000lbs. per square inch, the elongation would be three-eighths of one per cent. Reaching only 28,000lbs per square inch, the actual elongation would be $^{28}/_{30} \times {}^{3}/_{8} = {}^{7}/_{20}$ of one per cent. The work done, therefore, within the elastic limit is $14000 \times 0.0035 = 49$ foot pounds per square inch of cross section for each foot of length. The work done within the elastic limit per unit area of cross section is therefore 2 61 times greater in aluminum than in steel, as illustrated in Fig. 15. With the same weight, the work done by the aluminum piece, which would have three times the area of cross section, would be 7 83 times as great.

When it is recalled that structures, particularly marine structures, are subject to repeated dynamic forces, which on account of their repetition must be extinguished within the elastic limit, since they would entail destruction if this limit were passed; when it is recalled, thus, that the bulk of usual structural resistance is resistance to dynamic forces within the elastic limit, the above remarkable result takes on the aspect of a most serious advantage, an advantage for aluminum that is overwhelming where the structure is not liable to be subjected to an unusual or extraordinary force. When, however, a single, unusual force is liable to be brought to bear, as frequently the case in marine structures, causing the resisting material to pass its elastic limit, the aspect changes completely, for at the elastic limit the possible work of aluminum is nearing its limit while the work of steel has scarcely begun. Aluminum gives but 10 per cent. elongation in 2in., and practically no elongation outside of the 2in. containing the fracture, while mild steel gives readily 25 per cent. elongation in 8in., and the elongation extends to parts far removed from the point of fracture. Thus when the elastic limit is passed, the bulk of the aluminum piece ceases to lend adequate additional assistance, throwing same upon the narrow region of ultimate fracture, while with steel the whole bulk of the piece continues to contribute proportionately to the end.

It is almost as though the whole volume worked with steel, while only a section worked with aluminum, and the ratio of the two is roughly proportional to the length. For pieces of even moderate length the difference in work done is enormous, as illustrated in Fig. 16. Thus against a single, isolated, abnormal, destructive dynamic force, steel gives an overwhelmingly larger guarantee, but for usual dynamic forces, liable to be indefinitely repeated, aluminum offers enormous advantages.

The application of the results of the above comparisons of advantage and disadvantage from the standpoint of strength and weight are treated below, but these alone are not final in determining the choice between two metals; another important factor enters, namely, cost.

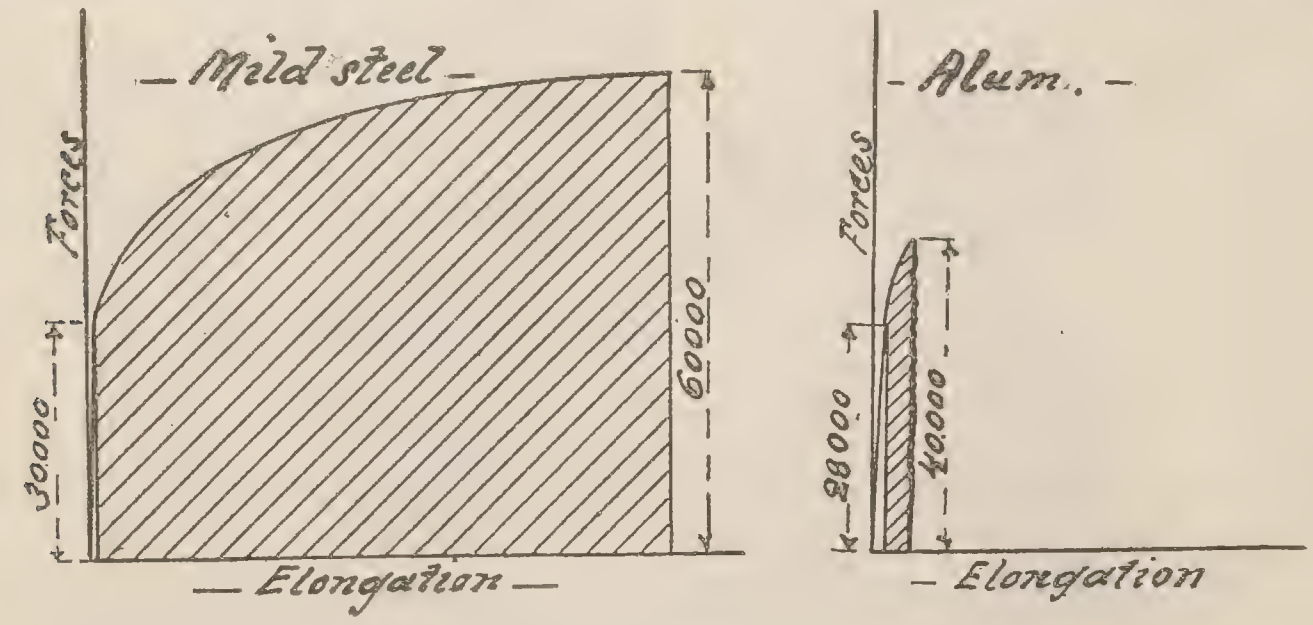

FIG. 16. Work Done Beyond Elastic Limit.

Data for Curves, Figs. 15 and 16.	Mild Steel.	Alum.
Modulus of elasticity,	30,000,000	10,000,000
Elastic limit,	30,000lbs.	28,000lbs.
Elongation within elastic limit,	⅛ of 1%	$^{7}/_{20}$ of 1% (deduced from modulus of elast.)
Ultimate tensile strength,	60,000lbs.	40,000lbs.

Work done within the elastic limit, $W = \frac{1}{2}\frac{S^2}{E} \times V$, the ratio of work done.

S = lbs. per sq. in. at elastic limit,
E = Modulus of elasticity,
V = Volume of body,

is thus, $\frac{30000^2}{30000000} = \frac{30}{78.4} = \frac{1}{2.61}$.
$\frac{28000^2}{10000000}$

Yacht Racing Association Rules.

NEW YORK, Oct. 26.—*Editor Forest and Stream:* The publication in your issue of Oct. 9 of the racing rules of the proposed Yacht Racing Association suggests certain points in connection with right of way.

Rule 1 reads as follows: "In maneuvering for a start, up to the time of the starting signal, where two or more yachts with the wind on the same side are standing toward the line, and the weather yacht has the wind freer than the yacht to leeward, the leeward yacht shall have the right to hold her course."

This rule is open to the same objections that were the rules of similar import heretofore adopted or proposed, in that the same dangerous conditions of crowding exist a few seconds prior to the starting gun as are found after the gun has been given. The words "up to the time of the starting signal" do not serve to eliminate the danger which this rule will create. This rule gives the yacht the right to hold her course when there may be ten or fifty yachts, each maneuvering in their own way for the one point of advantage on the starting line which all alike are seeking. The rule applies only to maneuvering for the start, which means that all are constantly shifting helm and that none are actually sailing a course. It is an inconsistency to grant rights on a course when none are sailing a course, but merely "maneuvering." It practically gives a yacht the right to lay a course through a fleet of maneuvering yachts, and if she chose, to cut them down, for the reason that in all good starts there may be a dozen yachts close to the line, and it is only possible to avoid collision by the leeward boats keeping off. A number of boats close together, under these circumstances, cannot get themselves clear if a leeward yacht insists upon holding her luff. The leeward yacht may swing around in a few seconds and be at once in a position to claim her rights on a new course, without notice and without being seen by the windward boats. In maneuvering for the start helmsmen will take chances, and no rule will stop them, and if at the last moment a man finds himself in an inextricable position, the rule should be so framed as to lessen the chances for collision, while the effect of the rule under discussion is to increase danger. The old rule allows every one to take all the chances they please, and at the last moment all danger is avoided because the leeward boat, which is the only one that can do so, must give way. In any case, what reason is there for changing the old rule that has always worked satisfactorily? The worst thing about this rule is that it is unnecessary and contrary to precedent. This maneuvering is also against the spirit of the one-gun start. The idea is to bring all starters to the line at the same instant, with an equal chance, and not to force any boat to windward of the line, which means in close racing that she is out of it from the start.

Rule 6 reads as follows: "An overtaking yacht shall, in every case, as long as an overlap exists, keep clear of the yacht which is being overtaken, except as specified in Sec. 13." In the interest of a clearer definition, and to facilitate the sifting of conflicting evidence in cases of protest, the addition of the following words is suggested: "The overtaking vessel, if to leeward, must not luff until she has drawn clear ahead of the yacht she has overtaken." The leeward yacht is protected by the bearing away rule, but should she luff it is wholly at her own risk—she must keep clear. This addition to the rule also makes mutual rights more definite when two boats are see-sawing for a long time.

Rule 9 reads as follows: "A yacht may luff as she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap is established." It is suggested to strike out the words "provided she begins to luff before an overlap is established." The justice of this is, that if a yacht has secured a lead the rules should aid her to retain it; further, under the present rule conflicting evidence in cases of foul always exists, for the leading yacht need only luff a hair's breadth to be able to say she luffed before an overlap was established. If a yacht may luff as she pleases irrespective of the overlap question, then the overtaking yacht knows definitely what he has to do, which is to keep clear.

Rule 14 reads as follows: "When a yacht is approaching a shore, shoal, rock, vessel or other dangerous obstruction, and cannot go clear by altering her course without fouling another yacht, then the latter shall on being hailed by the former at once give room; and in case one yacht is forced to tack or bear away in order to give room, the other shall also tack or bear away, as the case may be, at as nearly the same time as is possible without danger of fouling; but should such obstruction be a designated mark in the course, a yacht shall not force another to tack under the provisions of this rule."

There seems an important omission in this rule, which would be supplied by adding the following words after the words "at once give room"; "provided always an overlap has been established before an obstruction is actually reached"; otherwise an overtaking yacht is at liberty to force a passage between a leading yacht and a shore, for instance, which is not right.

Rule 1 of Marks says that a mark "does not involve any question of sea room," which I interpret to mean that one yacht cannot call upon another yacht to tack to enable her to pass upon a required side of a mark;

Rule 14 says: "but should such obstruction be a designated mark in the course, a yacht shall not force another to tack under the provisions of this rule." The latter provision should be discarded, because the two provisions read together may be inconsistent; in any case, in face of an actual obstruction the rule should not force a vessel into danger.

RALPH N. ELLIS,

Measurement Rules—A Rejoinder.

Editor Forest and Stream:

The reply of the author of the proposed new measurement formula to the criticisms of the writer deserves comment.

First head (*a*)—the statement that many yachtsmen and the yachting press generally, agree that "a measurement rule is intended to encourage the development of a safe, roomy, speedy and easily handled yacht," and that this is "of the first importance," is no answer to the demand for reasons that would justify the attempt to measure speed and to control design by the same formula.

He next says: "All the single formula rules have failed heretofore because they have followed Sextant's advice and have made 'supplementary regulations stating in plain terms how much breadth, draft, cubic contents, displacement of hull, etc., are deemed indispensable for a given L.W.L.'" If the author can cite any cases that tend to prove this assertion he should do so. The writer knows of none.

It is also said that Sextant gives no objections to the use of a single formula for measuring speed and controlling design. The following were stated and seem to have been overlooked, viz.: That such procedure is illogical because the two purposes are entirely different in character; that this plan has uniformly failed heretofore, and that better results will be had by treating each problem separately.

To the suggestion that if measuring speed and controlling design were entirely new problems it is inconceivable that any engineer would try to solve them by the application of the same formula, the author replies: "The primary purpose of all yacht designing is supposed to be to develop forms from which lessons having a commercial value can be drawn." This is not at all to the point, and it is open to question as an independent proposition. It was supposed by the writer that the primary purpose of yacht designing is sport—cruising and racing—and that the end of yacht designing should be the development of the speediest hull consistent with safety and comfort. If lessons having a commercial value, such as the matter of carrying capacity (except on the weather rail), have been studied of late in yacht designing they have produced small results.

It is further said that "Sextant must produce cogent reasons to overcome so universal an experience (the commercial purpose in yacht designing) and establish what appears to be his contention that the only purpose of a measurement rule is to produce speed." There is nothing in his communication that shows any such contention. His assumption is that the prime function of measurement rules is to furnish a basis for comparing speed, *i. e.*, to measure speed, not to produce it.

The author seems to hold that a measurement rule is primarily not a measuring device, but a means of controlling the form of yachts; and that it is so much the best means of controlling form, that it is not worth while to give reasons for using it for this purpose. Yachts are raced together to discover which one has the greatest speed. If all are of the same size, a time-piece is sufficient to settle the question. If they are of different sizes, a measurement rule is necessary to decide the matter. The size of a yacht is a complex thing. An excellent discussion of "size" may be found in the "Yacht Designing" articles now appearing in the FOREST AND STREAM. Measurement rules are based upon the fact that large boats are faster than small ones; and it is the main function of such rules to sum up the different elements of size into a single term, "racing size," which shall have a definite numerical relation to speed, so that appropriate time allowances from large yachts to smaller ones may be computed.

This function of measurement rules the author of the new rule practically ignores in his discussion. Undoubtedly measurement rules have an effect in controlling the forms of yachts, but the total effect cannot be foreseen. The present Seawanhaka rule is an excellent illustration of the impossibility of foreseeing the effect of the formula type of measurement rules upon form. Note the time that elapsed and the number of yachts that were built under the formula before Glencairn I. was produced. The question now is whether it is better to follow again this indirect method in the attempt to build up a fleet of wholesome yachts, or to take the direct method and state precisely what is desired in the matter of form. The Boston knockabouts furnish an illustration of the direct method. All existing freaks are an illustration of the indirect method.

(*b*) "To equalize the chances of winning prizes between boats of different types and characteristics" was given as the second function of the formula. Commenting on this it was pointed out that it is uncertain whether this refers to the ordinary races between racing yachts or to such contests as the handicap races, which are sometimes arranged for cruisers and racers together. The author's reply indicates a possibility that the new formula is not intended to measure speed; and that the purpose is to substitute for them competitions in general excellence, in which other good qualities, as safety, ease of handling and internal accommodation, are to be considered with speed in awarding the prizes. If such a revolutionary scheme is intended it should be definitely announced, so that yachtsmen may discuss it intelligently.

Replying further, the author says: "Sail area is not in the least a factor in the speed that comes from length"; and he demands arguments in support of the contrary view. If yachts of different length be tested with the same sail spread little, if any, increase of speed will be found with increased length. The speed that is commonly said to come from length is mainly an effect of the larger sails that are used on the longer boats.

(*d*) "To leave owner and designer absolutely free to produce anything they please." "In no way can so much positive knowledge be obtained as in experimenting, and so in no way can yachting be benefited. If this is granted, it must also be granted that a good rule will not limit a designer in any direction."

Tested by the foregoing conditions, the proposed new rule is a poor one, for it limits the designer in several directions. It was made on purpose to do so, and to drive out the current type of racing machines, and to induce the building of safer, more roomy, and more easily handled yachts. It is obvious that any rule or formula that contains more than one dimension of a yacht limits the designer. The more dimensions there are included, the more it limits him. The new formula limits him more than the present Seawanhaka formula—more, in fact than any American formula the writer has ever seen—and this is its merit. The trouble is it does not state these limits, so that any one can see what they are at a glance; and they may be limits that will produce undesirable yachts. The new formula contracts the field for experiment to the narrowest limits. It is only because of this ignorance that under this formula a designer would have any field at all for experiment. The rule really allows none. There is likely to be only one winning combination of immersed body, topsides and sail area; and if the designer had sufficient insight or skill in interpreting the rule, he would go straight to that combination without experiment.

Designers have two main problems to solve. One is the general question of the resistance of partly submerged bodies moving in water. In this field there should be the widest opportunity for experiment. The other, which as a practical problem is perhaps the more troublesome of the two, is the interpretation of measurement formulæ of the type of the one now proposed. This is an artificial problem that may in great measure be avoided. Experiment in this field is largely a waste of energy and money, and it should be kept within the narrowest limits possible. This may be done by making rules which are as simple and as precise as possible, hence attempts to control form should be made by explicit statements of dimensions, and not by complicated formulæ, any number of which may be changed at will, and whose ultimate meaning no one can foresee. The best way to encourage experiments concerning the physical question of resistance mentioned above, is to reward speed alone. Set all designers at work to discover speed factors, and interfere with this quest as little as possible. State the minimum amount of hindrances to speed, such as displacement and topsides, that must be insisted upon for the sake of safety and comfort, and give them otherwise entire freedom. Furthermore, yacht owners and club members are entitled to some consideration. They have little inclination to waste time in the study of formulæ whose effect experts cannot discover, and they should not be asked to accept on faith a new rule for controlling design.

With a simple rule to measure speed, and with form controlled by specific restrictions easily understood by everybody, steady progress could be made toward the development of the ideal yacht. With single formula rules a large part of the experience gained is worthless under the next formula, which is sure to come.

Fourth Head.—(1). "The universal experience heretofore of rules supplemental to the measurement formula giving arbitrary limits to certain factors has been bad."

The citation of a few of these cases would be appropriate.

(2) To the suggestion that only enough cubic size of hull should be required to insure safety and internal accommodation, the author says: "the amount of room necessary to insure safety and internal accommodation is one that must be fixed, at least in the second element, by the owner." This is an abandonment of the stated purpose of the formula to control those elements. If H (hull) is left in the formula, its effect should be to produce just enough cubic size of hull to insure safety and accommodation. Otherwise, the formula is a failure, and H might better be excluded.

The objection that the formula credits all size, whether superfluous or reasonable, as equivalent to speed is met by an emphatic denial that it does so.

If in a contest under this formula, a yacht finishing first loses to a slower one having a larger hull, it would seem to be a fair use of language to say that in such case size is credited as equivalent to speed.

The author claims that the formula "credits excessive size as being a desirable quality in a yacht." It is likely that this is a slip of the pen, or a printer's mistake. If he means that size is a desirable quality, that does not answer the objection that excessive size is not desirable.

(3) It was objected "that the formula gives to topsides and deck house equal credit with immersed body," whereas "in the matters of safety and general desirability, they are of very unequal worth."

The author replies that "it is a mistaken assumption to say that they are not desirable," and he quotes the editor of FOREST AND STREAM to the effect that they are desirable. This is singular argument.

(4) The objection was made here that this type of rule is sure to produce a racing machine. The reply is that, on the contrary, it prohibits the building of racing machines; and in proof Canopus and Akista are used to illustrate the fact that the rule bears more heavily on a small boat with large sail than on a large boat with small sail. This has no tendency to show that racing machines of other shape cannot be successfully raced under the rule. The result might be very different if, for example, Canopus had topsides enough to make her cubic contents as large as those of Akista.

It is impossible to ascertain *a priori* the effect of the rule. There is no way to test it except by trying it on existing boats built under other rules. This has been the trouble with all the old rules. They worked well with the boats of the old fleet, but designers proceeded to make something entirely different. The author of the new rule knows that with existing boats the scheme will work, for he has tried it. He cannot know how it will work with yachts of different shape built to fit the rule.

(5) "The formula is not suitable for measuring speed, because its factors (save one), have no numerical relations to speed that can be definitely and accurately stated."

The only answer to this is that it "falls to the ground on account of (*a*)."

This is not explicit enough to be understood by the writer. There seems to be nothing in (*a*) on this point. If this means that it is not intended to use the new formula for measuring speed, it ought to be plainly stated and not left to inference.

(6) "Under this kind of rule the cleverest interpreter of the formula wins, not the designer of lines to give the least resistance."

The author answers, "This is distinctly wrong. That designer wins who produces the best lines on the biggest hull with the smallest sail area; that is, who produces the best all-around boat (under the rule), and this is inevitable."

This answer is only a paraphrase of objection (6) and admits its validity. Such a measurement rule transforms yacht designing into a mathematical study of formulæ; into a nice balancing of the relative worth, under the rule, of topsides and immersed body, with speed; and the calculation of how much speed would better be sacrificed to topsides and deckhouse in order to win. If the designer finds that he can drive a given amount of hull through the air easier than through the water, as seems probable, he will make the topsides as large as possible and the displacement as small as possible. He will have little regard for safety or convenience. He will strive only for the largest number of points under the formula in which size of deckhouse counts as well as speed.

When an individual goes to a designer for a design, he states first what he requires in the matters of safety and accommodation. Then, in addition, he always asks for all the speed possible. If there is any good reason why a yacht club should not follow precisely the same course in relating its wants, it is unknown to the writer.

(8) The author says: * * * "a few such boats (large topsides, small displacement and deep draft) would prove a desirable lesson to those men who think that designing consists in beating the rule by an exaggeration of untaxed elements, instead of by an adherence to principles that are or should be well established and known to every designer of reputation."

(*c*) "Yachtsmen, generally, are a fair-minded body of men, and it is believed that if they feel that a rule is fair they will not attempt to beat it, but will strive to produce the best possible."

These two quotations present the view that racing machines are the result of unfairness on the part of designers and owners. The truth is, owners and designers, in order to win, are obliged to design and build such yachts as the measurement rule calls for. The responsibility for racing machines lies entirely with formula makers. It is impossible to "beat" a rule in any proper sense. What is called beating the rules is interpreting them accurately and following them implicitly. Beating rules is only another way of saying that designers discover more possibilities in the rules than their authors suspected. All trouble from so-called rule-beating will cease when rules are expressed in terms that cannot be misunderstood.

The allowance of time by a small yacht to a larger one (both having the same length and sail) is so illogical that it is not surprising that the author dodges the concrete question put to him, and does not attempt to explain on what basis the amount of such allowance should be computed.

He admits that "speed is influenced by displacement in an unknown ratio; no satisfactory data exists for determining it approximately." Yet he wishes us to believe that increasing L. by $\frac{10\ S.}{H.}$ per cent. for rating purposes, and applying the Herreshoff time allowances (which he also says "are not correct either theoretically or practically"), will produce just the right proportions of displacement, topsides and sail area to make a safe, roomy, speedy and easily-handled yacht.

The philosophy of measurement rules is well stated by C. in his contribution to the discussion.

SEXTANT.

YACHTING NEWS NOTES.

Nahma, steam yacht, Robert Goelet, arrived at Newport on Oct. 28 after a passage of twelve days. Capt. Churchhill is in command.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Oct. 17.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions, 200yds., off-hand, at the German ring target. Gindele was declared king to-day, with a score of 209. On the honor target Gindele led, with a score of 66. A very tricky fish tail wind blew in the faces of the shooters all day, making it very disagreeable:

Gindele	20	23	21	25	21	22	23	23	20	19—217

Zettler Rifle Club.

NEW YORK, Oct. 26.—Sunday last, Oct. 24, marked the close of the outdoor season of the Zettler Rifle Club. The winter season of gallery work commenced this evening at the club's headquarters, 219 Bowery. The weekly club shoots will now be held at the above address every Tuesday evening until March 29. Each member is entitled to shoot five scores at every club shoot. The scores of the members present this evening were:

M Dorrler	246	245	245	244	247—1227
L Flach	239	240	247	242	249—1217
H Holges	246	245	241	238	244—1214

PATTI.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 6.—CHICAGO, Ill.—Gilbert-Elliott match for the Kansas City *Star* cup

Nov. 6.—PHILADELPHIA, Pa.—Seventh monthly contest of the Philadelphia Trap-Shooters' League, under the auspices of the Silver Lake Gun Club. Coaches meet cars from the city at Second and Mifflin.

Nov. 16-19.—DES MOINES, Ia.—Tournament under the management of Mr. W. E. Kessler. First two days, open to amateurs only; last two days, open to the world. Added prizes each day. Live birds on the afternoons of Nov. 17 and 19. For programmes address W. E. Kessler, 1105 Maple street, Des Moines, Ia.

Nov. 25.—BUFFALO, N. Y.—Thanksgiving Day tournament of the Bison Gun Club. Sweepstakes and merchandise events. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo, N. Y.

Dec. 8-10.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Dec. 10, Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Nov. 30, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y

1898.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Mr. E. A. Jackson, secretary of the Bergen County Gun Club, of Hackensack, N. J., who received a serious injury to his right eye dur-

ing the September shoot for the E. C. cup on his club's grounds, was greeted with evident pleasure by those present at the cup shoot on Saturday last, Oct. 30, when he put in his appearance at the grounds with his eyes covered with dark glasses. It will be a pleasure to all Mr. Jackson's friends to know that his sight is apparently not injured, although the pupil of the right eye is oblong instead of round. He returns to business this week, after a two weeks' residence in a hospital and a three weeks' convalescence. His grit is well shown by the fact that the accident has not put a stop to his preparations for a trip to the Klondike region next spring. He has gotten up a party that will start from this city shortly after the new year. The trip will be made as follows: By sea to New Orleans, thence by the Southern Pacific R. R to San Francisco, and from San Francisco to Dawson City by the all-water route.

At the annual convention of the New York State Association, to be held on Dec. 9, the trap-shooting and the game and fish protective interests will be separated into two distinct bodies. This plan was first mooted at the meeting held in Auburn last June, and met with very general approval at that meeting. We understand that it is proposed to change the title of the present association to one that reads as follows: "New York State Fish, Game and Forest Protective League." The Association stands ready to make over all its right and title in the Dean Richmond trophy and in the Lefever medal to the trap-shooting association or league that will be formed from the clubs interested in that sport, that are now members of the present association, or who may become new members of the new association or league, for the furtherance of the art of trap-shooting in the State of New York. This meeting on Dec. 9 is a most important one to the trap-shooters of the State; they should see to it that their clubs are well represented at such meeting.

It is getting high time that the State Sportsmen's Association of New Jersey was up and doing. It should have held a meeting during the recent State shoot and have decided upon a place where the annual tournament and meeting of 1898 can be held. The State shoot this year suffered from lack of time in which to make adequate preparations for the same. This should not be allowed to happen again, or the organization would be in danger af disintegration through loss of interest. A general meeting should be called by the president at an early date to consider next year's tournament; to choose a place for holding same, and to receive a report of the financial results attained at the recent shoot. Don't let the New Jersey State Sportsmen's Association follow in the footsteps of its predecessor, the New Jersey State Association for the Protection of Fish and Game, and die a lingering death.

B. Waters was with us at the Brooklyn Gun Club's shoot on Oct. 28, and did some capital shooting for one who seldom takes a gun in his hands. He did not do so well in the big event, but he had fired over 100 shots previously, and was tiring fast. The talk at this shoot, as frequently happens around this city, turned on M. Herrington, of the W-A Powder Co., who is at present in the vicinity of the Klondike, or thereabouts. Somebody asked Waters why he didn't go to the Klondike. "They have no use for a kennel editor up there," said he, "they are not inquiring just now into the pedigree of a dog before they cook him!"

The Pawling, N. Y., Rod and Gun Club will hold its first annual tournament on Thanksgiving Day, Nov. 25. The occasion will also be a house-warming for its new club house. The programme issued for the day calls for 190 targets at an average entry fee of 10 cents per target. There are five 10-target races, $1 each; three 15-target events, $1.50; two 20-target events, $2; one 25 and one 30-target event, with entrance fees of $2.50 and $3, respectively. Anybody wishing a programme should address Morton Haynes, Sec'y, Pawling, N. Y.

Mr. Royal Robinson, secretary of the Limited Gun Club, of Indianapolis, Ind., writes us as follows: "Mr. E. H. Tripp, of the Limited Gun Club, has challenged Mr. M. W. Thompson for the Grand Hotel cup, emblematic of the amateur championship of Indiana, Kentucky, Ohio, Michigan and Illinois. Mr. Thompson has accepted, and names Crawfordsville, Ind., and Nov 4 as the place and time for the match, which is to be at 100 targets, known traps and unknown angles."

The proposed four-handed match between George S. McAlpin and Louis Duryea on the one team, and Edgar Gibbs Murphy and R. A. Welch on the other, is hardly likely to come off after all. The McAlpin-Duryea end is all ready, but the other side remains to be heard from. As we understood it, the proposition for the match came from the Welch-Murphy side; for that reason we looked upon the match as good as made, knowing that the Greater New York team was ready and willing to shoot.

There are always a lot of tournaments—both at live birds and targets—arranged for Thanksgiving Day of every year. There are also many shooters who are unable to make up their minds as to where to go and what to do on that date. Club secretaries and promoters of tournaments would confer a favor on such shooters, and would also do their shoots some good, by sending us, as early as possible, full particulars regarding these holiday shoots.

Louis Duryea leaves on Thursday of this week, Nov. 4, for the Turtle Lake Club in Michigan. Deer and ruffed grouse will probably lament his appearance in those quarters. On his return, some time in December, he will shoot a match on the Riverton grounds with Yale Dolan for $1,000 a side. The match has been arranged and will surely take place. Had it not been for Mr. Duryea's early departure for the West, the match would have been decided this week.

Justus von Lengerke has forfeited his right to the cup he won at the recent State shoot in New Jersey, and also to the title of State Championship that goes with the cup. Ferd Van Dyke challenged him for the cup as soon as the first shoot for it decided that cup and title went to Mr. Von Lengerke. Van Dyke, therefore, stands ready to defend the emblem and the title against any resident of the State of New Jersey, who is also a member of the State organization.

For the next six weeks or so shooting matters, so far as trap work is concerned, will be rather quiet. All kinds of game will be in season and it is scarcely worth while getting up a target shoot just now, as all the boys are away in the woods whenever they can spare a day from the desk or warehouse. Reports of "plenty of birds" come in from all hands, and we know personally of several very nice bags having been made.

Fred Quimby has gotten back from his trip through the West. He says he has no kick coming from a business standpoint, but regrets that he was unable to be present at the New Jersey State shoot at Clifton to defend his claims to the championship of the State of New Jersey.

Nov. 1. EDWARD BANKS.

Maple City Gun Club's First Annual.

NORWALK, O., Oct. 27.—The Maple City Gun Club of this city commenced its first annual tournament to-day. Among the shooters present were: Ralph Trimble, of Covington, Ky., representing the Du Pont Powder Company; J. 147 L. Winston, of the Austin Powder Company; L. E. Snow, of Cleveland; Latham, J. P. Easton and Valentine, of Monroeville. The latter made the best record on the first day, losing only 5 targets out of 130 shot at in the regular target events:

* Event No. 6 is evidently not a regular programme event, and is not counted in the averages.

Two team races were also shot between teams selected by 147 and Gardiner, respectively. Gardiner's team won both matches:

No. 1—Gardiner's team: Gardiner 23, Snow 22, Burton 22—67; 147's team: Trimble 24, Franx 22, 147 18—64.

No. 2—Gardiner's team: Gardiner 21, Snow 21, Burton 21—63; 147's team: Trimble 21, 147 17, Frank 17—55.

In the programme events (which called for 130 targets) the following scores were made: Valentine 125, Snow 117, Burton and Easton 115, Franx 114, Trimble and Ketcham 113, 147 and Gardiner 105, Riley 89.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

ON LONG ISLAND.

JOHN WRIGHT'S FIELD DAY.

Oct. 28.—The Brooklyn Gun Club, under the able management of John S. Wright, gave a most enjoyable one day's shoot on the above date. The attendance was more than satisfactory, conclusively proving Mr. Wright's popularity with the trap-shooters of New York and vicinity. Among those present were: Tom Keller, of the Peters Cartridge and King's Smokeless companies; Ferd Van Dyke, of the W. R. A Co; Louis Duryea, Geo. S. McAlpin, B. Waters, Dr. Little, W. and John B. Hopkins (members of the Aqueduct Gun Club, L. I.), Henry Bramwell, L. H. Schortemeier, Geo. H. Piercy, Dick Phister, W. M. Sanders, L. C. Cornell, H. Van Siclen, and Billy Mills, the boss trapper of Dexter Park. Quite a large number of spectators were also present. The club set out a free lunch that was highly appreciated, while a box of cigars was literally out of sight when everything was over.

The main event was a 30-target handicap for a silver tea service. In this event the handicaps were all arranged with the idea of permitting everybody, scratch men and all, make 30 if possible. This system of handicapping is the fairest, but we think it should be announced beforehand. If a probable scratch man knew that he had a chance to retrieve a miss and thus make a "possible," it would make a difference in his shooting after a miss. The winner proved to be the popular Tee Kay, who had 3 extra targets to shoot at. With his allowance he broke 29; Van Dyke, who had 2 extras, coming within 1 of tying him. Banks also had 2 extras, but could not tie, as he only broke 26 out of 30. Plain Bill broke 25 out of 30. W. Hopkins and H. Van Siclen, both had a chance to tie Keller, but were unable to do so, withdrawing as soon as it was not possible for them to win.

Several sweeps were also shot during the afternoon, quite a large number of targets being thrown. Van Dyke's shooting was worthy of note. The magautrap worked very well indeed, and was the subject of much favorable comment. John Wright "touched the button," while John Regan and W. Paterson looked after getting up the squads and the running off of the events. Below are the scores of the most important events in detail:

Handicap for silver tea-service, $2 entrance. Extra targets allowed.

* T H Keller (3)	1011101110111111110111111111111111	—29
* F V Van Dyke (2)	1111111011111001111111111111110	—28
E Banks (2)	1111110111101110111011111111	—26
P Bill (2)	0111011111011101111111111110111	—25
* W Hopkins (8)	1011011101111111011001111101010	—23
* H Van Siclen (8)	1110101110100101111110101111110110	—23
Fairmount (3)	0001011010111111011010111111	—21
J B Hopkins (5)	0010110101111000101111110111101	—20
L C Cornell (5)	0101111111100110101011101001	—20
B Waters (7)	1111110100011110111010101011000	—19
Dr Littlefield (7)	1101101111000010001101111100	—18
W Mills (6)	1010110101110001110100101111110	—18
H Bramwell (10)	0110000110101110101111111011100	—18
L T Duryea (7)	1110011101010001000101111101011	—17
R Woods (4)	0110100000000011111010010110 11	—14
W M Sanders (12)	0101010C0010110111010101001000	—12

* Keller and Van Dyke shot out their allowances. W Hopkins and Van Siclen withdrew after shooting part of their handicaps when it was impossible for them to tie Keller. None of the others shot out their allowances, as it was impossible for them, if they broke every arget, to tie Keller with 29.

A team race between six-men teams, captained by Van Dyke and Banks respectively, was also shot. This resulted in an easy win for Banks's team by 81 to 72. The winning team averaged just 90 per cent. Scores:

Banks's Team.		Van Dyke's Team.	
L T Duryea	1111111111111111—15	F Van Dyke	1111111111110111—14
J S S Remsen	1111111111111111—15	T H Keller	1111101111111111—14
E Banks	1111111111111111—15	L C Cornell	1011111011111111—13
B Waters	1101111101111111—13	W Sanders	1111111101001101—11
J Hopkins	1101111001111111—12	R Woods	1110011100101111—10
W Hopkins	1111101101110011—11—81	Dr Littlefield	1111110011110001—10—72

The last event of all was a race at 10 targets, entrance 50 cents, for a silk umbrella. The scores were: Van Dyke, Bramwell and Banks, 10; Dr. Littlefield 9, G. S. McAlpin and W. Hopkins, 8; Duryea and Cornell, 7; J. B. Hopkins and Woods, 6; Sanders 4.

The ties on 10 shot off at 10 targets, with the result that Van Dyke and Banks each scored 9 to Bramwell's 8. It was getting very dark, but the tie was shot off again between the two 9s. In this shoot off, Van Dyke missed his 1st target and Banks his 2d, both tying again on 9. In the third shoot-off, Banks lost his 1st target and Van Dyke lost his 5th; thus they tied again on 9 out of 10. In the fourth shoot-off, Banks lost his 9th, but Van Dyke ran straight and won the umbrella. After having it presented to him, he very courteously tendered it to Mr. Henry Bramwell, who had been in the first tie; Mr. Bramwell accepted it in the spirit in which it was offered. A very pleasant conclusion was thus arrived at for a very pleasant afternoon's sport. So dark was it when the final ties for the umbrella were being shot, that George McAlpin, who was refereeing, had to go down on hands and knees to get the targets against the skyline. Van scored 47 out of his 50, including the four series of 10 tie targets.

Sweepstakes shot both before and after the main event resulted as below, all events being decided on bluerocks thrown by the club's magautrap.

Events:	1	2	3	4	5	6	7	*8	9	10	11	12	13	14	15	16

* No. 8 was the team shoot; No. 12 was the shoot for the silk umbrella; Nos. 13, 14, 15 and 16 were the shoot-off of the ties on 10 in series of 10 targets.

CARTERET'S SATURDAY.

Oct. 30.—The attendance of shooters at the Carteret Club's Saturday shoot on the above date was decidedly flattering to the shooting committee. Sixteen shooters put in an appearance. Event No. 1 was at five birds; this was finally divided between McAlpin, Remsen and L. T. Duryea. No. 2 was a cup shoot, 15 birds, ties at 5 birds, four high guns. Remsen and Gilbert tied for the cup with 15 straight; on the shoot-off Remsen won. Six others scored 14, Jones losing his last bird. The birds to-day were not up to the usual Carteret standard. Scores were:

	No. 1.	Tie.	No. 2.	Tie.
H B Gilbert (30)	22222	220	2222222222222222	00
W S Edey (28)	22022	...	2122220222221	..
Capt Money (29)	12112	120	2222222022112222	..
G S McAlpin (32)	22222	122	022222222222220	..
W A H Stafford (27)	22220	...	2220222212112212	..
B F Jones (29)	22012	...	2222221212221220	..
C S Guthrie (29)	22220	...	022222222122222	..
C Kennard (27)	011	...	20222222210	..
F W Duryea (26)	2102	...	011201	..
J S S Remsen (28)	21212	222	2222212222212222	12
L T Duryea (29)	22222	222	1212222102200	..
J P Knapp (30)	0	...	2222222212220222	..
W Watrous (26)	.....	...	222222022122211	..
F Edey (27)	.....	...	022022122210	..
Hooper (27)	.....	...	22222201022	..

In the cup shoot that followed, the result was long in doubt. Guthrie finally won after killing 37 out of 38. Louis Duryea shot a great race, too, after losing his 8th bird dead out of bounds. Scores were:

No. 3, unlimited birds, 2 misses out, all at 30yds., $10 entrance, cup and 50 per cent. of purse to winner, 30 to second and 20 to third:

Gilbert	2220222222222222122222122222220
W S Edey	22220w
Money	2221102)
Watrous	222122222020
Stafford	2102122222222220
Jones	2122222121111101121120
Guthrie	2212222222212222222222222202222222222222
McAlpin	22212222222222222222222200
L T Duryea	2221222022121122222212222221222222222220
Kennard	022w
F W Duryea	210w
Hooper	22201122122122222211220
Schroeder	22220220

After the 21st round all those in the tie went back 2yds. to the 32yds. mark.

HELL GATE GUN CLUB.

Oct. 26.—The regular monthly live-bird shoot of the Hell Gate Gun Club, of New York, was held at Dexter Park this afternoon. The attendance of members was quite large. Of the twenty-eight shooters (twenty-seven members and one guest) not a single one made a straight score. E. Metz was high with the solitary 9. The scores were:

Class A, 30yds., 7 points:

E Doeinck	2022202211—8	G Nowak	2•1202212•—7

Twenty-eight yards, 7 points:

J H Voss	12•1102121—8	Wm Sands	20•2022222—7
F Trostel	1110221012—8	P Woelfel	1020201022—6
Ed Paynter	1111001220—7		

Twenty-eight yards, 6½ points:

J Schlicht	0200022210—5

Twenty-eight yards, 6 points:

E Metz	1022212222—9	M H Smith	0120•22101—6
H Seaman	2020120221—7	J Kessler	1010211010—6
H Foster	1022122010—7	L T Muench	2110020200—5
C Weber	1011021201—7		

Twenty-eight yards, 5½ points:

Twenty-six yards, 4 points:

C Robenstein	0111121021—8	E Marquardt	0220020200—4

Guest, 28yds.:

C Wigger	0000210020—3

DEXTER PARK'S SHOOT.

Oct. 27.—Proprietor Lippack, of Dexter Park, announced a live-bird shoot for the above date, the main event to be a 15-bird handicap, $10, four moneys. Had Mr. Lippack announced the conditions under which the handicaps would be awarded, it is safe to say that the entry list of ten would have been more than doubled. As the system devised by Mr. Lippack is somewhat original, it is as well to give it here: "No one allowed inside of 25yds., but everybody allowed to choose his own handicap!" When some one asked him what he meant, he replied: "Oh, well! Whenever they're handicapped they kick all the time. I'm going to let them choose their own marks, and then they can't kick at anybody but themselves." It looked very strange to see such good shots as W. H. Lair and Dr. G. V. Hudson walk right in to the 25yds. mark and stay there. The scores in this event were as below:

Van Allen (26)	22121•2222221222—14	Dr W Green (26)	2221201112222110—12
Dr Hudson (25)	12212•1211221111—14	J Voorhies (25)	2121011101•12201—11
R Woods (28)	2212221122221200—13	R J Smith (25)	1021221110112•01—11
Plain Bill (28)	0222222212•2222—13	W Hughes (26)	1121•2220002222—10
W Lair (25)	2121222212220•222—13	S Barrow (25)	0000000•101•2 — 3

Five sweepstakes were also shot, with the following results:

Nos. 1 and 2 were 5 birds, $3; Nos. 3, 4 and 5 were miss-and-outs:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Woods	5	5	..	..	1	Van Allen	4	..	2	1	2

JOHNNIE JONES.

IN NEW JERSEY.

THE E. C. CUP SHOOT AT HACKENSACK.

Oct 30.—The regular monthly shoot for the E. C. cup at the Bergen County Gun Club's grounds, at Hackensack was held this afternoon. Only eight shooters put in an appearance, one of them being Mr. Rose, a guest of the club, and a member of the staff of Recreation. Mr. Rose shot along with the rest of the boys, making a successful début at the traps. The afternoon was raw and chilly, the clear sky and bright sun of the forenoon being replaced by dull clouds that threatened snow. It was not until almost sundown that the clouds cleared off and the sun streamed forth again. With a dull sky and the yellow of the dying reeds on the Hackensack meadows, added to the varying elevations and angles at which the targets were thrown, the shooting was by no means easy.

Ed Everett, the winner, shot very well for a man with 11 extra targets to shoot at. He scored 20 out of his first 25, and then seemed likely to go all to pieces in the second series, starting off with four losses out of his first 5 targets. He pulled himself together like a veteran, and ran 19 out of his last 20. This gave him a total of 40 and 11 more to shoot at. Both he and Banta didn't do a thing with their allowances. Banta ran his 12 straight while Everett only lost 1 of his 11. He thus finished with a highest possible while Banta tied Banks for second place. Everett shot a Winchester '97 model and 54frs. of W-A; Banta shot one of the Winchester Company's new "brush guns." The race was refereed by Louis Piercy, the champion young target shot of the Endeavor Gun Club. Louis was trying his new Remington ejector, but was short of shells. He showed up well in the practice sweeps shot before and after the main event. Ed Taylor, of the Laflin & Rand Company, was out of trim, and was also trying some experiments, a combination that can never be productive of satisfactory results. Platt Adams was at his old game of "flinching"; at times he would take a spurt, and run a nice string of breaks in good, quick time; then he'd "fudge" on target after target, often breaking them "away out yonder," but more often getting a cipher to his credit. Dr. DeWolf, the only man with two wins to his credit for this cup (three wins constituting absolute ownership), lost his first target every time he went to the score. He broke 21 out of each 25, running the last 15 of his second string straight. Toplitz was shooting a gun that was 1½in. too long in the stock for him; the result is evident in his score; but the score does not tell how utterly he pulverized the low and sharp left-quarterers from No. 3 trap. The scores in the cup shoot were as below:

Monthly contest for the E. C. cup, 50 targets, unknown angles, handicap allowances of extra targets to shoot at, entrance, price of the targets:

E Everett (11)	0111111011111101111011101000011111111111111011111	—40

AT SINGAC.

Oct. 28.—The shoot to-day on Bunn's grounds was a complete success. Twelve shooters took part in the main event, several others being on hand but too late to enter. Brewer, at 33yds., and Doty, at 29, divided first money. Scores were as below:

Twenty-five birds, $10, birds extra:	No. 1.	No. 2.	No. 3.
Brewer (33) 2102212122222211222120222—23	22222—5	..	..

No. 1 was at 5 birds, $3. Nos. 2 and 3 were miss-and-outs, $2, all at 28yds. No. 3 was shot in the dark.

DUTCHER.

Jim Elliott's challenge to Gilbert for the Du Pont trophy makes it look as if there was a fence around the live-bird trophies just now, with only Elliott, Gilbert and Grimm inside the fence.

The Interstate Association's Annual Report.

DURING the season of 1897 the Interstate Association has given one live-bird tournament (the Grand American Handicap meeting at Elkwood Park) and eight target tournaments. The dates of these tournaments were:

Grand American Handicap, March 23, 24, 25.
Baltimore, Md., April 14, 15, 16.
Richmond, Va., April 28, 29.
Savannah, Ga., May 19, 20.
Monroe, La., June 9, 10.
New Haven, Conn., July 14, 15.
Lewiston, Me., Aug. 4, 5.
Montpelier, Vt., Aug. 25, 26.
Portsmouth, N. H., Sept. 15, 16.

In the introduction to its review the Interstate Association has this to say:

THE INTRODUCTION.

"The seventh season of the Interstate Association has gone into history as one of the most successful; establishing for it the prestige of being in the very vanguard of clean, moral and legitimate sports of the day—a representative type alike of the trap-shooting fraternity and all that tends to enhance and develop this particular line of sports. This enviable position has been attained in spite of the long drawn-out and discouraging financial depression, which naturally has meanwhile clogged the energies, retarded the efforts, and dampened the ardor of people in well-nigh every direction of human endeavor—whether that of the serious affairs of life or that of mere sport or pastime

"Resuscitating defunct clubs, rousing the moribund, inciting those active and wide-awake to increased and enlarged efforts; creating, rendering manifest and fostering interest in the sport where no concerted inclination had ever before been even suspected to be obtainable; the instruction of segregated sportsmen as a nucleus for subsequent clubbing and a widened spere of usefulness, with corresponding benefit and profit to themselves and to the fraternity: these are of the effective achievements of the Interstate Association during the last season and augur most favorably for a brilliant record in the coming one.

"This has been accomplished by earnest and unremitting efforts on the part of the promoters which has won the plaudits of an exacting public; but the trap-shooting fraternity, quick to realize and recognize true worth, have responded to every call of the Interstate Association, and aided in extending its sphere of usefulness.

"The statistical data and general information conveyed on the following pages of this review are not only self-explanatory, but highly suggestive of the scope of activity and usefulness of the aggregated and solidified interests in the pursuit of our peculiar line of sport, in common so much enjoyed and cherished by us all. If, indeed, under like circumstances 'history repeats itself'—and conditions bid fair to be better than ever before—then, truly, will the showing of 1898 equal, if it doesn't eclipse that of '97."

THE GRAND AMERICAN HANDICAP.

The inaugural tournament for 1897 was the fifth annual Grand American Handicap at live birds, which was decided at Elkwood Park, near long Branch, N. J., March 23, 24 and 25. The Interstate Association guaranteed $1,000 (and all surplus added) in the main event, which was shot under the following conditions, viz.: 25 live birds, $25 entrance, 50yds. boundary with a dead line at the 33yd. mark, handicaps ranging from 25 to 33yds., high guns to win, and moneys to be divided in accordance with the number of entries received.

The system of dividing the moneys which prevailed in 1895 was adopted again for 1897, the divisions, however, being graduated up to 150 entries for this year's event. The entry list was a most gratifying surprise to the Association. From twenty-one in 1893, the year the first Grand American Handicap was shot, it had sprung to 146 in 1897, a number greater than ever before in the history of trap-shooting in this country paid entrance money in an event of this kind. An entry list of 146 shooters in an open-to-all handicap at 25 birds, $25 entrance, birds extra, high guns to win, broke all records and speaks volumes for the popularity of this annual event. Of the 146 entries, 129 were regular entries at $25 each, six were penalty or post entries at $35 each, and eleven were forfeits at $10 each, making the total purse amount to $3,545. The purse under the system of division of moneys adopted by the Interstate Association provided for twenty-six moneys. The handicaps were so eminently fair and just, and the birds such a superb lot of flyers, that there was but one straight score of 25 made—which took the first prize of $500. Nine tied on 24 out of 25 and divided the next nine moneys—$1,696.15—a total of $188.45 each. Eleven were tied for the next eleven moneys—$1,094.35—and divided without a shoot-off, each man receiving $99 50. Thirteen men scored 22 and divided $254 50, each man receiving $19.55.

With a total of 135 shooters facing the traps it is impossible, in this review, to give the score of each individual. The following, however, shows the money winners:

Twenty-five straight: T. A. Marshall (28yds.) won first money, $500.

The ties on 24 were: W. F. Carver (32), H. C. Koegel (27), J. L. Williamson (30), F. V. Van Dyke (29½), Ed. Voris (29), Geo. Cubberly (29), J. E. Applegate (28), C. F. Arno (27½), E. C. Burkhardt (27). They divided $1,696.15—a total of $188.45 each.

The ties on 23 were: C. W. Budd (30½), R. A. Welch (30½), R Merrill (30), O. R. Dickey (30), W. S. King (30), W. Dunnell (29), F. D. Alkire (29), C. Furgueson (29), A. L. Ivins (29), Arkansas Traveler (29), Dr. V. G. Hudson (27½). They divided $1,094.35—a total of $99 50 each.

The ties on 22 were: C. M. Grimm (32), F. Parmelee (30½), C. M. Powers (30), C. S. Guthrie (29), H S. Coldren (29), J. S Rehrig (29), C. Von Lengerke (28½), J. Hamilton (28), R. Phister (28), F. G. Moore (28), Harry Thomas (28), Col. J. T. Anthony (27), Moccasin (27). They divided $254.50—a total of $19.55 each.

One hundred and fifty shooters took part in the tournament and $7,058.40 was divided in different purses. The total number of live birds trapped was 5,278.

IN THE MONUMENTAL CITY.

The second tournament was given at Baltimore, Md., April 14, 15 and 16, under the auspices of the Baltimore Shooting Association. The first two days was devoted to inanimate target shooting, and the third day to live-bird shooting.

THIRD DAY.

The principal event the third day was the Maryland Handicap at live birds. The conditions were 25 live birds, $20 entrance, handicaps 25 to 32yds. J. L. Brewer (32yds,) and W. R Crosby (30yds.) killed 25 straight, and divided first and second money. E. D. Fulford (30yds.), F. D. Alkire (29yds.) and J. M. Hawkins (29yds.) each killed 24, and divided the remainder of the purse.

The total number of shooters taking part in the tournament was 51. Average entry first day, 34; average entry second day, 27.9; average entry third day, 20¾. The total amount of money divided in purses was $2,658.40. 15,585 targets and 1,249 live birds were trapped during the tournament. $450 was added to the purses by the Baltimore Shooting Association.

The total number of shooters taking part in the tournament was 49. Average entry first day, 30.1; average entry second day, 18.4. The total amount of money divided in purses was $412 90. 8,400 targets were trapped during the tournament.

RECAPITULATION.

In the table as outlined below will be found a summary of the work accomplished during the season of 1897. Noting the fact that the tournaments were given in relatively far distant points, and as a rule in the smaller cities, the results are indeed very gratifying:

Shooters taking part	516
Live birds trapped	6,527
Targets trapped	89,951
Money divided in purses	$16,562 22

THE GRAND AMERICAN HANDICAP IN '98.

The Interstate Association closes its review of the work done in 1897 with the following note regarding its plans for the Grand American Handicap and the target season of 1898:

"The Grand American Handicap at live birds will mark the opening of the season of 1898 It will be held at Elkwood Park, Long Branch, N. J., March 22, 23 and 24. It is the intention to perfect arrangements for giving the most interesting series of tournaments during the season of 1898 yet proposed in the history of the Association. Clubs contemplating holding tournaments, and desiring the assistance of the Interstate Association, should make early application for same."

On Thursday, Oct. 28, Ferd Van Dyke shot exceedingly well. He broke 221 targets out of 235 shot at over the Brooklyn Gun Club's magautrap. He broke 47 out of the last 50 shot at, the final 30 being thrown when it was almost too dark to see to shoot.

The Cherokee Gun Club's Tournament.

CHEROKEE, Ia., Oct. 20.—The first annual tournament of the Cherokee Gun Club, of this city, was held yesterday and to-day. The scores made were particularly good for amateurs, as the weather was bad and the background poor. Mr. Harris, of Sioux City, Ia., deserves special mention for the averages made by him on the two days: 91.6 on the first day, and 95 per cent. on the second day. The average entrance on the first day was 32 and on the second day 22. Scores of both days, showing each man's percentage of breaks follow:

Reed-Hurst Shooting Park.

ERIE, Pa., Oct. 13.—The fall tournament at Reed-Hurst, under the management of Mr. Carl M. Reed, was held yesterday and to-day. The grounds were in good order and the weather all that could be desired. Among those in attendance were: Dr. C. A. Miller (C. A. M.), J. A. McNary and G. S. Harrington, of Greenville; John A. Wilson, E. D. Mallory and C. K. Brown, of Franklin; J. M. George, Miles Grove, and Capt. G. S. Wride, Rochester, N. Y. In the handicap for the Reed-Hurst cup Wilson and Bacon tied with 20 straight, Wilson winning easily with 4 out of 5 in shooting off, Bacon losing 3 birds. In this event George and Webber divided third and fourth money, each having killed 19. The scores:

T. W. B.

Election Day, Tuesday, Nov. 2, causes the usual disruption in FOREST AND STREAM'S going-to-press days. We go to press this week on Monday, Nov. 1, much valuable matter received on that date having to be held over until the following issue. Club secretaries and correspondents generally will please note this fact, and show forbearance if their copy does not appear in this issue.

Kentucks Gun Club's Annual,

LOUISVILLE, Ky., Oct. 16.—The very best tournament ever given on the Kentucky Gun Club's grounds came to a close to-day, adding fresh lustre to a gun club which needed but little in that direction. Too much cannot be said in praise of the management; nor can the most vivid imagination overdraw the hospitality and extreme fair play extended to all. The weather was simply perfect, and all in all it was a most thoroughly enjoyable affair.

Towering above all is the magnificent form displayed by Allen P. Houston, who on target day made a run of 97 straight bluerocks, losing only 11 out of 200. This with a Parker gun and Dupont powder. On the second day J. D. Gay did some grand work scoring all his live birds but one. Shooting at between 50 to 55.

SCORES OF OCT. 15.

Kentucky Handicap, 15 birds, $10, four high guns, 40, 30, 20 and 10 per cent.; handicaps, 25 to 30; twenty-two entries. Total net purse, $220:

G W Clay (30)	2222122222222122	—15	Shipp	222220120	— 7
J D Gay (30)	2222222222222222	—15	Harris	222202220	— 7
R Smith (29)	1222212121211122	—15	Jonah	21101221	— 7
W A Fawcett (28)	2122212222112222	—15	Hallowell	2112110	— 6
Hazard	2222222222222122	—13	Trimble	1101110	— 5
Miller	222212112110	—11	Richardson	022110	— 4
Boddie	2222222220	— 9	Woodcock	210220	— 4
Williams	2022222222	— 9	Lyons	220220	— 4
Ballard	222222210	— 8	Ripp	12002	— 3
Du Bray	222102222	— 8	Hook	2200	— 2
Winter	212112002	— 7	Broyles	100	— 1

Messrs. Clay, Gay, Smith and Fawcett, the four who divided up the $220, all shot Parker guns.

Some miss-and-outs were also shot. In one of these, which was decided before the above event was called, Messrs Gay and Smith each scored 10 straight.

Third Day, Oct. 16.

On the third day the Kentucky championship event, 25 pigeons, was decided. Four men made the highest possible, and finally "The pride of the grand old club," Sam Hutchings, carried off the cup, shooting in absolutely faultless form from start to finish, and shaking off by sheer persistence "The Kentucky cyclone," Bland Ballard, last year's winner.

As proof of the shooting prowess of Mr. Hutchings, *Le Grand Magnifique*, it is necessary to say no more than that out of the four yearly events he has been in first flight three times, having tied the winner twice, and finally captured the much coveted cup himself this last time. In other words, he scored in the last three events 73 out of 75 pigeons shot at, and one dead out of bounds.

One of the agreeable surprises of the meet was the great shooting displayed by Mr. W. P. Woodcock, of Danville, Ky., who, though quite a novice, ran out his 25 straight in such style that one would naturally regard him as a seasoned veteran. These youngsters are always giving one something to guess, one way or the other—and so are the old chaps for that matter—but there isn't much guesswork about a man like Woodcock; all he needs is practice.

CHAMPIONSHIP OF KENTUCKY.

Championship of Kentucky, 25 birds, $10, birds extra; silver cup to the winner. Class shooting, four moneys, 35, 25, 20 and 10 per cent., with 10 per cent to the club; twenty-one entries; total net purse $210.

* Score mailed to us shows two misses.

Straight scores paid $18.37; 24 paid $17.50; 23 paid $21, and 22 paid $10.50. Ten of the twenty-one entries did not get in for the money.

Mr. Sam Hutchings, of Louisville, used a 7lbs. 14oz Parker hammerless gun, U. M. C. 2⅞in. Smokeless shells, 44grs. Du Pont powder, and Tatham No. 7 chilled shot in both barrels.

PERSONAL MENTION.

Harry J. Lyons sawed wood, and sawed wood, quiet as a mouse all along, hugging a chair and looking demurely dangerous; very bad medicine; so awfully quiet; so grimly determined, and so smack in the middle did he shoot that it looked nasty all the way up to his 19th bird, and then came a frost. Well, there are twisting drivers, and driving twisters, and these are all bad enough; but when a fellow gets a zigzag driving twister (one that is also a twisting, driving, zigzag, low-down hug-the ground-black-imp-of a ghost) what is a fellow to do, poor thing? and that's what he got, with a goose egg to boot, see?

Bland Ballard, fresh from the East, brown and tanned by sea air, and full of life and vigor, shot away up, clinging with his usual tenacity to "the magnificent." He has acquired a kind of *grande fleurische* to his gun, which is dashing in the extreme. And then he uses his first barrel so awfully well that a pigeon must think, if he or she thinks at all, that it is quite out of the question to try to get away. I tell you, gentlemen, all that swing at arm and stride a leg is impressive, if not on the pigeon, at least on the contestants, for with it goes perforce, strength, agility, flexibility of muscles and confidence; and all these things, backed by courage and good judgment, are Bland Ballard's chiefest merit. So when a fellow swings himself to the score in that peculiar fashion he carries a *Je ne sais quoi* about him that is somewhat distracting and in direct contrast to the chap who creeps up there as though on eggs, fearful lest he twist a joint or undo a kink somewhere that had better be left unkinked

Mr. J. J. Hallowell, representing the U. M. C. Co., came upon us in the nick of time, having dashed across from New York for the occasion. Mr. Hallowell is new in this line, *i. e.*, talking up ammunition, but it is needless to say that so finished a shot, agreeable a man, genial, pleasant (and handsome with it all) a personage, must carry weight in whatever he undertakes, and Mr. J. A. H. Dressell is to be congratulated on having secured the services of so courteous a gentleman.

Mr. Damman, of the Winchester Arms, graced the grounds with his presence for a short time, but unfortunately could not stay long enough with us.

Mr. R. L. Trimble, representing the Du Pont and Hazard powder companies, hammered away in his painstaking and thoroughly earnest manner, and must have felt highly gratified in seeing the splendid work done with his powder. I know of no man in the trade who is a harder worker than Ralph Trimble, and when it comes to steering a shotgun he is a most dangerous man in any company.

Mr. John Mackie, of the Peters Cartridge Co., hovered about, telling whoever it might concern all about his ammunition, making friends for himself and his company in his quiet but telling way

Mr. Vass, of Mobile, Ala., who has shot pigeons with eclat all over the country, served as referee. So faultless were his decisions that not an appeal was made; Mr. Vass can do such thankless work in a style equal to any man's, and so quietly and easily that one would naturally suppose he never did anything else. The Kentucky Gun Club appreciates such a man, knowing how few and far between they are. So please come again next year.

The entries for the Kentucky championship were: G. W. Clay, Austerlitz; J. D. Gay, Pine Grove; W. F. Hook, Hardinsburg; R. L. Trimble, Covington; Roger Smith, Lexington; A. W. du Bray, Dayton; Dr. J. Marsh, Danville; W. P. Woodcock, Danville; John McRoberts, Danville; N. V. Boddie, Guthrie; John Williams, Guthrie; Sam Culbertson, Louisville; Harry Lyons, Louisville; J. S. Phelps, Louisville; Sam Hutchings, Louisville; A. P. Houston, Louisville; J. Winter, Louisville; W. A. Fawcett, Louisville; DeLong Miller, Louisville; Will Clegg, Louisville.

As three out of the four straights on the championship event used "the old reliable." I hadn't a kick coming, even if I didn't get placed.

The pigeons were furnished by the club's purveyor, Mr. John Lovell, and a capital lot of birds they were. There was but little wind to help them along, however, and as a good deal of straight powder was used, for the most part his birds were knocked down right and left with but few to get away. His prediction that *Le Grand Magnifique* would win, and must win, came true, and that fact, to so genuine an admirer, must have been balm to his soul.

THE DU PONT CUP CHALLENGE.

CHICAGO, Ill. Oct. 28.—As stated in my dispatch to FOREST AND STREAM last week, Elliott has challenged back for the Du Pont cup; but the challenge had some irregularities which will need to be corrected before all is strictly proper. Mr. Elliott handed his check and challenge to Mr. Ed Bingham, a Du Pont representative, on the grounds, the same reading to the "Du Pont Powder Co." Mr. Rice, general agent for the company here, returned the challenge to Mr. Elliott, explaining that the conditions named no such party, and that the challenge should be filed as in the hands of E. I. Du Pont de Nemours & Co., and other parties explicitly named in the conditions, and should be deferred till a date between Nov. 5 and 10. Time still remains for all these formalities to be complied with and for the race to be added to the attractions of the great triple bill at Chicago the first week of December. I took my advices on the Kansas City preferences in this matter from a letter written me by Mr. James Whitfield, the able hustler of the *Kansas City Star*, who said the K. C. boys would like to see this trophy—the Du Pont cup—shot for first, on Dec. 7. As pointed out in last week's comment on this, it will, of course, be impossible for the *Star* trophy race to be set for a later date than Dec. 7, under the sixty days' time clause, so that if we are to have all these events in one meet the *Star* cup will naturally come first, provided the meeting be here about Dec 7-10 and not at an earlier date. No doubt Mr. Elliott will arrange any lacking details in the formal part of his challenge, and we hope to see Gilbert and Elliott meet here in a match not only once, but twice, and that in the same week

DU PONT TROPHY RECORD.

Mr. J. E. Guinnotte, of Kansas City, having undertaken the compilation of the records of the leading trophies of trap-shootingdom, Mr. E. S. Rice to day forwarded to him the following details regarding the Du Pont trophy, which has of late been so much in evidence. (The conditions have been earlier printed in FOREST AND STREAM.)

RULES GOVERNING MATCHES FOR DU PONT TROPHY.

This trophy to remain the property of E. I. du Pont de Nemours & Co., to be held in trust by winner of same, bond to be given if required.

The winner of championship trophy is subject to challenge for championship and trophy from any shooter in the world who is a member in good standing of any organized gun club; match to be at not less than 25 live birds nor more than 100, American Shooting Association rules to govern, and on part of challenger a purse of $100. Both contestants to start at 30yds rise, regardless of position in grand tournament event, boundary 50yds

The holder of trophy to name time, giving challenger not less than ten days' notice, number of birds if in excess of 25, and grounds upon which match is to be shot.

Match to take place within thirty days of challenge, $25 forfeit, to be deposited by challenger with *American Field*, *Sportsmen's Review*, Chicago; FOREST AND STREAM, *Shooting and Fishing*, New York; *Sporting Life*, Philadelphia, or E. I. du Pont de Nemours & Co., Wilmington, Del., when challenge is made; remaining $75 to be deposited with one of the parties above named, or referee of match by challenger on date of match, holder of trophy to put up trophy on same day.

If either contestant fails to appear on day set for match—unless in case of sickness or for other reasons which are satisfactory to the referee—he shall lose his forfeit, holder of trophy forfeiting trophy. In case holder of trophy is not in condition to shoot the race on receipt of challenge, he must immediately notify challenger and Messrs. DuPont & Co., stating his reasons for not being able to shoot the match, which will be considered by Messrs. DuPont & Co. If satisfactory, same will be accepted; if not, holder of trophy must shoot match or forfeit trophy to challenger.

In case of bad weather on day of match, match to take place on first favorable day thereafter.

No challenge will be accepted or recognized until after the winner or party challenged shall be so declared and known.

All challenges must be made in writing, accompanied by forfeit, and filed with one of the several parties heretofore named as stakeholders. If holder of trophy attempts to take any unfair advantage of challenger, such as naming unreasonable place for match to be shot, by setting time of match on the Lord's Day, or resorts to any scheme to prevent an honorable and fair contest, he shall forfeit trophy, Messrs. DuPont reserving the right to say what shall be done with it

Immediately upon lodging challenge as herein provided, notice of such challenge shall be promptly forwarded to E. I. DuPont de Nemours and Co., who will then name referee. Trophy to be redeemed from holder thereof for $100 cash, the redemption of trophy to take place on the first day of each succeeding DuPont grand smokeless powder championship live-bird tournament, or such other time as Messrs. DuPont & Co. may elect.

WILMINGTON, Del. E. I. DUPONT DE NEMOURS & CO.

The Du Pont Smokeless Powder Championship Trophy was first offered by E. I. du Pont de Nemours & Co., of Wilmington, Del., and first contested for in an open championship event, at Baltimore, Md., on Oct 22, 23 and 24, 1895, competition for which was open to the world. Rules governing the holder of, and contests for, this trophy are hereto attached:

The trophy itself (cut of which is supplied) is magnificent, standing 55in. in height and consisting of cup and pedestal.

The cup is of solid silver, weighs 110oz. and stands 15in in height, resting upon a magnificent onyx pedestal, the pedestal designed to form a gun rack holding four guns, the whole being a work of art, conceded to be one of the most beautiful ever offered for sportsmen's competition.

On Oct. 23, 1895, there were fifty-one contestants entered for this trophy. Charles Macalester, of Baltimore, and Mr. Fred Gilbert, of Spirit Lake, tying on 25; the winner of the trophy was, by agreement, determined by a tie shoot, 5 birds to the man, Macalester killing 4; Gilbert, killing 5, became the winner.

I. W. Budd, of Pemberton, N. J., challenged Mr Gilbert for possession of this cup, match taking place at Watson's Burnside grounds, near Chicago, on April 4, '96. Score: Gilbert 92, Budd 74 out of 100.

The second contest upon the same grounds was between Mr. Fred Gilbert and George L. Deiter, of Milwaukee, Wis., June 1, 1896; Deiter 84, Gilbert 83, out of 100

The third race took place at Milwaukee, Wis., July 8, 1896; score: Gilbert 96, Deiter 88, out of possible 100.

The trophy was then called in by Messrs. E. I. Du Pont de Nemours & Co., and again offered in open competition at the Du Pont tournament held at Chicago and occupying an entire week, Aug. 3 to 8 inclusive For the cup event opening on Thursday morning, Aug. 6, at 10 o'clock A. M., 1896, there were 1 4 entries, the list embracing perhaps the greatest number of celebrated live-bird shots that ever came together at one time and for one purpose, representing as this gathering of shooters did, nearly every State in the Union. The record of that contest is particularly noticeable because of the large number of high scores made After nearly two full days of shooting the following gentlemen tied on 25 straight: B. W. Claridge, of Baltimore, Md.; W. R. Miller, of Texas; H. D Kirkover, of Buffalo; Roll, of Blue Island; Charles Gottlieb, of Kansas City. In the tie match Claridge won by 5 straight; was challenged by J. C. Malone, of Baltimore, and on Oct. 6, 1896, match was shot at Baltimore, Md., 50 birds to the man; score: Claridge 47, Malone 43, this being the fourth individual match for the trophy.

The fifth was shot at Baltimore, Md., 50 birds to the man, on Nov. 10, 1896, between Bert Claridge, of Baltimore, and George Roll, of Blue Island, Ill.; score: Roll 48, Claridge 45.

The sixth contest took place at Watson's Burnside grounds, Chicago, Ill., Dec. 16, 1896, 100 birds to the man, J. L. Winston 91, Geo. Roll 84.

The seventh contest, between J. L. Winston and George A. Mosher, took place at Yardville, N. J., Jan. 16, 1897, 100 live birds to the man; score: Winston 87, Mosher 85.

The eighth individual contest, at Chicago, Ill., May 16, 1897, at 100 birds to the man, between J. L. Winston and Charles W. Budd; score: Budd 86, Winston 85.

The ninth individual race took place at Burnside grounds, Chicago, June 8, 1897, between George W. Beck, of Indianapolis, Ind., and Charles W. Budd, of Des Moines, Ia., 100 birds to the man; score: Budd 91, Beck 76.

The tenth individual race took place at Eau Claire, Wis., Aug. 28, 1897, 100 birds to the man; score: J. A. R. Elliott 90, Chas. W. Budd 94.

The eleventh individual contest between J. A. R. Elliott, of Kansas City, Mo., and Mr. Fred Gilbert, of Spirit Lake, Ia. (the first and original holder of this trophy), resulted in victory for Gilbert, the score standing out of first 100 a tie at 97; shooting off the tie under the American Association rules, 25 birds to the man, resulted in a victory for Gilbert; score, Gilbert 25, Elliott 24. This race took place at the Exposition ball park of Kansas City, Mo., Oct. 22, 1897.

It is but two years since this trophy was first offered, and yet nearly 200 men have contended for possession of it; seven have held it; ten have shot individual races for it, and nearly 6,500 birds have been trapped in efforts to determine the one question: To whom belongs honors due the champion of champions?

GOOD FOR A SORE THROAT.

On last Wednesday, at Cordova, Ill., some local shooters asked Tom Marshall, who was present, to trot out his gun, and give them a little exhibition of live-bird shooting as she was did. Tom explained that he was not feeling very well, as he was troubled with the interior of his neck, which had lately been operated upon several times by the surgeon. The birds were good and fast, and the day was windy; but the shooting mayor managed to score 47 out of 50, which is pretty good, for a sore throat.

GOING IN FOR IT

Mr. W. R. Eliston, of Belle Meade Farm, near Nashville, Tenn., is surely going in for live-bird shooting, as well as targets. He and Uncle Andy Meaders have been practicing together, and Unc' Andy must have enthused his younger friend a lot. Mr. Eliston writes this week to John Watson, at Chicago, asking him where he can purchase a full set of King automatic live bird traps, with pulls and all complete, and full directions for its use. He says he has his target traps all up, but wants them to have the sanction of John Watson; and he asks the latter to send down to Nashville, at Mr. Eliston's expense, one of his boys to take charge of the installation of the full sets of traps, and to give him tips on the management and care of the birds. I do not know of any private individual going into the trap-shooting game any more thoroughly than Mr. Eliston, who is putting up an entire park on his premises.

CALUMET HEIGHTS CLUB.

Following are the scores made at the last meeting of the Calumet Heights Club, at the grounds in Indiana, the attendance being very light for the medal contests, Lamphere winning in Class A, Greely in Class B, and Schmidt in Class C:

Medal contest, 25 targets, known traps, unknown angles:

Lamphere (A)	1101111011111111111011111—22
Houston (A)	1010101100011011000111111—15
Young (A)	0101111111110101111111111—21
Booth (A)	0011101111111111010000101—16
Greely (B)	1110101111111101101111101—19
Norcom (B)	1111100010100101000100110—12
Harlan (C)	0100000110111011110111111—16
Schmidt (C)	1101111111110011111101111—21
Davis (C)	0011100010110000100111011—12

Two practice sweeps were shot, as follows:

No 1, 15 targets, unknown angles: Lamphere 13, Norcom and Young 11, Davis 9, Houston 8, Schmidt 7, Harlan 5.

No. 2, 10 targets, unknown angles: Houston, Harlan and Young 9, Greely 8.

COOK COUNTY LEAGUE HANDICAP.

The Cook County League handicap contest, the last league event of the season, will be shot Saturday next.

THE E. C CUP CHALLENGE.

As stated in last week's FOREST AND STREAM, Mr. W. R Morgan has accepted the challenge of Mr. A. C. Paterson for the E. C challenge cup offered the Cook County League. It now transpires that Mr. Eddie Bingham has also challenged Mr. Morgan, and I am advised that this challenge will be printed in a local sporting paper here this week. It would appear that this is a trifle subsequent, and that Mr. Morgan and Mr. Paterson will be the first to argue the matter at the score.

PUBLISHERS' DEPARTMENT.

Personally-Conducted Tours via Pennsylvania Railroad.

SEASON OF 1897-8.

THE Personally-Conducted Tourist System of the Pennsylvania Railroad Company is the most complete and elaborate system of pleasure traveling and sight seeing yet devised. It is the consummation of the ultimate idea in railroad travel, the final evolution of unassailable perfection.

For the season of '97 and '98 it has arranged for the following tours:

California.—Four tours will leave New York, Philadelphia and Harrisburg Jan. 8, Jan. 27, Feb. 16 and March 19. With the exception of the first party going and the last returning, all of these parties will travel by the "Golden Gate Special" between New York and California, stopping at interesting points *en route*.

Florida.—Four tours to Jacksonville will leave New York and Philadelphia Jan. 25, Feb. 8 and 22, and March 8. The first three admit of a stay of two weeks in the "Flowery State." Tickets for the fourth tour will be good to return by regular trains until May 31, 1898

Old Point Comfort, Richmond and Washington.—Three six-day tours will leave New York and Philadelphia, Feb. 19, March 16, and April 7.

Old Point Comfort and Washington.—Three four-day tours will leave New York and Philadelphia Dec. 28, Jan. 29, and April 23.

Old Point Comfort.—Six tours will leave New York and Philadelphia Dec 28, Jan. 29, Feb. 19, March 19 April 7 and 23

Washington.—Seven tours will leave New York and Philadelphia Dec. 28, Jan. 18, Feb. 3, March 3 and 31, April 21 and May 12.

Detailed itineraries of the above tours, giving rates and full information, may be procured of Tourist Agent, 1196 Broadway, New York; 8:0 Fulton street, Brooklyn; 789 Broad street, Newark, N. J., or Geo. W. Boyd, Assistant General Passenger Agent, Philadelphia.—*Adv.*

Winter Excursion Tickets on the Pennsylvania Railroad.

ON Nov. 1, the Pennsylvania Railroad Company will place on sale at its principal ticket offices excursion tickets to all prominent winter resorts in New Jersey, Virginia, North and South Carolina, Georgia, Florida and Cuba. The tickets will be sold at the usual low rates, with the usual liberal return limits.

The magnificent facilities of the Pennsylvania Railroad, with its many connections, make this the favorite line for winter travel.

An illustrated book, descriptive of winter resorts, and giving routes of travel and rates for tickets, will be furnished free on application to ticket agents.—*Adv.*

Twenty-Nine Hours to Florida.

SOUTHERN RY., through Washington, Charlotte, Columbia and Savannah. The popular route between New York and Florida. Double daily through sleeping car service. Leave New York 4:25 P. M., the famous Southwestern Limited; 12:10 midnight, the peerless United States Fast Mail. For further information call on or address Alex S. Thweatt, Eastern Pass. Agt., 271 Broadway, New York.—*Adv.*

Twenty-Four Hours, New York to Atlanta,

VIA Southern Ry. Through car service. For further information address Alex S Thweatt, Eastern Pass. Agt., 271 Broadway.—*Adv.*

WM. W. HART & Co. have just received word from Jackson's Hole, Wyo., that eleven fine elk heads are now *en route* from customers to be mounted. One of the heads may prove to be a record head.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 13, 1897.

VOL. XLIX.—No. 20. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

SNAP SHOTS.

ONE of the sections of the bill introduced into the Senate during the last session by Mr. Proctor as a new game law for the District of Columbia, provided "That wherever in this act possession of any birds, fowls, or meats is prohibited, the fact that the said birds, fowls, or meats were killed or captured outside the district of Columbia shall constitute no defense for such possession" And one factor in the regret that Senator Proctor's bill did not become a law was the belief that such a prohibition as was here contemplated was necessary to prevent the sale in Washington of out-of-season game killed elsewhere. It was recognized to be a national disgrace that the Capital city should afford an open market in close time, and so should be converted into a dumping ground for game killed in various States.

There is unalloyed satisfaction in the discovery by judicial test that the present law of the District is all-sufficient to serve the purpose sought to be attained by Senator Proctor's measure. We give in our game columns to-day, in advance of its publication elsewhere, the full text of the decision just rendered by the Court of Appeals of the District of Columbia in determination of this point. In brief, the court holds that the clause of the statute forbidding the having in possession of game during the close time applies to all game, irrespective of its source of supply, and whether killed within the District or outside its borders.

This is the most important game law decision ever rendered in the District of Columbia courts; it clears the way for action which will be far-reaching in its effect upon the game supply of those States from which birds are gathered for the Washington market. It is more important still in its moral effect. The text of the decision as an admirable exposition of some of the basic principles of game protection is worthy of careful reading. Chief Justice Alvey's reasoning is clear, logical, convincing, and in line with the principle laid down in the FOREST AND STREAM Platform Plank that "The sale of game should be prohibited at all seasons."

Some months ago we reported a decree from the Treasury Department of Venezuela regulating the hunting of herons and the gathering of their plumes for millinery purposes. While somewhat indefinite in its terms, the decree was intended so to restrict the hunting methods as to preserve the stock from the extermination which has overtaken so many rookeries; and the Venezuelan Government was warmly commended for its intelligent action. We have now to record the annulment of the decree by a recent decision of the Supreme Court, which finds the measure unconstitutional and void. From a translation, supplied to our State Department by Consul Plumacher, the ground of the decision is that the decree trespasses upon the rights of the Sovereign States, as well as upon individual rights.

According to the constitution, the court declares, the States have a right to dispose of their natural products, except mines, salt, and public lands, which are controlled by the general Government. It is as if our own Congress were to legislate with respect to game in the States. Industrial rights are also guaranteed by the constitution to all Venezuelans. The decree prohibiting the killing of herons "is not only a coercive measure, but tends to destroy a home industry, placing it at a disadvantage in competition with that of other countries. It also restricts the rights of property owners, which, according to the civil code, are absolute unless the property is illegally used." Further, the prohibition of hunting with firearms is at variance with the civil code, which declares that this is subject to special laws.

In standing out for his rights as a property owner, and defying this decree which would oblige him to hunt birds in a manner not to exterminate them, our friend and brother down near the equator talks like a citizen of the United States. The plume hunter, wherever you find him, is a stickler for his constitutional rights; and his rapacity is that of the butcher-bird.

Mr. Andrew M. Spangler, of Philadelphia, who died last week at the age of seventy-eight, was for many years prominently identified with the fishcultural and fish protective interests of Pennsylvania. A skilled angler, whose lines had been cast in all the famous waters of the continent, from Canada to Florida, he was also a prolific writer on angling themes, and an earnest and unremitting advocate of the education of the public to an appreciation of the value of fishery resources. He served as a Fish Commissioner of Pennsylvania and was the leading spirit in the organization and upbuilding of the Pennsylvania Fish Protective Association, serving for repeated terms as its president, and showing himself untiring in devotion to its aims and activities.

Mr. Spangler was profoundly convinced of the importance of educating young people in natural history. He contended rightly that if as a community and a people we are ever to change our attitude and practice with respect to the resources of the waters and the woods, the reform can come only as the result of education, and of that education which is most effective because acquired in youth. Inculcate in the boys and the girls, said he, an appreciative regard for the beautiful and the admirable in nature, whether of flower or insect, or fish or bird, and you will have given to them that which will be not only an abiding joy, but a constant incentive to the protection and preservation of nature's bounties. When we reflect upon the idle brains, empty heads, various kill-time occupations, puerilities and stolidities of hosts of persons we come in contact with, we can all of us most heartily support Mr. Spangler's plea for an awakening of an interest, whether it be in botany or ornithology or what it matters not, so that it shall give stimulus for study and thought, investigation and reflection.

An exchange reports that a frog-raiser of Massillon, O., "has planted forty thousand frogs' eggs in a pond near that place." It is not stated where the Massillon man discovered his forty thousand frogs' eggs in the bleak November; nor are we told what he expects will become of the "plant." The two-line frog item is but another of those winsome tales of frog-farming. If one-half of the farms of the newspapers existed in fact, the frog-farm product would cover the land as the frogs covered Egypt. The truth is that such a thing as a frog-farm does not exist, if by farming be meant the artificial propagation of frogs as fishes are propagated in hatcheries, and reared through the successive stages from the egg to maturity.

In a manual of fishculture, just issued from the office of the United States Commission, we are told by Mr. F. M. Chamberlain, of the Commission, that while the value of frogs as food is now thoroughly recognized in this country, to such a degree indeed that the United States consumes more frogs than are eaten in any other country, not excepting France itself, human ingenuity has not as yet devised a method of carrying artificial cultivation beyond the larval stage. When the frog farmer's frogs reach the adult form, the whole visionary enterprise is as elusive as a Michigan frog chased by Old Hickory or Kelpie or some other of the band of Kingfishers for bass bait. It is a comparatively simple undertaking to stock a pond with breeding frogs, and then let nature take her course; or to collect the tadpoles and transfer them to the "farm." The young may be protected by fences and screens against raccoons and reptiles and birds; and if fish, turtles, snakes, crayfish or older frogs do not intervene, the tadpole resorbs the tail, develops legs, and undergoes metamorphosis into frog form. This is the critical stage, for "as soon as the terrestrial habit is fully assumed, live food is absolutely requisite," and must be furnished in liberal quantities. But it is useless to attempt to supply this food artificially by any method at present known; neither has any device to increase the natural abundance of insects been practicable as yet. It is, however, possible to transfer the young frogs to other waters where food abounds.

This is the extent of "frog-farming," as conducted in America to-day. The only "farm" noted in the report is one in the Trent River basin in Ontario, where some twenty years ago the waters were stocked by the introduction of mature mated frogs. Food being naturally in abundance, no artificial feeding is attempted. The "farming" consists in capturing the marketable frogs at night by torchlight, and confining them in small pens, which can be drained as the frogs are required for shipment. During the years 1895–1896 the product was five thousand pounds of dressed frog legs, and seven thousand live frogs for scientific purposes and for stocking other waters. As the market demand is all the time growing and the native supply diminishing and in some sections altogether disappearing, this mode of frog farming is almost certain to prove profitable, and owners of favored swamp lands who are shrewd enough to protect their preserves may assure themselves of a substantial revenue.

Long Island is maintaining its character as a phenomenal deer preserve in close proximity to Greater New York. The open season this year consists of each Wednesday in November, four days all told; and the first Wednesday witnessed an exodus of hundreds of deer hunters. One single band numbered sixty-nine, and scored among them five deer. This was probably the relative proportion of game to guns; and the total killed would run into the hundreds. One newspaper reports the score as three hundred, but this is probably an exaggeration.

There is really nothing wonderful about this great supply of game close to a city population of three million people. The deer stock is kept up simply by restricting destruction to a point where the drain does not impair the parent stock. The Long Island deer are actually protected when the law is on. Their range is largely on private grounds and game preserves, where shooters cannot get at them, and the deer killed on public territory in the open season are actually the overflow from the private deer parks. Under such conditions the Long Island deer stock may be preserved for a hundred years. It is an illustration of game protection that protects.

The interest which reaps the most direct benefit from the Long Island deer season is that of the transportation companies. The managers should be hearty advocates of game protection; it puts thousands of dollars into their treasuries every year. The railroads could well afford to stock and keep stocked the Long Island deer covers as a promotion of travel, just as some of the trolley managers maintain electric fountains as spectacles to increase traffic.

The mania for catching the largest number of fish in a given time or from a particular water pervades all ranks and grades of anglers from the trout fingerling scorers to the killers of the mighty tarpon. A correspondent, writing from Tarpon, Texas, records a recent feat of a fisherman who scored eleven fish between 7 o'clock in the morning and 7 o'clock at night, this being the largest score of tarpon on the coast ever made in one day. The fisherman was a visitor from Shanghai, China, and the Texas people profess that their patriotism causes them to feel deep chagrin that a foreigner should hold the record.

Score fishing for tarpon is carried to ridiculous extremes in Florida. One aspirant for honors last season used to put out a number of lines from his boat, and when, as sometimes happened, two fish struck at once, he would determine which was probably the larger, then free the other one by smashing his tackle, so clearing the decks for action. At the end of the season his score of broken rods nearly equaled his count of fish. This is tarpon killing, but it is not angling.

This is a great year for quail. Reports of an abounding supply come from all parts of the South as far as Texas and Florida. The season has been favorable, the birds are in good condition, and the outlook is such as to lure many a shooter to the field for the winter holidays.

The Sportsman Tourist.

THE NATIVE AMERICAN HUNTER.

V.—VARIOUS TRAPPING METHODS.

Noosing Elk.

THE primitive Cheyennes had few methods of catching herbivorous animals other than those which have already been described. It is said that in ancient times the people used to catch elk in traps, but only those without horns. When they found a place in the timber where an elk trail passed under a tree they tied a rawhide rope to a branch, arranging the rope so that the noose would hang down over the trail at about the height of an elk's head. If an elk passing along ran its head into this noose and became frightened, it would make a quick jump, draw the noose tight, and so choke to death. Of course, this method could only be used for elk without horns.

Trapping Foxes.

The Cheyennes of those times had little use for furs except for purposes of ornamentation. For clothing, shelter and bedding, they, of course, used the skins of large animals.

They used to trap foxes, however, in dead-falls of the ordinary type, building a little house with a fence on either side, and placing the bait in a split stick, which was the trigger. After such a trap has been set the person who has made it goes off to one side a little distance and sings, calling the foxes. Sometimes, when one of these traps was first made, the women and children would gather around the singer and dance to the time of the song. The words of this song ran somewhat as follows:

Come, fox, I have meat for you,
Come, fox, I have food for you,
Come, fox, I have food for you,

The trap was usually built so that the fox was caught by the neck, or had its back broken.

How Wolves were Caught.

Sometimes larger traps were made of this same type, in which coyotes were caught, and sometimes, but not often, big wolves got into these traps and were caught. However, such dead-falls were not set for these large animals, and usually they were too strong for them.

Big wolves were caught in pit-falls, made so deep that they could not jump out from them, the sides being dug away toward the bottom, so that the hole at the top was somewhat smaller than at the bottom, which was about 6ft. across. On opposite side of this hole two pairs of stakes were driven in the ground, 2in. or more apart, and between these stakes on either side and reaching across the hole was laid a pole to which the bait was tied. This bait consisted of small pieces of meat. The horizontal pole was tied at either end to the two stakes between which it lay, and thus it could not be moved.

Large weed stalks were split and laid close together from the pole to the ground on either side, and over this grass and earth were scattered, so as to make the covering of the pit look as nearly as possible like the surrounding prairie. The wolf, attracted by the bait, ventured out on the split weeds, which broke with his weight and let him fall into the pit, either as he was reaching for the bait or leaving it.

Beaver Killing.

Until their intercourse with the white men had taught them the value of beaver, they did not attempt to trap these animals. At the same time they killed some, and had dogs trained to hunt them. When a beaver dam and house were found, it was the practice to break away the dam so as to let out the water, and then to find the hole where the beaver usually went in. The dogs which were small enough to enter this hole, and yet were pretty good-sized animals, went into the hole, found the beaver, and worried it until it became so angry that it followed the dog out. As the dog gradually backed away, barking at the beaver, it made short rushes at him, and finally the dog backed clear out of the hole, and the beaver jumped out after the dog. Then the man standing there with a club knocked the beaver on the head. They also shot beaver with arrows, watching for them to swim out; and occasionally they shot otters in the same way. As with other plains tribes, the fur of the otter was valued for bow cases and quiver covering.

A Mysterious Beaver.

In connection with this method of catching the beaver a mysterious story is told, which runs as follows: A long time ago, a young man found a beaver dam and broke it down. This was quite close to a large camp of Cheyennes, and many people came out to watch what was being done. They found the hole in the lodge where the beavers went in, and it was a very large hole. One young man said to the others, "I will crawl in there and see if I can find the beaver myself." He did so, and went quite a long way into the house, feeling as he went. Pretty soon he took hold of something that was alive. He thought it was a beaver's hindleg, and he called out, "I have got him by the hindleg." By this time many people, men, women and children, stood about on the bank watching.

A woman in the crowd said: "Hold on to him. I will run and get a rope and you can tie it to the leg and we will pull him out." The woman ran to the camp and got a rope made of buffalo hair and it was passed into the hole to the young man, who tied it to the leg and himself came out of the hole. Several men and boys took hold of the rope and began to pull on the beaver, but it seemed heavy. They could hardly pull it out. They kept pulling and pulling and presently there appeared at the hole a man's foot. Soon the whole of a person appeared sitting up and hitching himself along as he was pulled. It was an old man with long, white hair—an Indian.

Just as he came in sight the rope slipped off his foot and the people, who were frightened at what they saw, all ran away. Only the young man remained. He stood there doing up the rope, and when he had coiled it up he hung it on the limb of a tree, and then he ran away too. No one ever went back there again. They were afraid of the place. They often used to talk of this and the people thought that this was a medicine beaver who had changed himself into a man, to keep the Cheyennes from killing him.

Eagle Catching.

With the Cheyennes, as with other plains tribes, the feathers from the tail of the eagle are highly valued, and many men devoted themselves to catching the birds at the proper season of the year. This, however, cannot be done by every one, for the eagle catchers are regarded as rather powerful medicine men, and they alone can make the eagle medicine. A common man cannot do it.

One who is about to go out and catch eagles makes his medicine alone in his lodge. When he is about to do this the lodge is cleared out and the floor is covered—not very thickly—with white sage, the stems pointing away from the fire. While the eagle catcher is making his medicine, the fire is burning brightly and he sings all one night alone in the lodge.

After he has made the medicine, he goes away from the camp, telling no one where he is going. In a suitable place on a hill he digs a pit large enough for a man to sit in with outstretched legs, but not long enough for him to lie down in. He carries the dirt from this pit far away and scatters it. This hole, which is not wide, he covers by laying across it a pole, to which he ties long grass, which hangs over on each side and conceals the hole. Spaces through which he can look are left in this grass.

The bait is a fresh wolfskin, to which a piece of the meat is attached. This is laid loosely across the pole, flesh side up.

When all is ready, in the night he goes to this place and goes into the hole. With him he takes a small rope made of buffalo hair. This is used to put over the eagle's head to choke it with. The man sits in this hole and waits for the eagles to come. Perhaps a bird that flies over sees the skin and keeps circling about it, getting lower and lower, flying over and looking at it, and at length it alights on it. When it alights the man hears its feet strike, and while the eagle is picking at the bait, the man reaches out very slowly through the grass and seizes the bird by the feet. He pulls it into the pit, slips the noose of the rope over its head and chokes it until it is dead. Men have been known to catch as many as twenty eagles in one of these pits. Some days they have been known to catch two in one day.

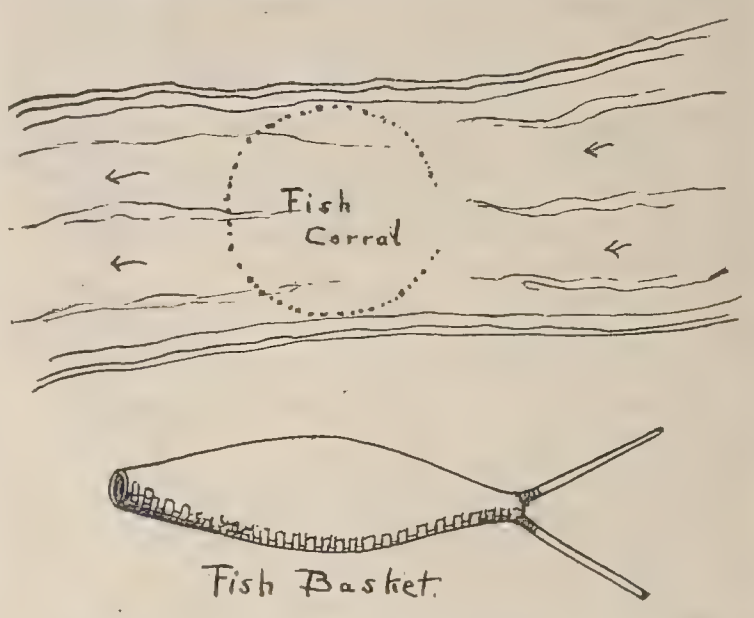
Every night the man takes his eagles home to his camp. Here he has two forked poles set up in the ground, close to his lodge. In the forks of these poles lie two slender poles, like lodge poles. At one end these are tied together, and at the other they are loose. When the man brings home an eagle he slips its foot between these two poles at their loose ends, and then brings the ends together and slides the foot along until it is firmly held. There he leaves it hanging.

A man would catch birds until he had as many as he wanted and then he would stop. After this, he would begin to pluck the feathers from the birds, taking those from the tails and from the wings. He puts the feathers away, takes the bodies and carries them off a long way from camp and places them on the ground side by side in a row and leaves them there. The feathers he gives to the people. He gives them, and the people who receive them give him something back, perhaps it may be a horse for twenty or thirty feathers. The man may go out of the pit at any time, but he cannot enter it except at night, when it is dark. Four kinds of eagles are known, the eagle that has a white head and the gray one that is its young, and the war eagle and its young.

Fish Catching.

The Cheyennes used sometimes to catch fish, and in this they were quite unlike some of their neighbors on the plains. It may be conjectured that their fondness for fish, and the methods used in taking them, were brought by the people from their earlier eastern home. There is a tradition describing the earliest fish catching practice which may be given. It treats of a period long, long ago but after the people had obtained bows and arrows. This is the way the story runs:

A long time ago a man and his wife were traveling out away from the main camp all alone, and they had nothing to eat. The woman dug roots and picked berries when she could find any, and the man hunted hard and tried to kill food, either game or little birds, but they were almost starved, for nothing to eat could be found. They were camped by a little stream, and one day as the man was walking along the bank he saw something dart through the water. He looked again and there he saw fish, many little ones, and some were big, half as long as his arm. He went back to his camp and spoke to his wife about this, telling her and the children that he had seen fish in the stream. He said, "If we could catch some of these fish then we would have something to eat."



He thought a great deal about this, and at last he made up his mind what he would do. He went a little way from the camp to where many willow bushes grew, and cut a great many small, slender shoots, and brought them back to the camp. Then he and his wife tied these sticks close together, to make something like a back rest, long enough to reach across the stream, which was only two or three steps wide, and about half a step wide. Then he said to his wife, "Come, now, take one end of this and we will go to the stream." When they had got there he said to her, "Now, let us put the edge of this into the water so that it reaches the bottom, and then we will drag it slowly up the creek. The water is shallow, and if any fish come against it we will try to catch them."

As they went along they watched for fish, and if one got against the willows near the woman, she would reach over very slowly and grasp it and throw it out on the bank. If one got against the willows on the man's side he would do the same. In this way they caught many fish—all they wanted. They pulled this net out of the water and the man said "Ah! in this way we can live. We can catch fish. We will save this and keep it." They picked up their fish and went to camp.

In more modern times they caught fish in a pomador corral made of willow saplings. Such a corral was built by the direction and under the charge of a medicine man, who during the night, when the fish were expected to enter it, stayed all night in his lodge without going out. His face was painted red and he had his robe drawn up over his head so that he was covered tight. All night he sat alone in his lodge not singing, silent. The people who built the corral took willow saplings as thick as a man's wrist, drove them into the ground in the stream bed and fastened them together by strips of rawhide. The saplings were set as close together as possible in a circle, an opening or gate being left on the upstream side. The corral was ready for the reception of the fish in the evening. Pieces of meat were laid in the water at the back of the corral to serve as a bait.

A special man was appointed to watch this trap. While it was building he took willow twigs and from them wove a sort of basket about 18in. in diameter, oval in form, and with a hole about 6in. in diameter in one end. To the end were fastened two short willow sticks, which served as handles for the basket.

In the morning, after daylight, the man appointed to watch this trap went down to it to see if any fish were in

it. He looked about its walls to find a place where he could work his hand and arm in between the willow saplings, so as to feel whether there are any fish inside. If he felt that fish were there, he called the people to come, telling them that there were plenty of fish. Then taking the basket, he went to the lower part of the corral, squeezed the saplings apart, so as to leave an open space, against which he puts the opening of the basket. The fish began to come out through the opening in the walls and to pass into the basket. From that the man took them in his hands and threw them out on the bank to the people. As long as he could get fish he kept throwing them out on the bank. Sometimes he might be at it all day long.

Sometimes the fish that were in the trap got frightened and swam out at the up-stream opening, but this did not often take place. This trap has been used certainly within the past forty or fifty years to capture suckers and whitefish in the Laramie River. GEO. BIRD GRINNELL.

THE CHESTNUT RIDGE.

And Along Its Foot.—VIII.

THE canal extending through the valley of the Conemaugh, to which I have more than once alluded in the course of these sketches, was a link in the great chain of public improvements made by the State of Pennsylvania in the early '30's. It extended from Pittsburg eastward along the banks of the Allegheny, Kiskiminetas, and Conemaugh rivers to the foot of the mountains at Johnstown. Here the once famous Allegheny Portage railroad continued the chain across the mountains to Hollidaysburg, whence the canal again stretched on eastward.

The Portage railroad was one of the earliest and most important railroads in this country. It was regarded for many years as a miracle of engineering skill. Its length was about twenty-six miles, and it consisted of alternating levels and inclined planes. Along the levels the cars were drawn by horses or by locomotives. These levels, as they were called, were by no means horizontally level, having generally a grade of 10 or 15ft. to the mile, while the first one west of Hollidaysburg had a grade of 52ft. to the mile. The inclined planes were ten in number, five on each side of the summit, the longest one being 3,117ft. in length, with a rise of about 307ft. and the shortest 1,480ft. long with a rise of 130ft. The cars were raised and lowered by means of stationary engines at the head of each plane, which operated endless ropes to which the trains were attached. Four cars, each carrying a burden of 7,000lbs, could be raised and an equal number lowered at the same time. These facts I obtain from Trego's "Geography of Pennsylvania," 1843.

There were two classes of boats on the canal: what were called 'big boats" and "section boats." The latter were built in sections, with separate bulkheads, which could be detached from each other. These sections at Johnstown and Hollidaysburg could be floated individually upon trucks constructed for the purpose, which were run down a submerged track. In this way the boat was formed into a railway train and carried across the mountains, where it was again launched upon the canal. The packets for transporting passengers belonged to the class of big boats, and could not proceed farther than to the foot of the mountains. The passengers were transferred by rail from one side of the mountains to the other.

In the year 1842, Charles Dickens, the great English novelist, visited the United States, and in the course of his peregrinations he passed from Harrisburg to Pittsburg over the canal and the Portage railroad. As all English tourists in those days did, he published a volume of travels on his return to England, and in conformity with the spirit of most of his countrymen, he made out to form, or at least to express a disparaging or contemptuous opinion of America. He was greatly lionized by our people, and in return he condemned them with "faint praise," or none. No book of travels could be more unsatisfactory or disappointing than Dickens' "American Notes." He was received by our most eminent people with the greatest respect and kindness, and I believe he has not condescended to do so much as name one of them. He visited the United States Senate chamber, where sat such men as Daniel Webster, Henry Clay, and John C. Calhoun, but he does not mention them. The most salient remark he makes apropos to this visit is this: 'I will only observe, that I strongly recommend all strangers not to look at the floor; and if they drop anything, though it be their purse, not to pick it up with an ungloved hand on any account." He was presented by "an official gentleman" to the President, but he does not think it worth while to name

either the one or the other. Of all the places along the line from Harrisburg to Pittsburg he does not name one, or even mention by its name the great State through which he was passing.

He speaks, though, of the pleasure he enjoyed by the way. "The fast, brisk walk upon the towing-path, when every vein and artery seemed to tingle with health; the exquisite beauty of the opening day; the lazy motion of the boat, when one lay idly on the deck, looking through rather than at the deep blue sky; the gliding on at night so noiselessly, past frowning hills sullen with dark trees; the shining out of the bright stars, undisturbed by noise of wheels or steam, or any other sound than the liquid rippling of the water as the boat went on—all these were pure delights." He speaks also of passing the new settlements and detached log cabins and frame houses; cabins with simple ovens, outside, made of clay; and lodgings for the pigs nearly as good as many of the human quarters; broken windows patched with worn-out hats and old clothes, and home-made dressers standing in the open air, whereon was displayed the household store of earthen pots and jars. "Sometimes at night," he says, "the way wound through some lonely gorge, like a mountain pass in Scotland, shining and coldly glittering in the light of the moon, and so closed in by high, steep hills all around, that there seemed no egress save through the narrower paths by which we had come, until one rugged hillside seemed to open, and, shutting out the moonlight as we passed into its gloomy throat, wrapped our new course in shade and darkness." There is plenty of this truly Dickensian gush all through the book, though there is a strange want of definiteness about everything. This last bit of word-painting of his could only apply to that part of the canal that lies in the gorge of the Laurel Hill and Chestnut Ridge; and, as it happened, he passed through these gorges in the early part of the night, and no doubt his description is true enough to nature.

It was on March 27 that Dickens arrived in Johnstown, over the Portage railroad. About the only incident of his trip that he has related took place here, though, as usual, he does not name the town. There were two lines of packets, the Express and the Pioneer, lying in readiness to receive the passengers from the East. The Pioneer was the cheaper and likely the inferior line. The first-class passengers were designed for the Express; but at Johnstown an attempt was made to put all alike into the first-class boat. This was highly resented, at least by one of the passengers, the "brown forester" of the Mississippi. "This may be all very well with Down-easters and men of Boston raising," said he, "but it won't suit my figure no how; and no two ways about that; and so I tell you. Now, I'm from the brown forests of the Mississippi, I am, and when the sun shines on me it does shine—a little. No. I am a brown forester, I am. I ain't a Johnny Cake. There are no smooth-skins where I live. We're rough men there. Rather. If Down-easters and men of Boston training like this, I'm glad of it; but I'm none of that raising nor of that breed."

It was a beautiful Sunday afternoon that Dickens was in Johnstown, and the whole population turned out to see him. Among them was my old friend, the late Judge Potts of Johnstown, who described Dickens to me as a dapper, well-dressed, dandified young fellow, who, while the brown forester was thus objurgating the boat people, walked about the deck, and evidently appreciated the humor of the situation.

The scenery along the line of the old Pennsylvania canal between Johnstown and Pittsburg well deserved the best word that even Charles Dickens could say of it. Gliding along the foot of the hills, whose wooded summits reflected themselves in the broad mirror-like expanses of the slack-water pools below; then by an attenuated channel through cultivated fields and quiet pastures where cattle were grazing, and by smiling farmsteads, where the white houses peered through the orchard trees; and on past thriving towns and villages, the canal boat, the Marathon, the Hector, the Victory, or whatever name it bore, glorious in all the pride of white and red paint, passed like a vision, and so onward to the haven where it would be. It was the day of small things, and the passenger between Pittsburg and Philadelphia was relatively as far-traveled a man as he who now goes from St. Louis to Boston. It was a matter of great boasting when the passage between the former two cities could be accomplished in three and a half days.

At the end of his canal trip, at Pittsburg, Dickens says that in the bustle and turmoil of getting the baggage ashore in the dark, he stumbled over the brown forester; who was sitting on the cabin stairs smoking a cigar, and muttering to himself, with a short laugh of defiance: "I ain't a Johnny Cake, I ain't. I'm from the brown forests of the Mississippi, I am"; from which Dickens was led to infer that he had never left off saying so, though he could not make affidavit to that part of the story. T. J. CHAPMAN.

PITTSBURG, Pa.

FOLK LORE AND FACT.

DOUBTLESS most persons who have been interested in folk lore and been pleased at the care which has been bestowed in late years upon its study, have been inclined to think the results valuable chiefly as a study of the working of the imagination of primitive peoples or primitive stages of society. Many a tale is thought to be purely and solely an invention, or at best with but the slightest and vaguest foundation in anything veritable. There has recently come to me with force a reason why much of folk lore and tradition may have a nearer relation to history than has been supposed.

I have long felt a strong desire that my children should not only have the same pleasures that I had in my childhood, but, especially that they should hear and enjoy the same stories that were told to me.

For a long time I did not reflect upon this, but carefully recounted to my children certain stories with which my father and my uncle charmed me when a boy. These included a great variety of things, pithy proverbs and wise sayings, stories of the adventures of some of my ancestors who were soldiers in the Revolutionary War, encounters with wild animals in the days of the early settlement of New Hampshire, my native State, bits of songs current in the early time, etc., etc. These proved to my children interesting, not only as I think because of the nature of the stories themselves but because they "belonged to the family."

I often found myself telling them that if they should grow up and have any little boys and girls to tell stories to, they must remember to tell them these same stories. I found myself very anxious to take my children to my birthplace, to show them the very rocks on which I had played, the brooks and ponds in which I had fished, the hills and mountains which I knew so well, and when this was for the first time possible, I experienced a deep and subtle joy in hearing my own little girl refer to these places in her own familiar way as of right belonging to her experience as well as mine.

Lately I have reflected on this experience and reasoned about it as follows: If this desire to have my children share in their turn the very experiences that I once enjoyed is so innate in me and strong, despite the fact that the modern world and particular environment into which they are born is far richer than my childhood was in actual marvel and complexity, is it not altogether likely that I but share in this what is common to mankind?

And if it is true that man has generally felt this desire, is it not certain that he would feel it with especial force in the case of those stories and traditions connected with what he deems needful for the wise guidance of his children? Will not this principle account not only for the marvelous transmission, in jealously preserved accuracy of form for generations, of rituals and ceremonials such as those of the wise men and priests of the Zunis, but the great literary works like the poems of Homer?

Would not the care spent upon faithfulness and accuracy in the transmission be almost proportional to the lack of any other means of transmission than the oral?

Doubtless this has all been thought out and properly estimated by the experts in these matters, but my own discovery of myself as a careful transmitter of my own experiences and my received traditions has so interested me, that I hope this note may suggest reflections from others, which they will be willing to give to me and others in the columns of FOREST AND STREAM.

Surely men like Geo. Bird Grinnell, and many others who have studied the Indian with special reference to such matters, will understand my wish and will respond. C. H. AMES.

Natural History.

COON INSTINCT.

Editor Forest and Stream:

I was greatly interested in Mr. R. L. Warner's "Notes" in to-day's issue of FOREST AND STREAM, under the above caption, as it gives me an opportunity to say to FOREST AND STREAM what I have long intended doing. My experience with "that same old coon" dates back to more than half a century ago, when I was a lad between ten and fourteen years of age. On my way home from school one early summer day I met a farmer boy with a young coon about the size of a half-grown cat which I purchased for all the ready cash I had on hand—10 cents. The animal was quite tame, and could be handled like a kitten. I carried him home in my arms and put a strap around his neck and attached a chain. Although he would follow readily when loose, he did not propose to be led; and when any force was applied he would throw his head down between his forelegs and place his paws over his eyes, as described by Mr. Warner.

My first experience in letting him climb was up the inside of the woodshed door frame, and he stationed himself above the door. When I proposed to have him come down from his perch by pulling on the chain, he objected to any such arrangement. I finally pulled too hard and he fell to the floor, and you can judge of my surprise to find that he was not killed, but I was astonished when I saw both his eyes protruding from their sockets; my younger brother, who in after years became a surgeon, proposed that I push them back. I did so with my thumb, and that coon went about his business as if nothing had happened.

I kept him for two and a half years until he met with a more serious accident. At the time I got him we had a large white dog, a mongrel of bull, and half a dozen of other dogs in town, and he was the best coon dog in the county. We had to keep "coony" away from him at first, but they finally got to be good friends and played together like two dogs. When a year or more old he was the largest coon I ever saw, and sometimes while playing with the dog he would play a little too rough and the old dog would give him a shaking and drop him; when the coon would make for his kennel, and the dog would lie down and take a nap. But the coon had his eyes on him, and when he thought the dog had forgotten him he would creep up to him with his ears laid back and pounce upon him, and they would go to playing again as if nothing had happened and repeat the performance until the dog would retire beyond the reach of the coon.

They often followed us in the woods together, and sometimes we would take only the coon, which would follow all right until we came to a brook that crossed the wood-road, when he would stop and look for frogs. At such times we would go ahead and get behind trees and let him find us; we would hear him coming, making the peculiar purring noise of the coon that I can only liken to that of the tree-toad.

My father smoked a pipe, and when it had burned out he would hold it down to the coon to clean out the ashes while they were still hot, and they would burn his fingers, when he would rub them on the ground and put them back in the pipe. He would take plums and apples from our pockets as handily a child. Given anything hard and round, that he would not eat, he would roll it between his paws, and at the same time would be looking around as unconcerned as if he did not know anything about it.

He was very mischievous, and we had to make sure that he was shut up nights, as sometimes he would manage to get the chain loose from the strap, and if he could not get into the house he would go to the barn for the hens, and that is what caused his downfall. It was near Thanksgiving time, when we had had him about two years and a half, that he got loose one night, and started out for his Thanksgiving dinner; and instead of getting it at home, he went to the upper part of the village, where he was not well acquainted with the man on whose hen-house he proposed to forage. The owner, hearing the hens, hastily dressed and went out to see what caused the commotion. As the man was very small (weighing less than 100lbs.), the coon probably mistook him for a good-sized rooster, left the hens, and started for him. The man retreated into the house; when next he appeared before that coon he had his old musket loaded for bear. Mr. Coon was brought up among guns, and knew they were dangerous, and he did not propose to expose himself, but was content to put his nose through a knot-hole in the board and watch the enemy; but the gun got onto him, and when I saw him the next day I did not recognize that nose; it looked as if it had been too inquisitive as to the working of a threshing machine.

If Mr. Warner can get any satisfaction from this screed about "Coon Instinct," I shall be more than pleased. Will Mr. Warner kindly explain why the instinct to hibernate did not develop in this coon?

J. L. DAVISON.

LOCKPORT, Oct. 30.

BARNYARD PLUMAGE.

CHARLESTOWN, N. H., Oct. 19.—*Editor Forest and Stream:* Is it ever allowable to "laugh in meeting"? I feel very much inclined to do so, but yet do not want to hurt anybody's feelings by the expression of my risible propensities. The fact is, that I have been laughing to myself for a fortnight over a letter from one of your correspondents, in which he suggests the improvement of the breed of barnyard fowls, so as to raise "egrets'" crests on them, and thus prevent the slaughter of the herons.

Now I should as soon think of growing a horse's tail on a muskrat as of trying to raise the real plumage of an aquatic fowl on the tail of one of the *Gallinaceæ!* Your correspondent truly says that great changes have been produced by selection and careful breeding, and speaks of some bird on which tail feathers 28ft. long have been grown! Does he not mean *inches?* and are not such plumes the natural growth of some of the "birds of Paradise" of the Eastern Archipelago, and not the result of cultivation?

It is perfectly true that great changes in the plumage of the barnyard fowl and the pigeon have been produced by selective breeding, but they remain barnyard fowls and pigeons all the same; and I know of no changes in the characteristic plumage of the races, or the transference of that of an entirely different genus from its original position on the head to a new one on the tail of the product of the experiment! Perhaps your correspondent might raise a Manhattan cocktail in some way, but I doubt his getting an egret's crest!

What struck me as the most ludicrous part of the letter was the announcement that "the discovery that silk would felt had saved the beaver."

Now, as your correspondent dates from Fifth avenue, he probably wears a Dunlap hat, and if he will ask any of the salesmen in the hat store, they can tell him that there is no felting process in the manufacture of a silk hat!

The long-napped silk plush, woven for the purpose, is cut to the proper shape and then cemented with shellac on to a pasteboard "shape" or foundation. Rain may spot and tangle it, so that it requires to be pressed over, but there is no felting about it, such as is produced by the constant rubbing, while wet, of all fabrics produced from wool or fur, due to the imbricated or scaly character of the natural fibers, which work into and interlock with each other, and which formed not only the nap but the body of the old-fashioned beaver hats or their more common muskrat imitations. Silk has none of these scales and will not felt at all, though it will snarl awfully, as every fly tier has probably experienced.

VON W.

MILLER ON SOME BATS.

BY the common people the bat has always been regarded as a mysterious and uncanny creature, neither bird nor quadruped, but a mixture of the two. Most naturalists even, until recently, have known but little about these mammals, whose habits are such as to make them more or less difficult of collection, and the study of their life histories especially difficult.

In No. 13 of the "North American Fauna," issued by the Biological Survey of the Department of Agriculture under the direction of Dr. C. Hart Merriam, Mr. Garrett S. Miller, Jr., has given us a valuable paper; entitled "Revision of North American Bats of the Family Vespertilionidæ," in which forty-six species are described, and in many cases illustrated by figures of skulls, teeth and ears.

While a considerable mass of facts concerning the distribution and comparative anatomy of members of this family have already been published, the species which represent this group in North America have not up to this time been treated from the standpoint of the systematic zoölogist, and it has been hitherto practically impossible for any one not acquainted with the literature of North American bats to identify specimens. Mr. Miller's paper is intended to supply this want. He has had access to a great mass of material, numbering nearly 6,000 specimens, of which perhaps one-half were alcoholic. These last are in some respects unsatisfactory, since it is learned that bats which have been kept in alcohol for any length of time change their color more or less, the tendency being toward a gradual bleaching, and perhaps even an ultimate entire loss of color. In the group studied, the range of sexual variation is very slight and often scarcely noticeable. Where it is seen, however, the female is slightly the larger of the two. No constant sexual differences in color have been observed among these bats.

There seems to be remarkably little geographical variation in size, proportions or color; specimens from Pensylvania, Virginia and the extreme southern point of Texas agreeing almost as closely as three specimens from the same locality. Mr. Miller suggests as an explanation of this uniformity, the habits of bats, which throughout the warmer part in the day live in cool, dark, and for the most part damp, places, and are thus exposed to comparatively little variation in temperature.

An interesting point mentioned by Mr. Miller and little known to the general public is that many bats migrate regularly. In 1888, Dr. C. Hart Merriam published evidence which showed that two American bats perform regular periodical migrations. In August and September, 1890 and 1891, Mr. Miller observed the appearance and disappearance of three species of bats at Highland Light, Cape Cod, Mass. The animals were not to be found during the early summer, but suddenly became numerous shortly after the middle of August, remained abundant for about a month, and then suddenly disappeared. This occurred on the two successive years named, and indicates that the migrations of bats are definite as to dates and paths.

More than twenty-five pages of this work are given up to the consideration of the generic, subgeneric, specific and subspecific names of these bats, and authorities are quoted at length. Lists of the American *Vespertilionidæ*, with the names used by different authors at different

times during the last thirty years, and the type localities are given for each species and subspecies are given, and then follows a technical description of the species. Three plates are given, one of ears, one of feet and one of wings, of the different species.

The work cannot fail to be of great value to the naturalists, but it is too technical to have more than a general interest for the popular reader.

AMERICAN ORNITHOLOGISTS' UNION.

AT the hour of going to press, the fifteenth Annual Congress of the American Ornithologists' Union is being held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, New York The public sessions of the Union will occupy Tuesday, Wednesday and Thursday of this week.

Monday was largely devoted to a meeting of the Council of the Union, and in the evening the business meeting of the active members was held in the board room at the Museum. At this meeting there were present Dr. C. H. Merriam, Dr. J. A. Allen, Dr. Elliott Coues, D. G. Elliot, L. S. Foster, Witmer Stone, Eugene P. Bicknell, Dr. A. K. Fisher, Dr. T. S. Roberts, Dr. Jonathan Dwight, Jr., Dr. George Bird Grinnell, Charles F. Bachelder, Ruthven Deane, E. W. Nelson, Walter B. Faxon, Frank M. Chapman, William Dutcher and John H. Sage.

The following officers were elected for the ensuing year: President, William Brewster; Vice-Presidents, Dr. C. Hart Merriam and Robert Ridgway; Secretary, John H. Sage; Treasurer, William Dutcher. Mr. Ruthven Deane was added to the council. One active member, Mr. C. W. Richmond, and a considerable number of associate members were elected, but no honorary or corresponding members.

The first public session opened in the library of the museum shortly after 11 o'clock on Tuesday morning. Mr. Sylvester D. Judd read an interesting paper on the "Protective Adaptations of Insects from an Ornithological Point of View." The gist of his argument was that whereas writers on protective adaptation have asserted that insects protected either by color or in other ways were not commonly eaten by birds, the investigations of stomachs of American birds by the Biological Survey has shown that many insects supposed to be most completely protected are very largely eaten by our birds. Interesting remarks were made on this paper by Dr. Allen, Dr. Fisher and Dr. Merriam. At the close of the discussion Mr. D. G. Elliot was called on to read a memorial paper on Charles Emil Bendire, written by Dr. J. C. Merrill, of Washington, who was unavoidably absent.

While the sessions of the Union are to be held during the day, Mr. D G. Elliot will give an illustrated lecture in the lecture hall of the Museum, on Wednesday at 8 P. M., on A Naturalist's Expedition to East Africa.

The session of Tuesday was remarkably well attended, and the interest in it seemed great.

Linnæan Society of New York.

A REGULAR meeting of the society will be held in the American Museum of Natural History, on Tuesday evening, Nov. 23, at 8 o'clock. Edwin I Haines will read a paper on "The nesting of Brünnich's Murre (*Uria lomvia*) at New Rochelle, N. Y."

Ernest Ingersoll: "Birds' Eggs from an Evolutionist's Point of View."

Ernest Seton Thompson: "The Mammals and Summer Birds of the Yellowstone National Park."

WALTER W. GRANGER, Secretary.

AMERICAN MUSEUM OF NATURAL HISTORY.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

GAME SALE DECISION.

COURT OF APPEALS, DISTRICT OF COLUMBIA.

Charles H. Javins, John F. Javins and Frank H Javins, otherwise called Francis H. Javins, appellants, vs. The United States. } No. 707.

THE appellants in this case were indicted as Charles H. Javins, John F. Javins and Frank H. Javins, otherwise called Francis H. Javins, all of the District of Columbia, for that, *on the 16th day of March*, 1897, they had *in their possession*, and exposed to sale, six dead partridges, otherwise called quail, against the form of the statute, etc.

The presentment or indictment was found under Section 1, of the act of Congress of June 15, 1878, Chapter 213, entitled "An Act for the preservation of game and protection of birds in the District of Columbia." The appellants pleaded the general issue of not guilty; and upon the evidence, and under the instructions of the court, the jury found the appellants guilty, and the court thereupon imposed the penalty prescribed by the statute. It is from that judgment that this appeal is taken.

Section 1 of the act under which the indictment was found provides, "That no person shall kill or expose for sale, or *have in either his or her possession, either dead or alive*, any partridge, otherwise quail, between the 1st day of February and the 1st day of November, under a penalty of five dollars for each bird so killed or *in possession*."

The Government proved that the appellants, as partners and dealers in game and fish at the Center Market, in the city of Washington, had, on March 16, 1897, in possession, at their place of business, and exposed for sale, one partridge, otherwise quail; and thereupon rested its case. The appellants then gave evidence to prove that the partridges, otherwise quail, were shipped to them with other quail *in regular course of trade* from Illinois or Missouri, a few days prior to the 16th day of March, 1897, and were not killed in the District of Columbia; and the appellants thereupon rested their case. And no other evidence being offered by either side, the appellants severally prayed the court to instruct the jury—

First—"That if the birds found in the possession of the defendants were not killed, entrapped or taken in the District of Columbia, then they should render a verdict for the defendants;

Second—"That if the bird offered for sale, or found in the possession of the defendants, was not killed, entrapped or taken in the District of Columbia, but was shipped to the defendants from without said District, they should render a verdict for the defendants;

Third—"That unless the jury should find beyond a reasonable doubt that the birds in question were killed in the District of Columbia, the defendants should be acquitted."

The court refused these prayers for instruction, and directed the jury that the evidence offered by the defendants was immaterial, and constituted no defense to the indictment. To which ruling the appellants excepted; and the verdict and judgment being against them, they have appealed.

It being conceded that the birds were taken or killed beyond the limits of this District, the question is, whether the parties having them in possession in this District for sale, have incurred the penalty prescribed by the statute.

The fact that the birds were taken or killed in one of the States of the Union and brought into this District for sale, in the regular course of trade, does not furnish the possessors of such game birds immunity from the penalty prescribed by the statute, upon any principle of interstate commerce involved. Greer vs. Connecticut, 161 U. S. 519. Congress, under the Constitution, possessing plenary legislative power over this District, may pass laws for the full and complete protection and preservation of all game birds or other animals *ferœ naturæ* therein; and whatever may be the natural right of man in such wild creatures when captured and reduced to possession, such right may be restrained by positive laws enacted for reasons of State or for the supposed benefit of the community. 2 Bl. Com. 410; Greer vs. Connecticut, *supra*. All civilized nations, from the earliest time, have enacted and enforced game laws, for the protection of game in which there was a common right against wasteful and indiscriminate destruction. Laws of this character, of more or less strictness, are found upon the statute books of England, and of most, if not all, of the States of this Union; and at no time has there been greater need of such laws, and their enforcement, than at the present time; for it is a known fact that our game and insectivorous birds are being rapidly exterminated. In order to prevent evasion of the law, and as a certain means of accomplishing the desired end, many of the game laws make it a substantive offense for a party, within the time and territory prescribed, to have in his possession, either dead or alive, any of the birds or animals sought to be protected. Otherwise the difficulty of proving the time and place of taking or killing such game would effectually defeat the operation of the law. Indeed, in a small territory, such as this District, it would be impossible to protect the birds, if they could be killed or taken on the exterior border to be brought into the District. The only effectual way of dealing with the subject is to prohibit the possession of the birds within the District, and that is entirely within the power of Congress.

In this case the whole question is one of construction. The terms of the statute are clear and unambiguous. The killing, or offering for sale, of any of the birds specified is prohibited; and also the having in possession, either dead or alive, any partridge, otherwise quail, within this District between the 1st of February and the 1st of November, renders the party liable to a penalty of $5. The contention is, that this provision of the statute does not apply to birds killed or taken beyond the limits of the District of Columbia. But to this contention we cannot assent.

This same contention has been urged in many of the States whose game laws are similar to the one under consideration; and while in some few States the construction would seem to be variant, and give sanction to the contention urged, the decided preponderance of judicial opinion is against such contention. And this would seem to be supported both upon reason and sound policy. Indeed, the Act of Congress under consideration would seem to furnish the key to its own proper construction, if such were needed, by the provision of the fourteenth section, which declares: "That person in killing birds for *scientific purposes*, or *in possession of them for breeding*, shall be exempt from the operation of this act, *by proving affirmatively such purposes; and the possession shall, in all cases, be presumptive evidence of unlawful purpose.*" This exceptional purpose, therefore, is in all cases to be proved by the defendant; and in the absence of such affirmative proof, the presumption *is conclusive* of the unlawful purpose of the possession.

As showing the interpretation of statutes similar to that under consideration, by State courts, we shall refer to a few of those decisions, and which are referred to in Greer vs. Connecticut, *supra*, with apparent approval.

The first of such decisions to which we shall refer is Phelps vs. Racey, 60 N. Y. 10, where the statute declared that no person should expose for sale, or kill, or *have in his possession* after it had been killed, any quail or other game, between the 1st of January and the 20th of October. The defendant was indicted for having quail in his possession in March. He had invented an apparatus to preserve game, and that which he had in his possession, and specified in the indictment, according to his proof, was killed in New York in the open season, or received from Minnesota or Illinois, where the killing at the time was legal, and put up by him in his apparatus in the month of December. This, to say the least of it, was a questionable defense, and such as to justify, upon principle of policy, the entire exclusion of it. It was contended that the statute did not apply to game so received and preserved. But it was held otherwise by the Court of Appeals; and in an opinion of the court, delivered by Church, Chief Justice, it was said: "The language of these sections is plain and unambiguous; hence there is no room for construction. It is a familiar rule that, when the language is clear, courts have no discretion but to adopt the meaning which it imports. The mandate is, that 'any person having in his or her possession' between certain dates, certain specified game killed, shall be liable to a penalty. The time when, or the place where, the game was killed, or when brought within the State, or where from, is not made material by the statute, and we have no power to make it so. * * * That it was either killed within the lawful period, or brought from another State where the killing was lawful, constitutes no defense. The penalty is denounced against the selling or possession after that time, irrespective of the time or place of killing."

The same principle was applied in the construction of the game law of the State of Illinois of 1879, which made it unlawful to sell, or have in possession, quail and certain other game birds, during the close season, and which was not in terms limited to birds taken within the State. In the case of Magner vs. People, 97 Ill. 323, Scholfield, J., in delivering the opinion of the court, said: "We think it is obvious that the prohibition of all possession and sales of such wild fowls or birds during the prohibited seasons would tend to their protection, in excluding the opportunity for the evasion of such law by clandestinely taking them, when secretly killed or captured here, beyond the State, and afterward bringing them into the State for sale, or by other subterfuges and evasions. It is quite true that the mere act of allowing a quail netted in Kansas to be sold here does not injure, or in anywise affect, the game here, but a law which renders all sales and all possessions unlawful will more certainly prevent any possession or any sale of the game within the State than will a law allowing possession or sale here of the game taken in other States. This is but one among many instances to be found in the law where acts, which in and of themselves alone are harmless enough, are condemned because of the facility they otherwise afford for a cover or disguise for the doing of that which is harmful." The same principle and reasoning were adopted and followed in the subsequent case, of the American Express Co. vs. People, 133 Ill. 649, arising under the amended game law of Illinois of 1889.

Similar construction of game laws of like import have been adopted in Ohio in the case of Roth vs. State, 51 Ohio, St. 209, and in Missouri in the cases of State vs. Randolph, 1 Mo. App. 15, and State vs. Farrell, 93 Mo. 176. And in the State of California, in a full and well reasoned opinion by the Supreme Court of that State, in the case of *Ex parte* Maier, 103 Cal. 476, the same construction was fully adopted. In that case it was held that the State, in the exercise of the police power, could prohibit the taking of wild game and any traffic or commerce therein, if deemed necessary for its protection or preservation, or the public good, and to this end could make it criminal for any person to sell, or offer for sale, any of such game, whether killed within or without the State.

It is true, there are several States in which a different construction would seem to prevail, though made of statutes somewhat different in terms from the statute here involved. This appears in Com. vs. Hall, 128 Mass. 410; Com. vs. Wilkinson, 139 Pa. St., 304; State vs. McGuire, 24 Oregon, 366; Dickhaut vs. State (Md.) 37 Atl. Rep. 21. These cases, however, do not appear to be supported by such weight of argument as to countervail and require to be disregarded the cases holding a contrary doctrine.

In this case, as we have said, the words of the statute are plain and unambiguous, and that being so, Congress must be intended to mean what the language employed plainly expresses, and consequently there is no room for construction. The court is not at liberty to read into the statute an exception to the general and unqualified provision, there being no such exception expressed, and where, indeed, by clear implication, such exception is excluded.

The question of the unqualified application of the terms of a game law to game killed beyond the limits of the country enacting the law and brought within the country, arose in the courts of England, and was decided in the case of Whitehead vs. Smithers, 2 Com. Pl. Div. 553. In that case the question was raised upon two acts of Parliament passed for the protection of wildfowl, viz., 35 & 36 Vict. C. 78, and 39 & 40 Vict. C. 29. By Sec. 2 of the first-mentioned act, it was enacted that any person who should kill or take any wild bird, or expose or offer for sale any wild bird recently killed or taken between the 15th of March and the 1st of August, should incur a penalty of 5s., "unless he should prove to the satisfaction of the justice that the bird was bought or received on or before the 15th of March, or of or from some person residing out of the United Kingdom." Under that statute it was an answer to an information if the person charged could prove that the bird which he exposed or offered for sale was bought or received by him of or from some person residing out of the United Kingdom. But that act failed to accomplish the purpose of the Legislature, and deeming it necessary to pass a more stringent and less qualified act, the act of 39 & 40 Vict. was passed; and after reciting that the protection accorded by the preceding act was found to be insufficient, the last act enacted "that any person who shall kill or take, or *shall have in his control or possession*, any wildfowl recently killed or taken, between the 15th of February and the 10th of July, shall, on conviction, forfeit and pay for every such wildfowl so killed, etc., or *so in his possession*, not exceeding £1." In that case, it was urged that, inasmuch as the second act did not in terms repeal the first act, and the second act made no mention of wildfowl killed or transported from beyond the limits of the United Kingdom, the two acts should be read together, and consequently, it having been proved that the plover in question was bought by the defendant of a person residing in Holland, that was an answer to an information under the latter act. But the court held otherwise, and, in the opinion delivered by Lord Chief Justice Coleridge, he said: "It is said that it would be a strong thing for the Legislature of the United Kingdom to interfere with the right of foreigners to kill foreign birds. But it may well be that the true and only mode of protecting British wildfowl from indiscriminate slaughter, as well as of protecting other British interests, is by interfering indirectly with the proceedings of foreign persons. The object is to prevent British wildfowl from being improperly killed and sold under pretense of their being imported from abroad. It has been said that the second statute cannot be held to operate as a repeal of the first, because there is no contrariety or repugnancy in the two acts. The act of 1876, however, refers in terms to the act of 1872, and declares that the protection afforded by it to the wild birds was insufficient, and that it is expedient to provide further for their protection." And this was done, as we have seen, by omitting from the last act the exception contained in the first, allowing birds to be brought into the Kingdom from foreign parts, and prohibiting their possession in the Kingdom during the prescribed period. This was found in England to be the only effectual mode of protecting the birds within the Kingdom; and that mode has been adopted by the act of Congress which we have considered.

It follows that the judgment of the court below must be affirmed; *and it is so ordered. Judgt. affirmed.*

Indorsed; No. 707 Charles H. Javins, John F. Javins & Frank H. Javins vs. the United States. Opinion of Court by Alvey, Ch. Justice. Court of Appeals, District of Columbia. Filed Nov. 1, 1897. Robert Willett, Clerk.

A true copy.

Test: ROBERT WILLETT, Clerk.

A BRACE OF WILD TURKEYS.

I HAVE always had a hankering for a shot at that prince of game birds, a wild turkey, and though I was born in the woods and mountains of central Pennsylvania, and have hunted more or less all my life, and been in at the death of some bears, a good many deer and almost all kinds of small game without number, it never was my good fortune until this fall to kill a wild turkey. Once when I was a boy at home on the farm, a flock of wild turkeys, which have always been very rare in our county, came into the field one fall where I was plowing. I hurried to the house and got our old rifle only to find them gone. I followed the flock quite a distance and succeeded in getting a bead on the old gobbler, and pulled the trigger, when I discovered that the cap was off, and so were my turkeys, which I never saw again.

The genuine American wild turkey is very wild, alert to any danger, wonderfully swift of foot, and a swift, strong flyer, and old hunters have told me that a wild turkey is harder to shoot than a deer. With this knowledge of the character and habits of my game I had very little hopes of getting a shot when, in company with a clerical friend, a school friend of other days, I boarded the train on the evening of Oct. 14 for the mountains of Miflin county, Pa., to hunt for turkeys. We spent the night with some good friends in Newton, Hamilton county, Pa., and the morning of Oct. 15, at daylight, in company with our mutual friend, McDowell, found us on Greenbrier Ridge, which was said to be the home of a large flock of wild turkeys, ready to open the season and try the new Pennsylvania game law. The weather was very warm, the woods very dry and water extremely scarce.

As soon as daylight came, the batteries of the gunners opened. From the top of Jacks Mountain, across the valley o the top of the Greenbrier ridges, there was one constant usilade. Most of the shooting was at squirrels, which were very numerous, and hundreds of them were killed and brought into town that day. I paid no attention to squirrels, for I was hunting turkeys. I had squirrels at home. During the early part of the day I got lost from my companions, and hunted alone. At noon I wended my way to a little farm-house, and got a cup of milk to drink with my lunch. Here I got into the good graces of a farmer boy, who gave me some valuable information as to the probable whereabouts of my turkeys. About 3 o'clock in the afternoon, I had given a flock of grouse a trimming up, and had reached an old road leading down along the mountain, when about 100yds. ahead of me a magnificent gobbler stepped into the road and spied me He was too far away for a shot, and I could only stop and look at him and wish for my rifle, while my gobbler slipped out of sight down the mountain toward a small stream in the valley below. I concluded that the turkeys would hunt the water about that time in the day, and this old gobbler was the advance guard in that direction.

I quietly hurried down the ridge, crossed the creek and secreted myself under a low-spreading pine, where I could see quite a distance both up and down the creek.

Below me, about 60yds., was a patch of green grass and a pool of water, the stream being about dry. I had not been seated more than ten minutes when I heard down the stream to my right: "Quit! quit! quit!" and on turning my head in that direction I discovered about sixteen as fine turkeys as ever greeted the eye of a hunter. The old warrior that I had seen on the road on the mountain had discovered me and had given the alarm, and some of the flock had already sought cover. No time was to be wasted, and springing to my feet I killed the largest gobbler in sight. The flock at once took flight, and stepping from under the pine tree, I killed a young hen before she got out of sight. I hurriedly reloaded my Remington ready for another shot, when I remembered that under the new game law I had killed my limit, "not exceeding two wild turkeys in one day," and I gathered up my game, slung them over my gun and started for town.

I have never made two better shots than on this occasion, and I have never sat down to a nicer dinner than that turkey hen afforded me on the Sunday following.

FRANK G. HARRIS.

CLEARFIELD, Pa., Nov. 1.

IN DUTCHESS COUNTY.

A LINK got loose from our chain last week, and we were off for our annual three days in old Dutchess, the land flowing with milk and honey and—cider. For the white hives dot the yards and hillsides of the farms in every direction, and at no time, day or night, do the roads seem free of wagons with covered milk cans. And apple juice! Where in the wide world is there better, or is it more freely ladled out than with the hospitable farmers of this old borough.

We were met with a hearty welcome by Cousin Will and Cousin Kate, not to forget the other Kate, who prepared the woodcock so well in all its tenderness and perfection. After a very enjoyable supper, of course we wended our way down town to veteran Jim Newman's, the headquarters of the sportsman's fraternity. Jim and his two sons are all lovers of the dog and gun. We had a hearty hand shake from ex-Sheriff Bartlett, who looks well after his sojourn on his Pine Apple Ranch, in Florida; also Mr. Hibbard, cashier of the bank, and a subscriber and ardent believer in FOREST AND STREAM; also the editor of the Amenia *Times*, who gave a good notice later on. They all seemed glad to see us, and we believe they were.

The boys, Jack and Mike Fitzgerald (the latter universally called Switzer, though why, nobody seemed to know), were on hand in the morning with Cute, the black setter, and their team. What luck! Previously, after a day's hunt in the neighborhood, we were accustomed to hire a livery team for more distant covers, but now the boys have a conveyance of their own, and they got it cheap. The parish priest, and a mighty good man he is said to be, wanted to dispose of his horse; it was put up at a raffle, and for a 63-cent ticket the boys won it. They proposed to trade it off for a bicycle, but fortune again favored them, and they got a light wagon and harness at a bargain, and there we were. What larks!

We found the woods very noisy and full of leaves (no rain for weeks) and the birds would not lie for the dog until they had been put up three or four times, but would steal off, or up with a whirr several gunshots off. Jacobstaff, as usual, fell early in the fight. Knowing our frailties we proposed to stick to the wagon, while the boys went around and skirted a swamp at the base of the mountains; and when we heard their guns we were to join them.

It was not long before the reverberations commenced, and we essayed to go over to them, but had a time crossing that swamp, with its bogs, black muck, briers, roots and burrs. But we found the shooters gone on, thinking we were still in the vehicle going down the road.

Back we started, getting part way when their voices again called us, and we tried it again, but still to find them like the *ignis fatuus*, further off. We finally reached them and found they had three nice birds. As there was a bad place to go through and no prospects of birds for a mile or so, we took their game and essayed that confounded swamp again to drive the team down the road and join them. We got along with much labor and divers falls until we struck the brook, now widened to some 8 or 10ft. We tried to jump, and landed up to our knees in the confounded black muck. With much exertion and many hard thoughts we extracted ourselves and went back on the road slush, slump, slump, slush, in our shoes, for the wagon. We finally got with the boys again and had our share of a few shots, adding to our bag.

The next day was a repetition, though not so bad as to swamp, but the leaves were very slippery on the mountain side, and there were a good many ledges and briers and logs and stumps, and the cunning birds often being shot at once in the vale would streak it for the mountain top, and then down to the swamps again—and we got enough of it.

Saturday came off clear and warm, the days had been overcast and somber. "Now, boys, for the bushy tails. You can climb the Empyrean heights (Dutchess county rock-ribbed mountains) for the cunning grouse; we have had enough." We had a good bag to take home anyway. There are not many patches of woods with large timber suitable for squirrels, and we were several days late in the season, the law being up on the 15th, and many of the rodents had been brought to bag by the juvenile sportsmen; but we hoped that some had escaped them. We drove over some six miles from the village and started in a piece of woods that looked good, but not a sign did we see nor a noise hear. It was like a graveyard or a Quaker meeting. We feared the last of the bushy tails had been gathered and that we were left. After getting some distance in the woods we sat down and essayed to finish our morning paper—what was that? a drop from somewhere above on the dry leaves near us. A hasty glance discovered a big gray diligently at work with his breakfast. He was soon bagged. Another one jumped off to our right. After a smart run and a running shot he found his fellow. Another was heard further along, and with careful steps we followed. All was still. Again we essayed to rest and listen. Down a big tree came a gray, followed by a red; we hurriedly fired at the gray while on the ground, but he, though evidently hurt, succeeded in reaching a big tree, running up on the opposite side, of course, and into a hole. We watched that hole for some time, but he didn't show up; but another did, his brother perhaps, from another direction, coming visiting. It took in our hurry the second barrel to get him. At the crack of the gun a big dark-colored fellow jumped from a neighboring tree and up another and into a hole. As he had not been shot at, we thought he would come out soon. He did show his nose, but guess he saw us, for he popped back; and we were about to start again, when along came a red and run up this same tree. And here is where we made one of the mistakes of our sporting life; we knew better, and how we came to be so idiotic as to shoot this pirate just as he was about to enter the home of the dark fellow is a mystery to us. We knew just as our finger touched the trigger that we had made a serious mistake. He would in all probability have routed out the big one, and we might have bagged both. We much dislike the red squirrel, the chickaree, the Ishmael of the woods, the buccaneer of the forests. He lays up nothing, but robs the larder of his larger and more valuable brothers, by whom he is much feared. And again, he robs them of their squirrelhood. Of the twelve squirrels we shot, four of them had been mutilated by the reds. Why they do it we could never really ascertain.

Well, we had a good time and a very pleasant visit, and were just as well satisfied that our thirty odd pounds of game was no larger. It weighed fifty pounds before we could commence distribution. We had enough for friends and ourselves.

H ve now a word to some of your readers. We do not wish to mislead any one in going to Dutchess county with the hope of big or even moderate sport. The game is not plenty and is scattered in different portions of the county. It is hard shooting, especially the grouse, and the game is not easily found except by a native of the place, like the Fitzpatrick boys. They are good fellows, true as the steel of your gun barrels, fair shots, know every patch of game spots in the country around, and if you secure the services of Mike and his setter Cute, he will show you birds, some, at least, and you may kill them if you can. JACOBSTAFF.

NOTES FROM NEW BRUNSWICK.

FREDERICTON, N. B., Nov. 5.—To go into the woods with Henry Braithwaite for your guide is about the surest way to inaugurate a slaughter house that I know of. By this I do not mean the reckless killing of game; on the contrary, Henry never kills any animal needlessly nor allows it to be so killed by others if he can help it. But it is a notable fact, which perhaps cannot easily be duplicated elsewhere, that during all the years that Henry has been acting as guide in this Province, there is no instance of any party that went with him failing to bring out their moose. It is not surprising that scores of people are falling over each other every year to secure his services. On Tuesday last his second party for this season, Bronson Rumsey and George Blenstein, of Buffalo, reached Fredericton after an absence of a little over three weeks. They secured one moose, two caribou and a bear, all of them fine specimens. Henry's next engagement is with Fred. Irland, of Detroit, and his closing trip for the season will be with Dr. Heber Bishop, of Boston.

One of the best sets of antlers secured in New Brunswick this fall is that owned by Mr. W. O. Usher, of Newburyport, Mass. The moose was killed by Mr. Usher on the Tobique. The horns measure 58in. across, the blades averaging 16in. in width.

One of the most genial and popular of Maine sportsmen of the younger generation, Mr. Charles Phair, of Presque Isle, is this fall trying his fortune in New Brunswick. He is hunting in the Little River district with W. H. Allen, and has already secured one fair specimen of a moose. Mr. Phair is waiting for the snow to fall, when he hopes to experiment with his .30-30 on the caribou.

Mr. Harry Kendall, clerk for William Richards, of Boiestown, tracked a large moose last week near Burnt Land Brook, and after a lively fusilade from his repeater succeeded in bringing down the game.

Comedy and tragedy are closely mingled in the chase. A party of moose hunters were camped last week near Willimsburg. They occupied a tent, while the horse belonging to the teamster was stalled in an adjacent hovel. During the night they heard an animal pounding around the tent which they took to be a bull moose. After a very exciting engagement they succeeded in bringing down the animal. It was the horse. A gentleman hunting on the Tobique came suddenly upon what he supposed was a bear. Not requiring any bears in his line of business, he dropped his gun and ran. When he returned with his guide to the spot next morning he found that the animal was a porcupine, which was industriously engaged in eating the stock off his gun.

Caribou are reported very plentiful near Boisetown and Doaktown. A few days ago the entire pepulation of Boiestown turned out to chase a herd of thirty caribou that ran through the village. Last week six caribou were killed near Doaktown by Frank and George Bartlett.

FRANK H. RISTEEN.

Death of Dr. Charles M. Sharp.

ITHACA, N. Y.—In the death of Dr. Charles M. Sharp, of this city; which occurred Nov. 1, the great brotherhood of anglers loses a most faithful and devoted member. Although a comparatively young man—being only forty-two—Dr. Sharp was old in angling experience, and he was never so happy as when tempting the wily bass from its lake-washed retreat or whipping a purling stream for his favorite fish, the brook trout. Dr. Sharp was a happy and studious reader of FOREST AND STREAM, a gentleman sportsman always, and to a charming personality were united those estimable qualities of mind and heart which so conspicuously distinguish the thoroughly manly man—the genial, gentle practitioner of a gentle art.

M. CHILL.

CHICAGO AND THE WEST.

The Champion Market-Hunting Outrage.

CHICAGO, Ill., Nov. 6.—This week I have run across something which I think is about the champion outrage of market-hunting so far as yet recorded. I met Warden Loveday on the street, and he was angry. He pulled out a paper parcel from his pocket and unrolled it, showing me two birds which looked like immature pigeon squabs. They were absolutely featherless excepting a few yellow hairs, and the head and beak were still soft. I could not tell what they were, as they were too small for pigeons, although unquestionably they had the look of the pigeon about the head and beak. I told Mr. Loveday that they were a puzzle to me, and he explained to me that they were the immature squabs of the mourning dove!

Warden Loveday was so angry that he could hardly speak. "I have just got these things out of a box of game which I seized this morning," he said, finally. "It was Illinois game shipped to South Water street here, and of course no Illinois game can be sold at any time of the year. I found these two things in the box. They are young mourning doves, actually taken from the nest for shipment to market. Of course, they could not fly one foot, for they have not a feather on their bodies. This box was shipped to M. George & Co., commission men of Chicago. Besides these two baby doves, the box had in it nine rabbits, two opossums, two squirrels, one hell diver, and sixteen quail, all of the quail cheepers and hardly able to fly. Neither the quail, the doves nor the hell-diver would be fit to eat. You can see what a market-hunter will do. I would rather not tell you the name or place of shipment of this game, as I am going down there at once to try the case. If I don't put this fiend through to the full extent of the law, I hope I may never try another."

These squab doves were probably taken from some nest at a point lower down in the State. The mourning dove, like the domestic pigeon, breeds as late as the weather will permit, and this has been an unusually warm fall, no cold weather, indeed, having been recorded up to this time in Illinois.

Warden Loveday also seized this week two cases purporting to contain eggs, shipped from an Illinois town. When opened, the case purported to contain not eggs but rabbits. Each case had a layer of rabbits at top and bottom. But between these layers of rabbits there rested in each box fifteen nice, fat and illegal prairie chickens. The calling of the market hunter and of the game dealer is truly an honorable and manly one!

The Indians and the Game.

The war between the Utes and the wardens has ended. I regret to see that we are shy a few more instances of the white man's valor. At first the candid newspaper reports gave it out that two or three bold wardens had attacked a camp of forty or fifty Utes. Now it appears to be the cold truth, officially stated, that about twenty-five wardens attacked four Indians, and among others shot a woman. Capt. Wright was sent out by Gen. Otis with the U. S. troops to take the Indians back to their reservations, and Gen. Otis has officially closed the matter in his despatch to the War D partment, which latter is a copy of the despatch sent in by Capt. Wright:

RANCH, Utah, Oct. 28.—Have just met party of about seventy-five Indians returning to the agency, including one wounded Indian. Ungulschem Star, one of the survivors, stated that about twenty-five wardens rode up to them while in camp, and, after stating that they were game wardens, tried to arrest the Indians. The Indians resisted arrest and the game wardens opened fire. Four bucks only in the Indian party. The Indians did not return the fire, as their guns were in their tent. The survivors escaped under fire. Doctor says wound in squaw's head is not dangerous. Squaw wild, wounded in arm, is not examined yet. Indians coming in all directions. Game wardens are in Lily Park.

General Otis says that reports of Indian depredations have come in from Meeker and Rifle, Colorado. I infer that there may possibly still be a little corn and hay which can be had by the U. S Government for a consideration. Meantime, it is to be hoped that the Indians understand perfectly the white man's way of doing business. What the Utes need, as I have said, is a private press agent more than anything else.

Of course, the straight law of the matter is this, as has been laid down in regard to the Minnesota Indians, and as the United States Supreme Court has laid it down earlier in the case of the Bannock Indians: No Indian can have hunting privileges, while he is off his reservation, which shall be greater than those accorded to a white man under the laws of the State in which his hunting is done. The subversion of law in this case is that in one week half a dozen Indians have been shot instead of being arrested by wardens, a number greater than the total of white men shot in resisting arrest by wardens in the whole country for half a dozen years. Of course, the Indian goes for his gun quicker than the white man in such a case, but perhaps this is because he thinks he is right in doing so, and believes that he is defending himself against aggression. It is a principle of the common law that a man must be charged before he can be tried, and he must be notified before he can be arrested. If a man should suddenly come upon me and pull a gun upon me without further explanation, when I was not conscious of having done anything wrong, I might in my innocence feel like going after my own gun as soon as I got a chance. One of the most useful things that a warden of Colorado could do would be to produce some credible proof that these Indians knew that they were doing wrong, knew that there was a law above them, and knew that that law had served its warning process upon them. Outside of this, it is simply a case of the white man against the red man, and, unfortunately, the case of twenty-five white men, with rifles, against four red men and one red woman, who had not their rifles in hand. This may be game protection, but it is not American fair play.

A Tribe No More.

At Tuskohoma, I.T., Nov. 4, the Choctaw and Chickasaw Indians signed the treaty of the Dawes Commission and are tribes no more. The treaty does away with tribal relations and allots the lands in severalty, with provisions for town sites and other little adjuncts of civilization. Thus the remnant of the hunting grounds of these tribes, as well as the hunting grounds of a good many white men, may as well be saluted with a sweet good-bye. The commission is now working with the Cherokees, and will then tackle the Seminoles. We don't do a thing in this country but knock the spear into a plow, and the war bonnet into a pair of overalls.

First Deer Hunter Killed.

The first deer hunter reported accidentally shot in the woods this season is John Benson of Richmond, Ind., who was killed while on a deer hunt in Minnesota this week. I have heard indefinitely that two other men were killed in Minnesota in this same way, but have not been able to get the names. On last Thursday two men were still missing who had been out of camp for two days. These were members of a party of six who were up from Minneapolis, camping out on a hunt in Cass county. The absent men had with them no food or means of making fire. The best to be hoped is that they were only lost and not shot.

Trials of the Woods.

Two deer hunters, Mr. Robert B. Hill, of New York city, and Mr. W. Osgood Orton, of Wishawaka, Ind., have just returned from a little deer hunt in Cass county, where they made Kabekona Camp their starting point. Thence they went some distance into the woods and pitched camp, taking with them a guide. In three days they saw five deer and one moose, but killed nothing. Mr. Hill got lost while out hunting and managed to fall into a sort of kettle-hole, or pit, into which he was precipitated after plunging through the light covering of brush which overlaid it. Excited and worn out by his efforts to get back to camp, he was unable to make his way up out of this pit, and finally concluded to shoot in order to attract attention. He began shooting up out of the pit from time to time, and after a while he came incidentally very near to getting an Indian who came along and poked his face out over the edge and looked into the hole to see what kind of subterranean fireworks were going off. The Indian could speak English, and he not only helped Mr. Hill out of the kettle-hole, but took him to a road which he said would bring him out at the camp. This made Mr. Hill very happy, and he started blithely home, congratulating himself on his narrow escape. Pretty soon a partridge flew up, and he thought he would follow and kill it. The bird flew on several times, and the first thing Mr. Hill knew he was lost again. Once more he bethought himself of his expedient of firing his gun to attract attention. Camp was near and the guide heard him shooting, came out, took him firmly by the right hand and led him into camp. The flat pine country is the easiest on earth for one to get lost in, and the hardest on earth for him to get found in again when he is lost. This, however, was not the end of the adventures of this particular party. On their third day in camp it began to rain, and they decided to break camp and go back home. When they got to their canoe on the shore of Woman Lake, they were still some twenty-five miles to their destination, and the lake was so rough that they could not attempt it if they carried their camp duffle along. They therefore cached their tent, blankets and provisions, and started for the houses of Kabekona Camp. In the dusk they struck a rock, and tore a hole in their canoe, so that they had to abandon it. It came on dark, and there they were half-way between their abandoned tent and home. They were landed in a Norway pine forest, where the trees run up about 60ft. without a branch, and where there was no dead wood or undergrowth. They had just three matches in the party, and nothing to eat. They kicked around, got a few twigs after a while, and managed to get a fire, which lighted them to further conquest of fuel. Here they passed the night, and in the morning walked home, a dozen miles or so, to Kabekona Camp. Today you cannot persuade either Mr. Hill or Mr. Orton that he did not have a wild and woolly time out in Minnesota, but they both say they enjoyed their hunt and its adventures very much.

Off for Michigan.

Mr. Tom Marshall, of Keithsburg, Ill.; Mr. E. S. Rice, of Chicago; Mr. H R. McCullough, of the Northwestern road, and Mr. Banks, another railroad man, left yesterday evening for a week's deer hunt in the upper peninsula of Michigan, where they expect to get some venison.

Not Tagged.

By this time a great many of the deer hunters of Minnesota and Wisconsin and Michigan have made or marred their records for the year. A great many hundreds or perhaps thousands of deer have been killed and perhaps even a few moose will have been killed within the coming week. Just how many head of game of this sort these three States, or any one of them, may this fall produce is something which no one can tell. I often notice the tabulated reports of the big game killed in Maine, and wish that we had a system out here by which we could go to a depot of information and get the statistics of where, when and how each head of this game was killed, who did it, and what was the age, sex, previous condition of servitude and color of eyes of each deer killed, but I confess we are behind the times out here yet. We haven't got our deer anywhere near respectably tagged, and Providence only knows how many of them are killed. No doubt some of our energetic friends on South Water street could tell us something about this, but they are not cheerful in imparting information of the kind.

Ducks.

It has been a rattling season for ducks in the far Northwest, and a mighty poor one in these parts. No one has been getting any very great shooting. Dick Merrill is visiting Chan. Powers at Hennepin Club as a guest. They should get some mallards there pretty soon now, though as yet no heavy bags have been made there.

Abner Price, the grandpapa of Duck Island Club, has been down there having a little fun with the mallards, but says the birds are not very abundant. The Northern flight has not yet appeared, and seems to be delayed somewhere in the mails.

Charlie Wilcox has been up at Horicon Club several days, but sent down word to Roll Orgu, who was to have joined him there yesterday, not to come up, as the shooting was very poor.

A few scattering birds have been picked up along the Kankakee, and at Calumet Heights Club a few diligent ones have killed an occasional brace of mallards, but expectation still rules.

The canvas-backs are in at Koshkonong, and shooting there is about as good right now as at any place known hereabouts. Eddie Bingham is just back from there, and in two days got thirty-odd canvas, fifty-odd bluebills, a fine lot of redheads and a few mallards, about 150 birds in all. Ezra Bingham has gone up to the old farm this week, and within the next few days we should hear of something dropping that way. The birds on Koshkonong are are already fat and heavy.

Not so Bad.

Mr. W. E. Warren writes me from Fox Lake, Wis., giving some information which leads to the belief that his neck of woods is not so bad in an all-around way of sport. He says:

"I note your inquiry in last FOREST AND STREAM as to shooting out here. Ducks have been fairly plentiful since Sept. 15 till within the last week or ten days, and it's a wonder they stayed as long as they did, with the incessant pounding they got seven days in the week. They might have stood it longer, but Milwaukee has lately made a market for black mallards (mud hens). They bring 5 cents each. The chase for these elegant game birds seemed to discourage the ducks, and they got up and left. However, the bluebills have commenced dopping in again, and from now on a man on the grounds should be able to pick up a few each day, also a few jacksnipe around the shores and bogs, plenty of squirrels, and now and then a partridge in the surrounding groves. Mr Walt Morrison keeps his hotel open on Morrison's Island as long as there is shooting—Nov. 15 to 20. He meets the sportsmen at trains when notified, and keeps a nice, clean place. Rates, with hunting boats, $10 per week; guides and pushers not needed. Lake Emily and Lake Maria, seven and eight miles northwest of Fox Lake, are good points for snipe, squirrels and rabbits, with a few ducks; but no accommodations for shooters. On the whole, I know of few better or pleasanter places to put in a week or so, if a man is satisfied with a reasonable amount of game."

Goats Good to Eat.

I am beginning to believe that we came near starving in the midst of plenty out in the Blackfoot country on the goat hunt last winter. I have still another indorsement of the mountain goat as an edible product, this time from Puyallup, a gentleman whose first sentence stamps him as a man of very great perception and critical judgment. He says:

"I enjoyed reading your article on 'Snowshoes and Sheep' very much, but must say I was glad to see Mr. E. E. Howard took you to task regarding the edible qualities of the goat. Was surprised to read that you were suffering for food and yet had goats lying around loose, as I have eaten them many times, and do think that a cut of fairly young goat is hard to beat. The reason you found the animals so tame was no doubt because they had been little hunted—we had the same experience several years ago in the Methow country, in Washington—and yet in the main range of the Cascade Mountains, near Mt. Tacoma, they are as wild and wary as one can wish; in fact, more so. I have seen elk, and lots of them, in the Olympic Mountains that were no more game animals, or harder to stalk, than a red cow in a pasture; all one had to do was to locate a band and walk up quietly to get what shots were wanted. Two years later, in the same country (it was near Lake Crescent), an expert hunter would do well to get a shot a week."

Tragedy of the Marsh.

One of the once famous hunting marshes about Chicago is the Skokie Marsh, which even to-day covers a big bit of country just inland from Evanston and Winnetka, suburbs of Chicago on the north. This marsh still offers a good day now and then at jacksnipe, and I know of at least one man who has tried ice-boating on its open reaches in the winter. One day this week a boy was crossing a bit of this wet marsh, and jumping over a narrow ditch landed in a little clump of willows. Stumbling over some object at his feet, he was shocked to find the dead body of a man. Near the body of the man lay that of a dog, an Irish setter, shot also, as the man appeared to be, through the head. A revolver lay near by, but no gun. This mystery of the Skokie Marsh was of three days endurance, but now it is thought that the man was a suicide, who killed first his faithful dog, which had followed him on this last quest across the bogs.

Intelligence of the Mule.

One day this week there came into the office here a gentleman introducing himself as Dr. Thos. Darragh, a university man of Dublin, Ireland, a traveler in Spanish America, a naturalist and lately a taxidermist of the Columbian Museum of Chicago. Dr. Darragh noticed an old pack-saddle hanging on the wall, and this set him to talking about the pack-saddles used in Central America, and this again caused him to reflect on certain experiences he had had proving the great natural intelligence of that much-maligned animal, the mule. He said that in the mountain travel of that country he had found it best never to try to teach the mule anything, as the mule usually proved itself much the more qualified to act as instructor. He has seen a mule, when urged to descend a steep hill covered with sliding rock, refuse altogether to go down headforemost, but turn round end for end and go down backward, putting one hindfoot after the other ahead of it and below it, and feeling its way inch by inch. The mule knew very well that in case of a slip it could scramble up hill better if its head pointed up hill than if it pointed down. Sometimes the mule in going up a steep hill would go up sideways, a step at a time, as a man would go upstairs sideways. A misstep in one of these animals was very rare, and an accident never happened excepting in cases where a man insisted that he knew more than his mule.

Death of a Real Sportsman.

We hear a great deal of talk about that being, fairly to be called an imaginary personage, the "true sportsman." We had such a man here; the kindest, sweetest, manliest man; the sincerest lover of nature, the most ideal character, and the most typically perfect sportsman I ever knew, John L. Stockton, forty years a resident of Chicago. This week Mr. Stockton died, after a season of failing health, which had not been benefited by the best of care and change and travel. Mr. Stockton was one of the first sportsmen to go into the wilderness of upper Wisconsin with rod, rifle and canoe. He was a member of the Blackhawk Club, of Lake Koshkonong, Wis.; as well as of Swan Lake Club, of the Illinois River. In all the quiet and unobtrusive ways of gentlemanly sportsmanship, he might have been called a prominent man. In business he was a man of affairs, and comfortably situated. I presume FOREST AND STREAM had no reader of which it might justly have been more proud, so perfect was his creed, and so perfectly lived up to. His was a singularly enthusiastic nature. He had always a bright face and eager voice. There was nothing rude or unfair about him, and he dies universally respected. Mr. Stockton was sixty years of age, and was born in Pittsburgh, Pa., coming to Chicago when he was but twenty years old.

Missed.

Mr. R. W. Foster, of New Orleans, La., one of the finest of the Southern sportsmen, and host and associate of the writer in more than one delightful hunting trip in the South

was in Chicago this week, and called at the FOREST AND STREAM office. I was so unfortunate as to miss him, nor could I ever find him afterward, although he seems to have hung around Chicago for several days. He also called on Roll Organ, but missed him, leaving no word where he could be found, excepting that he was "stopping on State street, and that he was going to move over on Oakwood boulevard." This description covers some thirty odd miles of territory and a good many thousands of people and habitations, but Mr. Organ and I are going to canvass both State street and Oakwood boulevard in the hopes of restoring Mr. Foster to his friends. We do not yet know whether he has gone back to New Orleans, but if so he has committed a grave breach of decorum.

Louisiana Hunting Wanted.

Mr. A. T. Barnum, of Toledo, O., wishes to know about Louisiana hunting, as per the following letter:

"As I contemplate making a hunting and fishing trip to the South in January, I would like to get some information about the country around Morgan City in St. Mary, St. Martin and Assumption counties in Louisiana. Any information regarding accommodations, boats, guides and game will be thankfully received."

I am unacquainted with the points specifically mentioned, but think they would be good for the purposes named. I wish some Southern sportsman would furnish the desired information. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

NORTH CAROLINA QUAIL.

AT our request, the Passenger Department of the Southern Railway has furnished the FOREST AND STREAM the following useful information about the season's quail supply in North Carolina. An examination of the original letters from which the extracts are taken, leads us to believe that the reports here given are truthful and reliable. The notes come from the Southern's local agents, and all are fresh October reports. For convenience, we give in each instance the distance in hours from New York.

REIDSVILLE (14 hours from New York).—There are more partridges than were ever known before. No dogs for hire. All lands were posted by an act passed at last Legislature, requiring all hunters to have written permission from owner of land before hunting. Any violation of this act punished with fine of $5 and costs for first offense. However, permission can be obtained on good hunting grounds at small cost, such as paying land tax or $5 for the season. A great many land owners make no charge.
N. C. THOMPSON.

JAMESTOWN (15 hours).—There is a good supply of birds. I am told by reliable persons that there are more than for several years, and that they are well-grown. There is no hotel here, but huntsmen would not experience any difficulty in finding boarding-houses, provided they reached here in daylight. There are no dogs or teams for hire, but could be very easily gotten from High Point. Am told there are several gangs of turkeys, with ten or twelve in each. Lands are not generally posted. Will gladly aid any sportsman all in my power.
W. J. CLIFTON.

HIGH POINT (15 hours).—Birds plentiful. Shooting privileges granted visiting sportsmen. Teams and dogs at low prices. F. N. TATE.

NEWELLS (16½ hours).—Partridges are reported more plentiful than for several years. The lands are generally posted, but I think arrangements for hunting could be made for very little cost. No hotels, but parties could engage board at private houses. No dogs that are well trained. E. C. WALKER.

CHARLOTTE (17 hours).—In Mecklenburg county the season opens Nov. 15 and extends until Feb. 1. The birds are more plentiful, larger and fatter than they have been known to be in years. The majority of the lands are posted, but hunting will be allowed for the asking. Quite a number of the farmers take sportsmen at a very low rate and allow them the use of their lands and dogs free.
T. J. WITHERSPOON.

CHINA GROVE (17 hours).—There is plenty of good hunting territory in this county. Partridges are very plentiful. There are no dogs. A great many farmers have their land posted, but most of them are reasonable if properly approached and permission is obtained. This neighborhood has been visited but little by hunters. I think any one or party wanting to come here to hunt will be pleased with territory they will find, and will have no trouble in finding local hunters, who will accompany them to the best grounds to hunt. J. A. THORM.

KINGS MOUNTAIN (18 hours).—Partridge very plentiful. The land is not generally posted. There are very few first-class dogs, and would suggest that sportsmen bring dogs with them. W. T. BRADFORD.

BESSEMER CITY (19 hours).—Am advised that a large number of partridges are to be found. Last season a number of bird hunters from the North stopped here and reported good luck. They brought dogs with them, although there are fine dogs to be had here for the asking. The land is not posted. M. I. SHOLAR.

BELMONT (19 hours).—Birds are very plentiful. Some lands posted; others are not. W. B. PUETT.

NEWTON (18 hours).—From my observations and all reports, game is more plentiful, especially quail, than has been known in many years. This is the regular meeting point for the Eastern Field Trials Club, also the United States Field Trials Club. They begin their next meeting on Nov. 14, and will last about fifteen days. The fact that this is their meeting ground should not be taken as to mean that they will do the hunting; for, on the contrary, they kill very few birds while their trials are going on. They usually scatter out to different places to do their shooting. The hunting grounds are in close reach of the town. R. T. BURTON.

CONNELLY SPRINGS (18 hours).—Birds very plentiful. Lands free to hunt on. Not posted. Good hunting grounds. Fine place here for sportsmen.
B. B. ABERNATHY.

BRIDGEWATER (19 hours).—Partridges are very plentiful. Land not generally posted. Hotel and livery accommodations are poor. No dogs for hire. W. E. ANGEL.

OLD PORT (20 hours).—Supply of partridges is very large. Birds are more plentiful than for several years previous. Lands are generally posted, but can usually be hunted on by the asking permission or for a small fee. No dogs here.
L. F. LONG.

MORGANTOWN (19 hours).—Birds seem to be exceedingly plentiful. Mr. E. Frisard is the leding sportsman, and can furnish trained dogs, and generally accompanies all hunters and shows them all attention possible. There is very little, if any, objections to allowing visiting sportsmen to hunt on any of the lands. J. W. WILSON.

MARSHALL (23 hours).—The birds are very plentiful, although the hunting grounds are considerably rough, and some of the land is posted, though not all. Dogs cannot be had. C. S. FULLBRIGHT.

MARION (20 hours).—Birds are plentiful; plenty of hunting grounds. We have no dogs to hire, but there are several private dogs in town. G. E. LEE.

SWANNA (21 hours).—Birds are plentiful; good country to hunt in; hotel accommodation inferior; very few dogs right around here. Some land posted, but not as a general thing. J. M. DEAL.

RANDLEMANN (near High Point).—Birds are more plentiful than for several years—very abundant. The land is posted to some extent, but enough left for good hunting. No dogs can be procured, but if dogs are brought by sportsmen, facilities are all right for taking care of them.
E. A. WILES.

NEW LONDON.—Bird hunting here is good; guides, dogs and board can be obtained cheap; no posted land.
J. B. BOMHART.

BURLINGTON (309 miles from Washington).—From what information I can gather, the supply of partridges seems to be plentiful. The conditions for visiting sportsmen are very convenient. Some of the land posted, but not all. Sportsmen generally find good sport. J. C. HOLT.

CHAPEL HILL (343 miles from Washington).—Birds are extraordinarily plentiful. The land is in most part open and very favorable to hunting; a small per cent. of it is posted, and permission to hunt can generally be obtained. Wild turkeys are also very numerous. Quite a number of hunters from the North have already appreciated the advantages of this place as a resort for sportsmen, and make yearly visits during the season. Guides who know the country thoroughly can be employed. Well trained dogs, however, are scarce. B. E. TEAGUE.

DURHAM (343 miles from Washington).—There are plenty of partridges. The time for hunting them is between Nov. 1 and Feb. 15. All the lands, however, on which birds can be found have been posted, and it is impossible to hunt on these lands without permission from the owners. This permission can, in most instances, be obtained by personal application to the land-owner before any hunting is done. There are no dogs to be had for hire. The hunting grounds can be reached in a distance of three to ten miles from Durham. J. A. WHITE.

EAST DURHAM (344 miles from Washington). From all sources I am informed that there are more partridges than there has been for years. A good deal of the land is posted, but I understand this is done mainly to prohibit negroes from hunting at will. There are no accommodations here, but, being only two miles from Durham, parties could easily come out from there and return same afternoon. J. T. BUSBEE.

ROCKWELL.—There have been only few bird hunters in this vicinity at all, which makes it all the better. Birds are plentiful. J. W. PEELE.

TRINITY (near High Point).—There are three lodges nearby belonging to sportsmen. They have some land posted. There is land not posted, where hunting is allowed. Prices for teams and dogs reasonable.
A. C. ENGLISH.

LYONS (near Durham).—There are plenty of birds in this section. A large portion of the lands directly on the railroad is posted, but the best hunting grounds are not, and are only a short way from the railroad, say one mile. There is no hotel at this place, but huntsmen can get accommodation at a reasonable price; can also secure teams, etc. W. T. ROBERTSON.

STEM (near Durham).—We have an abundant supply of quail. Conditions for sportsmen good. Mr. Mayes makes special arrangements ahead for hunting privilege. Lands posted in some instances, but he gets option on the choice grounds for game and the most desirable places for sportsmen. Guide and dog can be obtained at $1.50 per day. Guides are gentlemen and sportsmen of our community.
L. M. CRYMES.

CLEMMONSVILLE (near Winson Salem).—There are more birds this year than were ever known. This county has a special bird law. The whole county is posted in regard to hunting. Permission must be obtained before parties are allowed to hunt in Forsyth county. Z. H. COTNER.

ADVANCE (near West Salem).—Plenty of birds; good shooting grounds; some lands are posted. Land-owners will grant shooting permission if advised. I do not think there would be any trouble. No dogs here that can be hired; all other arrangements very good. G. A. ALLISON.

MOCKSVILLE (near West Salem).—Birds are said to be more plentiful than for several years, owing to the excellent summer for raising. Guide and dog cost $1.50 per day. Dog alone, 50 cents. B. L. BALLINGER.

ELKIN (392 miles from Washington).—Birds are more plentiful than ever before. The lands are posted. Messrs. Reece & Swaim have leased a large body of land near Elkin, on which they guarantee plenty of birds, and will furnish their terms, etc., on application. W. E. PAUL.

WILKESBORO (391 miles from Washington).—From all we can learn, there is a great number of birds. Visiting sportsmen are allowed to hunt on a majority of land-owners' property, although some posted. Dogs are rather scarce and hard to obtain. E. G. SHERRILL.

BRYSON CITY (542 miles from Washington).—There are plenty of birds. Sportsmen are allowed to hunt, with but few exceptions. They will find some land posted, but as a general thing they can hunt most anywhere they wish. No dogs to be had, except one or two here, and they belong to parties who hunt occasionally, but might possibly loan or rent them. J. L. MATHEWS.

SKYLAND (near Asheville).—Hunting will be splendid, especially for partridges, etc. Good accommodations here for visiting sportsmen. Little or no objection to hunting by land-owners. Living good and reasonable. Splendid dogs in neighborhood. C. O. CASE.

MOORESVILLE.—Hunting grounds about three or four miles from town. Bird supply is plentiful. The most of the land is posted, but visiting sportsmen could make satisfactory arrangements to hunt. No bird dogs here for hire. C. E. HAWTHORN.

TAYLORSVILLE (382 miles from Washington).—Partridges are extraordinarily plentiful. Are found in large coveys near town. The birds are nearly grown now. A great deal of the land is posted, but satisfactory arrangements can be made with owners for privilege of hunting the birds on their lands. This has been the custom here for some time. We have always had some sportsmen here every winter from New York and New Jersey, and will have this season again. Mr. R. F. Cobb, a sportsman, owns ten trained bird dogs. P. L. STECK.

I have shot over nearly all of western North Carolina, and Alexander county is the best territory I have struck yet. Quail, rabbits and squirrels are unusually plentiful this season, and a good sprinkle of turkeys on the hills. Territory or privileges can be had without much trouble or expense. R. F. COBB.

A HEAVY DEER.

Editor Forest and Stream:

The largest deer killed so far in the Adirondack Mountains this year, was one brought down by Mr. W. W. Hastings, treasurer of the New York Standard Watch Company, at 11 Pine street, this city. The animal weighed 310lbs., and was killed on Oct. 22.

Mr. Hastings went to Fourth Lake on Oct. 17, and over the mountain to Kimball's on horseback, beginning to hunt on the 18th at Little Plains, on Moose River. His guide was Arthur Delmarsh, well known throughout that region as one of the best camp and field guides of the country, being a good hunter, cook, etc.

The men were alone, and came down to the foot of the upper stillwater in a boat, and packed their duffle down to Beecher's old camp at the head of the Little Plains stillwater. The men still-hunted all over Little Plains, which is simply a big burning with hills and gullies, covered with ferns, cut by a couple of alder-banked brooks, and with occasional evergreen tree-grown swamp.

On Thursday night it rained hard, and in the morning the trees and ferns hung wet and glistening. Under foot the ground was noiseless, almost, to a hunter's footsteps. It was a day to make a still-hunter smile broadly. Delmarsh told Hastings on Friday morning to make his way down to the Red River, one of the plains brooks, and at the forks, where a little stream comes in to it, to take his stand on a knoll where he could cover both streams. Delmarsh waited three-quarters of an hour and then struck back from Beecher's camp, and when he got to the knoll on which Hastings was to stand in line like gunsights between two hills, between which the tributary of Red River runs, he started down with much crashing of brush toward the knoll.

Delmarsh had not waited long enough. He started the deer and it came out of the brush before Mr. Hastings had his breath back from his exertion. It was a deer, too, to take a man's breath just to look at, without any previous exertions to assist. But no matter. The deer was there, anywhere from 70 to 150yds. distant. Its yellow horns looked like twigs over a log, and Mr. Hastings opened on it with his .38-55. The first shot dropped the deer's horns by breaking both hindlegs; the next staggered it by passing just under the backbone. Then Mr. Hastings went down the knoll, leaping whatever happened to be in his way, and as the deer faced him, tore the animal's heart in two at short range.

It well nigh tuckered the men to get the beast to the river. It was a hard pull to get it to Kimball's, and the horse that toted it over the ridge to Fourth Lake wished itself dead, no doubt. The expressmen at the railroad station, and the hunters thereabouts, united in saying it was a lunger, a buster, an old socker, an old booster, and a whale.

Those who maintain that there are two species of big deer in the Adirondacks will find more fuel in this one. Its legs were short—shorter than a fawn's in the fall. Its body was long, broad and very deep. The horns were small, about as large around as a man's thumb, but they spread 17in. at the widest. The tips of the guards and of two or three of the prongs had been broken off, probably in love contests. The neck was much swelled, too.

The deer was killed within a mile of where I killed my big buck on Sept. 11, of which the FOREST AND STREAM told on Oct. 2. RAYMOND S. SPEARS.

NEW YORK.

The Stretched-out Arm Fad.

Editor Forest and Stream:

In my younger days, many long years ago, one of my shooting companions was the late Chief Justice Beasley, of New York, and although I have shot with nearly as many men as Mather has fished with, he was the only one for whom I had unbounded admiration as a sportsman; for, beside his many accomplishments, he was one of the most agreeable companions that I ever went in the field with. We were about equally skillful in bagging birds, but he was so perfectly cool, and handled his gun so gracefully that I was often willing to forego the pleasure of taking a shot for the sake of watching him. One of our modern professionals, with his arm stretched out, as if trying to reach the muzzle of his gun, would have given a shock to his sense of grace in action. Of all the "fads" of the present day, this one among club shooters is, to my uneducated mind, the most absurd, not even excepting the now abandoned one of shaking hands in the upper air.

If the claim that the shooter has better control of his gun could be proved, it would be an item in support of its awkwardness, but all the club men in the country could not make me believe it.

It may be asserted that all the famous match shots have adopted it, but what of that? We seldom hear of a match at double birds, and there is very little show of skill where the shooter uses both barrels at a single bird. I was never a trap-shooter, but resorted to it once when a young man to see what I could do against a famous shot whom I met at Cincinnati. In the test we tied on eighteen out of twenty double birds, and we did it without resorting to the stiff-arm principle; which will probably answer as a bit of proof that it is not absolutely necessary to success in scoring.

The club men have an undoubted right to adopt a ridiculous rule if they see fit, but I shall claim the right to ridicule it till they convince me that I am wrong. DIDYMUS.

ST. AUGUSTINE, Fla., Nov. 1.

NEW YORK STATE ASSOCIATION.

SENECA FALLS, N. Y., Oct. 28.—*To all Clubs, Organizations and Associations for the Protection of Forests and Propagation and Protection of Fish and Game in the State of New York:* You are hereby notified that the annual meeting of the New York State Association for the Protection of Fish and Game will be held at the Yates Hotel, Syracuse, at 10 A. M., Thursday, Dec. 9.

The meeting is called at this time, instead of January, in order to give the law and legislative committee ample time to properly engross and present the proposed amendments of the Fisheries, Game and Forest law, to the Legislature early in the session.

This meeting will be of great importance to all clubs and associations, for the following special reasons: It is proposed to incorporate this Association under the laws of the State of New York; to sever our connection with the trap-shooting branch of the Association; to revise and amend the existing constitution, by adopting one which will be in all respects sufficient when we shall have become incorporated; to give all clubs, organizations and associations, whether incorporated or not, a full representation at this meeting, to the end that this organization may be strengthened and its efficiency increased so that the fish, game and forests of this State may be fully and carefully protected.

Each club or association interested in these matters is entitled to and is urged to send five delegates with proper credentials; and all are expressly notified that any suggestion of amendments to the fisheries, game and forest law must be submitted in writing to Mr. R. B. Lawrence, chairman of law and legislative committee, *not later than Nov.* 20.

Game protectors and foresters are urged to see that clubs are organized in every town and village in their districts, and that they send delegates to this meeting. No part of the State should fail to be represented in this Association, for it is only by a united effort on part of each and all that sufficient protection can be accomplished.

It is the policy of the State Association to simplify the present fish and game law, remedying if possible the many evils that now exist, eliminating unjust local legislation and rendering to protective associations aid in the enforcement of the laws. It is the medium through which all right-minded organizations should seek and give counsel. Every county in the State should have a strong fish and game protective association, thus carrying to the Legislature a voice of power working for a common interest and an honest purpose.

The sportsmen of this State are requested carefully to consider this matter to the end that they may identify themselves and the clubs or associations to which they belong with us. Success will be dependent entirely upon the forces we can muster.

The object of this appeal is to place the State Association upon a sound basis having a large, enthusiastic enrollment of members, true sportsmen, willing to serve the organization faithfully in its work.

The cause is a worthy one requiring hearty co-operation on the part of all true lovers of legitimate sport with rod and gun. Do not fail to have your club or association fully represented at this meeting. Yours respectfully,

W. S. GAVITT, President.

By ERNEST G. GOULD, Secretary.

Mongolian Pheasants in Massachusetts.

FITCHBURG, Mass., Oct. 30.—Several years ago, before there ever was such a thing as a Mongolian pheasant in New England, a few members of the Fitchburg Rifle and Gun Club sent to Oregon and purchased five dozen pheasant eggs and had them shipped here by express, but either they were sterile or were shaken up too much in transit, for none of them hatched.

Last year we obtained some eggs from Hon. E. A. Brackett, chairman of our State Commission of Inland Fisheries and Game. From these eggs we raised eleven birds; eight got away, leaving us three. We obtained another trio from Mr. Brackett last spring, and have now seventy fine full-grown pure breed Mongolian pheasants all in beautiful plumage; and they are a sight to gladden the heart of the sportsman and the lover of the beautiful in bird life.

We have had ups and downs in breeding these elegant birds, but have now accomplished our desire. We can now rear these pure breed Mongolian pheasants with as much certainty as the ordinary poultry man can raise his Plymouth Rocks. Mr. Harlaw Foster, of Ashby, has charge of our aviaries, and he has proven himself equal to the task, and has reduced the rearing of these birds to a science. We now have eight large double pens and a winter and summer run for the birds. In the coming season shall have between thirty and forty hens to collect eggs from, and as they lay from fifty to eighty eggs in a season, we ought to have "right smart" of these birds next fall.

Of those which got away and were liberated last spring we know of three broods that have bred wild here this season, and every few days someone comes in and reports seeing some of the birds in our fields and covers.

The members of the club are doing a grand work in propagating and releasing these elegant game birds, for they are not only a benefit to the sportsman, but as they work in fields to a large extent, and are great insect-destroyers, they will prove of benefit to the crop-raiser in this vicinity. The club is doing a purely unselfish work, for all of the birds will be liberated on public grounds, so they will be a benefit to the public at large as well as to members of the club. The birds are very hardy, impervious to cold, and as game birds will tax the skill of our sportsmen, and require the keenest of pointers and setters to bring them to bag. We would be pleased to assist any other club that is trying or would like to try to rear these lovely birds.

We have released several this season and shall have quite a number to breed wild next spring. We ask everyone to refrain from molesting or destroying in any way any of these birds anywhere within our State until the law goes off in 1900.

IRVING O. CONVERSE,
Sec'y Fitchburg Rifle and Gun Club.

That Sixty-Six-Inch Moose Head.

FREDERICTON, N.B., Oct. 30.—*Editor Forest and Stream:* Will you kindly allow me to state in your columns that I had nothing whatever to do with the exaggerated press reports on the subject of a moose recently shot by me in the Nepisiguit country. (1) I never "claimed" that the head in question beat any record. (2) I never asserted that this antler spread was 66in., nor even that it was 61in. (3) I never measured nor saw these antlers measured with a tape and I therefore decline all responsibility for any statemen that may have been made about their size. JOHN BODKIN.

Newfoundland Caribou.

COL. A. B. BLAIR, of Scranton, Pa., sends us the story of a hunting trip to Newfoundland as told in the Scranton *Truth:* Mr. E. G. Asmus, of West Hoboken, N. J.; Mr. Benjamin Dorrance, of Dorranceton, and Mr. A. B. Blair, of Scranton, Pa., reached New York Saturday, Oct. 23, by steamer Portia of the Red Cross Line, on their return from a visit to Newfoundland, where they had been for the purpose of hunting caribou. These gentlemen are perfectly delighted with their trip, had all the shooting that they wished for, and met in and about St. Johns a very genial, hospitable and intelligent class of persons, who did much to make the stay a pleasant one in all respects. The hunting grounds were reached some 250 miles northeast of St. Johns.

The objective point of the huntsmen was the head of Holls Bay, where the efficient guides, Richard Le Buffe and James Goodyear, met the party. Twenty-five miles of tramping brought the Americans to the extreme end of the Big Marsh, near the old camping grounds of Dr. Davis, and within easy access of Grandfather's Look Out, and the great white hills where the caribou roam in large numbers. The shooting proved to be all that one could desire, while even under the severe license law three stags and two does heads or horns may only be brought out by a non-resident.

Of course, in so far as possible, the better specimens were selected, and as a consequence the stag's heads secured are beyond a doubt among the finest ever brought to the United States, and as to points ranging from twenty-eight to fifty-two in number, heads of great symmetry and beauty.

Thirty-one days of camp life gave the sportsmen ample opportunity for seeing for themselves, and for pronouncing judgment upon that part of Newfoundland where the soil is remarkably unproductive, and the people necessarily, for the most part, very poor.

It is very evident that the business men of St. Johns, and in fact the great mass of the people of Newfoundland, hold in high esteem the better citizens of the United States, and one cannot be surprised at this when he learns that so many of her people have become Americans and are to be found in perhaps every State of the Union. These men are even here in Scranton, Pittston and throughout this valley, well known, respected and representative persons.

It is quite true that a limited number of sportsmen visit this island, where tourists are needed and even wanted, only to find that the license tax is burdensome, while the natives, for the most part, many of them, kill and destroy the noble game in season, out of season, and indeed at all seasons of the year.

The fishing is free for all, under good and wholesome laws; but we Americans should not be compelled to pay a heavy, onerous tax for the privilege of killing five reindeer during any one season.

If these fine animals are to be exterminated, the fault will not, I am sure, lie at the hands of Americans, some of whom within the past two weeks have, out of sympathy, absolutely refused to shoot down the does and fawns.

To those of our fellow-countrymen who enjoy legitimate sport, who are willing to undergo the fatigue of walking, who can make themselves comfortable while sleeping on the balsam boughs, and who have the time and money at their command—to all such, the members of this late successful hunting party would say: "Go up to Newfoundland and enjoy a two months' outing." A. B. BLAIR.

A CANADA MOOSE.
Photographed from life.

Southern Quail.

HASLIN, N. C., Oct. 31.—*Editor Forest and Stream:* For the benefit of your readers desiring to learn of the quail shooting and conditions governing it in North Carolina, especially the level tidewater section of the eastern part of the State, I will give what information I have at hand, the greater part coming from my own store of knowledge, acquired by close observation during a period of twelve years afield with dog and gun. It is a great country for quail, arranged by nature seemingly to supply their every need and want. Possibly 10 to 15 per cent. has been cleared and is now under cultivation or growing up in hedges, etc. The remainder is as nature made it, each part contributing an essential to the welfare of Bob White. A great portion of the virgin forest is covered with a growth of pines, among which grows in profusion a wild feed (known locally as quail peas), upon which thousands of birds find sustenance. In these open pine forests the shooting is all that could be desired; there is enough grass for birds to "lay" perfectly, and the cover is open enough for shooting yet not so 'dead easy" as the open field, where hundreds of birds are brought to bag. With a territory so vast, and in places with thousands of acres totally inaccessible to dog and gun, all suitable to their habits, and with the variety and abundance of food, this country forms an ideal combination, which will be instrumental in assisting this noble game bird to hold its own against the ever-increasing legion of sportsmen for years to come. F. P. LATHAM.

WATER LILLY, N. C., Oct. 27.—The prospect for good duck shooting this fall and winter was never better. The sounds are filled with wild celery, and the ducks have arrived in abundance during the past week. Our opening day begins Nov. 1, and ends March 31. Redheads and ruddie ducks are more plentiful than other kinds, but the first flight of canvas-backs has arrived. CURRITUCK.

THURMAN, N. C., Nov. 1.—The prospects are very good here for game. We have quail, turkeys and ducks, and bear and deer. JOHN S. HARDISON.

Maine's Game Season.

GREENVILLE, Me., Nov. 1.—*Editor Forest and Stream:* The record of big game killed to date throughout this Moosehead Lake region will undoubtedly exceed that of last year, large though it was. Already hundreds of deer have been received at the Bangor & Aroostook station here, together with moose and caribou. Notwithstanding the late opening of the season on moose, fully as many heads have been obtained in this section as last year. Caribou are noticeably increasing, and are apparently working back into this country from the eastward, where they are plenty. More than the usual number of bears have been secured by sportsmen, and altogether the season has thus far been decidedly successful, which may be accounted for not alone by the increase of our game, but also because of the splendid hunting weather we have enjoyed.

Throughout all northern Maine venison is more plentiful than beef, and much cheaper, too. Restaurants and hotels everywhere serve it so often as the *pièce de resistance*, that the ubiquitous drummer is kicking and the butchers are in despair. At a restaurant in Bangor where they make a strong card of the legend, "Regular Dinner for 35 cents," a son of the Emerald Isle created great merriment by disgustedly exclaiming, when confronted with a steaming venison stew: "Take away yer dum Yankee grub and bring me some mate. I'm the Government contractor from Camden, and I want more mate!"

I returned last week from a month's moose hunt. Never have I enjoyed such glorious, invigorating fall weather, although I have hunted for twenty years. Day after day my friend and myself went about in shirt sleeves, the skies were unclouded and the air was like rich wine. At night the tent flaps were left open, and the camp-fire was only kept going for the cheer which it imparted. Game of all kinds abounded. We saw seventeen deer the first day we went out, and although we remained on one camp ground for three weeks, actually counted 112 deer during our stay. We got a big moose with a 46in. spread of horns and twenty-five points, and two deer. Five years ago I hunted in the same place, and at that time there was not anywhere near the amount of game there, which indicates how our big game is increasing through the more rigid enforcement of our game laws.

A number of so-called "sportsmen" have been detected in illegally shipping game out of the State, but on the whole, there is a disposition among our visitors to respect the law protecting our game. But now we need a law to protect our hunters as well. There are too many cases of gross carelessness and criminal stupidity occurring in our forests and men are being shot for deer beyond all excuse. We need a law to land some of these fool sportsmen, who shoot at everything that moves without troubling themselves to learn what it is, behind prison bars for a term of years. It is manifestly unfair and unwise to jail a man for a dead moose and yet let him go scot free for a dead hunter. Or, as an old Indian friend of mine puts it: "Sportsman kill moose, he go jail; kill white man, he call accident."

ECHO.

Carrier Pigeon with Gold Dust.

CONNERSVILLE, Ind., Nov. 2.—J. B. Sacre, while hunting near Laurel, killed two carrier pigeons. On the legs of both were silver bands on which were numbers, K. 31,165 and K. 2,383. Encircling the neck of one was a small sack of gold dust. The supposition is that the pigeons were from Klondike. They were in an exhausted condition and were flying

at a slow speed when shot. Thinking this might interest some reader I write you the same.

T. F. Thomas, while hunting near the river bridge last April, shot a white pelican, which is a fine specimen and a rare bird for this locality. Any one can see the same by calling at his place of business. BASS.

A Pit-fallen Moose.

THE moose was captured in a bear pit-fall by two Indians, who tied him up and took him on a sled to Halifax. Here he was turned out in an inclosure and was photographed at close range, while a companion of the photographer stood by with a rifle to be ready should the moose charge the artist. The creature remained motionless for five minutes, and then, when the party had left the inclosure, "tore around at a great rate." In a few days the moose died, presumably of starvation.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

THE NEW YORK AQUARIUM.

BY FRED MATHER.

AT last New York city has a free aquarium worthy of the name. The taste for aquaria and their uses as public educators has never become as popular in America as in Europe, but it is growing. Most of the aquaria there are built by companies as speculative affairs, and many pay fair dividends. I have seen most of them, studied their workings, and have watched the growth of our new one at Battery Park with great interest. I was at first disposed to be severe on the arrangement of the tanks in a plain, rigid semicircle, and the waste of floor space into great pools, where only seals and cetaceans can be displayed to advantage, for large fish do not show well in them, and that most uninteresting of all animals, the alligator, shows as well when stuffed, and is as active when carved from a log, as it is in life. I prefer the winding walks, caves, grottoes and surprises of the Berlin Aquarium, but when I visited the New York Aquarium after its opening and saw that its being free crowded it to its capacity, it was apparent that the space required by the public was none too great, and that to have filled the interior with inclined passages, caves and grottoes, would, in the present building, have cramped the space which the crowds render necessary, and under the circumstances it is the best that could be done.

Still, I regret that the old building did not afford the space for such a design, for I hold that a public aquarium should be more than a mere exhibition of living aquatic animals.

In 1876 Messrs. Coup and Reiche built "The Great New York Aquarium" at Thirty-fifth street and Broadway, and the building is now the Herald Square Theatre. I was with them from the time of the opening until they quarreled about opening on Sunday, and Coup sold out and Reiche let it run down and closed it. They were showmen. Coup had been Barnum's business manager and a circus proprietor, and Reiche was a dealer in wild animals. The latter wanted to run it as a beer garden on Sunday, hence the quarrel. Fifty cents was the price of admission. The aquarium, exclusive of the building, cost $70,000, of which $20,000 was paid by receipts at the door. My notes, dated Sept. 20, 1877, say: "The gross receipts since opening, up to Sept. 15 (eleven months) have been $91,000, and will no doubt exceed $100,000 by the end of next month. The expenses, including rent, $10,000, salaries, music, gas, advertising, collecting specimens and all other items will not exceed $70,000 for the year." When Reiche got it he let it run down, the fishes all starved except the fresh-water gars, and the Aquarium closed. Under proper management it might be running yet, in which case the Battery Park Aquarium might not have been built.

The new Aquarium was built under laws of the State of New York, Chap. 28, 1892, and Chap. 254, 1893. One hundred and fifty thousand dollars was appropriated under each of these laws, or $300,000 in all. The exact cost of the Aquarium is so merged in other bills that it is difficult to get at, for the acts authorizing the expenditures were: "For improving Castle Garden and grounds adjoining and stocking Aquarium." Under this broad law the sea wall was repaired, walks laid in Battery Park and the lawns sodded. Under the appropriation of 1892 there was expended $149,953.15, and outside of an item of $21,700 for repairing the building, the following items occur:

Dec. 1, taking down and rebuilding walls, annex	$ 3,300.00
June 9, Repairing, etc., Battery sea wall	2,832.22
June 30, Paving walks, etc., Battery Park	13,464.77
July 14, Sundry bills	11,071.67
Commissions	4,449 39
Pay rolls	32,088.10

These were all legitimate expenditures under the law, and are only cited to show that the Aquarium proper did not cost all the money which was appropriated for it and "the improving of the grounds," and having no figures at hand, I estimate Battery Park to cover between twenty and thirty acres, and as near as I can separate the items, and estimate the proportions of others, out of the $300,000 the Aquarium cost $175,000.

There was a sad mistake in selecting the first superintendent, who planned the tanks, pipes and other apparatus. He had no practical knowledge of aquaria, whatever, but had dabbled in sea shells and was possessed of some knowledge of their marketable value. He passed a Civil Service examination, which was so quietly conducted that the very few men in America who have had experience in this most difficult of all branches of natural history work, and with whom I have corresponded, never heard that such an examination was to be held. He was appointed several months before I heard of it, and I read some New York daily seven days in the week. He was densely ignorant of aquarium matters, as I found in half an hour's talk and saw the white tiles with which he was lining his tanks, to the detriment of the eyes of fishes.

But when I looked over the source of the salt-water supply, 20ft. outside the Battery wall, I was astounded. For the benefit of people who do not know New York harbor, let me explain. At the confluence of the North (Hudson) and East rivers, at the southern end of Manhattan Island, on which the older city of New York stands, and from where its first settlement by the Dutch was made, is now the breathing spot called Battery Park. There was an ancient brick fort there called Fort Clinton, which is well represented on an old platter recently presented to the Aquarium by Miss Mary D Earle and her nieces, Miss Alida Van Derwerken Earle and her sister, daughters of the late Cornelius D. Earle. It is framed and hangs in the lecture room, and shows Castle Garden when it stood apart from the mainland and was out in the harbor as a fort, connected with the island by a bridge. The intervening space was filled in long before the remembrance of any living New Yorker, and so the present park was made.

The platter is about 18in. long and 14½in. wide, and of a very dark blue. It is in perfect condition. The decoration of the border or rim of the platter is composed largely of marine shells. In the center background of the picture on the platter, appear Castle William and Governor's Island. On the back of the rim of the platter, at one end, in blue, is an eagle holding a shield, while from its beak flies a streamer upon which is the motto, "*E Pluribus Unum.*" Under the eagle's claws appear the words: "Castle Garden, Battery, New York." At the other end, on the flat part of the platter, is the impression of a stamp containing an eagle and the names of the makers, in Burslem, which is in Staffordshire, England.

This platter is valuable evidence in the case of the improved supply of salt water. I was so surprised at the taking of salt water from the harbor at the Battery wall that nothing could be said for a moment. Memory ran back some eighteen years, to the time when we would not run a pipe to the North River at Thirty-fifth street, but brought up the salt water from outside Sandy Hook on tugs, and then in street-sprinkling carts to the old Aquarium, where we used it over and over again, the best of all systems except the natural filter now in use at Battery Park, which may or may not have been suggested to Dr. Bean by the old platter.

After thinking how the great city poured its foul sewage into both rivers, which, at every ebb tide, united at their junction at the end of Battery Park, I ventured the question: "Do you expect to get good water where the sewers from both rivers meet?"

"Well, now," said the self-satisfied man, "I've looked that all over and find that at 25ft. from this wall the water is pure. At 30ft. or at 20ft. it isn't; but where my pipe ends there is a back-roll of good sea water from Governor's Island, where the currents strike and rebound, sending us good water."

I knew nothing of the rebound, and asked: "How about storms from the east, when the water is driven past Governor's Island and overpowers the flow of the Hudson?"

"That will make no difference; if the sewers bring down foul water, we have the best filters in the world to purify it."

The ignorance of the man staggered me. He seemed to think that chemical impurities could be filtered out like sand, and I ventured to ask: "If a spoonful of sugar is dissolved in a glass of water, or the flow of the sewers into the rivers should come to the pipe beyond the wall, do you think your filters would take out the foulness?"

He believed that it would, and I believed that he knew nothing about the difference between an impurity in solution and one held in suspension, and I came near asking if a filter would remove an odor from water, but decided not to argue the question.

The Aquarium dragged along slowly through part of '92, the whole of the next two years, and people began to wonder why it was not completed. A few inquiries revealed the fact that the Commissioners of Public Parks were not pushing the work for some reason, and the reason soon appeared when they appointed a committee to examine the work. This committee reported unfavorably, and the superintendent moved out. Dr. Tarleton H. Bean, formerly Assistant U. S. Fish Commissioner, was appointed superintendent in May, 1895, and found that the tanks would not hold water, the pipes were too small to carry off the drainage, and the whole plant, except the engines and pumps, had to be remodeled. Then the salt water was foul, as it naturally would be from what I have shown of its point of intake, and after learning that the Aquarium stood on made land, the new superintendent dug down under that portion of the building nearest the city, put in a 10in. suction pipe and got a flow of good salt water in which fishes from the clear, clean waters of the Gulf Stream live, and in which hermit crabs remain in their shells. To an Aquarium expert the sight of a hermit leaving its shell, unless to change for another one, is an unfailing sign of bad water.

All these changes took a long time, as they always do where there is work to be done for a city, or a State, with the consultations, approval of recommendations and the circumlocution which we call "red tape." Some newspapers howled about the delay and selected Dr. Bean as the target for their shafts, and assumed that he was responsible for the delay; but he said nothing to the newspapers, and kept on getting ready to give the public an opening which would not have to be closed for repairs the next week.

The Aquarium was formally opened on Dec. 10, 1896, when it was visited by 11,531 people, by actual count of the register. The daily attendance has been as high as 21,456 in one day, and averaged over 10,000 per day for the first seven months, which shows the great popularity of a public aquarium.

In this preliminary article it is not intended to give any account of the inhabitants of the tanks. That may be postponed while we take into consideration the great difficulties an aquarist has to contend with. Animals which live on the earth are subject to sudden changes of temperature; fishes are not, for large bodies of water change slowly, and migratory fishes avoid a change while many fresh-water species become semi-torpid. Then, some forms of marine life are annoyed by the light, which is a necessity in an aquarium; but the most severe test to most marine fishes, and to some fresh-water ones, like the lake trout and the whitefishes, is the absence of pressure. The giant lobsters and many other marine animals died from what I may call the "rarity" of the water. All mountain climbers have experienced distress in high places, and I have seen the nostrils of pack-mules slit in order to let more air into their lungs, while men were panting at the slightest exertion. Fish brought up suddenly from great depths turn their stomachs out of their mouths because the inside pressure is greatest, and there are few marine fishes which can live with only a pressure of 4ft. of water on them.

When we consider a display of the salmons, trouts, whitefish and smelts in an aquarium, the question of temperature is a vital one. In winter these fishes are comfortable, but the casual visitor in summer does not see the refrigerating apparatus which is necessary to the life of these specimens, and may only detect its presence by condensed moisture on the glass. There is no end of problems to be solved in an aquarium. The duration of life of some fishes in confinement is comparatively short, while other forms live and thrive in the tanks. The interesting little sea-horses never live long either in balanced tanks or in flowing water, although fed with the minute crustacea on which they live when at liberty. A balanced tank is usually a small one, such as is suitable for home ornament and study, and in which the water is never changed, the only new water used is to replace that lost by evaporation. It may be filled with either fresh or salt-water, and is stocked with plants which grow submerged, and throw off what oxygen the fish require; for fishes extract oxygen from the water to aerate their blood, as we extract it from the air for the same purpose. Too much plant life or light, and the glass becomes covered with vegetation; too much animal life, and some of it dies. A properly balanced tank has just enough of each kind of life; the carbonic acid gas thrown off by the fishes is consumed by the plants, and so the balance is maintained.

In the lecture room, where the general public does not go, there are some interesting balanced tanks with both fresh water and marine specimens in which the water has not been changed for over a year. Mr. Spencer has charge of these, and delights to show them to those who appreciate the beauties of the smaller aquatic life, but the mass of the people would pass by these without a glance. What they want is size, all else is "caviare" to them. The antics of the seals interest them more than anything in the building, judging by the crowd which is always about their tanks. The late Mr. Lloyd, the superintendent of the Aquarium in the late Crystal Palace, London, and in his day the best aquarium authority, would not admit any lung-breathing animal into an aquarium. He even went so far as to refuse a place to the newts, turtles and frogs. His rule was: "The animals must not be lung-breathers; that is to say, they must be either such as the sea-anemones and corals and some others which have the function of respiration diffused over their entire bodies, or be such as the creatures above them (up to and ending with fishes), which are provided with gills during their whole period of existence." This rule would admit the tadpoles, but not the frog nor the salamander, but then Lloyd was cranky on such things.

His aquarium was devoid of all ornament, and he was offensively blunt in condemning my taste for caves and grottoes, which he said did not accord with the plain floors beneath them, and which tried to make the visitor believe that he was under the sea when he was not; and he scolded about "bad taste" like a fishwife. Many of his small table-tanks were so low that the visitor looked down into them, and it was my turn when he asked me how I liked them. "Mr. Lloyd," said I, "they are the worst lot I've seen. If I was in charge here they would be raised until the eye of the visitor was below the waterline. The worst possible view to get of a fish is to look down on its back.

"That's the only natural way to see a fish," he replied. "When you are on the bank of a stream or in a boat, don't you look down on the back of a fish? Why not in an aquarium?"

"Because most fishes look alike from a dorsal view, and the bright colors are usually on the sides."

"I care nothing for that," he snapped out; "what I want is to follow nature and have no tomfoolery," and he walked off.

I let him go for a while. He was all right on his management of water and keeping fish alive, but he was notional and irritable. I smoothed his fur by talking about his remarkably clear sea water, which he stored in reservoirs and used over and over all the time, and we parted friends.

In this article I mentioned the great pools in the floor of the Battery Park Aquarium, and the above conversation recalls another. Some time ago I said to Dr. Bean: "That big sturgeon would show off twice as large if you had a tank higher up to show it in. Looking down upon it does not even give a fair idea of its length. If you had such a tank as our 'shark tank' in the old Thirty-fifth street aquarium it would show splendidly."

"That's true, but we have no such tank. How big was that one?"

"As memory recalls it, 35×12ft. were about its dimensions; a 10ft. shark could turn easily in it. You should have such a tank as that. These pools in the floor are only good for seals, cetaceans and crocodiles, and they are not very good for them. Our whale tank in the old aquarium was only 2ft. below the floor, and the water was 4ft. above it, so that you could see the whale broadside. Fill up all these holes in the floor and build them up."

The superintendent looked at me more in sorrow than in anger, and replied: "I did not build the tanks."

"No, I know you didn't; but here's this big circular whale tank, some 30 or 40ft. in diameter, with the sides slanting inward, probably to prevent splashing the spectators. There's a big barn-door skate right under us, and but half of it can be seen because of the faulty build of the pool, and if the fish was on the other side we couldn't see it at all."

"You are very critical," said Dr. Bean, "and there is much truth in what you say; but there's no use in talking to me about these things, I took the place as I found it, and have done what I could to improve it. Perhaps if you were in my place you would not be so critical; all things can't be done at once, have patience."

That last remark was a correct one. If I were in his place this article would not be written, but as I am a free lance I may tilt at pleasure, and will further say: The aquarium is under the immediate charge of the Park Commissioners of the city of New York. These Commissioners are appointed by the Mayor, and may be more or less interested in the matters which are likely to come before them, but, if they were the best men in the world for the place, they would be removed at the first political change. Within a few days a new Mayor will be elected, and when he takes his seat on New Year's Day, he will probably have a few political friends to reward with places, and the Park Board will provide for a few.

This is the worst possible state of affairs for the Aquarium. A man may know a lot about parks, botany, roadways and landscape gardening, but in the city of New York there are not a dozen men who have a superficial knowledge of how an aquarium should be run, and in the whole United States there are not as many capable aquarium superintendents.

The Board of Park Commissioners being a changeable body, dependent on an elected Mayor, is not the proper custodian of as delicate and intricate a scientific thing as a public aquarium. It should be placed under a board of trustees which will not be subject to political changes. Such boards govern the American Museum of Natural History, in Central Park, New York city; the Zoölogical and Botanical gardens; and the Aquarium calls for more careful selection in its trustees than any other public institution, because fishes are more difficult to keep alive than any other form of life.

[TO BE CONTINUED.]

ANGLING NOTES.

Mash-kinoge.

My compliments to Dr. Robert T. Morris, whose article in regard to the spelling of the name of the big pike I have read in FOREST AND STREAM of Oct. 30. While I have adhered to spelling the name mascalonge, I have never contended that it was the correct way to spell it. My contention is and has been, that it should be spelled in one way, and not in half a dozen ways. I was very willing to adopt any spelling that seemed to be by authority, and I think it was natural to look to the United States Fish Commission for that authority. The matter was submitted to Dr. Bean, who then operated the spelling factory of the Commission (the question was put by a New York newspaper, the particular copy of which I could find, perhaps, by searching for it), and he gave out the spelling I have since used. In fact, I have talked with him about the spelling of the name within the past year, and he had then found no reason for changing his mind in regard to it. Really, I have been more consistent about the spelling of the name of the fish in question than my authority, the U, S. Fish Commission, for the publications of the Commission do not use that spelling now, I find upon looking. In one place it is muskellunge, but the late Prof. Goode is responsible for that. It is like a certain State Fish Commission which "resolved, that hereafter the fish commonly called lake trout and salmon trout, shall hereafter be called lake trout only"; and thereafter, in the same report containing the resolution, the fish was called salmon trout. I am not hide-bound, and am willing to recede from my declaration to spell the word mascalonge forevermore, if a congress of fishermen or some other body will authorize some other spelling, and stick to it; so we can have one universal form of the word, and not half a dozen, as we have had and now have. I do not recall that I have seen the spelling advocated by Dr. Morris, although maskinonje has been said by some to be the correct form, and I am of the opinion that the introduction of the h, and the omission of the second n, makes an entirely new form of the word. However that may be, if Dr. Morris will have his spelling legally adopted, as I have suggested, I will get in line.

As to ouananiche, I must leave that to my friend Chambers, as he is the godfather and mother of that spelling. His paper, "Philology of the Ouananiche. A Plea for the Recognition of Priority of Nomenclature," read before the Royal Society of Canada, treats of the spelling of the name quite exhaustively, and I would like Dr. Morris to read it. By the way, in that very paper the author says: "In the case of another North American fish, *Esox nobilior*." (My dear Chambers, are you aware that the fish sharps have changed both the generic and specific names of this pike. They may have done this when you were not looking, but the name on the door-plate now reads: *Lucius masquinongy*, and this is where old Mr. Priority comes in. By the way, for the second time, Jordan gives the common names muskallunge, maskinongy, muscalonge.) "whose popular title in its original form, like that of the ouananiche and namaycush, comes down to us from its Indian nomenclature, an apparent desire to get away from French orthography has produced a somewhat similar confusion of language to that already described in the case of the ouananiche. The original spelling of the Indian name was undoubtedly maskinongé, and such it is still called in the statutes of Canada. According to Mgr. Lafliche, maskinongé is derived from *mash*, deformed, and *kinongé*, a pike, and was applied to the *E. nobilior* by the Indians because it appeared to them a deformed or different kind of pike from that to which they had been accustomed."

You will readily see that here is another doctor in the case, and I leave it to you if, under the circumstances, it was not discretion on my part as a layman to adopt the spelling I believed was given by authority, and stick to it. I had either to do this or take to the brush.

The Pikes.

It is my opinion that the pikes have caused more confusion than any other family of fishes, not alone in the spelling of the name of one of them, as may be gleaned from what I have written above, but in various ways, the chief of which is perhaps the application of the name pickerel. The fish that was *Esox lucius* and is now *Lucius lucius*, is almost universally called pickerel, when really it is the pike, the same pike that English anglers regard highly as a game fish. I have just been on the witness stand in the Supreme Court in this State, where the principal question at issue was the dentity of members of the pike family. The people had brought suit against a man for catching pickerel illegally in the closed season and by a device forbidden by law. Witnesses, several of them, testified that the fish caught were mascalonge and the defendant got the verdict. The case was appealed to the Supreme Court and I went out there to find what kind of fish the pond contained before the trial came off, for the Court would not permit the State to amend its complaint to include the word mascalonge, for it was just as illegal to catch mascalonge as it was to catch pickerel. As a matter of fact I found that some people really called the fish mascalonge, and not for court purposes, for they were not mascalonge. When the trial came off I arrived by train when the case was well under way, and going to the court room listened to one or two witnesses for the people, and to my astonishment they termed the fish pickerel or mascalonge, as if they were interchangeable terms. The people had provided some fish to test the knowledge of the witnesses, but I did not see them until I went on the stand, as I preferred not to. All that I could tell about the case from where I sat was that the witnesses one after another swore that they "never h d seen a fish like the big one." When I went on the stand I found that the people had provided a mascalonge, a true pike (*Lucius lucius*), and a pickerel (*Lucius reticulatus*), and the big fish, which none of the witnesses had ever seen before that day, was the mascalonge. The fish which the defendant had caught in a trap were identified as being like the one that I testified was a pike, commonly called pickerel.

It seemed from a small part of the testimony which I heard on cross-examination, that the defense intended to rest its claim that the fish were mascalonge upon the fact that they grew to great size. One question was: "Do you remember hearing about a fish taken from this pond that was 6½ft. long." To the credit of the witness he promptly answered, No.

It is surprising to find how many people believe that a mascalonge is nothing more than a pike of great size. In other words, they have an idea that a pike grows in time into a mascalonge, as in England a jack grows into a pike. On the other hand, in this State the fish generally called the pike, called so too by people who should know better, and probably do know better, is not the pike at all, and does not belong to that family, but is the pike-perch or wall-eyed pike.

Reforms in fish nomenclature are like other reforms of slow growth, and I imagine nothing short of a convulsion of nature will ever bring about a change in this respect.

If every time a man should say pickerel when he ought to say pike to be correct, or pike when the fish he means is the pike-perch, the earth would open and swallow him, those that escape might in time, if they said anything, use the right term to designate the fish they are talking about.

Age of Trout.

A few days ago a correspondent asked me how long trout lived. I replied that brook trout lived about fifteen years on an average in confinement, and that we knew little or nothing of how long wild trout lived. The letter was sealed on my desk ready to go to the post with other mail, when I took up an English paper, and almost the first thing that met my eye was 'Longevity of Trout." Under this head I read of a trout placed in a well by a man who had been dead thirty years at the time the item was written, and no one knew how long before his death the trout was placed in the well, nor how old the trout was when so placed. I did not open the letter to make any corrections, but if my correspondent should happen to read the same item he may think he came to a poor shop for information. However, it is of record that a brown trout once lived fifty-three years, according to Dr. Day, and another twenty-eight years, and I knew this when I wrote what I did. Dr. Day was of the opinion that in such exceptional cases where trout had lived to great age that they were sterile fish. In nearly all recorded cases of great age in trout the fish have been confined in wells and their growth has been very slight. In fact, I recall one case where the fish was of the same size after many years' confinement, the exact number of years I do not recall and it is not worth looking up.

One American fish breeder fixes the average age of brook trout in confinement at twelve years. A Scotch fish breeder places the age of the *fario* at about fourteen years. Stone, one of the pioneers in this country, says it is more than twelve years, but he does not fix the limit. In Scotland the fishculturist thinks fish should not be handled to get the best results until they are four years old. In this country trout are used for artificial breeding when they are two years old. I know of one private establishment where nothing but two-year-old fish are used as breeders, but they are larger at two years than many fish in other regions are at three years.

When trout reach the age of eight or ten years they cease to be prolific breeders, and so I will stick to what I said in my letter to my correspondent in spite of the fifty-three, twenty-eight and other year old trout. Size alone does not indicate the age of a trout, for food or the absence of it will make a trout large or small, and over and over I have written to inquirers that I could not tell the age of a trout by its size. Trout from the same lot of eggs grow unevenly and have to be sorted from time to time, and the large ones removed from the pond containing their smaller brethren or the smaller ones will be missed at roll call, as they go to increase the size of the larger and more active trout without regard to family ties or relationship.

Size of Trout.

The foregoing has reminded me of the size of lake trout that have been taken the past season in some waters. Unfortunately, the law in New York reads: "Trout of any kind, salmon trout or landlocked salmon, less than 6in. in length, shall not be intentionally taken or possessed," etc

That is all right enough for "trout of any kind," which means common brook trout, rainbow trout and brown trout, but it is all wrong for lake trout and landlocked salmon. The Commissioners of Fisheries, Game and Forests wished to have this limit changed, but as yet have not succeeded in getting the law-making body to change it, although the section is actually undoing their work of re-stocking the waters with lake trout and landlocked salmon. Lake trout, to be on a footing with brook trout, should not be taken until they are at least three years old (four years would be far better), and at that age they will average about 13½in. in length. Larger three-year-old fish have been reared, but I am writing of the average, and I think what I have said is fair. What is true of lake trout is true of landlocked salmon, and both should be put in the same class with salmon under Sec. 114, which limits the length at which they may be legally killed to 18in.

The Commissioners are stocking our lake in this State with lake trout, and the people living on the shores of the lake are catching the baby trout when they are in weight from ¼ to ⅜lb. This is a sheer waste of food, when in a few years these fish would weigh from 5 to 10lbs. each. Several letters of complaint, as well as complaints by word of mouth, have come to me about this sort of fishing, one says that one man in one day caught 127 of these baby trout. He might almost as well have gone to the hatchery and caught the trout out of one of the rearing boxes.

A lot of yearling trout were planted in this lake, and it is not impossible that the 127 baby fish were some of the lot. The State had reared those fish until they were fourteen months old, had bought food for them during the time and paid men to feed and care for them every day during that period. Then the Commission had sent the State cars with attendants to transport the fish 200 or 300 miles and plant them in the lake. Then a little later, in one day a man catches what it would cost, if the railroads did not haul the State fish car free, $25, say, to transport, to make no note of the men's wages and the cost of food to rear the fish. Of course, it was legal to catch the baby fish, but a man who would do such a thing must have a precious poor opinion of himself if he ever stops to think about it. There is one thing he and others engaged in this business must do: about next year they should make an application to the Commission for more trout and complain that the fishing is falling off, and be particular to ask for yearlings and say that it does not do any good to plant fry because the yellow perch eat them as soon as they are put in the water.

Ask for at least 20,000 yearlings, say three carloads, for the Commissioners will be disappointed if you ask for a less number. If you don't get what you ask for, make a kick, for it is the regular thing to do after you have practiced a style of fishing that would shame a graven image, and exhausted the fishing, to demand the impossible in the way of restocking the waters that you have depleted by your own selfish acts. To any one to whom it may appear that I am writing about an imaginary condition of things, let me say that it is no joke, and that I have simply skirmished around the edge of the truth instead of plunging boldly into the thick of it, for I must confess that it is not a pleasant subject for me to write about.

Black Bass.

Twice at least within a very short time I have noticed that black bass, small mouthed, were a drug in our local markets. One market man told me the fish came from Buffalo, and another that they came from New York. One day the bass were offered at less than the wholesale price in New York that week, viz., 8 cents per pound. In the absence of proof to the contrary, we must assume that the black bass were caught legally, although of course they were caught in nets, somewhere. Netting is permitted in some waters, with an especial provision that all black bass taken must be returned to the water alive. Perhaps this provision is always observed, but I doubt it. Going up and down the Hudson River, I have often wondered if the fyke nets take any great number of black bass. I saw twenty-two of such nets in about the distance of the length of the train I was on, some of them with long leaders, like a pound net. The Hudson is not considered a black bass stream from the angler's standpoint, but there are many black bass in the river, and some are caught with hook and line. It has been reported to me along the river that few, comparatively, black bass are taken in these nets, but one fisherman told me that the fykes never took any salmon, and before I finished talking with him he admitted that three salmon had been taken in such nets, but none in his. On the other hand, a member of the Board of Education in Albany made an investigation two or three years ago and found salmon in several fyke nets, something like a dozen fish, as I now recall the number, found in one trip over a portion of the river. But this note is not about salmon. Admitting that all the black bass which find their way to market are taken legally as to season and method, would they not be worth more in the water for hook and line fishermen than they are when taken by nets and sold for 8 or 10 cents per pound—10 cents being the highest wholesale price I have noticed in New York markets this fall? If they are worth more in the water, how can a change of method in their capture be brought about to make them solely a hook and line fish instead of a net fish? To be sure, the present law purports to make them a hook and line fish within the State, but it is certain that black bass came from somewhere after being being taken in nets. In 1894 the interior waters of New York furnished 55,806lbs. of black bass, valued at $6,230, and in 1895 45,999lbs. valued at $5,078. The black bass cannot be hatched artificially like the trout, shad, pike-perch and whitefish, and there can be no question about this fish becoming scarce in all waters in the State, in spite of such restrictive laws as we have. Last year the Fisheries, Game and Forest Commission distributed no small-mouth black bass. Every year the applications for black bass outnumber those of the year before, so that the demand increases while the supply decreases. To any one who has said to himself that the netted fish I have mentioned above came from the Great Lakes, where the State has no jurisdiction, let me say that in one year 1,000,000 black bass were asked for of the Commission, to be planted in Lake Ontario. This is a condition of affairs that the State Commission is powerless to remedy. The first great evil is that the present law does not cover the breeding season of the black bass, but under the present condition of things it would appear necessary to do more than extend the close season to cover the spawning period, to restore the black bass fishing in waters where it has fallen off to almost nothing. The remedy I would suggest for consideration in addition to an extended close season, is to make the St Lawrence River law as to the number of black bass which can be caught in one day, apply to all the waters of the State, and amend Sec. 109 of the game law to read: "Trout of any kind, salmon trout, landlocked salmon, or *black bass* caught in any of the inland waters of this State, shall not be transported to any point within or without the State, from or through any counties thereof, or possessed for that purpose, except when accompanied by the owner."

There is one thing sure, the fishermen themselves have got to do a little thinking, and then act in concert, if the black bass, which has been called "the people's game fish," is to be saved for future fishing in this State.

Nature never intended the black bass for small waters, but man has tried to improve on nature in providing a habitat for this fish; and it is a failure except when unusual safeguards are thrown around it to compensate for changed conditions.

Salmon by Millions.

Through the kindness of Mr. Livingston Stone, who is now the oldest living fishculturist in this country, I am able to give a few figures showing what was done at a single hatching station in California last year. At Battle Creek, in Shasta county, 4,968 female salmon were stripped, and produced the enormous number of 25,852,880 eggs, or something over 5,200 eggs per fish.

In writing of Mr. Stone, I am reminded of his hatchery at Cold Spring trout ponds, near Charlestown, N. H., which he established in 1866. Four years later I made a pilgrimage to Charlestown, where some of my forebears lived and died long ago, and visited the hatchery. The next year I went into a hatchery to learn the business of practical fish propagation by artificial methods. There is no doubt in my own mind that my visit to Mr. Stone's trout breeding ponds had a decided influence on my after life. I left home at that time with no intention of going to Charlestown, but chiefly to visit a younger brother in college, and the visit to the ponds and the town and its graveyard was an afterthought. Trifles light as air sometimes changes the whole current of our thoughts and create new desires and ambitions. As a boy I had an artificial trout pond and I stocked it by catching trout with hook and line and conveying them to the pond alive. Cold spring ponds opened a new book to me which I have been reading ever since, and have got perhaps as far as the middle of the book. To be perfectly candid, I once thought I had read it to the end but I was mistaken, for I must have

dreamed that I read it all. Mr. Stone was the first to take the eggs of the rainbow trout on the Pacific Coast, where he went to inaugurate salmon breeding for the United States Fish Commission, and I used to wish that he had kept all the eggs on that coast, but time effected a change of opinion in this as it has in other matters. But a note concerning Mr. Stone's life work must be left to a future time and appear by itself. A. N. CHENEY.

CHICAGO AND THE WEST.

Muscallonge Do Shed Their Teeth.

CHICAGO, Ill., Nov. 6.—A few weeks ago I advanced what was to me the curious information regarding the shedding of its teeth by the muscallonge during the summer months. I now have confirmation on the matter advanced at that time by Mr. H. L. Stanton, of Chicago, and I believe the phenomenon properly to be regarded as established. Mr. Stanton's observations were made in Wisconsin, and his original informant had seen the phenomenon in Canada. Now comes Mr. H. G. McCartney, of Chicago, who has observed the same thing in the waters of Cass and Itasca counties of Minnesota. Mr. McCartney says that last spring in May and June the teeth of all the muscallonge taken in Woman Lake and adjacent waters were sound and normal. On July 10 he examined fish which showed jaws red and inflamed, and with some of the teeth missing. In August still more teeth were found to be absent in specimens examined. In late August and in September it was the rule that no teeth at all would be found in the mouths of the muscallonge taken. The muscallonge taken in October all showed perfect teeth. Mr. McCartney intends to keep a record on this matter next year. He does not know whether the teeth are shed yearly or not, but knows that they are shed sometimes.

The Record 'Lunge.

The largest muscallonge of which I now have word this year weighed 40lbs., and was taken by Mr. E. H. Charles, of Minneapolis, Minn., in Woman Lake, Cass county, at 8:30 A. M., Oct. 16. Mr. Charles killed this fish on the bar about half a mile inside the island in front of Kabekona Camp. He had previously, on Oct. 14, taken one of 26½lbs., and his friend one of 25lbs. They only fished three days.

Alderman Henry S. Fitch, of Chicago, on Sept. 11, in Woman Lake, killed a fine 'lunge weighing 36lbs. The fish taken in these waters seem to average larger later in the fall. The last twenty fish taken at Kabekona Camp averaged 21¼lbs., certainly a very remarkable showing.

Fox River Bass.

Puyallup writes me from Elgin, Ill., some interesting news regarding large bass: "Small-mouth bass are running large this year," he says, "one caught (or killed) near here this week, Fox River, weighed, actual live weight, 5¼lbs., and a number have been taken over 4lbs. Lake Geneva has given up any number of good ones, two that I saw weighed 4lbs. 14oz. and 5lbs. 2oz. respectively."

Lake Crescent Trout.

The writer last above mentioned, Puyallup, seems to travel a bit now and then, and to savvy fish a plenty. In regard to the now famous Lake Crescent trout he remarks: "Am glad to learn that our scientists have classified the two kinds of trout in Lake Crescent as distinct. Our party was confident that they were 'all by their lonesome' as early as 1888 or '89, but were laughed at when we made the claim." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Bass at Ball's Bluff.

WINCHESTER, Va.—The Potomac is noted for its bass fishing; and several of the streams emptying into it in the vicinity where my story opens are well filled with trout. President Cleveland has fished in these streams more than once and has caught some very handsome strings of fish. I was living in Leesburg, and the river being only about two miles from town across the fields, was just a nice walk for any one who enjoys sport with the rod. On this particular morning, with rod and bucket of bait, I struck out for the river; I arrived there about 7 o'clock. I found the bank clear and the water smooth and in fine condition for bass fishing. I took my station on a sand bar, which projected out into the river about 30ft., and right opposite the water was about 15ft. deep. It is said that late in the fall, when the water is low, these deep holes are the best places in which to fish, so I put on a couple of nice minnows and threw in my line. Presently the line quivers; goes out for about 35ft., there stops; and now again is drawn out. Giving a quick jerk, I realized all at once that I had most assuredly hooked into something. I rapidly commenced to wind him in. But, oh, no! he wasn't coming in yet. Out he went again, and my old reel fairly buzzed. He ran out about 60ft. and stopped. Once he threw himself clear out of the water, his white belly shining like silver in the sunlight. I commenced to wind him in again, and finally got him within a few feet of the edge of the sand bar, when I reached out with my landing net and lifted him out of water and landed him. He was a magnificent specimen, and tipped the scales at a little over 5lbs. I was soon rewarded by another strike, which proved to be a 2 pounder. By 10 o'clock I had caught as pretty a string of fish as any one could wish for—nine bass and one sucker, which I caught with a worm. The string weighed exactly 15lbs.

The river at this point is connected right prominently with the late war. The battle of Ball's Bluff was fought there, in which a good many Union soldiers were forced over the cliffs into the river below. A quaint little cemetery nearby, which is surrounded by a stone wall, contains the graves of these soldiers. ALF. T. CLINE.

Bass from Lake Erie for New Jersey.

IN his report as State Fish and Game Protector, for October, Mr. Charles A. Shriner relates that the principal work done during the month was the bringing to this State of a number of adult fish from Lake Erie. This is the third trip of the kind made by wardens, and, like its predecessors, it was successful, although attended with some difficulties. The risk necessarily attending the transportation of fish during warm weather is a temptation to postpone work of this character until cold weather has arrived; but experience has shown that late in the season the fish go to deep water, and difficulties arise in the securing of fish of suitable size. In two previous trips referred to above, an attempt was made to bring to New Jersey the pike-perch and channel catfish, the former for general distribution and the latter for large bodies of water, especially the Delaware River. This object having been accomplished to a certain extent, more attention was paid this year to the procuring of the silver or white bass, a fish which, from its gamy qualities, beautiful appearance and excellent flesh, would make a very desirable addition to the fishes of this State. Wardens Kerr, Hendershott, Dare and Hill started for Lake Erie during the early part of the month, but were delayed considerably on account of the warm weather which set in about that time after a week of lower temperature. In order to procure the fish wanted, it was necessary to go by steamer some fifty miles from Toledo to the fishing grounds, and although bass in considerable quantities were obtained, there was a great deal of trouble in bringing them to Toledo in sufficiently vigorous condition to permit of their transportation further East. Several attempts of this nature failed, but finally 1,000 fish, principally white bass, the rest being pike-perch and channel catfish, were secured, and these were brought through to Paterson with exceedingly small loss in transit. The fish arrived early on Sunday morning, and their removal to other parts of the State would have been extremely hazardous; consequently they were placed in a reservoir of the Passaic Water Company, kindly placed at my disposal. Here they can remain until the present rush of distributing fish is over, and when colder weather will make their removal attended with less risk.

Texas Tarpon Scoring.

TARPON, Tex., Oct. 28.—I think it may interest some of the readers of your paper to know of a remarkable catch of tarpon just made at this place. On the 24th inst. Col. E. U. Smith, of Shanghai, China, landed eleven fish between 7 o'clock in the morning and 7 o'clock in the evening. The fish were all of a fair average size, running from 5ft. 4in. in length up to 5ft. 10in. All were caught by trolling from a skiff in the inlet between St. Joe and Mustang Island, where the depth of water ranges from 25 to 40ft. The rod used was an 8ft. bamboo pole, with a Von Hoff reel that carried comfortably 400ft. of Hall's 27 line. This is the largest catch of tarpon ever made in one day on this coast, the previous best score being six. So far as I have ever heard, seven is the best take recorded on the Florida coast; so Col. Smith can safely claim to hold the world's record on tarpon with rod and reel. FRANK HETFIELD.

The Kennel.

FIXTURES.

BENCH SHOWS.

Nov. 23.—Metropolitan Kennel Club's second annual show, Brooklyn, N. Y.
Nov. 30.—Washington City Kennel Club's show, Washington, D. C.
Dec. 8.—Rhode Island Poultry Association's show, Pawtuxet, R. I.

1898.

Feb. 15.—New England Kennel Club's fourteenth annual show Boston.
Feb. 21.—Westminster Kennel Club's twenty-second annual show' New York.

FIELD TRIALS.

Nov. 15.—National Fox Hunters' Association's fourth annual triais, Cynthiana, Ky.
Nov. 15.—E. F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials, Newton, N. C.
Nov. 29.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Dec. 6.—Texas Fox-Hunters' Association's meet, Hinson Springs, Tex.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.
Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal.
Jan. 24.—Union Field Trials Club's trials, Tupelo, Miss.
Jan. 31.—Champion Field Trial Association's Champion Stake, Tupelo, Miss.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala.

THE NEW ENGLAND BEAGLE CLUB FIELD TRIALS.

THE fifth annual field trials of the New England Beagle Club were held at Oxford, Mass., Nov. 1-6. Game was abundant, and the weather, barring Tuesday, was excellent for hunting, though a trifle warm in the middle of the day. The club made its headquarters at Bacon's Hotel, where the proprietor did everything possible for the comfort of his guests.

The judges were: W. S. Clark and Thomas Shallcross. They worked hard, and gave their decisions after careful consideration.

Among those present at the trials were: G. H. Clark, Lowell, Mass.; Geo. F. Reed, Barton, Vt.; Wm. Saxby, Ilion, N. Y.; H. S. Joslin, Geo. Appleby, Oxford, Mass.; John Helding, Howard Almy, Providence, R. I.; D. F. Summers, Thorndale, Pa.; A. Parry, Franklin Park, Mass.; M. T. Mason, Northampton, Mass.; A. H. Morse, Woodstock, Mass.; E. C. Cork, Walpole, Mass.; H. A. Purinton, Waterbury, Conn.; H. W. Lacy, Boston, Mass.; A. D. Fiske, Worcester, Mass.; Bradford S. Turpin, Boston, Mass., and others.

President Joslin called the annual meeting to order on Monday evening. E. C. Cook, Massachusetts; N. T. Mason, Northampton, Mass.; A. J. Purinton, Waterbury, Conn., were chosen to membership.

The election of officers resulted as follows: President, H. S. Joslin; Vice-President, A. D. Fiske; Secretary-Treasurer, W. S. Clark; Executive Committee, Thomas Shallcross, C. J. Prouty. A vote of thanks for special prizes was passed and the meeting adjourned.

Monday.

The beagles were measured in the morning and immediately after dinner the party took the field with the Futurity entries. Rain fell in a steady drizzle, and all who followed the hounds were wet through.

The Futurity.

First Series.

There were six starters in this stake which was open to all beagles whelped on or after Jan. 1, 1896. The value of the stake was $70.50; first prize, $28.30; second prize, $17.63; third prize, $10.57; to N. E. B. C., $7.05; to breeder of the winner, $7.05.

The drawing resulted in running Franklin Field Trial Kennels' w., b. and t. dog Summers's Sailor (Sailor—Summers's Fly), whelped March, 1896, handler, D. F. Summers, with H. S. Joslin's b., w. and t. bitch Cora J. (Wanderer—Headlight), whelped June, 1896, handler, Geo. Appleby.

Franklin Field Trial Kennels' w. and t. bitch Maggie S. (Sailor—Lucy S.), whelped April 1, 1896, handler, D. F. Summers, with Howard Almy's b., w. and t. dog Buckellew (Lewis—Skip II.), whelped January, 1896, handler, owner.

William Saxby's b., w. and t. dog Doubtful (Harker—Dime), whelped January, 1896, handler, owner, with Howard Almy's b., w. and t. dog Blitz (Baronet—Whiffet), whelped May, 1896, handler, owner.

SUMMERS'S SAILOR—CORA J.—This stylish pair were cast off on Federal Hill at 1:45. A rabbit was soon started, but scent lay badly and the run was unsatisfactory. First one beagle would drive, then the other would pick it up, and neither was willing to hark to the other. This rabbit was lost and it was some time before a second was started. In the last race Sailor at first set the pace, but later he was thrown out and Cora drove the game across an open pasture alone. Up at 3:45.

MAGGIE S.—BUCKELLEW.—This brace was laid on at 4:00 and worked into a dense thicket where the judges could not follow. Buckellew trailed to a start and drove alone for some distance. Then Maggie harked, and together they forced bunny into the open and in a short run to a wall where the game went to earth; there was little to choose between them. Meantime a rabbit had been marked in the field, but before the beagles could be brought up it was killed by a weasel, its cries calling the party to the scene of the tragedy. The weasel darted into a wall and escaped. Up at 5:00.

Tuesday.

Rain fell all day and nothing was done in the field. The competition for Mr. Joslin's special prize for the best hunting story filled in the time pleasantly, and many good yarns were spun around the great stove in the hotel office. George F. Reed was declared the winner.

Wednesday.

The afternoon was clear and pleasant, but the morning was wet, foggy and disagreeable. Scent lay well, game was abundant and the day's work was an excellent one. Ten races were run.

MAGGIE S.—BUCKELLEW.—They were put down at 8:20 near the Shepardson farm. Maggie trailed to a start and led the chase till the game was driven to earth. Buckellew was indifferent and would not bark. Up at 8:45.

DOUBTFUL—BLITZ.—This brace was cast off at 8:48. Two rabbits were started, and both were forced to ground. Blitz drove them truer than Doubtful, who tongued but little when driving alone, and ran mute when in company. Up at 9:40.

Second Series.

MAGGIE S.—CORA J.—They were put down at 9:54. Cora outworked Maggie, catching the turns quicker, overrunning but little and driving her game steadily and well. Up at 10:18.

MAGGIE S.—BLITZ.—They were put down at 10:22. Three rabbits were found, but one of them made no running, as he tumbled into a hole scarcely 5yds. from where he was started. The others led off well, and in both chases the advantage lay with Maggie; she hunted better than Blitz, and when the game was up drove faster and cast with more judgment. Up at 11:15.

The judges gave first prize to Cora J., second to Maggie S., third to Blitz, and reserve to Doubtful. The prize for breeder of first prize winner went to Mr. Joslin.

The Derby—15 to 13in.

First Series.

This stake was open to all beagles, 15 to 13in. in height, whelped on or after Jan. 1. '96. Forfeit, $3; $5 additional to run. First prize, 40 per cent.; second, 30 per cent.; third, 20 per cent. of entry fees. There were seven starters in the stakes, drawn to run as follows: Howard Almy's b., w. and t. dog Buckellew (Lewis—Skip II.), whelped January, '96, handler, owner, with John G. Reed's b., w. and t. bitch Splitter (Wanderer—Triumph), whelped April '95, handler, Geo. F. Reed.

Franklin Field Trial Kennels' w. and t. bitch Maggie S. (Sailor—Lucy S.) whelped April, '96, handler, D. F. Summers, with Howard Almy's b., w. and t. dog Blitz (Baronet—Whiffet), whelped May, '96, handler, owner.

Wm. Saxby's blue-ticked dog Doubtful (Harker—Dime), whelped January, '96, handler, owner, with Franklin Field Trial Kennels' w., b. and t. dog Summers's Sailor (Sailor—Summers's Fly), whelped March, '96, handler, D. F. Summers.

A. D. Fiske's w., b. and t. dog Scamp (Clyde—Blossom), whelped May, '96, handler, A. H. Merse, drew the bye.

BUCKELLEW—SPLITTER.—They were cast off in the well-known alder field in the rear of the Shepardson barn at 11:37. Two rabbits were started, and both chases were interesting. The beagles packed well, watched one another closely, ran at a great pace, and did beautiful work from start to finish. Buckellew ran in much better form than he showed in the Futurity. Splitter's work seemed to be a little better than Buckellew's.

MAGGIE S.—BLITZ.—These beagles were cast off at 1:08. Maggie was the better hunter, and after the game was up, ran faster and truer than Blitz. He moved slowly, and acted as if he took little interest in the chase. Up at 1:57.

DOUBTFUL—SUMMERS'S SAILOR.—They were put down at 2:12. Two rabbits were afoot and the hounds were constantly changing from one to another. The advantage rested with Sailor, who was the more eager hunter and better driver; he was, however, inclined to babble a bit, while Doubtful did not give tongue freely enough. Up at 3:04.

Owing to a mistake, Scamp was not on the grounds, and the remainder of the races in this stake were run on Thursday; but they are reported here for convenience.

SCAMP.—This pretty beagle was put down at 10:45, and was hunted by A. H. Morse. Maggie S. was ordered down as a running mate, but after a short drive she was ordered up, her condition handicapping Scamp seriously. Sailor was then put down with him, but Scamp refused to be interested in the hunt, and did not run in his true form at any time during the race. Up at 11:34.

Second Series.

MAGGIE S.—SPLITTER.—These flyers were cast off at 11:36. The first race was a short one to a loss. Then Splitter had a drive all by herself and handled her game well. Finally they got away together, and it was soon evident that Maggie was a trifle quicker than Splitter in working out the losses and equally as fast. Up at 12:10.

BUCKELLEW—MAGGIE S.—This couple was put down at 1 and hunted for an hour. Maggie, on account of her condition, was kept on chain till Buckellew had his game started. The first rabbit started was driven into a wall before Maggie came up with the chase. In driving the second rabbit, Maggie showed her superiority, being speedier than her opponent and quicker in picking up the losses.

The judges gave first prize to Maggie S., second to Buckellew, third to Splitter and reserve to Summers's Sailor.

All-Age—13in. and Under.

First Series.

This stake was open to all beagles, 13in. and under, that had not taken a first prize at any recognized field trial. Forfeit $3; $5 additional to run. First prize, 40 per cent.; second, 30 per cent.; third, 20 per cent. of entry fees. There were seven starters in the stake and they were drawn to run as follows:

Franklin Field Trial Kennels' blue-ticked bitch Stump (Sailor—Minnie S.), whelped June '96, handler, D. F. Summers, with Mrs. A. H. Morse's w., b. and t. bitch, Ida Novice (Clyde—Lady Novice), whelped June '95, handler, A. H. Morse.

H. S. Joslin's b., w. and t. bitch Cora J. (Wanderer—Headlight), whelped June, 1896, handler, Geo. Appleby, with Franklin Field Trial Kennels' w., b. and t. bitch Pinnie (Sailor—Minnie S.), whelped June, 1896, handler, D. F. Summers.

Geo. F. Reed's b., w. and t. bitch Snifter R. (Wanderer—Triumph), whelped April, 1895, handler, owner, with A. Parry's b., w. and t. bitch Belle of Franklin (John Bull—Belle), handler, owner.

Wm. Saxby's b., w. and t. bitch Bessie (Judge—Baby), whelped June, 1891, handler, owner, drew the bye.

STUMP—IDA NOVICE.—They were cast off at 3:09. Ida was smaller than Stump, and was outfooted. Both, however, hunted well and drove prettily in a long chase through the open field to the woods, where the game was lost. Up at 3:44.

CORA J.—PINNIE.—This couple was put down at 3:35 and hunted into pines, where Pinnie trailed for some distance and started her game. Cora hunted and drove indifferently, and Pinnie won without great trouble. Up at 4:26.

SNIFTER R.—BELLE OF FRANKLIN.—These beagle were put down at 4:28 in thick birches. Bella trailed to a start, and in the ensuing run the work of both was very good. They packed well, drove at a great clip, and ran their game to earth to the best music of the day Up at 5:15.

A meeting of the club was held in the evening, President Joslin in the chair. Michael Kennedy, Peabody, Mass., and D. F. Summers, Thorndale, Pa., were elected to membership. Resolutions of sorrow and eulogy were passed in respect to our beloved friend, George Laick.

Thursday.

The day was a beautiful one, clear and still, but too warm for the best work. Game was abundant, but the rabbits went to earth much quicker than they did on Wednesday. The 15in. Derby, reported above, and the 13in. All-Age stakes were completed.

BESSIE.—She was cast off at 8:08 with Pinnie as a running mate. Two rabbits were started and in both chases Pinnie outfooted Bessie, and also ran truer and steadier. Up at 8:38.

Second Series.

STUMP—SNIFTER R.—This was a long race, the beagles being put down at 8:47 and taken up at 10:05. Neither hound was under control, and there were frequent waits while the handlers hunted for their charges. Five rabbits were jumped and both beagles placed pretty work to their credit, but Stump was the faster, quicker on the turn and the better trailer.

SNIFTER R.—BELLE OF FRANKLIN.—This pair was ordered down at 10:08. The first rabbit found was a coward and took to earth at once. The second led a long, hard race, and at its conclusion was so exhausted that he was easily caught by a spectator. It was as pretty and fast a race as was run during the trials. Snifter showed himself to be the better. Up at 10:22.

The judges gave first to Stump, second to Snifter R., third to Belle of Franklin, reserve to Pinnie.

All-Age—15 to 13in.

This stake was open to all beagles, 15 to 13in. in height, that had not won a first prize at a recognized field trial. Forfeit $3, $5 additional to start. First prize 40 per cent., second 30 per cent., third 20 per cent. of entry fees and forfeit money. There were thirteen starters that were drawn to run in the first series as follows:

John Mullane's b., w. and t. dog Prince (Sam—Baby Deane), handler, A. Parry, with H. S. Joslin's b., w. and t. dog Trick (Clyde—Lady Novice), whelped June, '95, handler, George Appleby.

Wm. Saxby's blue-ticked bitch Dime (Judge—Baby), whelped January, '91, handler, owner, with John G. Reed's b., w. and t. bitch Splitter (Wanderer—Triumph), handler, George F. Reed.

John Helding's b., w. and t. bitch Lady Wedgewood (Glenwood Boy—Lady Glenwood), whelped August, '93, handler, owner, with Franklin Field Trial Kennels' t. and w. bitch Summers's Fly (Clover—Lucy S.), whelped March, '95, handler, D. F. Summers.

Howard Almy's b., w. and t. dog Lewis (Bannerman—Parthenia), whelped June, '92, handler, owner, with Franklin Field Trial Kennels' b., w. and t. bitch Belle Summers (Clover—Lucy S.), whelped March, '95, handler, D. F. Summers.

A. D. Fiske's b., w. and t. dog Phantom (Clyde—Brummy), whelped May, '94, handler, George Appleby, with Howard Almy's b., w. and t. bitch Miss Quinn (Diamond—Nancy Lee), whelped August, '95, handler, owner.

George F. Reed's b., w. and t. bitch Scorcher (Wanderer—Triumph), whelped April, '95, handler, owner, with Wm. Saxby's blue-ticked dog Doubtful (Harker—Dime), whelped January, '96, handler, owner.

A. Parry's b., w. and t. bitch Nellie Bly (Sport R.—Bess), whelped October, 1894, handler, owner, drew the bye.

PRINCE—TRICK.—Down at 2:16 in brush field. They ran an even and interesting race. The first two rabbits put up quickly went to ground, but the third led a great run in open and cover. Honors were very evenly divided, notwithstanding the fact that Prince was frequently harked on ahead of Trick when at a loss, and thus obtained an advantage over his opponent to which he was not justly entitled. Up at 2:53.

DIME—SPLITTER.—This brace was ordered down at 2:58. Splitter started the game, but in the drive Dime seemed to have the advantage, working most of the turns and carrying the line truer than her running mate. Up at 3:28.

LADY WEDGEWOOD—SUMMERS'S FLY.—Cast off at 3:32. The first rabbit was started and driven to earth by Lady before Fly harked in. During the heat there were two other short races, in which Fly easily showed her superiority. Up at 4:40.

LEWIS—BELLE SUMMERS.—These hounds were put down at 4:45 and taken up at 5:07. No start was made.

Friday.

A thick fog made the morning cold and disagreeable, but the sun soon showed his face and the day proved to be warm and pleasant. The hope that the trials would be finished early in the afternoon was not fulfilled.

LEWIS—BELLE SUMMERS.—Put down at 8:30 in the brush field. The first rabbit found was quickly forced to earth, but the next was a splendid runner and led one of the finest races of the day. Most of this chase was in the open and gave the spectators an excellent view. Lewis ran true to the line, and was quicker than Belle in picking up the losses. Up at 9:30

PHANTOM—MISS QUINN.—Put down at 9:31. A rabbit was trailed to a start and driven to earth by Phantom. Miss Quinn did not hark and could not be found. Pending her discovery another brace was put down, and these hounds were not cast off again till 12:32. Scent was then very bad, and neither could follow the dodging rabbit that was started. Up at 1:07.

SCORCHER—DOUBTFUL.—Ordered down at 2:16. Four rabbits were started; two were driven to earth in brief chases and the others were quickly lost. Scent was very poor and neither of the beagles did creditable work. Up at 11:50.

NELLIE BLY.—The bye was cast off at 1:22 with Belle Summers. One rabbit was soon forced to earth, and a second then led a fine chase through a low, swampy country, where the scent lay well. Belle had the advantage, though Nellie was always in the race. Up at 2:03.

Second Series.

PRINCE—BELLE SUMMERS.—Down at 2:18. They ran a long and interesting race in cover with plenty of music. Belle was quicker in making out the losses and before the rabbit was up hunted better than Prince. Up at 3.

DIME—LEWIS.—Cast off at 3:08. Lewis drove a rabbit to ground before Dime harked to him. Soon after a small rabbit was started, which led three short races. He was twice bolted from the wall, and finally driven to earth. In trailing this little cottontail, Dime showed excellent nose and fine judgment. Another rabbit was then started and after a good run was forced to ground, Dime having the best of the chase. Up at 4:15.

SPLITTER—NELLIE BLY.—Ordered down at 4:18. Nellie was lost almost immediately and not found till she was heard tonguing in the distance. Finally the beagles were sent away together on a hot scent. Nellie led the chase and drove to earth, Splitter being left at the first turn. Up at 5.

Saturday.

A fine hunting day, damp and cloudy. The trials were finished.

SPLITTER—NELLIE BLY—Down at 7:59. Two rabbits were found, one of them being started by Nellie. Both were little fellows and made no running. Up at 8:25.

PRINCE—LEWIS.—Cast off at 8:26. Six starts were made in this race, but only one of the rabbits was a good runner. He led a long chase in corn, and was at last forced to earth. The race was an even one, with little advantage to either hound. Up at 9:57.

PRINCE—DIME.—Down at 10:14. A long, hard run in corn. Up at 10:43.

The judges awarded first to Prince, divided second between Belle Summers and Dime, gave third to Lewis and reserve to Splitter.

Derby—13in. and Under.

This stake was open to all beagles, 13in. and under, whelped on or after Jan. 1, 1896. Forfeit $3, $5 additional to start. First prize 40 per cent., second 30 per cent., third 20 per cent. of entry fees and forfeit money.

There were two entries: H. S. Joslin's b., w. and t. bitch Cora J. (Wanderer—Headlight), whelped June, 1896, handler, owner, with A. D. Fiske's w., b. and t. bitch Queenie (Clyde—Blossom), whelped May, 1896, handler, A. H. Morse.

CORA J.—QUEENIE.—Down at 10:55. At first Queenie had the advantage, but later Cora J. improved in her work and won, with something to spare. Up at 11:40.

The judges gave first prize to Cora J. and second to Queenie.

Special Prizes.

Best in trials, Prince. Best marking game in hole by tonguing, Lewis. Best combination of speed and nose, Prince. Best 13in. All-Age entry, Stump. Best brace, Stump and Belle S Best trailer, Lewis. Best starter, Lewis. Best voice, Lady Wedgewood Best Derby entry bred by owner, Cora J. Most stylish worker, Dime. Greatest sustained speed, Prince.

This event has excited much interest among members of the Worcester Fur Company, many of whom will attend. It is estimated that twenty or twenty-five hounds will represent Worcester in the hunt. Messrs. A. B. F. Kinney, J. M. White and E. Walling will take twelve hounds, nine of which belong to the two former gentlemen. President John R. Thayer will take his three hounds with him. J. H. Bairl, of Auburndale, will be on hand with half a dozen animals, and Ledyard Bill, O. C. Wails and others will each take one or more, so that it looks as if Worcester will be well represented. Messrs. Kinney and White have arranged to leave Tuesday, and it is likely that all the party will go at the same time.

After his return from Westfield, Saturday, Mr. Kinney will leave for Cynthiana, Ky. P. A. B.

A. K. C. Executive Board.

PRESENT: Messrs. Schellhass, Watson, Wilmerding and Hunnewell, the latter presiding.

Washington City Kennel Club and American Pug Club, Louisville, Ky., were admitted to membership.

The following kennel names were allowe : Pine Lawn, to Mrs T. W. Currier, New York; Willmount, to Mr. William W. Caswell, New York; Standard, to Mr. William Saxby, Ilion, N. Y.; International, C. N Daly and A R. Curzon, Guelph, Can.; Chestnut Hill, to Mr. Henry Jarrett, Philadelphia; Archmont, Messrs. N. G. Alexander & Son, Delevan, Ill.

In the matter of the unpaid prize of the Louisville, Ky., show, the prize having been paid, the case was dismissed.

In the matter of the Great Dane Osceola Chummie, it was "ordered that in view of certain extenuating circumstances and the fact that this case was brought to the attention of the A. K. C. by the owner, who had entered the dog throughout the year without his registered kennel prefix, the full penalty of disqualification be not imposed, but he be directed to pay a fine of $10 This decision is not, however, to be regarded as a precedent in case of a similar violation of the rule governing entry, and all dogs must be entered at shows in their registered names."

It was "ordered that the officers of the C. K. C. be and are hereby suspended until they remit to the A. K. C. the deposit of $25 made by the Toronto Association, with its claim for dates, and held by said C. K. C."

It was "ordered that the suspension of Toon & Thomas, imposed by Vice-President Brooks under the rules, be continued, and that the secretary of the A K. C. be instructed to forward said Toon & Thomas a true copy of charges, and they be given an opportunity to defend themselves."

In the matter of the A. K. C. and Pacific Advisory Board (the matter of H. T. Payne and James Mortimer) the following statement was made: The case, cleared of its outside and irrelevant issues, is simply this: Mr. Payne was called upon to supply the evidence to support his public statements This he has refused to do, filing a demurrer, and pleading liberty of the press. It is first necessary to consider the demurrer, which is practically an admission that Mr. Payne made the public statements reflecting upon Mr. Mortimer Mr. Payne's demurrer has no standing in the case, and must be ruled out on the ground that Mr. Payne is not called upon to defend anything that he has stated, but merely to give the evidence or information upon which he based his statements, in order that, if guilty, Mr. Mortimer may be punished in accordance with the rules of the A K C No liberty of the press is endangered wha soever, and none can be until Mr. Payne is called upon to defend himself, which is not contemplated in the matter of this investigation as it is before the club. The person sought to be reached is Mr. Mortimer; if he has been guilty of the conduct as accused by Mr. Payne, and Mr. Payne by his public statements, coupled with his present attitude, is shielding an alleged offender. Mr. Payne has thus put himself in the same category as those who have in other instances refused to give information to the club, and have been from time to time suspended until the desired information has been vouchsafed. There is no reason why an exception should be made in the case of Mr. Payne, and Mr. Payne is hereby suspended until he submits the evidence upon which he made the said statements. As there are neither charges against Mr. Mortimer nor any evidence upon which to base any charges, the Pacific Advisory Board went beyond the case in filing a verdict. Their report should, therefore, terminate with the statement as given in Exhibit "C."

The following resolution was then passed: Whereas, Mr. James Mortimer, by the refusal of Mr. H. T. Payne to produce any evidence as to said Mortimer's conduct at the Oakland dog show, has been deprived of the opportunity of defending his good name; be it, therefore, resolved, that the executive board of the A. K. C. hereby expresses confidence in the honesty and integrity of said James Mortimer.

On recommendation of the secretary, the board ordered a die for A. K. C. championship medals, one of which will be donated to each dog winning its championship after Jan. 1, 1898.

MR. HAMMOND'S NEW BOOK

From Our Animal Friends.

This is one of the most sensible books on the treatment of dogs that we have ever seen.* The opening words of the introduction are these: "More than half a century has passed since I gave the first dose of medicine to my dog. Since that time, I regret to say, deep under the sod lies many a poor victim of mistake." Mr. Hammond knows by sorrowful experience that he has killed more dogs with medicine than he has ever cured. He has learned that "to throw physic to the dogs" is about the worst thing that can be done with the physic—for the dogs at any rate. He has also learned that nature has a healing power which drugs are more likely to obstruct than to assist. Not that he does not allow the use of simple medicines when he is quite sure that they are the right medicines; though, even then, he prefers to use them sparingly. The true way to assist nature in the cure of disease, dog diseases not excepted, is just to give her a chance, by scrupulous attention to cleanliness and temperature, by careful and kindly nursing, by watching the diet; in short, by permitting nothing to harm your dog, and so giving kindly nature an opportunity to heal. That is the basis of Mr. Hammond's whole system, and, after making his system perfectly clear, he gives descriptions of many common ailments, with hints of the proper treatment in each case and of the remedies that may be safely used

Of course Mr. Hammond is not one of the men who believe in wild cries of "Mad dog!" When he hears that cry he knows that it is the people who are mad and that the chances are a million to one that the dog is not mad. Here is a story on the subject which we think it well to quote:

"Nearly forty years ago I was the proud owner of a young pointer bitch that I thought was very near perfection, and I loved her with my whole heart. One day, while at the vilage store, we were startled by the cry of 'mad dog.' As we went to the door, my little brother came running up, and with many tears and sobs told me that Gipsy had run mad and had been chased under a barn that was some quarter of a mile from the house. I was soon on the spot. I found an excited crowd watching one of their number, who was on his hands and knees trying to see the dog in order that he might shoot her. Pulling him away from the aperture, I crawled in, and could see by the light from her eyes that she had gone to the furthest corner. I crawled to her, and at once saw that she was suffering from a severe attack of epilepsy. When near enough, I spoke to her and attempted to put my hand on her head; but she caught my hand in her mouth and set her teeth nearly through, but at once let go and stiffened out, with only a slight convulsive movement. I then took her by the collar and backed out from under the barn. I was loudly commanded by every one to 'Come away and let him shoot her!' but I got upon my feet, and, taking her in my arms, told them that if they shot her they would have to shoot me, as I was going to carry her home. The crowd was determined and threatened to take her from me; but as she had come partially out of her stupor, and was snapping her jaws together and struggling, I answered them that the first one who put hands on me would get bitten, and they made way. I soon had her at home, where I bathed her head freely with cold water, and in less than half an hour she was as bright and well as ever. Until old age finally dimmed her bright eye, she had no more attacks of rabies. Although I have gone mad whenever I have seen valuable animals sacrificed to the blind ignorance of their owners, I still live."

---

* NURSING VS. DOSING. A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond (Shadow), Author of "Training vs. Breaking," etc. New York: Forest and Stream Publishing Company. Price, $1.00.

M. V. G. & F. P. A.'s Trials.

OUR special report of the Monongahela Valley Game and Fish Protective Association was received too late for publication this week. It was written for us by an expert, and will be a succinct and accurate recountal of the competition. The winners are as follows: Derby first, Dr. J. R. Daniels's pointer bitch Nellie Wilson (Plain Sam—Dolly Dee II.); second, H. K. Devereaux's setter bitch Mattie's Gleam; equal third, J. T. Crawford's setter dog Winks (Joe—Dot C.) and Fox & Blythe's setter bitch Madera (Dion C.—Hopeful). All-Age, first, H. K. Beattie's setter bitch Loretta (Gladstone's Boy—Rill Ray); second, Fox & Blythe's setter dog Forzands (Gath's Mark—Countess Rush); third, H. K. Devereux's setter dog Spot Cash (Vanguard—Georgia Belle).

POINTS AND FLUSHES.

According to the London *Field* of Oct. 16, Mr. John Crozier has been master of the Blencathra foxhounds for nearly fifty years. The country hunted over by this pack of hounds, which number in all twelve and a half couples, is exceedingly wild and broken in character, differing very strongly from the country hunted over by the swell packs of "the grass counties". The oldest master of hounds, however, is said to be Mr John Lawrence, who hunts the Llangibby pack of twenty-five couples, two days a week during the season. Mr. Lawrence has been practically an M. F. H since 1862, seventy-one years ago, when he was presented with a leash of hounds that were the nucleus of the present Llangibby pack. Although Mr. Lawrence is ninety years old, having been born in 1807, this is the first season that he has divided the honors and duties of mastership with anybody; Mr. H. A. Williams is his coadjutor this season, the huntsman being Mr Evan Williams.

That there may be a breed established by wise selection, a breed of the rugged stalwart type advocated by Mr Hough, there is less and less reason to doubt. The following, taken

from a letter written by Mr. G. B. Kirkpatrick, is pertinent to the point. He concludes in writing of his puppy: "By the way, I think Brother Hough, would like this pup, as I think he will turn out to be his ideal 'meat dog.' He was run over by both wheels of a tandem bike when about six months old. Last month, while in New Hampshire shooting with my old dog, he was playing around the farmhouse, a country wagon came along, two men sat on the seat, barrel of sugar and other merchandise in the wagon, both wheels went square over his back, between the short ribs and his hips. The sandy road saved his life."

The Missouri Field Trials Association completed its organization recently, and contemplates holding its first trials in November or December next, at Amoret, Mo. It will not permit professional handlers to participate in the competition.

The list of eminent dogs of the Pacific Coast has been honored by the addition of Dash Antonio (Antoni—Lady Lucifer) to it, according to *Field Sports*. He made a most commendable competition in the Canadian field trials of the past three years.

We are informed by a correspondent that Pottinger Dorsey died suddenly of heart disease, at New Market, Md., on Wednesday, Nov. 3. He was very popular among all beagle men. He died while hunting. His brother saw him fall, and when he reached him he was dead. At one time he was quite conspicuous in bench show interests.

In our business columns Arthur L. Bailey, Plymouth, Mass , offers pointers; Beaumont Kennels, New York, offers setters; Charles S. Onderdonk, Philadelphia, offers collie; R. I. Holbrook, Townshend, Vt , offers bull terrier; Standard Stock Co., Truro. Nova Scotia, offers King Charles spaniel; 922 South Sixtieth street, Philadelphia, offers dogs of different breeds; Fred McGough, Richardson, Ill., offers beagles; S. W. Hart, Stamford, N. Y., offers foxhounds and wants a cocker

---

The tenth annual hunt of the Western Massachusetts Fox Club was scheduled for Wednesday and Thursday of this week at Westfield, with the dinner served on Wednesday evening at 7 o'clock. We acknowledge with thanks an invitation to be present, and deeply regret that the pressure of the busy season denied us the pleasure of accepting and being present.

Mr. Mortimer, under date of Nov. 8 writes us that everything looks very favorable for the Metropolitan Kennel Club's show. Several challenge and puppy classes have been added. The management would be pleased to receive photographs of exhibitors' dogs. Entries close on the 12th inst.

Wheeling.

THE CHAINLESS BICYCLE.

An expert on the construction of bicycles is credited by the daily press with the following criticism on the chainless bicycle:

"There seems to be some slight imperfections in the chainless bicycles I have ridden. When you put foot pressure on the pedals there is a certain amount of backlash caused by the cogs of one wheel not fitting tightly into those of another. The binding of the cogs against one another makes a sort of burring sensation that you can feel with your feet, but not hear.

"The only possible danger of accident is in the breaking of the cogs, but the metal is made so hard that this possibility is only remote. But even should a cog break it would not interfere seriously with the running of the wheel, as two or three cogs practically fit into their places at the one time. The backlash is not so noticeable in the wheel when it is new, but if there is a sixty fourth part of an inch play between the cogs to begin with, every revolution of the pedal will tend to increase it. The action of the chainless wheel is more positive than in the chain wheel, and the transmission of power is therefore more direct.

"The great advantages of the chainless over the chain wheel are its convenience to keep clean and its absence of mud-gathering facilities. For instance, if the riders in the century run on Sunday last had been mounted on chainless bicycles, they would not have found it nearly such hard work plugging through the mud, and they would not have had to dismount frequently, as most of them did, to clean the mud away from the running gear."

In the matter of the patents covering the driving mechanism of the chainless wheel, it is reported that two expert patent attorneys have made a thorough investigation in behalf of some large bicycle manufacturers, and have discovered that the patents are what were known as the old League chainless patents, and that so far as affording exclusive rights of manufacture are concerned they are worthless. In view of the attorneys' report, these manufacturers have decided to manufacture chainless wheels after the designs of those now on the market. A common fund is established to defend any one of the combination against whom suit may be brought, each one paying a *pro rata* of the expense of such litigation. All the indications are that the high prices asked for the chainless wheels will not long be maintained.

Pleasure and Business.

The pleasantest ride, with all the accessories of good route, beautiful landscape and delightful weather, may be marred or spoiled by the impatience of a companion to go somewhere. One town being reached in haste, there is a feverish hurry to reach the next. And in this manner town after town is reached and passed in a scramble to reach some destination. The habits of business life cling to many people in their pleasures. The hurry to reach the office, the depot, the landing, etc., becomes such a confirmed habit that few city-trained men can divest themselves of it even when there is no occasion for hurry, or when hurry is a detriment. And yet the man in a hurry without a purpose is impatient and irritable if there is any delay. If a companion is fatigued and stops to rest, he shows about the same nervous anxiety and disapproval that he might if a moment lost might lose him his train or his steamer. If asked why he wanted to hurry, he could give no sensible reason. He is unconsciously the victim of the habit of going nervously and hurriedly, as all must do in a big city where cable cars or elevated trains must be taken instantly or not at all, and where even walking on the sidewalk requires a certain vigorous speed and energy if one would not be passed, cut off and elbowed constantly by the anxious throngs who have the going-somewhere habit, whether they are really going somewhere or not.

It is a bad habit to have on a pleasure trip—bad for the one afflicted with it, and worse for his companions, who are forced on and on speedily and hurriedly from place to place against their inclinations There may be historical places at hand, ones where the fate of a nation was decided, where heroic deeds were done, or where the finest works of art have place, and yet they are nothing to the man with a mania to be somewhere else than the place he is in. There may be inviting side roads winding through forest, by winding river, or in flowery dells—the man in a hurry to leave where he is never notes any of such. He has no time for the contemplation of the beautiful in nature, the historical association of places, or the charm of varied scene sought as a pleasure. He is too intent on leaving where he is and being where he isn't.

THE 1898 WHEELS.

The new chainless wheel, while not causing any special alarm to manufacturers in general or any universal interest to a degree which reaches a craving on the part of the general public, has nevertheless served a useful purpose in stimulating effort on the part of the manufacturers of the chain wheels, to perfect a protection for the running gear of their productions and to offer also such useful novelties in addition as they can devise. The patents of the new chainless wheel generally are looked upon with more or less contempt because of several reasons, the most important being that first of all the mechanism involves no new principle and is one already in common use throughout the mechanical world; next, it is virtually the same as that of the old league chainless, and it has not proven to be of the superlative merit in practical use that is claimed for it by its makers.

Out of the 200 makers of wheels of more or less general good repute, there will be only about twelve who will devote their efforts to the success of the chainless. The others will be free to do their best to make the chain wheel better in itself and better in its driving machinery. A great variety of wheels will thus be offered to supply the demand of 1898. The protection of the gearing, in whole or in part, will be one of the chief aims of most makers, thus equaling as near as may be the one feature of the chainless wheel which is generally admitted to be of real value, namely, the protection of the gearing from dust, dirt and wet. The much greater space occupied relatively by the chain gearing makes this problem somewhat difficult to solve satisfactorily. Manufacturers, however, have been diligently at work on the problem of gear cases, or "inclosed chain," as some prefer to call the mechanism so protected, with the result that a most comprehensive assortment of gear cases and chain protectors will be offered to the public next year This line of effort is not by any means a new one, but an old one with a new impetus. The gear cases of the past, made of leather, celluloid and different kinds of metal, have been both of a weight to seriously encumber the wheel, and of a shape to mar its proportions and offend the eye. Aluminum alloys and very light steel, used in American cases, have somewhat removed this objection, but the problem is still unsolved from a commercial standpoint.

With the gearing satisfactorily inclosed and protected from dust, mud and wet, it is claimed that the chain wheel possesses certain properties of flexibility and adaptiveness to weight carrying combined with the action of the wheels on the rough or smooth surfaces of the average roads, that the stiffer mechanism of the chainless does not possess.

One mechanical novelty is a combination cog and chain gear which will be produced by an Indiana manufacturer

An improved chain and sprocket, for which is claimed a power to work perfectly, regardless of mud or dust, will be offered by another concern. This benefit is derived from rollers on the sprocket wheel, so arranged that by revolving with the action of the chain, they free the mechanism from such mud, etc., as may find lodgment on it. Under severe tests it is claimed this mechanism gave admirable results. With the mechanisms in common use, a varying resistance of from 48 to 150lbs. resulted from the tests, while the new mechanism varied but slightly from 49 to 53lbs.

New chainless gears, approximating in external appearance to the present chainless, but differing in mechanism, also will be offered for public approval. Nearly all the mechanical principles of friction, spur and bevel gears, etc., will be applied to the gearing in one form and another, although none will contain any new mechanical principles. They will be old principles applied to new uses.

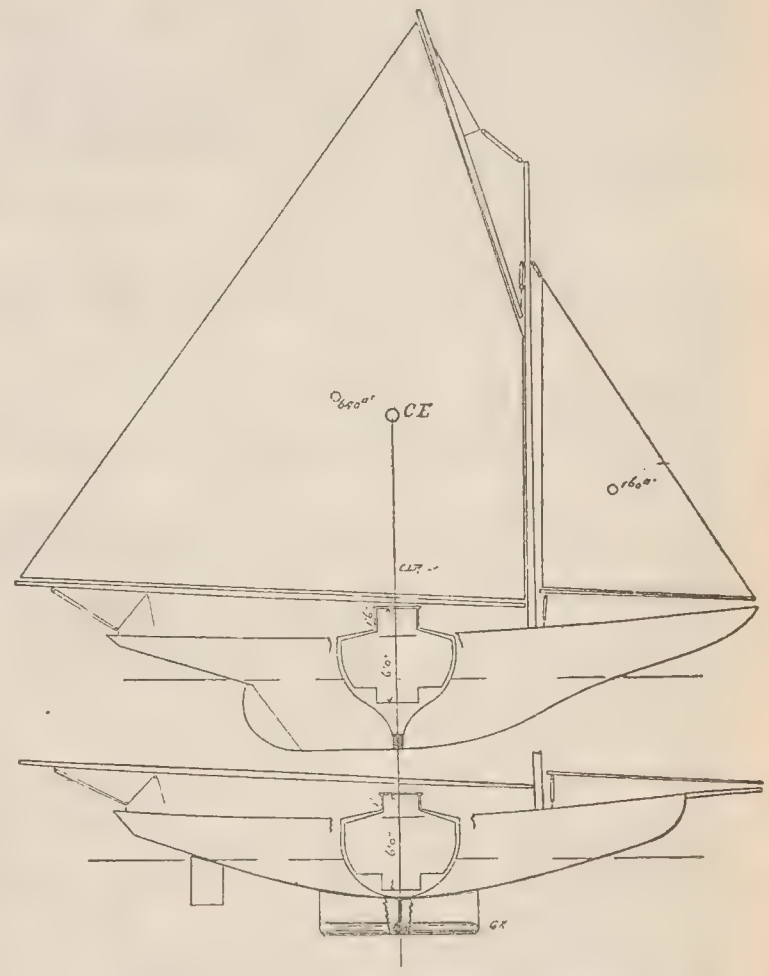
Frames have also been given consideration, one being so devised that it can be adjusted to suit the convenience of any rider, and also can be changed from a diamond to a drop frame.

Brakes will be treated as a desirable special feature of next year's wheels, and there will be a general striving for greater excellence of finish by the freer use of nickel, enamel, silver, etc.

There will be an effort made to sustain the price of a certain line of next year's wheels at $100 and $125, chiefly with a view to gain the prestige which comes from making a high grade wheel and the confidence it inspires in the other products of such makers; but it is probable that really useful and beautiful wheels of standard make will be readily obtainable at from $50 to $75, with a range of prices otherwise to suit purses long or short.

Yachting.

The only new yachts thus far under way for next season, except the many small craft in restricted classes, are three schooners to be designed by Cary Smith & Barbey. These yachts are of a new and most sensible and serviceable type, of light draft, and fitted with compact auxiliary naphtha engines. One will be about 45ft. l.w.l., one about 55, and one some 10ft. longer. They will have excellent accommodations for their size and draft, and the power, while occupying but little space, will enable them to get somewhere in a calm.



Taken in connection with the lively demand for restricted classes, this new type shows a decided turn for the better in yachting and a more hopeful outlook than has been seen for many a day.

It is just a year since the yachtsmen of New York were called on to restore the sport and inaugurate a new era of prosperity by adopting, as a panacea for all existing ills, the limitation of draft at a preposterous figure, designed to encourage the production of large semi-fins of the Quisetta type. As the Forest and Stream predicted at the time, the limitation of draft, in the form in which it was proposed and adopted, has failed in bringing the promised prosperity to yachting. One racing yacht in the 51ft. class has been built under it, and has practically raced alone all the season. There has been no schooner racing to speak of, and there is now no prospect of new schooners or more racing next year.

Had the draft limit in the schooner division been placed at a reasonable figure, so as to encourage instead of prohibiting the American type of moderately deep centerboard—roughly speaking, the Quickstep type instead of the Quisetta type—it is quite probable that some racing boats would have been built. As it is, all thought of racing is thrown aside and such new schooners as are planned are thorough cruisers.

Poor as the immediate outlook is, there are evidences that men have tired of the big, fin-keel racing machines, and are now ready to go to the other extreme in accepting all sorts of restrictions. The latest news from the proposed new 51ft. restricted class is that the excessive cost of building even these boats has deterred the wealthy men who were back of the plan. This is much to be regretted, as the class promised to be a good one. It only emphasizes, however, the fact we have long insisted upon, that the building and racing of such craft as Defender and Vigilant at *carte blanche* cost is no indication of general prosperity in yachting; and on the other hand, that there are few yachtsman who are sufficiently enamored of the sport to pay the very heavy cost of racing large yachts year in and year out.

If the movement for restrictions extends from the very small to the medium classes, as it now promises to do, there will be quite a revival of racing next season; but there is little probability of a renewal in the very large classes, even as large as 75ft. racing length, until a new rule and many accompanying restrictions are universally adopted.

The Fin in the Small Classes.

The above diagram was intended to accompany Mr. George Hill's letter in the previous issue of the Forest and Stream. Mr. Hill has submitted to the American Y. C. a complete design for a 25-footer similar to the lower one in the diagram.

Hobe Sound Y. C.

HOBE SOUND, FLA.
Monday, Oct. 25.

The last three races of the Hobe Sound Y. C. have resulted as follows:

FIRST CLASS

	Elapsed.	Corrected.	Points.
Sprogie	1 07 00	1 07 00	2
Wenonah	1 12 21	1 09 45	1

SECOND CLASS

Lorraine	0 51 05	. . .. ,,	3
Juaita	0 56 37	. . .. ..	2
Water Witch	Capsized.		0

FIRST CLASS.

	Elapsed.	Corrected.	Points.
Wenonah	1 06 40	1 01 19	3
Wanda	1 05 49	1 05 49	2
Sprogie (disqualified)	1 08 36	1 08 36	

SECOND CLASS

Juanita	1 08 24	. . .. ..	1
Ruby	Withdrew.		0

The race to-day was sailed in a howling norther. The yachts got away well together, with Wenonah first, Wanda, Sprogie and Frances in the order named, and held the same positions to the second buoy. On the beat back Wanda forged to the front, Sprogie a close second, and Wenonah and Frances fighting hard for third place. Just before crossing the line in the first round, Frances split her jib and withdrew. The second round was a procession; Sprogie made a slight gain and Wenonah steadily fell behind.

In the second class Juanita had a sail-over.

FIRST CLASS.

Start, 2:33:	Elapsed.	Corrected.	Points.
Wanda	1 17 29	1 17 29	4
Sprogie	1 18 14	1 18 14	3
Wenonah	1 31 25	1 30 34	2
Frances	Withdrew.		

SECOND CLASS.

Juanita	0 57 15	0 51 43	1

H. D. McVean.

Gilberts Bar Y. C.

Waveland, Fla., Nov. 4.—The Gilberts Bar Y. C. commenced its third annual series of races on Saturday, Oct. 30. This also being the first field day the club has held since the completion of its new and commodious club house.

The races were sailed in a drifting breeze from N.E., with the following results:

FIRST CLASS—22FT. SAILING LENGTH.

	Actual.	Corrected.
Joker	1 18 00	0 58 48
Albatross	Did not finish.	

SECOND CLASS—UNDER 22FT. SAILING LENGTH.

Beatrice	1 05 08	1 03 11
Swallow	1 01 02	1 01 02

Paul M. Astor, Sec'y.

Notes on the Yacht Defender and the Use of Aluminum in Marine Construction.

BY RICHMOND PEARSON HOBSON, ASSISTANT NAVAL CONSTRUCTOR, UNITED STATES NAVY.

Reprinted by permission from the Proceedings of the United States Naval Institute.

Copyrighted by the U. S. Naval Institute.

(Continued from page 374.)

THE features that determine cost in a structure, are: first, the cost of production, or first cost; second, the cost of maintenance, or care; third, the length of life.

D.—COMPARISON FOR FIRST COST.

The cost of production, or first cost, is made up of cost of material as supplied by the dealer or manufacturer, cost of labor expended in construction, deterioration of plant entailed, and interest on capital invested. The cost of labor is here taken to include draughting, superintendence, supply of power, etc.

1. Cost of Material.

a. Rolled Material.—The cost of ordinary mild steel used in hull construction may be taken at 2 cents per pound for both plates and shapes.

The cost of aluminum has not reached a steady level, continuing naturally to fall with the increase and improvement in methods of production. Roughly speaking, this increase in production has doubled each year for several years past, and though, for other causes, the fall in price has not been so rapid, it has been pronounced, and must be expected to continue for some time to come.

It is difficult, therefore, to assign to aluminum a definite value, and any value assigned must be considered as only momentary. For the purpose of comparison, however, the cost of rolled aluminum at the present time may be taken at 40 cents per pound for plates and 60 cents per pound for shapes, giving, compared with steel, the ratios per unit weight of 20 and 30, respectively.

(1) *Plates.*—As seen above, the ratio of weights for steel and aluminum in tension is .5 for equal ultimate strength, and .35 for equal elastic strengths. For plates, therefore, the ratios of cost in the two cases are 10 and 7, respectively.

The ratio of weights of plates for equal bending moments is .44 when working to the ultimate limit and .36 when working to the elastic limit. The ratios of costs, therefore, are 8.8 and 7.2, respectively.

The ratio of weight for equal stiffness is .648; the ratio of costs, therefore, is 9.6.

(2) *Shapes* of proportional dimensions.

The ratio of weights for equal bending moments when working to the ultimate limit is .55 for I beams and .58 for angles. The ratios of costs, therefore, are 16 and 17, respectively.

The similar ratios when working to the elastic limit are for weight .37 for I beams and .4 for angles, and for cost 11 for I beams and 12 for angles.

The ratio of weights for equal stiffness is .4 for I beams and .62 for angles. The ratios of costs, therefore, are 12 and 18, respectively.

b. Cast Material.—It will appear below, if not already evident, that aluminum is unfitted for heavy ship castings, such as stems, sternposts, shaft struts, etc., by nature of its small resistance to unusual violent shocks. The comparison, therefore, need extend only to small castings for fittings.

The cost of cast-steel for hull fittings may be taken generally at 10 cents per pound. The cost of cast-aluminum for the same fittings may be taken at 60 cents per pound. The ratio of costs, therefore, per unit weight, is 6.

In the range of cast hull fittings, the castings and parts of castings serve the function of covering like plates, of stiffness like shapes, and attachments like simple bars.

Some castings and some parts of castings are designed with special regard to ultimate resistance, and others are designed with special regard to elastic resistance. The resistance in some cases is simple, in others compound. Taking a general mean for equality of resistance, the ratio of weight is .48. The ratio of costs therefore, is 2.9.

Many cast hull fittings are made sometimes of cast steel, sometimes of cast brass; many are made exclusively of cast brass. It is therefore interesting to note that the comparison of aluminum with brass in these cases would give a ratio of weight of about .3, and of cost about .9. Recalling, too, that the two metals are more or less alike in relative softness and ease of working, it may be said roughly that the aluminum fittings, giving the same strength as brass fittings, have the same cost, with only one-third the weight.

It should be borne in mind, however, that this comparison, as also the comparisons with steel, assumes a degree of perfection in casting aluminum scarcely warranted at the present moment. It is given, however, in view of the rapid progress being constantly made in the new art of casting aluminum.

2. Cost of Labor.

a. For Rolled Material. (1) *Hull work proper.*—For steel, the cost of labor in large hull work, plates and shapes may be taken at 4 cents per pound. For aluminum, on account of its newness and limited application, definite figures or results, and estimates of the cost of labor in construction are lacking, and, despite of efforts, have not been attainable. The comparisons, therefore, must be limited to a general appreciation only.

The term labor, in estimates of hull construction, includes all operations of transportation and handling in yard and in shops, all operations of preparation of the material, laying off, punching, shearing, planing, bending, flanging, trueing; all operations of adjusting and securing in place, bolting, drilling, riveting.

In operations of transportation, handling and adjusting, the great lightness of aluminum work, less than half the weight of corresponding steel work, permits of marked economy in the number of men and length of time required.

In operations of tool work, planing, shearing, chipping, drilling, etc., the greater softness of aluminum insures a similar marked economy. The same feature of softness gives a marked economy in riveting, all work being riveted cold, doing away with the portable forges, and reducing the number of riveting gangs.

On the other hand, the greater elastic elongation, and the immensely smaller ultimate elongation of aluminum, cause the operation of shaping, rolling, bending, flanging plates, bending and trueing shapes, to be more difficult and more delicate, requiring longer time and greater skill. This drawback, evidently, is much more pronounced for shapes than for plates, the operation of trueing under the beam set involving, indeed, danger of destroying the integrity of the shapes.

The relative importance or amount of labor in these various operations depends evidently on the nature of the piece of work. Taking hull work throughout, and considering all the operations involved, the advantage sets emphatically to the side of aluminum in the case of plates, but is probably against aluminum in the case of shapes.

For the sake of continuing the numerical comparison, the advantage of aluminum over steel for plates is estimated at 25 per cent., while the advantage of steel over aluminum for shapes will be taken at the same figure. These figures, however, must be regarded as results of inductive judgment only.

Thus for aluminum, the cost of labor in large hull work is taken for plates at three-fourths, and for shapes at five-fourths the cost of steel for the same work.

Taking the weight ratios roughly at one-half, the cost of labor becomes for plate work 6 cents per pound, and for shapes 10 cents per pound.

(2) *Hull fittings.*—For rolled steel, the cost of labor in hull fittings may be taken broadly at 20 cents per pound.

The observations on the comparison for hull work hold in general for hull fittings. The operations of transportation and handling, however, become of less consequence, reducing the advantage of aluminum. On the other hand, the operations of shaping and trueing become, likewise, of less consequence, while the operations of small tool work, chipping, drilling, etc , become more pronounced in favor of aluminum. For the present purpose, therefore, the price ratio may be taken at three quarters for shapes as well as plates; with the same weight ratio, the cost of labor for aluminum hull fittings becomes 30 cents per pound.

b. For Cast Material.—Confining the comparison, for the same reason as given above, to small castings for hull fittings, the cost of labor for steel castings may be taken broadly at 12 cents per pound. The cost of labor for aluminum castings for the same fittings may be taken at 16 cents per pound, giving a cost ratio of about two-thirds, using the same weight ratio of one-half.

3. Other Costs.

All other costs, including deterioration of plant, interest on capital invested, shop expense, supply of power, drafting, superintendence, etc., may be grouped together. For steel work the cost of the whole group may be taken at 25 per cent. of the cost of labor, in which the allowance for deterioration of plant is taken at about 10 per cent. per year, and the interest on capital invested at about 10 per cent. per year.

For aluminum, it is evident that the lightness and softness will materially reduce the cost of deterioration of plant and shop expense, requiring less power, with less strain on machines, and less usure and dressing of tools. The group cost may be taken at four-fifths the cost for steel work.

These rates give the following results:

For Rolled Material.

	Cost of Labor.	Group Cost.
For steel hull work, plates and shapes.....	4c. per lb.	1c. per lb.
For aluminum hull work, plates.....	6c. per lb.	1.6c, per lb.
For aluminum hull work, shapes.....	10c. per lb.	2c. per lb.
For steel hull fittings, plates and shapes,.....20c. per lb.		5c. per lb.
For aluminum hull fittings, plates and shapes.30c. per lb.		8c. per lb.
For Cast Material.		
For steel hull fittings.....12c. per lb.		3c. per lb.
For aluminum hull fittings.....16c. per lb.		4.8c. per lb.

4. Summation for First Cost.

The results thus found for the elements making up first cost are assembled in the following table:

FIRST COST, CENTS PER LB.

	Steel.				Aluminum.				Weight Ratio Aluminum to Steel.	Cost Ratio Aluminum to Steel.
	Material.	Labor.	Other Costs.	Total.	Material.	Labor.	Other costs.	Total.		
For Hull Work:										
Plates.....	2	4	1	7	40	6	1.6	47.6	.43	2.83
Shapes	2	4	1	7	60	10	2	72	.48	4.98
For Hull Fittings:										
Plate work...	2	20	5	27	40	30	8	78	.43	1.24
Shapes.....	2	20	5	27	60	30	8	98	.48	1.74
Cast fittings.....	10	12	3	25	60	16	4.8	80.8	.46	1.48

The striking feature of this table is the reduced ratio of total costs, due to the fact that cost of material in which steel has so heavy an advantage is but one item, while cost of labor and other costs are items of much greater consequence, in which the advantage is slightly on the side of aluminum.

The results are specially pointed out in connection with the applications below, but attention may be called at once to the uniformly small weight ratio, a saving of over one-half in weight, and the comparatively small cost ratio for hull fittings and small castings, and to the marked difference of cost ratio between plates and shapes for hull work, the comparison for first cost thus pointing to the adaptability of aluminum in the following relative order: first, to plate work in hull fittings, with increase over cost of steel work of only 24 per cent.; next, to small castings in hull fittings, with increase of 48 per cent.; next, to shapes in hull fittings, with increase of 74 per cent.; next, to plates in hull work, with 2 8 times the cost of steel; next, to shapes in hull work with 5 times the cost of steel.

E.—COMPARISON FOR COST OF MAINTENANCE AND CARE AND LENGTH OF LIFE.

Obstructions have stood in the way of every advance in human industry. Scarcely an advantage has been won without antagonism and offsetting disadvantage. When, therefore, not many years since, the industrial world, wrestling with steel and iron, saw aluminum appear above the horizon as a commercial article, promising the great desideratum of strength without the penalty of weight and excessive hardness, it felt a thrill, and the more impetuous, foreseeing correctly the inevitable reduction of cost, thought that man had come into a new province without the strife of conquest, proclaiming in effect an abdictation by terrestrial nature of her inexorable law of struggle.

The marine engineer and architect felt the elation above all others, for weight in construction material is the Goliath of their enemies. Only prudence and conservatism interposed to prevent precipitate application of the new metal. The conservative asked if aluminum was in truth a fully constituted David. The first reconnaissance showed an obstacle in the road, of huge proportions, not to be removed by the hand of a boy or the aim of a sling. Salt water and salt air were found to attack and disintegrate the metal.

Three notable cases of aluminum construction followed each other in rapid succession, the Vendenesse, built in France in 1892 and 1893; the Foudre, built in England in 1893 and 1894, and the Defender, built in the United States in 1894 and 1895. All three of these craft more than realized the expectations of performance, but all of them have demonstrated the weak point of aluminum. All have been exposed in varying conditions to the corroding action of salt air and salt water, and have contributed to the knowledge of this unfortunate phenomenon.

The Vendenesse, sloop rigged sailing yacht, built at St. Denis, has her shell plating, decks and bulkheads of aluminum, 6 per cent. copper alloy, while her frames, keel and stringers are of steel, the weight of hull by this disposition being but 18 per cent. of the displacement.

Shortly after launching, in December, 1893, she was dropped down to Havre, and lay in the salt-water basin for about four months without attention. Her waterline showing signs of corrosion, she was docked and her bottom was found bare, with the paint off about 200 square meters of surface, part of the paint at least having been scraped off by obstacles while coming down the Seine. Examination showed corrosion wherever the metal was exposed, pitting being particularly pronounced around the edges of bare spots.

An investigation as to the causes of such pronounced results in so short a time showed, however, that part of the corrosion was undoubtedly due to galvanic action that set in from the proximity of a schooner with copper bottom, and, moreover, the basin received sewer discharges and had imperfect renewal of water.

The subsequent history of the yacht showed conclusively, however, that the metal would be attacked whenever exposed. It showed also practically continuous slow galvanic action, even between plates, both of which were of aluminum. The joints swelled and strained the rivets. One plate only would be corroded, showing lack of homogeneity and the existence of a voltaic circuit.

The deck plating was irregularly attacked; plates here and there had to be removed. The linoleum covering gave partial protection, but not immunity.

The excellent nautical qualities and the mechanical behavior of the metal made the yacht a decided success, but it was found that a specially prepared paint had to be used, and that special care and almost constant attention were still necessary for even imperfect preservation.

The Foudre, second class torpedo boat, 60ft. long, 9ft. 3in. beam, 4ft. draft, built by Yarrow for the French Government, and intended for the torpedo cruiser Foudre, is built practically throughout hull and hull fittings of aluminum, worked cold, realizing a saving of about 2½ tons, equal to about half the weight of hull, and about 25 per cent. the weight of total boat.

The stem and sternpost are of galvanized steel; the rivets, where exposed to bilge water, were of iron, elsewhere they were of aluminum; the inner tube of smoke-stack and deck plating around smoke-stack exposed to heat, and a small part of the deck where special strength are required, are of steel. The propeller is of aluminum bronze.

The bottom and inside throughout were painted with red lead, and the deck was covered with rubber canvas glued on. After successful trials in the fall of 1895, on which the speed realized was 1¾ knots in excess of contract speed, the boat was taken to Cherbourg and left at moorings all winter, apparently without being visited.

When examined the following spring, corrosion was found to be practically general. The outside of hull was pitted wherever exposed, and the inside was corroded practically throughout. Conning tower and hull fittings, exposed only to the salt air, were likewise uniformly corroded wherever uncovered, though the rubber canvas was effective in preserving the deck.

The result showed that red lead favored and produced corrosion. Moreover, when once begun, corrosion continues unless the metal is thoroughly scraped and cleaned before painting again. To clean the parts thoroughly would have required taking the boat to pieces, so general was the corrosion. The interesting little craft, so unfortunately treated, was practically given over to inevitable disintegration. The five sister boats, first ordered of aluminum, were changed to steel, and the torpedo cruiser was converted to an ordinary first-class cruiser, though it does not necessarily follow that this conversion was due alone to the failure of the aluminum boat.

Referring to the method of construction of Defender, given above, it will be recalled that the top side plating, deck beams, deck strapping, and upper fittings are of aluminum, 4 per cent. nickel alloy, the bottom plating is of bronze, and the stem, frames, floor plates and stiffening angles, bilge stringers, inverted angle bulbs under deck beams, the two deck beams inclosing mast, tie plates around mast, stepping socket, bed plate fittings and supports and chain plates are of steel, while the rivets are of bronze, making thus an intimate association of the three metals.

After completion afloat at Bristol in July, 1895, Defender was taken to New Rochelle. Examined there, the aluminum top-sides were found to be in bad condition, with paint off in patches, particularly along waterline, showing signs of corrosion along the seam of juncture of bronze and aluminum.

She was docked, washed, sand-papered and painted, and was similarly treated three times more before leaving for the races in September, on each of which occasions there were evidences of corrosion wherever the aluminum and bronze were in contact, and, to a less degree, wherever aluminum was water-washed.

Returning to New Rochelle after the races she was next examined in January, 1896, and was found to be corroded practically all over, corrosion being found underneath the paint, even where it appeared solid. The inside, too, was slightly corroded all over, with severe corrosion in closets.

She was scraped throughout, washed with benzine and given four coats of paint on the outside and two coats on the inside. It may be recalled, in referring to painting, that the bronze surface of bottom is left bare.

The next examination, five months later, in June, showed corrosion at the waterline, along the seam of juncture of aluminum and bronze and around rivet heads, a few rivet heads having fallen off, also corrosion around the chain plates, apparently due to leakage from deck. Corroded parts were scraped and touched up and deck leaks stopped.

The above examinations were made by the care-taker of the yacht, from whose log record the information is taken.

Two months later, in August, as previously referred to, an inspection was made by the writer and the results, as above given, were fully confirmed.

It was found, in addition, that the cast fittings on deck, such as deck light frames, exposed on the whole to spray and salt air only, were in the last stages of consumption, and in many cases the spongy, honeycombed metal could be broken and crumbled with the hand. On the outside along the seam of juncture of aluminum and bronze, a close inspection showed a series of small mounds for practically the whole length. Upon puncture these mounds were found to be raised by the gray powder of corroded aluminum. On the inside this gray powder of corrosion covered the ledge formed by the top of the inside plating, the system being, as seen above, the raised and sunken system, and by jarring the sides more powder would sift down, showing a general process of corrosion.

Additional rivet heads were found fallen off and an examination of the fracture showed the force of rupture to be mechanical, there being nothing more than usual verdigris on the surface. The only way to account for this breaking off of rivet heads is the supposition of strains set up by the swelling due to the corrosion of the plates connected, combined with the slight elongation capable of being sustained by bronze. This swelling, as seen above, was found on the Vendenesse, and, moreover, appears inevitable when it is recalled that the process of corrosion forms a less compact substance, more bulky, than the metal.

Down from around a number of rivet heads and from the edges of the chain plates extended the yellow-brown streaks of iron corrosion. The steel frames and other steel work are being corroded by the bronze rivets and plates. The vessel presents undoubtedly a series, a network, of voltaic circuits, and it would be interesting to have a galvanometric survey.

Thus in Defender, too, we see a full realization of all the mechanical advantages sought in aluminum, and full satisfaction of behavior under stress of service; but we see, too, upon her the doom of a short life. In her system are working the fatal germs of the phthisis of corrosion.

Besides the three notable cases of the Vendenesse, Foudre and Defender, there have been others in which aluminum has been used to a greater or less extent, furnishing additional experience on preservation and length of life.

The Forban, first-class torpedo boat, built for the French Government in 1893 and 1894, by Normand, at Havre, had her low-pressure pistons and piston valves, and her conning tower, galley, framing for turntables, torpedo tubes and other fittings of aluminum, realizing a saving in weight of

about a ton. The results were unsatisfactory for all of these parts and fittings; the piston and valves did not meet the requirements for strength, though it should be recalled, as stated above, that even a comparatively low temperature must be expected to affect the strength of aluminum; the parts and fittings on deck within twelve months gave bad results of corrosion, flaking off in parts, notwithstanding care in painting. The result was that Normand abandoned the use of the metal.

On the torpedo boats built at the New York Navy Yard and intended for the Maine, a number of cast fittings, principally on deck, such as stanchions, sockets, deck-light frames, etc., were first made of aluminum. The metal exhibited brittleness and showed signs of corrosion, and in consequence was abandoned, though it should be stated that measures to prevent corrosion were not attempted.

Some of these fittings left exposed longer to sea air were entirely disintegrated, becoming spongy and flaky, and crumbling to gray powder, as found in deck fittings of Defender, described above.

Other craft have been built wholly or in part of aluminum, but have not furnished data, yet attainable, on the corrosive behavior of the metal.

A 23ft. electric launch, of eight-knot speed, of about 3,100lbs. displacement, built at Toulon for the service of the navy yard, is practically aluminum throughout—plating, stem and sternpost, frames, rivets, etc., realizing the remarkably small hull weight of 346lbs., or one-ninth of the displacement, the plates being but .078in. thick The aluminum is 6 per cent. copper alloy. This little craft has been in use some time, and has probably evinced interesting features as to corrosion, complicated, in all probability, by the presence of the storage battery and motor for propelling; but information is not to hand as to results.

Another interesting craft, which in due time will probably give valuable information on the subject of the preservation of aluminum, has recently been built at Nyack on Hudson, a 40ft. launch, designed to develop 200 horse-power and exhibit a very high speed; designer, Chas. D. Mosher; owner, George A. P. Magoun, Esq.

This launch has her frames, bilge stringers, keelson and deck beams of aluminum, the planking being mahogany and keel oak. Adequate measures have been taken in advance with a view to prevent or reduce corrosion. The aluminum is not in contact with copper or other corroding metals; it is nickel alloy, which alloy, as will be seen below, offers better resistance to corrosion than copper alloy, and is coated with four coats of special enamel.

The results of behavior under conditions of service will doubtless be valuable.

It may be mentioned here that a number of other craft have been built of aluminum for service in Africa and Madagascar, about twenty-five in all, many of which are built in sections for transportation on the backs of pack animals and couriers. Some of these craft have been in service for a number of years, the Etienne and Davoust being among the pioneers.

No returns have come as to behavior. They doubtless serve their purpose with efficiency, but, navigating fresh water, cannot furnish information of value on the question of corrosion; for, as seen below, aluminum has been found to resist effectually the action of fresh water. It is only salt water and salt air that assail it so disastrously.

The weight of experience, as thus seen above, sets against aluminum. While the object sought in saving of weight was fully realized in each instance, and the mechanical behavior has been satisfactory in every respect, the metal has proved a uniform failure on account of galloping corrosion. When examined more closely, however, the results appear far from conclusive. In the case of the Vendenesse and Foudre, the material was a copper alloy. Copper is far removed from aluminum in the electro-chemical scale, and should be expected to make an alloy specially liable to galvanic action; indeed, the combination in the alloy itself practically contains the elements of a battery. As a matter of fact, the copper alloy, which offers but very slight, if any, advantage for resistance over other alloys, such as nickel, is the most corrosive of all, the zinc alloy perhaps excepted. Moreover, the paint put on the Foudre to protect it was itself an active agent of corrosion, and both vessels were exposed to conditions that would be severe for a steel hull. It is reported that the special paint used on the Vendenesse in three coats, the first coat having special properties against corrosion, the second against permeability of water, the third against fouling, has given results more or less satisfactory.

In the case of Defender, while the nickel alloy is used solely perhaps for its physical properties, it is in direct and most intimate contact with bronze, no effort at insulation of any kind whatsoever being made, not even simple precautions that would have been insisted on in an ordinary case of steel and bronze construction. The yacht was built for one sole purpose—to win one series of races—and features not bearing upon that purpose were altogether ignored.

It is evident, thus, that the case against aluminum is not complete, and the abandonment by the different governments of its further use in marine construction as a result of the excessive corrosion in the cases tried—this action, while conservative, and perhaps for the moment simply cautious—is by no means final.

The case is one that eminently calls for thorough scientific investigation and experiment, covering the range of alloys and the range of paints or preparations, those now existing and new ones that suggest themselves.

Partial and isolated experiments have already been made.

In connection with the decision to use aluminum for certain fittings for the torpedo boats intended for the Maine, referred to above, and in connection with a proposition to introduce the general use of aluminum for hull fittings in naval vessels, tests were made by the naval constructor at the Norfolk Navy Yard to determine the resistance to corrosion and fouling.

Two plates, 12in. × 18in. × 1 16in., furnished by the Pittsburg Reduction Co., one of pure aluminum, the other of nickel alloy, were immersed with metal bare for three months in tideway water. When taken out in October, 1894, the nickel alloy plate was reported to be thickly covered with small barnacles and very considerably wasted away and corroded, and the pure aluminum plate was reported as "more thickly covered with larger barnacles and slightly pitted throughout its surface."

In January following another test was made.

Two plates were used, 14in × 16in. × 1 8in., furnished by the Pittsburg Reduction Co., one of pure aluminum, the other of 6 per cent. copper alloy. Both plates were immersed with metal bare for 136 days, being taken out for examination after forty days, and remaining out for eight days, being cleaned before reimmersion. When finally taken out, the pure aluminum plate was reported as showing no signs of corrosion beyond a few small pits, and was only "very slightly fouled" with a "few small barnacles." The copper alloy plate, on the contrary, was reported as "covered with a quantity of small barnacles," "badly fouled and pitted over its entire surface."

These tests, in their limited extent, would indicate that the bare metal of both the copper and nickel alloy is subject to corrosion and fouling in sea water, and that the pure aluminum, commercially pure, was subject but very slightly to corrosion. On the fouling of pure aluminum the results are more or less contradictory, and would indicate a difference of material in the two cases, though indicating that the commercially pure metal is subject to fouling. The exact degree or rapidity of corrosion was not determined, and it would be difficult to compare same with the results for steel under similar conditions.

The above limited experiments, confined to bare metal, are, it appears, the only ones that have been made in this country under Government directions.

Private tests have been made, however, extending to the behavior of the metal when coated with preventatives of corrosion.

The most extensive of these tests were undertaken by Edward Smith & Co., of New York city, and conducted under the direction of Professor A. H Sabin, the aluminum plates being furnished by the Pittsburg Reduction Co.

The scope of the tests covered five different kinds or series of plates and six different coatings for each kind, making thirty plates in all.

The plates, carried horizontally, supported by the four corners in a rack, with about 2in. between plates, were immersed in the waters of the New York Navy Yard for six months.

The tests were described in a paper read by Prof. Sabin before the American Society of Civil Engineers, contained in the Proceedings of the Society, Vol. XXII., No. 7, September, 1896.

The composition of the plates, the nature of the coatings, and the results, were as follows, as given in the paper above referred to.:

COMPOSITION OF PLATES.

"Series I.—Ninety-nine and one-half per cent. pure aluminum.

Series II.—Ninety-eight per cent. aluminum and 2 per cent. copper.

Series III.—Ninety-eight per cent. aluminum (the quality known as commercially pure aluminum).

Series IV.—Ninety-three per cent. aluminum and 7 per cent. copper.

Series V.—Seventy-five per cent. aluminum, 20 per cent. zinc, 3 per cent. copper, 1 per cent. iron

These plates were numbered from 101 to 130, and were coated as follows:

I	II.	III.	IV.	V.	
101	107	113	119	125.....	'Sabin Process' pipe coating enamel, baked.
102	108	114	120	126.....	Durable metal coating, one side baked. Ultramarine blue, one side; flamingo red, one side; ground in varnish, not baked.
104	110	116	122	128.....	White zinc ground in varnish, one side baked
105	111	117	123	129.....	Chromium oxide ground in varnish, one side baked.
106	112	118	124	130.....	Edward Smith & Co.'s spar varnish; no pigment, one side baked.

The varnish in which the ultramarine blue, flamingo red, white zinc and chromium oxide were ground was composed of 100lbs. Kauri resin to 20gal. linseed oil, thinned with turpentine. The chromium oxide was the anhydrous oxide made by the ignition method, and was of commercial quality, not chemically pure. The baked coatings were baked about four hours at 215° to 240° F., except that the 'Sabin Process' pipe coating enamel was baked two hours at 400° F."

The condition of each plate after being taken out is given by Mr. Sabin as follows:

SERIES I.

"101.—Perfect.

102.—Baked side, perfect. Unbaked side, three blisters ¾in. diameter. No general corrosion or roughening. The surface of the paint had lost its gloss. The coating was good on the edges of the plates.

103.—Ultramarine blue. Showed roughening of coating, numerous pinhead blisters, no corrosion to speak of.

Flamingo red. General condition good, except near edges of plate, which showed blisters over a surface about ½in. wide and one-fifth the marginal distance; very little corrosion.

104.—Baked side. About 2sq. in. in one place half covered with small blisters. No corrosion.

Unbaked side. First-rate condition.

105.—Baked side, one blister 1 × ½in.; otherwise, first-rate. No corrosion. Unbaked side all right.

106.—Both sides perfect.

SERIES II.

107.—Perfect.

108.—Baked side, one blister ⅜in. diameter. Unbaked side, perfect.

109.—Blue and red about the same as 103, except that about twice as much surface was blistered. General condition, good.

110.—Baked side badly blistered in spots along the edges, amounting to about 6 per cent. of the total surface of the plate. Some corrosion under these. Unbaked side all right, except that about 1 per cent. of the surface showed pinhead blisters along a strip about ½in. wide on one edge of the plate.

111.—Baked side showed four central ¾in. blisters, numerous marginal ones about 1½ per cent. of plate. Very little corrosion. Unbaked side in first rate condition.

112.—Baked side, two central blisters 2sq. in., and nearly all the margin ½in. wide. Considerable corrosion. Otherwise perfect protection and higher luster. Unbaked side, two central blisters ½sq. in. and 1sq. in. Slight marginal corrosion. Coating evidently thin on edges.

SERIES III.

113.—At one corner evidently a break in the coating let in water and caused a blister of about 2sq. in. Coating rather overbaked and brittle; elsewhere perfect.

114.—Baked side perfect. Unbaked side tough and adherent, except one small spot near the middle of the plate, which looked as if coating had been broken, and where corrosion had begun.

115.—Blue and red about alike. No decided blisters, but coating itself showed some signs of decomposition, especially the blue, which had a rough surface.

116.—Both sides in good condition, but showed some signs of incipient blistering about the edges.

117.—All right on both sides.

118.—Both sides quite perfect.

SERIES IV.

119.—At several places about the corners of the plate single blisters, some of which were as large as 3sq in., had formed. These appeared to be due to the fact that the coating was overbaked and had been cracked at the corners by the supporting framework, and galvanic action had ensued on the penetration of the sea water. This was facilitated by the 7 per cent. of copper in the alloy. The remainder of the plate was perfect.

120.—Baked side showed three blisters of about 1sq. in. each and some corrosion under these; otherwise all right. Unbaked side perfect.

121.—Blue and red about alike; about 30 per cent. blistered and corroded.

122.—Pinhead blisters along the edges; general condition all right.

123.—Baked side all right. Unbaked side, seven or eight small blisters, but no corrosion. General condition good.

124.—Both sides badly blistered and corroded along the edge, about 10 per cent. of the surface. Where not blistered, all right.

SERIES V.

125.—Coating brittle and certainly overbaked. Badly blistered along the edges. In all cases of blisters under pipe-coating enamel the blisters were continuous and started from the edge. The middle of the plate was all right.

126.—Baked side badly blistered along the edge—6 per cent. or 8 per cent. affected. Unbaked side slightly blistered, chiefly along one edge; condition otherwise good. No corrosion.

127.—Blue. Considerably blistered along the edges, in pinhead blisters mainly. Little corrosion.

Red. About the same, but some large marginal blisters. The red had a smooth surface, but the blue was rough.

128.—Baked side, nine or ten blisters of some size (1½in. diameter), and considerable corrosion. Remainder of surface good. Unbaked side, about 1 per cent. of the surface, near the edges, with small blisters showing some corrosion. The rest of the surface all right.

129.—Baked side. A large number of groups (about 1in. diameter) of small blisters. No corrosion. Unbaked side, about the same, but not so bad.

130.—About like 124.

The pigment mentioned as flamingo red is supposed to be a mixture containing some coloring matter derived from coal tar, and is reasonably permanent in the air. In these tests it became dark and mottled.

The baked surface of those plates which had one side baked were in all cases harder and more glossy than the other sides after the test was made. It should be observed, however, that while these coatings are all at present hard and firm, when they were first taken from the water they were much softer and could be more easily scratched or scraped off, with the exception of the pipe coating enamel, which was exactly as it was when it was put into the water. Even the luster was not affected, and the smooth plates coated with it are like a mirror.

On all the plates, except those covered with pipe-coating enamel, which was applied by dipping, the coating is much thinner for about an inch along the edges of the plates than it is on the central portions. This fact has been called to the attention of the workmen who painted the plates, and is said to result from the method employed in applying the paint with a brush. In future experiments care will be taken to avoid this. Probably four-fifths of the corrosion occurred along this marginal strip."

The features of these tests, to be noted for the present purpose, are contained in the writer's remarks in the discussion of Professor Sabin's paper, part of which may be given as they were made, as follows:

"Alloys.—The prominent result of the experiments is that which shows that the corrosion increases as the amount of alloy increases, and that copper, as the alloy, particularly accentuates the corrosion. This result is striking in the comparison of the excellent results of Series III., where the alloy was simply 2 per cent. of the commercial impurities, with the unfavorable results of Series II., where the same amount of alloy, 2 per cent., was copper. The interest in this feature is special, for it requires an alloy to develop the best conditions for strength; while among the alloys suited to this purpose, copper, though prominent, is by no means exclusive."

"Coatings.—The experiments, it is noticed, are restricted to varnish and enamel preparations. The favorable results indicate a field for these preparations for the preservation of fittings, if not for hulls.

Interest would attach to comparative tests of these preparations and those used on ships' bottoms, also with special preparations thus far made, and that may be prepared especially for aluminum. A feature that suggests itself from these experiments, is that the insulating qualities, as well as the porosity or permeability, may enter to affect results, and there would be interest in determining them in experiments to be made for comparative results. The generally unfavorable results with the baking process would indicate that the process increases the permeability, while the increase of adhesion counts for but little when galvanic action starts beneath. Interest also would attach to determining whether the paints themselves, or any of their components, enter into the phenomena."

"Conditions.—The close proximity of plates of different alloys, which varied widely in their galvanic action, affected, in all probability, the results in the individual cases. As far as practicable, while still insuring the same conditions, plates of different alloys should be separated far enough not to affect each other. Even those of the same alloy, having the different coatings, should be arranged so as to affect each other as little as possible.

An analysis should be made as near as can be, of the mean sample water of immersion, to determine the special agents, if any, that are present.

If practicable, sets of similar plates and coatings should be tested in different waters, and analyses of the water made in each case.

Both coated and uncoated plates of the same and different alloys should be immersed in vessels with sea water of sample kinds, and analyses, qualitative and quantitative, made as follows:

Of the materials of the plates before and after immersion; of the water before and after immersion; of the protecting coatings before and after immersion. These tests should be made progressively, analyses being made at regular intervals.

In addition, the tests should extend to determining the insulating properties of the coatings, and their permeability or porosity, in different thicknesses.

The object of the experiments outlined is apparent. They contemplate, while determining comparative qualities of different alloys and different preparations, to determine the phenomena that take place, and to find each element that enters, and the role and relative degree of importance of each."

It is to be regretted that these valuable tests, already extended so largely, covering so large a range of alloys and range of varnishes and enamels, were not still further extended to cover the compositions now used on ships' bottoms, Rahtjen's, McInnis, red lead, etc., for it seems that adequate tests for these compositions have not yet been made.

The caretaker of Defender, Mr. T. S. Mitchell, painter, of New Rochelle, made experiments, as he described orally, in search of a preparation, and found the usual paints all gave bad results. He finally determined on a special paint of his own preparation, which was used exclusively

This is a white paint, apparently a white zinc paint, that tarnishes and streaks badly under weather, even under the drippings of condensation. Remark may be made of an experiment of Mr. Mitchell's which apparently reproduced the conditions found where the aluminum of Defender laps the bronze. A copper plate was placed on the back of an aluminum plate and put overboard. The result, of course, was a precipitate and destructive attack of the aluminum.

References may be made to a prior experiment with pure aluminum made in this country on the bottom of a wooden sailing vessel plying to the West Indies, where the test was comparative with copper.

The aluminum plate gave .005in. corrosion where the copper plate gave .007in. On the other hand, the aluminum plate was foul with marine growth, while the copper plate was clean.

[TO BE CONCLUDED NEXT WEEK]

ACCORDING to very meager reports from St. Thomas, th schooner Social was wrecked on Oct. 23 off the island Santa Cruz, several persons being lost.

The FOREST AND STREAM *is put to press each week on Tuesd Correspondence intended for publication should reach us at atest by Monday, and as much earlier as practi cable.*

THE NORTH AMERICAN YACHT RACING UNION.

THE formal organization of the North American Yacht Racing Union took place at the Fifth Avenue Hotel, New York, on Oct. 30, the articles of association being adopted and officers elected. The movement for the establishment of a national yachting body began early last winter, and resulted in a conference of yachtsmen in New York on May 1. Though many of the delegates present, especially those from a distance, were in favor of immediate action and organization, it was at last decided that nothing final should be done until the fall; a special committee being appointed to draw up articles of association and sailing rules during the summer, these to be submitted to all clubs and associations for criticisms, and after final revision to be acted upon at a meeting in October. The articles of agreement and sailing rules, as prepared by the committee, have been published already in the FOREST AND STREAM of Oct. 9. the date of the meeting being fixed for Oct. 30.

All of the members of the committee, Messrs. N. D. Lawton, F. Bowne Jones, Æmelius Jarvis, L. M. Clark, J. M. Macdonough, A. J. Prime and Oswald Sanderson, were in New York on Friday, Oct. 29, and the chairman, Mr. Lawton, entertained the other members at dinner at the New York Club. This gave occasion for an informal but thorough discussion of some points in the proposed rules, on which a difference of opinion existed; but when the party broke up at 1 A. M., there was still nothing like a complete agreement on some very important details.

The committee met again on Saturday, at 1 P. M., at the Seawanhaka C. Y. C. house for lunch, and the same disputed points were further discussed until 3 o'clock, when the members adjourned to the Fifth Avenue Hotel. Other delegates were already present in parlor F, and the meeting was called to order by Mr. Lawton at 3:15. Mr. Jones, the secretary of the committee, was requested to read the call for the meeting, as follows:

To the Yacht Associations and Clubs of the United States and Canada:

Pursuant to a resolution adopted at a conference of the representatives of the yacht associations and clubs of the United States and Canada, held at the Fifth Avenue Hotel, in the city of New York, on Saturday, May 1, 1897, we, the undersigned, a committee appointed by the chairman of the said conference, hereby give you notice in accordance with said resolution, that we have prepared articles of association and sailing rules, omitting from the latter the measurement and classification rules, and other rules dependent thereon, copies of which are hereto annexed, and which we forward to you herewith for the purpose specified in said resolution of having same submitted to the different clubs represented at said meeting, and such other clubs as it has been deemed advisable by the committee to furnish with copies of such articles of association and racing rules, in order and for the purpose of having the same reported back to this committee, and having such associations and clubs appoint and instruct delegates as to the action or position they desire to take with respect to the same, at a meeting which, we hereby notify you, will be held at the Fifth Avenue Hotel, in the city of New York, on Saturday, Oct. 30, 1897, at 3 o'clock in the afternoon, which meeting we hereby call for the purpose specified in and as directed by said resolution.

Dated Sept. 25, 1897.

NEWBURY D LAWTON,
ÆMELIUS JARVIS,
LOUIS M. CLARK,
ALANSON J. PRIME,
JAMES M. MACDONOUGH,
OSWALD SANDERSON,
FRANK BOWNE JONES,
Special Committee.

Nominations for chairman of the meeting were then called for, and Oliver E. Cromwell was nominated by Mr Prime, seconded by Mr. Lovejoy, and elected. Nominations for secretary were called for, and W. P. Stephens, who had served as secretary of the May meeting, was nominated by Mr. Lovejoy, seconded by Mr. Jones, and elected. The roll was then called, as follows:

Æmelius Jarvis (Royal Canadian Y. C.), Y. R. U. of the Great Lakes.

E. B. Hart, H. W. Tyler, Oliver E. Cromwell, F. Bowne Jones, C. P. Tower, Stuyvesant Wainwright and F. E. Towle, Jr., Y. R. U. of Long Island Sound.

L. M. Clark (Massachusetts Y. C.), Massachusetts Y. R. A.

A. J. Prime (Yonkers Cor. Y. C.), New York Y. R. A.

J. M. Macdonough (Pacific Y. C.), Pacific Interclub Y. A.

E. W. Radder (Cleveland Y. A.), Interlake Y. A. and Lake Michigan Y. A.

E. H. Ambrose (Royal Hamilton Y. C.), Lake Y. R. A.

A. F. Bancroft, Henry S. Jeanes (Corinthian Y. C. of Philadelphia.

Oswald Sanderson, John F. Lovejoy, Larchmont Y. C.

F. T. Adams, N. D. Lawton, Atlantic Y. C.

P. H. Jeannot, Wm. Cagger, Brooklyn Y. C.

Rawson Underhill, Penataquit Cor. Y. C.

Mr. Prime moved that in voting on all questions at this meeting each club shall be entitled to one vote, and each association shall be entitled to one vote for each club comprising such association. Seconded by Mr. Jarvis and carried.

The report of the organization committee was then called for, and on motion of Mr. Jarvis seconded by Mr. Adams, it was decided that Mr. Lawton should read the articles of association *seriatim*, and that those to which no objection was made should be considered as approved by the meeting. The first five articles were then read and accepted without comment; in the amended form as given hereafter. When Art. 6. relating to the management, was read, Mr. Radder moved, seconded by Mr. Wainwright, that the chairman and treasurer must be members of the Council, and that the chairman should preside at all meetings of the Union. Mr. Radder suggested the desirability of leaving the secretaryship free from this limitation, as someone not a member of the Council might be available for the office of secretary. Mr. Jones opposed this, and offered an amendment: "The Council shall from their number elect a chairman, secretary and a treasurer." Mr. Sanderson seconded the motion, and Mr. Clark suggested the addition of the words "who shall be chairman of the Union." This was accepted by Messrs. Jones and Sanderson, and after discussion it was carried in the following words: "The Council shall elect from its number a chairman, who shall preside at all meetings of the Union, a secretary and a treasurer."

In considering Art. 7, Mr. Radder suggested the advisability of ten days' notice of special meetings, instead of five. After some discussion of the subject of special meetings, Mr. Jones moved to insert the word "ten" for "five," which was carried. The remaining articles were read and approved; and on motion of Mr. Clark, seconded by Mr. Sanderson, were formally adopted as the articles of association.

North American Yacht Racing Union.

ARTICLES OF ASSOCIATION.

1. NAME.—The name of this organization shall be the North American Yacht Racing Union.

2. OBJECTS.—The objects of the Union shall be to encourage yacht racing and promote the adoption of uniform racing rules throughout the United States and Canada.

3. ORGANIZATION.—Any yacht club in North America having a regular membership of over fifty members and over fifteen yachts of 15ft. racing measurement or upward enrolled in its fleet, or any association of yacht clubs, shall be eligible for membership in the Union.

4. REPRESENTATION.—Each association or club shall be entitled to be represented in this Union as follows:

Each local association belonging to this Union shall be entitled to choose from the delegates from the clubs of which it consists, representatives to this Union, the number of such representatives to be determined as follows: One representative for each club having 100 members, and one representative in addition for each additional 200 members. Each club belonging to this Union, but not connected with any local association, shall be entitled to choose from its members one representative for 100 members, and one representative in addition for each additional 200 members.

5. POWERS.—The Union shall have power to adopt racing rules, but no association or club having membership in this organization shall be bound by such rules until ratified by such organization.

6. MANAGEMENT.—The affairs of the Union shall be managed by a Council, consisting of fifteen representatives, who shall be elected annually by the Union at the annual meeting, and shall hold office for one year, or until their successors are elected, and shall have power to fill vacancies in its number.

7. DUTIES OF COUNCIL.—It shall be the duty of the Council to consider and act upon application for membership in the Union, to appoint special officers and committees, to frame racing rules for submission to the Union, and to determine and settle all difficulties and disputes relating to yacht racing which may be properly referred to it for decision; and, further, to take such steps as it may consider necessary and expedient to carry into effect the objects and purposes of the Union.

The Council shall elect from its number a chairman, who shall preside at all meetings of the Union; a secretary and a treasurer.

The chairman may call special meetings of the Council whenever necessary, and shall do so upon the requisition in writing of five members, in which case ten days' notice must be given of such meeting.

The Council shall meet at such times and places as it may consider expedient.

Five members shall constitute a quorum at any meeting of the Council.

8. MEETINGS.—There shall be an annual meeting of the Union, at such place as the Council shall determine, on the first Saturday of October in each year. The Council may call special meetings of the Union whenever it may consider it necessary

Fifteen representatives shall constitute a quorum at any meeting of the Union.

Ten days' notice, in writing, of a meeting shall be given to each representative.

At any general meeting of the Union voting shall be allowed by proxy.

9. DUES AND ASSESSMENTS.—The fee for membership for each association or club shall be $5 per annum, and the additional expenses of the Association shall be apportioned and assessed among the associations and clubs as may be determined by the Council; but no assessment to exceed $2 a representative shall be levied in any one year.

10. AMENDMENTS.—Amendments to these articles may be adopted at any meeting of the Union by a two-thirds vote of those present in person or by proxy, provided that the proposed amendments in full shall be contained in the notice of the meeting.

After the adoption of the above articles, Mr. Clark moved to proceed to the election of the Council, and that the chair should appoint a nominating committee of three. Mr. Radder seconded the motion. Mr. Lovejoy suggested that some means be taken to ascertain which of the representatives were qualified to act for their clubs A discussion followed, in which Messrs. Sanderson, Radder, Jones, Adams, Prime and others took part. The point was raised by Mr. Sanderson that the Larchmont Y. C., having but one meeting each year, in February, had taken no action since the May meeting, and that its delegates were not authorized to join the Union. Mr. Prime and others spoke in favor of immediate action, as otherwise it might never be possible to organize. Mr. Prime, seconded by Mr. Jones, moved to poll the delegates to ascertain how many were authorized to join the Union. Mr. Clark called for a vote on his motion, which was carried. The chairman named as a nominating committee Messrs. F. Bowne Jones, Stuyvesant Wainwright and F. T. Adams. On motion, a recess of five minutes was taken.

When the meeting reconvened, the nominating committee reported the following candidates for members of the Council: E. W. Radder, Æmelius Jarvis, J. M. Macdonough, A. J. Prime, A. T. Bliss, F. Bowne Jones, G. H. Duggan, N. D. Lawton, Oswald Sanderson, E. H. Ambrose, Oliver E. Cromwell, A. F. Bancroft, R. N. Ellis, L. M. Clark, J. A. Mollenhauer. Mr. Jeannot moved to accept the report, seconded by Mr. Chellborg. Mr. Lovejoy requested that action be suspended until Mr. Sanderson, who was absent from the room, should return. The motion was carried, and on motion the secretary cast one ballot for all the candidates, who were declared elected.

Mr. Jones moved that the proposed sailing rules be then taken up. Mr. Jeannot, seconded by Mr. Clark, moved that the rules be considered as accepted in default of any objection; carried. Mr. Lawton then read the proposed sailing rules. In the first section Mr. Radder suggested the substitution of the word "organization" for "club," which was accepted.

Under the second section there was some discussion as to the preparatory signal for the entire race versus the preparatory for each separate class. The question of galley fittings was discussed at length under Rule 7, Mr. Radder, seconded by Mr. Ambrose, moving to omit the words, "galley fixtures and," which was lost. Mr. Radder moved to amend the section relating to trimming by dead weight, but the motion was not seconded.

Under Rule 17, Section 12, "Converging Close-hauled," a long discussion followed, Mr. Lawton finally moving, seconded by Mr. Tower, to substitute the word "windward" for "leeward," which was carried unanimously, after some final remarks by Mr. Clark in its favor. A letter from Mr. R. N. Ellis was read, but the suggestions were not adopted.

Under Rule 18 Mr. Lovejoy, seconded by Mr. Radder, moved to substitute "shall" for "may," which was carried.

Mr. Jarvis offered the following amendment: "A yacht after crossing the finishing line shall not interfere with any yacht still in the race," giving an instance of a race on Lake Ontario in which a yacht allowing time to another finished first and then went back on to the course and blanketed the smaller yacht to the line, claiming the right to do so in default of anything to the contrary in the rules. This amendment was accepted, but in the course of the discussion Mr. Stephens pointed out that the rule headed "Disqualification" really included, as worded, several provisions which should be classed under other heads. Mr. Lawton, seconded by Mr. Wainwright, moved to insert a new rule under the heading "Interference," leaving only the final section of the rule as printed under the original head of "Disqualification." The motion was carried, Mr. Jarvis's proposal being included in the new rule. Mr. Lovejoy proposed the adoption of Section 3 of Rule XXV., of the Larchmont Y. C., "If a yacht, after having been officially measured, makes changes in her trim, causing an increase of L.W.L., or makes alterations in her sail plan, should enter a race without remeasurement or notifying the regatta committee in writing that alterations have been made, and a request for remeasurement, she shall be disqualified." The amendment was not adopted. On motion of Mr. Tower, seconded by Mr. Wainwright, it was decided to refer to the Council the wording of the rule relating to protests.

Mr. Radder brought up the question of the amendment of the sailing rules, and Mr. Prime moved to amend in the same manner as the articles; seconded by Mr. Radder and carried.

Mr. Tower, seconded by Mr. Wainwright, moved that the rules be accepted as finally amended, which was carried:

North American Yacht Racing Union.

RACING RULES.

Rule 1. MANAGEMENT.—All races and all yachts sailing therein shall be under the control and direction of the race committee of the organization giving the race. All matters shall be subject to its approval and control, and all questions and disputes which may arise shall be decided by it.

No member of any race committee shall take part in the decision of any question in which he is directly interested.

A member of a race committee who is the owner of a yacht sailing in a race shall not act upon the committee in the management of such race.

Rule 2. APPLICATION.—Yachts shall be amenable to the rules from the preparatory signal.

Rule 3. OWNERSHIP.—No two yachts owned wholly or in part by the same person shall compete in the same class.

Rule 4. ENTRIES.—Entries shall be filed in the manner prescribed by the organization under whose auspices the race is sailed.

Rule 5. INSTRUCTION.—1. The owner of each yacht entered for a race shall be furnished at the time of the entry, or as soon thereafter as possible, with written or printed instructions as to the conditions of the race and the courses to be sailed.

2. The race committee may change the courses or amend the instructions, provided notice of such change is given to each yacht before the preparatory signal is made.

Rule 6. SAILS.—1. The following sails may be carried.

On schooners: Mainsail, foresail, forestaysail, jib, flying-jib, jibtopsail, working main and fore gafftopsail, maintopmast staysail, spinaker, and club topsail when specially permitted.

On sloops and cutters: Mainsail, forestaysail, jib, flying-jib, jibtopsail, working gafftopstopsail, spinaker, and club topsail when specially permitted.

On yawls: The same as on sloops and cutters, with mizen, mizen staysail and mizen topsail.

On catboats: Mainsail. Balloon sails may be set over working sails.

3, No extra spars, booming out or whisker poles, except a spinaker boom, shall be used.

4. A working main or fore gafftopsail must be jib-headed and must not extend above the topsail block or beyond the end of the gaff. A spinaker must be triangular, and must not extend above the topsail block or beyond the outer end of the spinaker boom.

Rule 7. FITTINGS, WATER AND BALLAST.—1. Floors shall be kept down, and bulkheads and doors left standing. Galley fixtures and fittings shall be kept on board in their proper places, and one serviceable anchor and cable shall be carried.

2. Trimming by dead weight shall not be allowed, and neither water nor ballast shall be taken in or discharged.

Rule 8. NUMBERS.—All yachts shall carry racing numbers, which shall be placed above the reef points, at an equal distance from the luff and leach, on each side of the mainsail.

Rule 9. POSTPONEMENT.—The race committee may postpone a race, should unfavorable weather or other circumstances make a postponement advisable.

A race postponed or resailed shall be considered a new race.

Rule 10. TIME AT START AND FINISH.—1. All starts shall be flying, and shall be "time" or "one-gun" starts, as may be specified in the instructions.

2. In time starts an interval shall be allowed for crossing the line, and the time of each yacht shall be taken when the point marked by the foremast in schooners and the mainmast in single-masted vessels and yawls crosses the starting line. A yacht crossing the line after the starting interval shall be timed as having crossed at its expiration.

3. In one-gun starts each yacht shall be timed from the starting signal.

4 The time of finish of each yacht shall be taken when the point marked by the foremast in schooners, and the mainmast in single-masted vessels and yawls crosses the finish line.

5. In any start, if the point marked by the foremast in schooners, and the mainmast in single-masted vessels and yawls, has crossed the line before the signal for the start in her class is made, she must return and recross the line.

A yacht so returning, or one working into position from the wrong side of the line after the first starting signal has been made, must keep clear of, and give way to all yachts in the race.

Rule 11. PROPULSION.—1. No means of propulsion other than sails shall be employed.

2. Manual power only shall be used in handling sails.

Rule 12. MARKS.—A mark is a vessel, boat, buoy, other object used to indicate the course. Should any stake boat, buoy or other mark be absent or moved from its proper position during a race, the race may be resailed or not at the option of the race committee.

Rule 13. ANCHORING.—A yacht may anchor, but must weigh anchor again and not slip. A yacht shall not warp or kedge, or make fast to any buoy, pier, vessel or other object, except for purposes specified in the following rule:

Rule 14. RUNNING AGROUND AND FOULING.—A yacht running aground or fouling a buoy, pier, vessel or other object, may use her anchors, warps, boats, etc., to get clear, but may not receive any assistance except from vessel fouled. Any anchor, warp or boat so used must be taken on board again before continuing the race.

Rule 15. ACCIDENTS.—Every yacht shall render all possible assistance to any vessel or person in peril, and if in the judgment of the race committee she shall thereby have impaired her chance of winning, it may order the race to be resailed between such yacht or yachts and the winner in her class.

Rule 16 SOUNDING.—No other means of sounding than the hand lead and line shall be employed.

Rule 17 RIGHT OF WAY.—When one yacht is approaching another yacht so as to involve a risk of fouling, one of them shall keep clear of the other as follows:

1. On Different Points of Sailing.—A yacht free shall keep clear of one closehauled.

2. On the Same Point of Sailing with the Wind on Opposite Sides.—When both yachts are closehauled, or both free, or both have the wind aft and on opposite sides, the yacht with the wind on the port side shall keep clear.

A yacht is deemed to have the wind on the side opposite to that on which she is carrying her main boom.

3. On the Same Point of Sailing with the Wind on the Same Side.—When both yachts are free or have the wind aft and on the same side, the yacht to the windward shall keep clear.

4. Wind Aft.—A yacht with the wind aft shall keep clear of a yacht on any other point of sailing.

5. Overtaking.—An overtaking yacht shall, as long as an overlap exists, keep clear of the yacht which is being overtaken.

6. Passing and Rounding Marks.—Should, however, an overlap exist between two yachts when both of them, without tacking, are about to pass a mark on the required side,

then the outside yacht must give the inside yacht room to pass clear of the mark.

A yacht shall not, however, be justified in attempting to establish an overlap and thus force a passage between another yacht and the mark, after the latter has altered her helm for the purpose of rounding.

7. Definition of Overlap.—An overlap is established when an overtaking yacht has no longer a free choice of which side she will pass, and continues to exist as long as the leeward yacht by luffing, or the weather yacht by bearing away, is in danger of fouling.

8. Altering Course.—When of two yachts, one is obliged to keep clear, the other shall not alter her course so as to involve risk of fouling.

9. Luffing.—A yacht may luff as she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap is established.

10. Bearing Away.—A yacht shall not bear away out of her course so as to hinder another in passing to leeward.

11. Rights on New Courses.—A yacht shall not be entitled to her rights on a new course until she has filled away.

12. Converging Close-Hauled.—When two yachts, both close-hauled on the same tack, are converging by reason of the leeward yacht holding a better wind, and neither can claim the rights of a yacht being overtaken, then the yacht to windward shall keep clear.

13. Obstruction to Sea Room.—When a yacht is approaching a shore, shoal, rock, vessel, or other dangerous obstruction, and cannot go clear by altering her course without fouling another yacht, then the latter shall, on being hailed by the former, at once give room; and in case one yacht is forced to tack or bear away in order to give room, the other shall also tack or bear away, as the case may be, at as nearly the same time as is possible without danger of fouling; but should such obstruction be a designated mark in the course, a yacht shall not force another to tack under the provisions of this rule.

Rule 18. INTERFERENCE.—A yacht, after crossing the finishing line, shall not interfere with any yacht still in the race.

Every yacht must go fairly over the course, and must not touch any mark, but shall not be disqualified if wrongfully compelled to do so by another.

If a yacht, in consequence of her neglect of these rules, shall foul another yacht, or compel another yacht to foul any yacht, mark or obstruction, or to run aground, she shall be disqualified and the owner shall pay all damages.

Rule 19. DISQUALIFICATION.—The race committee shall, with or without a protest, disqualify any yacht, should it come to its knowledge that she has committed a breach of these rules.

Rule 20. PROTESTS.—Protests shall be made in the manner prescribed by the organization under whose auspices the race is sailed.

Rule 21. AMENDMENTS.—Amendments to these rules may be adopted at any meeting of the Union by a two-thirds vote of those present in person or by proxy, provided that the proposed amendments shall be contained in the notice of the meeting.

The chairman called for a statement as to the matter of a measurement rule, and Mr. Lawton in reply stated that the committee had not been instructed to deal with the subject, but that it recommended by way of compromise the adoption of the Seawanhaka rule for all yachts over 30ft. l.w.l. length, and of the waterline rule for yachts of 30ft. and under, this to be merely a temporary expedient until some new rule was proposed. Mr. Jones spoke in favor of this action, and Mr. Jarvis and Mr. Lovejoy urged that no attempt be made at present to adopt a new rule. Mr. Jarvis also spoke of the necessity for the inauguration of a movement for the limitation of scantling and regulation of yacht construction. Mr. Prime urged that no immediate action be taken. Mr. Lovejoy moved that the measurement and classification rules now in vogue in the different districts be continued for one more year, and that the entire subject of measurement and classification be referred to the Council, with instructions to present at the next annual meeting a proposal for rules. Mr. Lawton seconded the motion and it was carried.

The chairman announced that the Seawanhaka Corinthian Y. C. desired to extend to the Union the privileges of its town club house at all times for purposes of meeting. On motion of Mr. Lovejoy, seconded by Mr. Sanderson, a vote of thanks to the Seawanhaka C. Y. C. was passed, after which the meeting adjourned, the members of the Council being requested to remain.

A meeting of the Council was held immediately after the general meeting adjourned, Mr. Clark being nominated for chairman and elected in spite of his declination. Mr. Jones was elected secretary and Mr. Lawton treasurer. Mr. Jarvis and Mr. Macdonough were both about to visit England, going by the steamer St. Louis on Nov. 3. It was decided, after discussion, to authorize them as a special committee, to confer with the British Yacht Racing Association with a view to future co-operation and harmonious action in matters of measurement, classification, limitation of scantling, etc.

The Proposed 25ft. Class.

IN answer to the call issued by Com. Chas. A. Gould, a number of yachtsmen from the American and other Sound clubs met at the Grand Union Hotel, New York, on Nov. 4, to consider the subject of a new restricted class. As a basis for discussion there were some half dozen designs and several estimates from designers and builders. These were discussed, together with the necessary details of the restrictions. The general opinion was in favor of a one-design class, and it is understood that a fin-keel design, with centerboard, was practically selected. The proposed dimensions are about 25ft. l.w.l., 38ft. over all, 6ft. least head room, and 800sq. ft. of sail. The following gentlemen expressed their intention of building, and others who were not present will also join the class: S. & J. H Wainwright, American Y. C.; Com. Chas. A. Gould, American Y. C.; Simeon Ford, Seawanhaka Cor. Y. C.; George G. Tyson, commodore Riverside Y. C.; P. T. Dodge, Seawanhaka Cor. Y. C.; Charles T. Wills, American Y. C.; H. R Harper, Larchmont Y. C.; J. Rogers Maxwell, Atlantic Y. C., two boats; George D. Pratt, F. R. Lawrence, American Y. C.; W. H. Parsons, American Y. C.; William H. McCord, American Y. C.; Francis J Scott, Larchmont Y. C.; Charles A. Stevenson, Larchmont Y. C.; C. T. Pierce, Riverside Y. C.; W. C. Comstock, New Rochelle Y. C.

A committee was appointed to draw up rules for the class and to arrange further details, reporting at a meeting on Nov. 11; the members are: F. Bowne Jones, Indian Harbor Y. C.; A. Bryan Alley, Larchmont Y. C.; Stuyvesant Wainwright, American Y. C.; N. D. Lawton, Atlantic Y. C., and E. Burton Hart, Huguenot Y. C. Mr. S. T. Shaw, S. C. Y. C., of Oyster Bay, offered a cup for such races of the class as may be held about Oyster Bay. There is little doubt that the class will be a success and that a goodly number of yachts will be built.

YACHTING NEWS NOTES.

The Lake Winnebago Ice Yachting Association has organized for the coming winter by electing the following officers: Commodore, M. H. Dittmar, Fond du Lac; Vice Commodore, J. A. Kimberly, Jr., Neenah; Secretary, Paul Fritz, Fond du Lac.

Fleur de Lys, schr., George Lord Day, sailed from New York on Nov. 6 for Bermuda.

Mr. A. V. Armour has sold his steam yacht Ituna to A. S. Bigelow, of Boston, and purchased from W. W. Durant the larger auxiliary Utowana, designed by J. Beavor Webb, both sales being made by Tams & Lemoine. Utowana will fit out at once for a winter cruise, probably to the West Indies. May, steam yacht, Mrs. Sarah Drexel Fell, sails from Philadelphia on Nov. 9 for a Southern cruise, first visiting the Chesapeake and Washington, and probably continuing to the West Indies. Later on she may visit the Mediterranean. Nahma, the handsome new Watson steam yacht, the last foreign yacht that can be navigated by an American citizen in American waters under the Payne bill, is now at New York. She will soon fit out for a Southern cruise Varuna, steam yacht, Eugene Higgins, is at Erie Basin Dry Docks, preparing for a cruise to Bermuda.

The Penataquit Corinthian Y. C. has just been incorporated at Albany. This new club has its station at Bay Shore, Long Island: the directors are J. Adolph Mollenhauer, Charles A. O'Donohue, H. S Jewell and R. A. Bachia, of Brooklyn; Frank L. Camp and Malcolm Graham, Jr., of New York city, and Samuel T. Cushing, Rawson Underhill and Henry Mortimer Brewster, of Bay Shore.

At last the widely-advertised sale of Britannia is an accomplished fact, the new owner being John Lawrence Johnstone, of Kingwood, Kent. Mr. Johnstone is known to fame not as a yachtsman, but as the head of a company manufacturing an extensively advertised proprietary article; also as the recent purchaser, at a price of nearly $4,000, of the bed upon which Prince Charles slept before the battle of Culloden. With such special qualifications as a yachting expert, his name is likely to figure prominently in the future in cable dispatches as to future challenges, the racing of Defender, and other current yachting topics.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

Commodore, F. L. Dunnell, Brooklyn, N. Y.
Sec'y-Treas., C. V. Schuyler, 309 Sixth avenue, Brooklyn, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Wm. M. Carpenter, Main street, Sing Sing, N. Y.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J Burrage, West Newton, Mass.
Northern Division, Edgar C. Woolsey, 37 Charles St., Ottawa, Can.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Division Representation.

BROOKLYN, N. Y., Oct. 30.—*Editor Forest and Stream:* While a man cannot correct all of the errors that may get into print concerning himself, I would like to call your attention to one in connection with the board of governors of the American Canoe Association, contained in your issue of week before last reporting the meeting of the executive committee of the A. C. A.

Your report states the commodore stated the board of governors had taken some action or notice regarding representation on executive committee from the divisions. Your report comments on this.

No exception is taken to your comments, but I desire to state that either the commodore or your representative were in error, as neither the board of governors nor any of its officers have given any official opinion regarding the subject, nor has its opinion been asked.

I do not know that it is necessary for you to take any further notice of this than to get the facts straight, so that the same error may not appear in future comments, should you deem it expedient to make any.

ROBERT J. WILKIN,
President Board of Governors, A. C. A.

[We were informed by Com. Dunnell that the ruling on which representatives were recognized at the meeting of the executive committee had been made by the board of governors; further than this we have been able to ascertain nothing.]

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Michael Dorrler Wins the Championship.

NEW YORK, Nov. 2.—The annual 100-shot match for the championship took place to-day in the Greenville Schuetzen Park, Jersey City Heights, N. J. The light was poor, the cloudy day having much to do with the comparatively low scoring

Michael Dorrler, the winner of the championship at the Sportsmen's Exposition last March, again came to the front, winning the title of champion with the score of 2,182 for the 100 shots. H. M. Spencer, of Scranton, Pa., was next, beating Fred. C. Ross by just one point; their respective scores were 2,166 and 2,165. Ross was the winner in 1893 (the opening year) with 2,194; in 1895 he won with the great score of 2,222, but last year (1896) he went it three better, making 2,225. He attributed his falling off this year to the poor light on the ranges. The scores were:

M Dorrler, New York	2182	R J Young, Montclair, N J	2007
Hy M Spencer, Scranton, Pa.	2166	F C Watts, Newark, N J	1981
F C Ross, Brooklyn, N Y	2165	Gottlieb Warn, Brooklyn, N Y	1978
E Pillard, New Britain, Conn.	2153	Ignatz Martin, Brooklyn, N Y	1974
O C Boyce, Jersey City, N J.	2148	G D Weigman, Newark, N J	1970
H M Pope, Hartford, Conn.	2136	Ed Berckmann, Hoboken, N J	1961
Wm Hayes, Newark, N J.	2123	A Kronsberg, Brooklyn, N Y.	1946
G W Plaisted, Jersey City, N J	2120	A Bergerow, Newark, N J.	1880
L P Hansen, Jersey City, N J.	2115	G P Williams, Newark, N J.	1810
G Schlecht, Guttenburg, N J.	2098	H Mahlenbrock, Jersey City	NJ 1797
G W Hudson, New York.	2079	Geo Oberst, Newark, N J.	1727
S J Lyon, Collinsville, Conn.	2042		

A cup was presented to the winner by that well-known rifle-shot of Newark, N. J., Wm. Hayes.

Revolver Shooting in England.

THE Kelso challenge cup, representing the Gallery Revolver Championship of England, was won in 1895 by Walter Winans with the highest possible score of 42; he won it again in 1896 with a score of 41, and this year, not having been challenged for it, has become his absolute property. It is interesting to note that he won it with the revolver which the late Ira Paine used in his exhibition work.

Cincinnati Rifle Association.

CINCINNATI, O., Oct. 31.—The following scores were made by members of the Cincinnati Rifle Association to-day, at Four-Mile House, Reading Road. Conditions: 20 yds. off-hand, at the German ring target. Payne was declared king to-day, with a score of 216. Gindele was high on the honor target with a score of 73, which entitles him to the medal for this month. Several members will shoot for the individual championship competition on Election Day, and while we do not expect to make high scores on account of shooting strictly off-hand, we will see how near we can come to the top, or rather, how far away we can keep from the bottom.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 16-19.—DES MOINES, Ia.—Tournament under the management of Mr. W. E. Kessler. First two days, open to amateurs only: last two days, open to the world. Added prizes each day. Live birds on the afternoons of Nov 17 and 19. For programmes address W. E. Kessler, 1105 Maple street, Des Moines, Ia.

Nov. 23-25.—ST. LOUIS, Mo.—Tournament of the St. Louis Trap-Shooters' League. First two days, targets; last day, live birds. $100 added to the purses each day.

Nov 25.—PAWLING, N. Y.—Thanksgiving tournament of the Pawling Gun Club.

Nov. 25.—BUFFALO, N Y.—Thanksgiving Day tournament of the Bison Gun Club. Sweepstakes and merchandise events. C. H. Werlin, Sec'y, 1634 Broadway Buffalo, N. Y.

Dec 6-11.—WATSON'S PARK, Chicago, Ill.—*Dec. 6*—Heikes-Grimm match for the Cast-Iron badge. *Dec. 7*—Elliott Gilbert match for the Kansas City *Star* cup. *Dec 8*—Sweepstakes, open to all. *Dec. 9*—Elliott-Gilbert match for the Du Pont trophy. *Dec. 10-11*—The Kansas City-Chicago team race.

Dec. 8-10.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Dec. 10. Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Nov. 30, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y

1898.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 23-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns: all surplus added.

March 29-April 1.—READING, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Limited Gun Club has issued its programme for the tournament Dec 7-9. The tournament is open to all, but black powder and 10-gauge guns are barred The programme for the first day consists of four 20-sparrow events, $5 entrance, sparrows included at 10 cents each. The purses on this day will be divided as follows: Ten per cent of net purses will be paid to the five high guns shooting the day's programme—30, 25, 20, 15, 10 per cent. Balance of each purse will be divided 35, 30, 20. 15 per cent.; class shooting. Entries close in each event when the first squad has shot at 25 birds. On the second day there will be two events at pigeons: No. 1, 7 birds, $7, birds included; No. 2, 10 birds, $10, birds included. Pigeons charged for at the rate of 20 cents each. The purses will go to the five high guns, 30, 25, 20, 15 and 10 per cent. Entries close with the firing of the last gun in the first round. On the third day there will be but one event scheduled: the Grand Central Handicap, 25 birds. $25 birds extra at 20 cents each. Ten dollars payable on or before Nov 30. Post entries will pay $5 extra, or $30 in all. Shooters will withdraw on the third miss Entries close with the firing of the last gun on the first round. Handicaps to range from 25 to 32yds. The purse will go to the eight high guns, 25, 20, 15, 10, 9, 8, 7 and 6 per cent. Shooting will begin at 8:30 A. M. each day, and the programme states that "this does not mean 10 o'clock." Shells should be shipped in care of Gus Habich, 62 West Market street, Indianapolis, Ind. It seems a pity that the Limited Gun Club could not, for its own benefit, put off the shoot until the week following the Chicago week—Dec. 6-11. Perhaps something may yet be done in this line.

W. M. Harding, a resident of New York city for a certain portion of the year—when his business does not call for his presence "on the road" out West—is once more with us for the winter; and promises to devote some of his Saturday afternoons to smashing targets. Mr. Harding was out at Rutherford, N. J., at the Boiling Springs' club shoot, Saturday afternoon last, Nov. 6. He had lots to tell about his experiences while in California, a State that he says is the only place fit for a man to live in While talking about some of his hunting trips of a few hours' duration, he mentioned the name of W. Sandercook, of Riverside, Cal. Were we to repeat all the nice things he said about Mr. Sandercook, we should have to enlarge this column materially. It is sufficient to say that what we learned about Mr. Sandercook, determined us never to forget Riverside if we ever got out as far as California, and wanted to take a hunt. By the way, we believe that Mr. Sandercook can tell a good story about Mr. Harding and his first jackrabbit. We don't know Mr. Sandercook's story, but we know Mr. Harding's, which runs thus: "I was out with Sandercook, and wanted to kill a jackrabbit; getting out of the buggy I took a gun, and hadn't gone very far when up jumped a great big thing with long ears and longer legs. I let drive at it, and it gave a jump. I took off after it, and finally came back to town with that same rabbit. How far did I chase it? I must have run about four miles, altogether. How many times did I shoot at it? Four or five times, certainly. And now Sandercook always introduces me as the man who ran a jackrabbit down!"

Colin Wise, of Passaic, N. J., the recently elected captain of the Boiling Springs Gun Club, of Rutherford, N. J., is also a member of the Orean Park Association, a club with a capital club house and hunting grounds located a few miles north of Newfoundland, Passaic county, N. J. We had the pleasure of taking a few days hunt with Mr. Wise last season, and always glanced with awe, tinged with a little skepticism, at a pile of huge rocks known as the "Wildcat's Den." Noel Money was so taken with the idea of hunting a wildcat, that he went up after a snowstorm last winter and took a couple of his Welsh hounds along with him. He did nothing much beyond getting up to his neck once or twice in snow-drifts. (You can imagine from this that the drifts were pretty deep!) After that experience, Orean Park's wildcats were always dismissed with a smile. But Colin Wise has dispelled that myth; he has dispersed the mist of incredulity that obscured the mental vision of more than one person that we wot of. He has killed a bobcat, and killed it with a charge of bird shot from his old Parker (watch Du Bray smile); and he has the cat to prove his story. It all happened about three weeks ago. He was up at Orean Park and was out hunting ruffed grouse with the club's janitor-keeper, Mr. Post. Mr. Post went one way and Wise went the other. Instead of walking through the brush, he wisely (no pun) kept to a "woods road." Soon Post jumped some birds and fired two or three shots in rapid succession. Wise stood still, hoping that the birds might come his way; instead, there crept along through the underbrush an animal that he at first took for one of the Belgian hares that the Association has turned out in the past. It was not a hare, but was a wildcat that came within 20yds of where he stood, and that met its death from an overdose of No. 7½ chilled shot, as aforesaid. His elevation to the captaincy of the Boiling Springs Gun Club is distinctly traceable to the above feat. A man who can, with the discharge of a single barrel of a 12 gauge gun, clear both his reputation for veracity and kill a wildcat with 1⅛oz of 7½ chilled, is surely fitted to captain an aggregation of mere trap-shooters!

Cecil Kennard, Capt. Money's son-in-law, otherwise known to San Antonio friends as English Kennard, to distinguish him from Texas Kennard, is once again in this country. He is probably by this time *en route* for the Indian Territory, where he is interested in some oil property. Mr. Kennard does not go unaccompanied: as a companion he takes with him a 1ft. high monkey of engaging habits, that is more than proud of a yellow sweater that it wears while in the treacherous climate of the northern portion of the States. On Thursday, Nov. 4, we had the pleasure of pursuing the wily ruffed grouse of New Jersey, in company with Capt. Money and Mr. Kennard. It was a lovely day, but rather too warm for comfort when walking up and down the hills, tagging after the two above named. The leaves were also as dry as tinder and the grouse naturally almost unapproachable. At lunch time we had one grouse and one woodcock in the bag. Thoughtfully munching a sandwich, Kennard delivered himself as follows: "As a means of exercise, New Jersey ruffed grouse hunting is superb, but as a means of shooting, it's a rank failure; you can't loose off your *paterero* often enough." We have to thank Mr. Kennard for a novel word and the definition thereof. "The paterero," said he, on being questioned, "was the chief weapon of the old buccaneers. They had several kinds of guns, but the paterero was the one with which they did the business." Elmer Shaner, Old Hoss and others, who are always on the hunt for new and lengthy words, are perfectly welcome to the use of the foregoing.

The dates for the Pennsylvania State shoot of 1898 are March 29–April 1. The selection of the above dates seems to us to have been a wise move on the part of the Independent Gun Club, of Reading, Pa., under whose auspices the shoot will be held, as they occur in the week following the decision of the Grand American Handicap at Elkwood Park. This means that there will be a large contingent of shooters from the extreme West and East centered at the above popular New Jersey live-bird grounds the week previous to Pennsylvania's State shoot. It is, therefore, more than likely that many of these shooters can easily be prevailed upon to stop over a few days, and take in the Reading shoot. In our issue of Oct. 9, we made a note of an interview with John Shaaber, of Reading, in which he gave it as highly probable that the above dates for the State shoot would be chosen by his club. The Independent Gun Club's grounds are located some three miles from Reading, at the Three-Mile House, Shillington. They are, however, easily reached by rapid and frequent trolley cars that cover the distance in a very short time. We understand that the Independent Gun Club is going to get up something like an old-fashioned tournament, one that will suit the boys who want to shoot.

A race is never out until it is finished. This is an excellent maxim for a trap-shooter to remember. A good example of the value of practicing what you preach may be gathered from the team race at Bunn's grounds, Singac, N. J., on Wednesday last, Nov. 3. Capt. Money and A. Doty shot a friendly race on that date with Chris. Wright and Garry Hopper, both of Paterson, N. J. Bunn always has good birds, and on this occasion he surpassed himself in the quality of the pigeons he trapped in this match. The Money-Doty team started off badly, and were behind all the way; but Capt. Money never gave up the match. He "jollied" Doty along, and both of them kept right at it, Doty doing some excellent work. But it looked hopeless for them, as they were 2 behind at the end of the 22d round. Then came the break. Wright lost 2 out of his last 3, and Hopper lost his last bird, having to kill to tie. Thus the Money-Doty end won by a single bird after all.

The Brooklyn Gun Club's management announces an all-day shoot for Thursday, Dec. 16. Mindful of the fact that the weather about that time is liable to be bad, it makes the proviso that, in case the 16th is unfavorable, the shoot shall take place on the 17th. At this early date, Manager John Wright cannot give us full details of his plans for this shoot; but he promises some "solid silver, no plate," merchandise prizes for competition in one or more events of 30 targets, with an entrance fee that will just cover the cost of the articles and the price of the targets. In sending out programmes later, each programme will be personally addressed, and will give the recipient's handicap in the main events. We like this innovation, and think that the trap-shooters around New York will think well of it. They don't approve of "going it blind," as the saying is.

Several members of Long Island gun clubs ventured down to the deer country on the island on Wednesday last, the first open day, taking their lives in their hands when they did so. We have, however, learned of no fatal accidents to date, although there was a vast army of men present to deal death and destruction to the deer that were jumped. Among those who lined the railroad, a favorite crossing near Centre Islip, there were two men armed with .45-90s, the bullets from which have hardly stopped going yet. No big bags were made that we know of. Mr. Van Sise, the lessor of the property on which the Brooklyn Gun Club has its grounds and club house made one of a party of sixty-nine! The sixty-nine returned with just five deer for the party.

We received the other day a copy of the game laws recently enacted by the Legislature of the State of Tennessee. The copy was mailed us by Mr. S. B. Dow, the president of the Knoxville Gun Club, an organization that was very largely responsible for the passage of the staid laws. The four important restrictions are: Open season on quail from Nov. 1 to March 1; non-exportation of quail, dead or alive, out of the State; Mongolian, English, ring-necked, or other pheasant not to be shot for a period of five years; providing for the punishment of dynamiters of streams by imprisonment for not less than one year nor more than three years in the penitentiary. Tennessee has been robbed year after year of thousands of live quail for restocking purposes in other States; she intends, however, to put a stop to it now. We learn from Mr. Dow that quail are very plentiful indeed this season.

At the recent annual meeting of the Boiling Springs Gun Club, of Rutherford, N. J., the following officers were elected for the season of 1897-8. President, E. A. Jeanneret; Vice-President, C. H. Coe; Treasurer, Frank Krebs; Secretary, W. H. Huck; Captain, Colin R. Wise. The executive committee, or rather the board of directors, is composed of all the above officers (with the exception of the captain) and Messrs P. A. Jeanneret, O. L. Marvin and Louis Lane. The club will donate for competition during the ensuing six months a gold watch that will be well worth winning. The watch will be competed for on the first and third Saturdays of every month, the greatest number of wins out of the twelve shoots to take the watch.

It is with the greatest pleasure that we announce the challenge issued by Rolla Heikes to Charlie Grimm for the Cast-Iron medal. The match ought to be a grand contest. We have always held that Rolla is almost as near the top in live-bird shooting as he is in target shooting. The result of this match will, we think, prove that our contention is pretty nearly correct. One thing about the challenge that we are particularly glad to note is, the compliance by Heikes with every condition of the rules governing challenges for this heretofore family badge. The forfeit has gone into the proper hands, and neither corn husking nor bass fishing will be valid excuses this time. But perhaps "fall plowing is now in order?"

Dr. O. J. Fay, secretary of the Carleton, Mich., Rifle Association and Gun Club, writes us, under date of Oct. 31, that the first annual tournament of his club will be held Nov. 17–18. The first day will be devoted to targets; the second day to live-bird shooting. Ben O. Bush, of Kalamazoo, Mich., (who doesn't know Ben Bush?) has been secured as manager by the club for this, its initial tournament. On both days the prizes will consist of cash and merchandise. For full particulars regarding this shoot, we would advise those interested to address the secretary, Dr. O. J. Fay, who, we feel sure, will be glad to answer any and all questions connected therewith.

Mr. T. W. Stake, of Schoverling, Daly & Gales, distinguished himself on Saturday last, Nov. 6, by winning the first heat for the November cup put up by the Crescent Athletic Club, of Brooklyn, N. Y., for competition on every Saturday in November. Mr. Stake only received 1 more target to shoot at than the scratch men, so that his victory was evidently well deserved. The strong west wind that swept across the Upper Bay made the shooting of bluerocks at Bay Ridge exceedingly hard. There were thirteen entries for the cup, among the number Mr. Wilmot Townsend, well known to readers of the columns of FOREST AND STREAM from his sketches of ducks on the wing and in the water.

The review of the Interstate Association's work during the season of 1897, published in our issue of Nov. 6, compared most favorably with that Association's work in previous seasons. The annual meeting of the Association will be held early next month, and clubs that are desirous of securing its services to aid them in giving tournaments, should lose no time in making application for dates to the manager, Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa. So far as we are aware of, there is not likely to be any decided change in next year's programme. The lines laid down in the past will in all probability be followed quite closely in 1898.

John J. Hallowell, otherwise U. M. C., Jr., had quite an experience in Rochester, N. Y., on the morning of Oct. 26. He was walking from a street car to the shooting grounds of the Rochester Rod and Gun Club at Cobb's Hill. He was directed to "go over the hill." He did so, and got lost in the thick fog that prevailed, finally walking over the edge of a sand pit. Not having a parachute or a flying machine, U. M. C., Jr., descended rather too rapidly for comfort. A heap of loose sand luckily broke his fall, and he reached the shooting grounds "slightly disfigured, but still in the ring." The shock, both mental and physical, is plainly traced in the scores he made on both days of the tournament.

In a short time the Money family will be able to put a dangerous three-men team in the field. Captain Money and his two sons, Noel and Harold, would constitute that team. Noel will not be in this country for a couple of months or so; but Harold Money is now on his way here to take a position in the laboratory at Oakland, N. J. When all three get together, it will be as well for most families to refrain from any and all kinds of bluffs in the shooting line.

Chicago's shooting carnival next month is something that causes us a little pang of sorrow that such things do not come our way just now. The intercity team race, the two matches between Elliott and Gilbert for the Du Pont trophy and the *Star* cup, and the match between Heikes and Grimm for the Cast-Iron badge make a schedule of events that is decidedly attractive.

Among the Brooklynites who went deer hunting on Long Island on Nov. 3 were Thomas McGlynn and G. B. Paterson; they were joined by Messrs. G. S. Raynor and Will Brown, of Riverhead, L. I. The party hunted in the Lake Ronkonkoma region and brought back a fine buck, besides a large bag of quail, ruffed grouse and some rabbits.

Justus von Lengerke returned from his old stamping grounds in Sullivan county, N. Y., on Monday morning last, Nov. 8, with as fine a string of ruffed grouse as ever came into the city. Justus accounted for eight grouse one day and five the next. His partner helped to swell the bag also. The cottontails in the bunch made the total string of twenty-six head look very impressive.

Chris Gottlieb, of Kansas City, Mo., can break targets as well as he can kill live birds. At the last shoot of the Metropolitan Gun Club of that city, held Oct. 30, he won the Class A trophy in the badge shoot with 25 straight. Ed Hickman, with 23, was the next to him out of fourteen entries; no one else could score more than 21.

If anybody gave us his address as 236 Blank street," we would say to ourselves: "Twice three are six; 2, 3 and 6; 236 Blank street. That's easily remembered." The other day a friend gave us his address in Brooklyn, N. Y., as "147 —— street." Not much trouble to memorize that number, was it?

The Sportsmen's Exposition in Madison Square Garden, Jan. 13-22, has "caught on" with the exhibitors most satisfactorily. It is now certain that the Exposition of 1898 is going to be far ahead of its predecessors in many respects.

Nov. 9. EDWARD BANKS.

On Championships, Historical or Otherwise.

NEW YORK, Nov. 3.—Although more particularly engaged in matters pertaining to dog and gun, I take a great deal of interest in trap-shooting, some of it being speculative, some practical. Nevertheless, in venturing on so bold an affair as writing on trap-shooting, I admit the ineligibility of any one to write anything savoring of common sense, or anything else, who cannot at least shoot a 90 per cent. gait. True wisdom and spirit are found only in men who have a deftness of trigger-finger and eye; for when the intellect is high enough to enable any one to shoot straight, the nothing-beyond is attained. Still, it would be more satisfactory if, on the matter of skill, methods, etc., there were greater unanimity between experts and novices, or professionals and amateurs. The spirit of true progress may yet so change the standards of skill and excellence, that the performance of the worst amateurs will be received with the greatest honors, and the true system will be that wherein each contestant who shoots the worst will reap the most profit.

But what I speculatively purposed writing about is the matter of championships. The sport of trap shooting is generously favored with them. He is common clay indeed if, with some skill and persistence, he cannot become some kind or degree of champion.

Nearly all the championship trophies of the trap world had more or less of an independent origin and free atmosphere concerning them, all apart from those interested as competitors for honors; something at least distinct and apart from the men who were to be the actual competitors—all save one, the brightest flower in the championship wreath, the one called the "cast-iron medal."

The whole honor or glory of a championship emblem rests on public opinion and public aspirations. The well settled rules governing championship contests—rules resulting from common sense, experience, and the necessities of the case, rules sanctioned by the usage of centuries—imperatively require that a trophy emanates from a properly authoritative source, one which gives prestige and a guarantee of open-handed fairness to all alike, one which is distinct and independent from the competitors obtain. The competitors of the past ages were as distinctly apart from the source of the trophy as are the parties to an action at law apart from judge and jury. That, however, is all an old grandmother's notion. Modern progress has shown that a few men can make their own trophy out of any old thing, launch it in the name of "we, the people," and then shoot for it themselves—meaning the Cast-Iron medal.

History nowhere recounts that any one or two men made their own laurel wreaths, then contested for them, and wore them later as a public sign of merit and honor—but history is never up to date. If there had been cast-iron medals at the Olympic games there had been nobler Greeks, perhaps, and to a certainty a better understanding of how to keep trophies in the family.

The perpetual strivings of man to excel or vanquish his fellows makes history and gives to it its value and its fire. His contests in time of peace were such as fitted him for war or for the struggle for existence in peaceful pursuits. A sound mind in a sound body was an essential requisite for war or peace, and a sound body was one of strength, endurance, activity and suppleness, with senses developed to their highest degree of acuteness. Nor was he content to excel in his own person; he must needs contest for the superiority of his horses, his dogs, boats, fowls, or, if need be, in matters of State with his armies.

The great contests of the ancients in time of peace were national events. The public was informed of them months in advance, and all comers were welcomed. It was not in vogue then to hold a meeting in an hour or two, or a day or two, after it was called, bring forth a fantastic cast-iron creature and then have its creators shoot for it before the public at large even knew of its bringing for h. A champion in those days was one who met the very best men who could meet him, and he owned the title just so long as he could hold it. He did not become a champion in perpetuity by winning a trophy three times. The trophy had a championship significance, but such significance was only with him who could take it and hold it. How extremely old-fashioned were our grandfathers! They had no idea of silence out of season, of a silence when some one was nearby looking for trouble, or a fishing for bass when there was a chance to win or lose honors, or a-husking of corn in silence when there was a man on their trail who was anxious to try conclusions. Had some one of the old Greeks injected the art of husking corn or bass fishing into the Olympic games, in so far that one competitor was to wait till the other broke silence and finished his husking, there is no doubt but what that nation would have become much better farmers, though poorer gladiators. And yet, being of stern sterling stuff, they then would have claimed to be only farmers, not gladiators or athletes or what not. They would not pretend to more than they were. Alas! it is to be deplored that they had not discovered the Cast-Iron badge.

I remember that some months ago, Mr. Banks, trap editor of FOREST AND STREAM, suggested that the cast-iron badge be tacked to the trophy of the Schmelzer Arms Co., to the end that it might have an added value and significance. To me, it seems that if the cast-iron bauble was tacked to any old thing it would gain thereby in value, and at the worst it could not lose. Why? Because it has no championship significance whatever; because the competitors were the originators of it, made the rules governing it, and contested for it. There were only eight men in its bringing forth. They represented no public sentiment, nor, so far as I know, did they claim to do so. They were as follows: Messrs. Geo. Kleinman, J. L. Brewer, Chas. Grimm, Ed. Bingham, R. S. Mott, C. W. Budd, J. A. R. Elliott and Dr. W. F. Carver.

Immediately after the conclusion of the shoot in Chicago, Nov. 16, 1894, and before the public had much time or opportunity to know that such a thing as a comic opera, trap-shooting, cast-iron freak had been hastily created, "while you wait," Dr. Carver challenged Geo. Kleinman, who forfeited owing to illness. There seemed to be no great public craving for the bauble, since no one, save those who, in meeting assembled, by joint force of intellect, solemnly produced the iron plaything, made any effort to possess it till Dec. 23, 1896, when Grimm met and defeated Carver for it, and since then there has been no contest for it, although recently Elliott challenged Grimm for it. Yet the latter, being one of its creators, seemed to know fully its true worth and the courtesies appertaining to it, for he was so busy husking corn he had no time or inclination to refrain from that exciting avocation to contest for its tame honors, and as to the courtesies, which one would suppose went with it, the cast-iron thing seemed to have none. B. WATERS.

The Rochester (N. Y.) Tournament.

THE report of the Rochester (N. Y.) Rod and Gun Club's tournament, held Oct. 26–27, did not reach us until too late for insertion in our issue of Nov. 6. Election Day (Tuesday, Nov. 2) necessitated our going to press a day earlier than usual, hence the delay in publishing this and other similar matter.

Our correspondent in Rochester, Mr. E. D. Hicks, makes the following comment in his letter to us that accompanied the scores: "The attendance was much smaller than we had expected, as the weather was just right for trap-shooting. Fanning made the best average for the two days, while Glover and Byer tied for second place. After the programme had been finished on the second day, U. M. C., Jr., Hadley, Lane and Davis shot a 15-target race, low score to pay for the targets and refreshments. The race resulted thus: Lane 15, Hadley 14, U. M. C., Jr., 11, and Davis 10."

It will be noted that Mr. Hicks says, "Fanning made the best average for the two days, while Glover and Byer tied for second place." Our scores as we figure them (they were sent to us by Mr. Hicks) show that Glover was first in the general averages, Fanning and Byer respectively second and third. Event No. 7 on the second day is missing, but this was a team race on the programme, and was not shot.

The names of those taking part will be easily recognized. There was Col. A. G. Courtney, of the Remington Arms Co., shooting in much improved form; U. M. C., Jr., otherwise John J. Hallowell, the new representative of the U. M. C. Co.; J. S. Fanning, the popular Californian who looks after the interests of the Gold Dust Powder Co. in the extreme East; Charles Wagner, of Syracuse, N. Y., a thoroughly reliable shot and dangerous in any sort of company. The balance of the shooters present were nearly all, if not all, local men.

Some capital shooting was done, notably in event No. 8 on the first day. In that event squad No. 1 made the record of 98 out of 100; U. M. C., Jr., 20, Fanning 20, Meyer 20, Glover 19, Byer 19. The ten men entered in that event broke 167 out of 200 shot at; there were three 20s, four 19s and three 17s. No dropping for place into the 8 hole there. A glance at the scores will show that some long runs were made, although Bartlett's 151 straight, made on Sept. 26, 1895, on these grounds, was not approached.

GENERAL AVERAGES.

Only six men shot through the entire programme of 335 targets. Below we give the standing of the six as we find it in the scores mailed to us:

	First Day.		Second Day.		Total.		
	Shot at.	Broke.	Shot at.	Broke.	Shot at.	Broke.	Av.
S Glover	175	163	160	154	335	317	94.6
J S Fanning	175	164	160	152	335	316	94.3
L V Byer	175	163	160	150	335	313	93.4
C Wagner	175	165	160	143	335	308	91.9
A G Courtney	175	153	160	142	335	295	88
U M C, Jr.	175	140	160	130	335	270	80.6

The scores of each day follow:

SCORES OF OCT. 26.

Events:	1	2	3	4	5	6	7	8	9	10

Total number of targets thrown in the programme events to-day was 1,630.

Closing the Season at Auburn, Me.

AUBURN, Me., Nov. 3.—Below is the score of the Auburn Gun Club's last shoot of the season. Ashley won the badge for this shoot; but it becomes the property of Barker, who has the highest per cent. of the year, and who has won the badge eleven times out of twenty-five. Conner has been up in the big woods after deer (and he got two), and thought his eye would be a little out on clay birds; but he got into gear and pushed us all hard for first place, tying Fletcher and beating him out on the shoot-off. The boys all feel as though they had shot very well for their first year at the trap, and say they will make them go some next year. Score:

Ashley	10101001111111111111111101—20
Fletcher	11111101110001010111111111—19

ASHLEY.

Ducks and Pigeons at Havre de Grace, Md.

HAVRE DE GRACE, Md., Nov. 4.—To-day being a bye day for ducks Messrs. J. R. Malone, of Baltimore, and Walter T. Jackson, of this place, arranged a live-bird shoot at pigeons for the visiting sportsmen. There was a fair attendance and eight events were decided. Hood Waters, of Baltimore, was in great form, scoring his first 63 birds. Five traps were used, and all stood at 30yds., except in the last two events, when the rise was 28yds., one barrel only being allowed. No. 1 was a $2 miss-and-out; Nos. 2-6 were 10 birds, $7.50; Nos. 7 and 8 were 5 birds, $2. Scores were:

Western Traps.

CHICAGO, Oct. 29.—The following are scores of some of our Chicago shoo ers, showing the spirit entering into the practice preparatory for the contest of teams, Chicago vs. Kansas City, which takes place at Watson's Park, Burnside Crossing, Ill., during the month of December. Scarcely a day passes that some of them are not availing themselves of the opportunity of a little practice at Watson's birds, which are usually a good lot. Many new faces are seen every week, some of whom are members of clubs of this city, whose shooting in the main is at targets, and many of whom only shoot at live birds during the week of the State shoot:

Oct. 25: Blue Bird shot at 175 and killed 160.

Oct. 26:

W W McFarland	01111122112112122121132122112211111—34

Neal	100	88	Schmidt	50	29
E Graham	100	89			

COOK COUNTY TRAP SHOOTERS' LEAGUE.

Oct. 30.—The last shoot of the Cook County Trap-Shooters' League was held to-day at Watson's Park, Burnside Crossing. There were two events on the programme: one was the handicap event for merchandise prizes, the other was a four men team race for a set of bluerock traps. The attendance was large and the shoot was a success in every particular, although the genial face of Oswald von Lengerke was missed in the crowd on account of his partner being absent from our city. The day was a perfect one, with a slight breeze from the left quarter, but there was a strong sunlight that bothered some of the shooters very much on right quartering targets

Handicaps ranged from 1 to 6 extra targets to shoot at, scratch men shoo ing at 25. No one was allowed to score more than a highest possible of 25. High guns won the prizes, and all ties were shot off at 25 targets, with the original handicaps. The following is a list of the prizes offered for competition:

1. L. C. Smith ejector shotgun, 12-gauge. 2. One Remington ejector shotgun, 12-gauge. 3. One Winchester repeater shotgun, 12-gauge. 4. One gold medal. 5. One Vom Hoff "President reel." 6. Up-the-grove hunting coat. 7. One 5lb drum Gold Dust powder. 8. One high grade bench closer. 9 One high grade bench closer. 10. One high grade bench closer. 11 One hundred Peters loaded shells. 12. One set B. G. I cleaning implements. 13. One year's subscription to *Sportsman's Review.* 14. One year's subscription to "Sports Afield." 15. One year's subscription to "Sports Afield." 16. One year's subscription to "Sports Afield." 17. One year's subscription to "Sports Afield." 18. Five dozen Jones decoy anchors.

HANDICAPS.

The handicaps were based upon the percentages made by the best four scores made by each contestant in the league team races during the past season. It will be noticed that John Ruble, of the Garden City Gun Club, made a percentage of 10 for four scores of 25 each. The table below gives the totals of the best four scores, and the resultant handicap allowance:

	Best four scores.	Total to shoot at.		Best four scores.	Total to shoot at.
J Ruble	100	25	R Kuss	98	26
E E Neal	93	26	F P Stannard	93	26
E M Steck	92	26	A C Paterson	90	26
H A Ferguson	89	27	A W Fehrman	89	27
E Graham	89	27	G C Lamphere	88	26
Dr S Shaw	89	26	J S Houston	88	27
O Von Lengerke	87	26	R A Turtle	86	27
F M Fish	86	27	T Graham	85	27
L H Goodrich	85	27	T P Hicks	85	26
H Wiley	85	28	C P Richards	84	28
A W Adams	84	28	S Young	82	28
S M Booth	81	28	F Edgar	80	29
M E Bowers	79	27	P D Norcom	78	29
W Metcalf	77	29	A Hellman	76	28
I P Goetter	75	29	E B Knott	74	28
M J Lowrey	74	29	G W Prickett	74	29
C Stickles	74	29	W H Cornwall	73	29
W Cheesman	72	30	Dr A Mathews	72	30
S H Greeley	71	30	M Goldsmith	70	30
A C Black	68	30	A W Harlem	68	30
W E Schmidt	68	30	H Levi	65	30
G E Marshall	65	30	H B Morgan	65	31
Dr C W Carson	64	31	A Cheesman	64	31
F G Barnard	61	31	D Russell	56	31
S Palmer	49	31			

The scores made in this big event, in which there were forty entries, are given in detail below. The figures and the letters that follow each shooter's name tell the number of targets he shot at and the name of the club he represented. (G stands for Garfield; C H for Calumet Heights; E for Eureka; G C for Garden City; C for Cicero.)

Ruble, of Garden City Gun Club, the only scratch man, ran his first 24 straight, but let his 25th get away from him. Three men scored highest possibles of 25. There were four ties on 24, and eight ties on 23 (including Fehrman's score, referred to in a note below the score). Dr. Carson, one of the 23s withdrew, thus fourteen prizes were appropriated by those who broke 23 or better. The last four prizes were not placed, so far as could be ascertained. The order of merit observed in running the scores given below shows how the first fourteen prizes were disposed of.

Merchandise handicap, 25 to 31 targets, unknown angles:

G E Marshall (30, C H)	11111111111101101011101111110 —25
A C Paterson (26, G)	11111111111111101111111111 —25

* A. W. Fehrman's score, as mailed to us, shows 22 breaks out of 27 shot at. His name appears, however, among those tied on 23; on the shoot off in that class he won the ninth prize, as shown below:

Three men being tied for first place, they shot off for choice of the first three prizes. The first shoot-off resulted thus: Paterson (26 and Marshall (30) 23 each, Goldsmith (30) 22. Goldsmith, therefore, took third prize, the Winchester repeating shotgun. On the second shoot-off, Marshall (30) scored 25 to Paterson's 21. Marshall took the L. C. Smith, and Paterson the Remington.

The four 24s then shot off. F. P. Stannard (26) ran his 26 straight, scoring, of course, a highest possible; he took the gold medal. Jack Ruble again made 24 out of his 25, and won the casting reel. R. Kuss (26) and Wiley (28) tied for the next two prizes on 23 each. They shot off again. H. Wiley (28) scoring a highest possible and taking the Up-the-grove coat. Kuss (26) scored 24, and won the Gold Dust powder.

The 23s also shot off. E. E. Neal (26) and A. W. Fehrman (27) tied for the 8th and 9th prizes on 25 each. Dr. Shaw (26) won the 10th prize with 24. A. W. Adams (28) and L. Goodrich (27) tied on 22, and shot off again; they made another tie of it on 23 each, and agreed to divide the 11th and 12th prizes. G. C. Lamphere (26) took the 13th prize on 20, S. H. Greeley taking the 15th prize on 17 out of 30 shot at on the shoot-off.

(The distribution of the 15th, 16th, 17th and 18th prizes was not known to our correspondent at the time of writing.)

It took almost 1,700 targets to decide the above event, over 1,100 being thrown in the first portion of it, and nearly 600 in the decision of the ties.

THE TEAM RACE.

The team race was for four-men teams, the teams to be chosen from those eligible for the handicap prize shoot referred to above. The prize in this event was a full set of bluerock expert traps, with pull attached. Each club was allowed to enter one or more teams; all men on the teams shot with the same handicap as in the merchandise event. (The scores in that event were counted in this event also, the teams being named and entered prior to the commencement of the handicap shoot). Below are the results as shown by the scores given above:

Garfield No. 1: A. C. Paterson (26) 25, R. Kuss (26) 24, Dr. Shaw (26) 23, E. E. Neal (26) 23—95.

Eureka No. 1: F. P. Stannard (Old Hoss) (26) 24, L. H. Goodrich (27) 23, A. W. Adams (28) 23, Dr. C. W. Carson (31) 23—93.

Calumet Heights No. 1: G. E. Marshall (30) 25, S. H. Greeley (30) 23, P. D. Norcom (29) 22, W. E. Schmidt (30) 22—92.

Garfield No. 3: H. Wiley (28) 24, D. Russell (31) 24, F. M. Fish (27) 22, C. Stickles (29) 22—92.

Calumet Heights No. 2: G. C. Lamphere (26) 23, R. A. Turtle (27) 22, J. S. Houston (27) 21, S. M. Booth (28) 21—87.

Calumet Heights No. 3: A. W. Harlan (30) 22, S. E. Young (28) 21, H. A. Ferguson (27) 20, W. Metcalfe (29) 18—81.

Garden City No. 1: J. A. Ruble (25) 24, M. Goldsmith (30) 25, A. Hellman (28) 18, H. Levi (30) 13—80.

Garfield No. 2: E. Graham (27) 21, T. P. Hicks (26) 20, T. Graham (27) 19, C. P. Richards (28) 17—77.

Eureka No. 2 (one man short): G. W. Prickett (29) 21, H. B. Morgan (31) 19, W. H. Cornwall (29) 11—51.

The Garfield Gun Club finished the year's shooting season with a con inuance of the success which has attended its members throughout the entire season of '97. It won the set of traps with a margin of 2 targets to spare. The Eureka No. 1 was close up with 93. Calumet Heights No. 1 and Garfield No. 3 were also only a short distance behind with 92 each.

SOME LIVE BIRDS

While the handicap at targets was in progress, several of the participants who had shot out their scores spent the remainder of the spare time in shooting sweepstakes at live birds. The following scores were made in a 10-bird race, $3 50 entrance, three moneys—50, 30 and 20:

Neal	0222222222— 9	H B Morgan	00000
S Palmer	1220211100— 7	R B Carson	10002

THE BIGGEST WEEK IN TRAP SHOOTING.

CHICAGO, Ill., Nov. 6.—Preparations are going merrily on for the big race between Kansas City and Chicago for supremacy at the live bird traps. The team shoot alone will constitute a great attraction, and will be, perhaps, the most important trap event of the year in the West, surpassing very much as it does in interest the average target tournament. When it comes to adding to this event three live bird matches, each a championship event, and the three covering the entire field of live bird trophies now before the public, the occasion begins to attain a magnitude peculiar to itself. No very great amount of booming has been done on this event until the present week, but from now on we may look for rapid and persistent work at the Chicago end of the line, where the festivities will occur.

The following circular letter has been sent out to Western papers by the press committee of the organization having the matter in charge. It covers the situation well enough, though rather from the standpoint of the lay press, the text being as follows:

"The biggest week in American trap-shooting will be celebrated at Chicago, Dec. 6-11. At that time all three of the live bird championship trophies of America—the Kansas City *Star* cup, the Du Pont trophy, and the Cast Iron badge—will be put in competition in races between the pick of the American crackerjacks. There is some doubt among shooters of different localities about the final or the relative significance of these different trophies, but the public interested in shooting certainly cannot deny that Chicago covers the field and the question perfectly when she brings them all together in the same week, and asks the world to come, see, and take its choice. Nor is this all. The hottest team race of any recent years will be shot at Chicago this same week, when the experts of the City by the Kaw will be here with the earnest resolve to take the individual and collective scalp of all Chicago. The total aggregation of shooting attractions is something unparalleled in shooting history. Citizens of the East are wont to call the Grand American Handicap the greatest trap event of the year's fixtures; but neither this nor any other sweepstake tournament can compare with the combined interest of three actual championship contests, a day of heavy sweeps, and a team race between the picked men of the entire West as represented by the two representative shooting cities of the West. The East is ambitious and energetic enough in its way, but for a really big enterprise the public is always forced to turn to Chicago.

"At present the Kansas City *Star* cup and the Du Pont live-bird trophy are both held by Fred Gilbert, the Iowa wonder, who made it two straight over the former holder of these two trophies, Jim Elliott, of Kansas City. The Cast-Iron badge is held by Chas. M. Grimm, also of Iowa. The latter has just been challenged for the Cast-Iron badge by Rolla Heikes, the Dayton, O., target-shooting phenomenon, who is one of the most remarkable characters before the traps of any country. Until defeated by Fred Gilbert recently in the race for the E. C. cup, indicative of the inanimate target championship of the country, Heikes was thought invincible in this style of shooting, though he has never gone in so much for live bird work. Now he is to try the Clear Lake, Ia., man for the trophy which some think is the most important of all live bird trophies, though others do not so consider it. Be that as it may there will be a good man on each side of that race, and it will be equally close between Gilbert and Elliott in their two races here for supremacy. The latter two men have shot in practically identical form of late, and it is a mere toss up which will take the turn here at holding these two trophies, which they both seem to want so badly.

THE PROGRAMME.

"The programme, as arranged by consent of all the challenging and challenged parties and by the members of the two interurban teams, is as follows:

"Monday, Dec. 6—Heikes and Grimm will shoot for the Cast-Iron badge.

"Tuesday, Dec. 7—Elliott and Gilbert will shoot their race for the Kansas City *Star* cup.

"Wednesday the champions will lay off for a rest from match shooting, but the day will be thrown open to all comers for sweepstake shooting of any desired size and weight of entry.

"Thursday, Dec. 9—Elliott and Gilbert will again meet, this time for the Du Pont cup race.

"Friday and Saturday, Dec. 10-11, will then be given over to the big team race between the ten men from Kansas City and those chosen to represent Chicago. On Saturday evening the Chicago shooters will banquet their visiting guests, and very likely their victors also, at the hall of the Chicago Athletic Association. This will close what is undoubtedly the most interesting programme ever offered a shooting assembly in America. This is no gathering of sweepstake shooters to juggle for each other's money, but a genuine entanglement of the good ones, with nothing but a finish wished or possible. There will be four finishes of the biggest sort possible in American trap-shooting at live birds. Naturally, a large crowd may be expected from many corners of the country, which hold enthusiasts on the gun, and the event will, in all ways, be of a sort to stimulate and elevate the sport of trap-shooting far beyond the possibilities of any purely mercenary sweepstake tournament. There is no hippodrome to this event, which is about as 'sporty' a proposition as we will be apt to see for a long time in gun matters.

"A meeting of the directors of the Chicago organization, which has been formed to bring off the intercity shoot, was held Friday, Nov. 5, for the purpose of formulating plans for raising revenue for suitably entertaining the number of visiting shooters. Probably seventy-five to 100 men will come from Kansas City. It was resolved to send out general invitations to the Chicago sportsmen, asking them to attend the banquet to the visitors. The shooting will occur at Watson's Park, Burnside, the spot where so many hot events have been contested in Chicago. The expert shots of the country say that these grounds are the hardest pigeon grounds in America."

EXECUTIVE MEETING.

The meeting of the executive committee above referred to really took place on Wednesday afternoon, Nov. 3, at the office of Mr. E. S. Rice, president of the Chicago Association, the latter being in the chair, present also Col. C. E. Felton, Messrs. W. L. Shepard, John Watson, C. B. Richards and E. Hough. Mr. Rice explained that he was going on a hunting trip and would be gone for eight or ten days. He thought it was time active measures were taken for the coming trap-shooting entertainment. Col. Felton proposed a plan for reaching the individual sportsmen of Chicago with a letter advising them of the nature of the proposed entertainment, and inviting them to share in the honor of the position as host to the visitors from Kansas City. After formal motion and discussion the text of this circular invitation was determined to be as follows, as written by Col. Felton:

60 AND 62 WABASH AVENUE, Chicago, Ill., Nov. 8.—*My Dear Sir:* As you are aware, our Kansas City sportsmen friends are soon to visit our city and compete with a team of our sportsmen for supremacy at live bird shooting at the trap.

When our sportsmen visited Kansas City some years ago and were successful again t a team of their sportsmen, our team and our friends who accompanied the Chicago teams, were not only royally welcomed, but entertained at a banquet in our honor, seldom equaled upon any occasion anywhere.

Chicago gentlemen are never behind in the return of courtesies, and it is the wish of our city sportsmen to give to our Kansas City friends at least as pleasant a reception and entertainment as was given to our sportsmen when they visited Kansas City.

To do this, considerable money must be secured, and the finance committee has determined that the best method is to invite and urge each sportsman in the city to participate in the enjoyment by presence at a banquet to be given our visiting friends at the banqueting hall of the Chicago Athletic Association.

It goes without saying, your presence is desired, and to that end you will find herewith a ticket in your name. The expense of the entertainment of our friends will make it necessary that tickets be placed at $10, which of course includes not only the expense of the holder of the ticket, but will be an equitable share of each toward the entertainment of visitors.

Please send the committee a check for $10, retain the ticket and be present in person. It is now believed that the number at the table will be nearly 200. If impossible to be present, please advise the undersigned, however, and return the ticket, sending a check for such amount as you may kindly favor us with for the purposes desired.

By order of the executive committee.

ELLIOTT S. RICE, Pres't,
E. HOUGH, Sec'y,
C. P. RICHARDS, Treas.,
COL. CHAS E. FELTON,
W. L. SHEPARD,
F. H. LORD,
JOHN WATSON,
} Executive Committee.

It being pointed out by Col. Felton that the former secretary of the organization had retired from sporting journalism, and was now absent from the city, the office was by vote turned over to E. Hough, of the FOREST AND STREAM, little attention being paid to the protests of the latter that he never accepted office of any kind. It was moved by Col. Felton that the chair appoint a finance committee of such number as might seem fit for the purpose of raising necessary funds for the proper entertainment of the Kansas City gentlemen. The chair appointed the following: Col. C. E. Felton, Messrs. C. D. Gammon, Chas. S. Wilcox, W. L. Shepard, F. H. Lord, W. P. Mussey, Jacob Rehm, W. R. Linn, Ed Bingham and W. F. White.

ADDED TO ENTERTAINMENT COMMITTEE.

The following gentlemen of Chicago have been added to the list of the entertainment committee at the request of Col. Felton, chairman of that committee: R. S. Mott, Stock Exchange; F. S. Baird, 758 Walnut street; A. W. Adams, 271 Wabash avenue; S. M. Booth, Northern Office Building; G. C. Lamphere, 221 Fifth avenue; R. A. Turtle, 36 Clark street; B. Barto, northeast corner Clark and Chicago avenues; O. J. Buck, 36-38 Boston avenue; H. A. Furguson, 143 Adams street; J. T. Glover, 59 Wabash avenue; E. W. Heath, Heath, Milligan & Co., Randolph street; L. M. Hamline, 3 Chalmers place; J. L. Jones, 1207 Security Building; W. A. Jones, 57-59 S. Jefferson street; W. G. Stannard, Montgomery, Ward & Co.; A. T. Whitman, 6334 Lafayette street; F. R. Bissell, 164 La Salle street; M. R. Bortree, 86 La Salle street; R. Kuss, 7 Blue Island avenue, Dr. F. Liddy, 2893 Archer avenue; Jessie Sherwood, Union Stock Yards; Hon. A. S. Trude, Chicago; Al. Smith, care Morely Bros.

THE TEAM COMMITTEE.

The committee appointed for the selection of the team which will represent Chicago in the intercity race, Messrs. R. B. Organ, C. E. Felton and W. P. Mussey, have gone so far as to determine upon one or two names, and it is probable that they have the first six men of the team practically agreed upon. They refuse, however, to give out any information for publication, and in this they are very wise. As Mr. Organ remarks, this committee will have only ten friends left after it has announced its selection of the team, and as the committee will probably have to leave town when the decision is made known, they prolong their residence in Chicago by keeping silence for a while longer.

ST. LOUIS TRAP SHOOTERS' LEAGUE.

The St. Louis Trap Shooters' League will have a big Thanksgiving shoot, Nov. 23, 24 and 25, which will no doubt bring together a large number of the shooters of the Southwest. Mr. W. R. Nold, secretary, sends out the following circular letter:

"The St. Louis Trap Shooters' League will give a tournament on Nov. 23-25. Three hundred dollars added money. The last day, Nov. 25 (Thanksgiving Day), will be devoted to live-bird shooting; $100 of the added money will be added to the events on this day. In addition, there will be a turkey shoot and a turkey dinner served in the club house at Du Pont Park. As this is the first tournament which has been held in St. Louis for some time, the Trap-Shooters' League of St. Louis feels that in extending an invitation to the sportsmen of the country, and particularly to our friends in Kansas City, it can offer to them one of the best-appointed parks in the country and a dead square shoot. The $300 is offered as added money; $200 to the target events and $100 to the live bird events. We take out no per cent. of the purses; the entire moneys, after deducting the price of the birds (25 cents), or in case of targets, 2 cents, will be left in the purse. We extend a hearty welcome to you all. Be sure to arrange

to come and bring your friends. A programme of the shoot, with the advertisements of our friends who have aided us, will be mailed to you in a few days."

RUMORED.

It was rumored last week that Dr. Gagnon, of New York city, who is this week present at the horse show and is winning about everything in sight, was to shoot a live bird race with Mr. W. P. Mussey, of this city. This is no doubt the same Dr. Gagnon whose name has figured in some hot individual races in the East, in which he was described as a Chicago man. He might not have a strictly easy time with the "Parson" just now, as the latter in a little practice run at Watson's this week killed 49 out of 50 and 94 out of 100, on good stiff birds.

OBITUARY.

Mr. E. B. Knott, ex-secretary of the Cook County League, died of pneumonia this week. The attack was very sudden. Mr. Knott attended the League shoot next to the last one, and was then apparently in perfect health. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

IN NEW JERSEY.

BOILING SPRINGS GUN CLUB.

Nov. 3.—The semi-monthly shoot for the silver tea service at the Boiling Springs Gun Club was held this afternoon. These shoots are held on the first and third Wednesdays of each month Wise and Huck tied in to-day's shoot, Huck winning on the shoot-off. Scores were as below:

Trophy shoot: 50 targets, unknown angles, handicap allowance of extra targets to shoot at:

Nov. 6.—The regular monthly shoot of the Boiling Springs Gun Club was held this afternoon. This shoot was the first of the new series that lasts from November, 1897, to April, 1898 The new handicaps in the club event, which is at 50 targets, unknown angles, not having been fixed to date, the handicaps which prevailed in the series which concluded last month were used to-day. Capt. Wise, the recently elected captain of the club, will attend to this matter before the first Saturday in December. To-day's shoot was poorly attended; the scarcity of shooters was entirely attributable to the open season on game in the States of New York and New Jersey. The weather was fine, clear and cold; but there was a gale blowing from the northwest that played all sorts of pranks with the targets. In the club shoot there were eight entries; out of this number there were four ties on 39 for first place, one scored 38, one scored 37, another 34 and the eighth 33. In all fairness to the captain, Mr. Wise, who won the booby prize, it should be said that, in addition to his having two strange guns and strange ammunition, he had to stack up against the malign influence of a rabbit's foot. Among those who took part in the shoot was W. M Harding, an enthusiastic sportsman, but one whose business does not permit, save at great intervals, of any practice at the trap Mr. Harding has not shot at a target since March last. The scores in the club shoot to-day were as below:

B James (8) ..1111101100111100000101110111111011011111101001111l—35

A CLOSE MATCH AT SINGAC.

Nov. 3.—A close and exciting match was shot to-day on the grounds at Bunn's Hotel, Singac. The birds were an extra fast lot even for Singac, where Bunn furnishes some of the best birds trapped anywhere. The contestants to-day were Capt. Money and A. Doty against Chris Wright and Garry Hopper. The last-named pair were 3 in the lead at the end of the twenty-second round, but met defeat by 1 bird after all. The scores were:

DUTCHER.

Trap at Buffalo.

BISON GUN CLUB.

BUFFALO, N. Y., Oct. 28.—The Bison's regular shoot was well attended, twelve shooters taking part in the events decided. In the club badge shoot, Bauman won in Class A, Hager in Class B, and Tolsma in Class C. In the team shoot for the championship of the city of Buffalo, the Bisons were the winners in a remarkably close contest. The scores in the team race were:

Bison Gun Club: Ernest 23, Werlin 22, Bauman 21, Lewis 21, Foxie 19—106.

Cazenovia Gun Club: L. N. 23, Alderman 22, Jones 21, Becker 21, Beck 17—104.

Audubon Gun Club: Norris 23, C. Burkhardt 22, Alderman 21, E. C. Burkhardt 19—Tolsma 16—101.

The scores in the sweeps were as follows:

AUDUBON GUN CLUB.

Oct. 31—E. C. Burkhardt was in good form to-day at the regular shoot of the Audubon Gun Club. The occasion was the twelfth and last shoot for the cup donated by the club. The event was won by J. A. Kennedy, but E C. Burkhardt won the cup outright with the highest total for 10 out of the 12 shoots. Mr. Burkhardt also won the Class A, badge to-day, but not until he had shot off a tie with L. W. Bennet. J. P. Jacobs won in Class B and J A. Kennedy in Class C.

The series of monthly cup shoots just finished were governed by handicap rules, contestants shooting at from 28 to 35 targets each with 25 as a highest possible. No contestant to be eligible for more than one cup. At the termination of the series of 12 shoots, the man who made the highest aggregate in 10 shoots was to be presented with a very handsome special cup. This was won by E. C. Burkhardt after a very stubborn contest, by a majority of 1 target. It should be stated, however, that Burkhardt shot as a scratch man.

Following are the winners of the cups during the competition: H. D. Kirkover. E. C. Burkhardt, G. Zoeller, A Forester, G. W. Smith, F. D. Kelsey, Dr. Woodbury, A. Coomb, Norris, W. A. Eaton, G. McArthur and Kennedy.

The scores of to-day's shoot were:

CONEY ISLAND GUN CLUB.

Nov. 3.—The Coney Island Gun Club held its regular monthly shoot this afternoon at Dexter Park. J B, Voorhees ran 10 straight in the club shoot, as below:

Club shoot, 10 live birds, handicap rise:

J B Voorhees (27)..2121122212—10
J Schlieman (28) ...1111222101— 9
Hy Knebel, Jr (28)..2011101112— 8
Dr Raynor (27) .....1222120210— 8
Dr Van Zile (30).....2212220•10— 7
W H Lair (30).....1222201•1•1— 7

Sweeps were shot as below:

No 1, 3 birds, 28yds. all: Voorhees, Lair and Knebel 3, Van Zile and Schlieman 2.

No. 2, same: Voorhees, Lair, Van Zile and Schlieman 3, Knebel 2.

Shoot off for first money, miss-and-out: Voorhees, Van Zile and Schlieman (divided) 1, Lair 0.

CRESCENT GUN CLUB

Nov. 4.—Four members of the Crescent Gun Club met at Dexter Park this afternoon for the regular monthly shoot of the club. Scores were:

G E Loeble.....1221122—7
L C Hopkins.....2111•22—6
W D Gilman .....121•221—6
L W Herin .....1011010—4

In a match at 5 birds, for the price of the birds, Loeble won with the score of 3 to 2.

A team race at 3 birds per man was shot, as follows: Gilman 3, Herin 2—5; Loeble 3, Hopkins 2—5.

Shoot-off: Gilman 2, Herin 2—4; Loeble 3, Hopkins 1—4.

Second shoot-off: Gilman 3, Herin 3—6; Loeble 3, Hopkins 2—5.

NEW UTRECHT GUN CLUB.

Nov. 6.—The New Utrecht Gun Club's target shoot at Dyker Meadow this afternoon was not very largely attended. The heavy wind made the shooting very hard and disagreeable, and no one cared to shoot after the main events had been decided. In the club shoot D. C. Bennett and G. E. Nostrand tied for the class A badge, the tie not being shot off; Dr. O'Brien was the winner in Class B. Dr. O'Brien was also the winner in the prize gun shoot. Scores follow:

Club shoot, 25 targets, unknown angles, handicap allowances:

D C Bennett (A).....1111111010110011111111111 —21
G E Nostrand (A).....1111111110110110111011110011—21
P E George (A).....1000010011011110010111111111—17
Dr O'Brien (B).....1111010010J10110111011101 —16
E G Frost (B).....1011110000011101101110011100—15
C C Fleet (B).....1010101000010000011101110011—13

Prize gun shoot; same conditions as above:

Dr O'Brien.....1111111111111111100101111101—25
* G E Nostrand.....1101111011011111111011111010 —21
D C Bennett.....1111010011111111011111011 —20
P E George.....1100101011111110110111011 —18

Metropolitan Gun Club, of Kansas City.

KANSAS CITY, Mo., Oct. 30.—The Metropolitan Gun Club, of this city held its regular monthly target shoot at Washington Park to-day. The winner in Class A was Chris. Gottlieb, who broke 25 straight; Nelse Jarrett won in Class B with 21. The scores were:

Chris Gottlieb.....1111111111111111111111111—25
Ed Hickman.....1111101111011111111111111—23

1202202202202202222222222—21—45

Glenwood Gun Club, of Newburgh, N. Y.

NEWBURGH, N. Y., Oct. 28.—W. L. Colville, of the U. S. Smokeless Powder Company, having donated six lib. cans of Gold Dust powder to this club, a handicap shoot was held this afternoon to decide the ownership of the powder. The event was at 25 targets, with an allowance of extra targets to shoot at. H Wyatt and Stanbrough tied for first place on 23; they shot off, Wyatt winning. The attendance was light, a great many of our shooters having gone after woodcock, a good flight having been reported. Scores in the target event were:

H Wyatt (30).....10111110111111101101111110101l0 —23
W M Stanbrough (25) ..1111011111111111111111110 —23
S Cole (45).....0011101010111001010100001101010001010100010101—21
S Lewis (35).....0100111101111111010101100010011000l1 —20
DeWitt Carr (25).....1111101110010111111111100 —19
F Taylor (35).....1111101101011000011101100000101110 —19

On the shoot-off Wyatt broke 11 out of 12 to Stanbrough's 8 out of 10. W. M. S.

Tripp Defeats Thompson for the Cup.

CRAWFORDSVILLE, Ind., Nov. 4.—The Grand Hotel cup, emblematic of the amateur championship of Indiana, Kentucky, Ohio, Michigan and Illinois, was to-day the object of an interesting match between Mr. M. W. Thompson, of Lafayette, and Mr E. H. Tripp, of the Limited Gun Club of Indianapolis. This cup is perhaps the handsomest and most valuable trophy open to competition of amateur target shooters. It was first won in the autumn of 1895 by Mr. H. J. Lyons, of Louisville, Ky., after being tied by Geo. Elliott, of Rochester, Ind., on 49 out of 50. The next year, Mr. O. V. Eblesisor, of New Albany, Md., and Royal Robinson tied on 46, and the former won on the shoot-off. This year the conditions were changed to 100 targets instead of 50, and the winner must defend the cup against challengers. Mr. Thompson was the winner over a field of twenty-nine, with the good score of 91 on very hard targets.

He was promptly challenged by Mr. Tripp, and the match to-day was the result. Both gentlemen are old sweepstake shooters, but this was their first experience in a match, and the natural nervousness under the circumstances was visible in the first string of 25. Tripp lost the 4th, 7th 8th, 15th and 19th, while Thompson dropped the 2d, 3d, 5th, 12th, 21st and 23d. Each scored 22 in the second quarter, which left Tripp one ahead at the half, the scores being 42 to 41. But Thompson was coming fast, and ran straight from the 37th to the 70th, and looked like a winner, as he was then one ahead. He, however, lost 3 in 5, and finished the third string with another 22, making 63 out of 75. Tripp missed only one in this string, and was 3 to the good with 66. In the last quarter he lost 5, and Thompson with 2 to shoot at, stood to tie if he broke both; but the strain was too much, and he missed them, leaving Tripp the winner by a score of 86 to 84.

These figures look small, but the targets were thrown hard and there was a gusty wind blowing directly from behind, making them dip under the load at times in a way which defied calculation. There are four or five men in the Limited Gun Club who think they can beat Tripp, and the probability is there will be a warm time on their grounds this winter.

In the meantime, any outsider who wants the cup can get a race by complying with the conditions, which require a deposit of $10 with the secretary at time of challenge, and a like amount on or before the day of the match.

Mr. Tripp also beat Ed. Voris, of this city, in a match at 50 targets for $25 a side. Scores: Tripp 45, Voris 39. Prior to this match they had posted a forfeit of $25 each to bind a match at 100 targets for $100 a side. This was wisely forfeited by Mr. Voris's backer

MONTGOMERY.

Cobweb Gun Club.

NEW YORK, Nov. 5.—The monthly shoot of the Cobweb Gun Club was held Thursday afternoon, Nov. 4, at Baychester, New York city. The day was beautiful and consequently attracted a large number of our members and friends to the grounds for an afternoon's outing.

The sport began with the club handicap, composed of different classes, A, B, C, who decided their separate class contests in the handicap Conditions: 5 live birds, handicaps from 26 to 30yds. Class A men Messrs. Greiff and Zorn tied and decided to shoot it out some other day. Class C men Messrs. Regan and Erff shot it out, resulting in Regan winning the gold medal.

The day wound up in extra sweepstake events, and two separate matches of $25 a side between Messrs McKeon and Cashau at 30yds. The first match resulted in Cashau grassing 9, the 10th dropping dead just across the boundary; McKeon 8. The second match resulted in Cashau grassing 10 to McKeon's 9.

This last match was finished when quite dark, the birds being very hard to see and consequently hard to kill.

PUBLISHERS' DEPARTMENT.

How Shot is Made in St. Louis.

THE latest shot-producing firm in the United States is the firm operating the Markle Lead Works, St. Louis, Mo. In a circular issued by the above firm, occurs the following:

"In the construction of our tower, great care has been taken to improve upon existing methods of manufacturing shot. We have, in addition to a 200ft. height of tower, a 70ft. well. Not only does this well give us an additional distance for the shot to drop, but its atmosphere is of such low temperature that the shot in falling through it, is hardened more than it would be by falling three times the distance through ordinary air. It is desirable to have shot as round as possible. When the load leaves the gun the perfect shot goes further and gives much more accurate results than the imperfect, which scatters and flies off in different directions according to the degree of its imperfection. In our works we have so arranged the machinery that the shot is never permitted to fall after it comes out of the well. In our factory we have the most rigid inspection, and only shot of superior quality is bagged. It is polished twice; once immediately after drying, and again before going into the bin preparatory to bagging. We use an automatic weighing machine that insures greater accuracy than can possibly be obtained by hand. Any number of our bags may be weighed and found to contain exactly 25lbs. net, in addition to the weight of the bag. We furnish a quality of chilled shot that will please the most fastidious."

The Markle Lead Works manufacture the "Success" brand of shot As in all other shot works, the shot is manufactured in the usual manner. The lead is melted at the top of the tower, and is then poured into a pan with holes in the bottom of it; pans with larger or smaller holes in them are used, according to the size of shot it is desired to turn out. The molten lead comes through the holes in the pan in a round form, that is, when it leaves the pan it is round shot, but molten. The fall through the air is designed to give it time to cool, so that when it strikes the water it will not flatten.—*Adv.*

Lincoln Park, Chicago,

ONE of the beauty spots of Chicago, is described in a most beautifully illustrated book of ninety-six pages, now being distributed by the Chicago, Milwaukee & St. Paul Railway Company. It is full of the finest half-tone pictures of one of Creation's most charming places of resort for citizens of the Greaf Republic. Every one who has ever visited the park will appreciate the souvenir, and for those who have not, it will be a revelation of what is to be seen in Chicago. It can only be procured by inclosing 25 cents in coin or postage stamps to George H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

California Excursions.

PERSONALLY CONDUCTED.

Leave Chicago every Wednesday.

BURLINGTON ROUTE to Denver, thence *via* Denver & Rio Grande Ry. (the scenic line of the world). Parties travel in Pullman tourist sleeping cars fitted with every convenience, which go through to California and are in charge of special agents of long experience. For particulars address T. A. Grady, Excursion Mgr. C., B. & Q. R. R., 211 Clark street, Chicago, Ill.—*Adv*

Twenty-two Hours to the "Land of the Sky."

THE Southern Railway "Limited" for Asheville and Hot Springs, two of the greatest health resorts in America. Leave New York daily at 4:25 P. M. Through sleeping car, New York to Asheville, Chattanooga and Nashville. For further information call or address Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway.—*Adv.*

Thirty-nine Hours to Memphis.

SOUTHERN RAILWAY "LIMITED." Leaving New York daily at 4:25 P. M. The only through sleeping car service New York to Memphis. Connection through to Arkansas and Texas. For further information call on or address Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway.—*Adv.*

A DECISION has just been rendered in the case of G. W. Colt & Co. against several parties for infringement of trade-mark "3 in One." The court sustained the trade-mark and directed an injuntion to issue against defendants.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 20, 1897.

VOL. XLIX.—No. 21. No. 346 BROADWAY, NEW YORK.

In the long catalogue of honorable anglers are the names of apostles, kings, princes, priests, poets, bishops, statesmen and philosophers—men who made history, ruled nations, honored the church, dignified humanity, and left the impress of their scholarship upon all the centuries. And what they did they did all the better—more wisely, more humanely, and with a higher conception of the sacred character of the work assigned them—because they had the contemplative habit, proverbial patience and gentle spirit of the simple wise men who love to go a-fishing.

George Dawson.

SNAP SHOTS.

MR. DEARBORN'S notes on the direction signs, which the woodman may read in tree and moss and grass, give perhaps the most complete exposition of that branch of woodcraft we have ever printed. In these days of brief trips into the woods under the guardianship of guides, not one out of a thousand pays much attention to such secrets of nature. But in woodcraft, as in every other art, by as much greater as one's attainment in it may be, so much the more keen and rich will be his enjoyment and satisfaction. The more a man knows of the woods and the more closely his attention is engaged, the more varied will be his interest, the fuller his reading of nature's open book and the more generous the store of material which he will bring home for reminiscence and reverie as he reviews his outing. It is true that for the most part the average vacationist in the woods has no time to acquire the fine points of woods lore; but much more might be done in this direction, if men would only teach themselves that the sole end and reward of hunting do not lie wholly in the actual killing of the game or the bagging of a score of birds. One who is intent only upon slaughter can have no eyes, even if he may have the opportunity, to observe the written records of bark and rock and fern.

This is a gun age; the factories have been turning out sporting firearms year after year until it would appear that there must be enough to provide every man and every man-child in the land; and the ammunition manufacturers have made their part of sporting equipment so simple and abundant and inexpensive that every new possessor of a gun is on the instant a ready-made gunner. There are no longer any masterful details of loading to be acquired; nor does the beginner think it necessary to undergo a novitiate. If his gun is of rapid fire and his machine-loaded shells are in good supply, he ranks himself as a competent sportsman and is impatient to get into the cover to shoot something. Thus it is that while the hosts of shooters have multiplied, the ranks of the real sportsmen have increased more slowly.

As for men with guns, the woods are full of them; but the sportsman may go far and not meet up with a master mate. Indeed, things have come to such a pass in more than one hunting district that the prudent sportsman will remain at home, and keep himself out of the woods, for very fear of having his head shot off. The woods and swamps and canebrakes are now practically free from dangerous varmints that go on four legs, but a new terror is the biped armed with a deadly weapon and from whose noddle common sense flies when a gun comes into his hand. The explanation of the multiplicity of casualities and fatalities with guns and rifles, of which we read lists in the press day after day, is found in the fact that an army of greenhorns has taken to the woods and fields, every man-jack of them frantic to shoot something, and each one ready to shoot on the instant before he can know what the something is, whether it may be game or another man-jack or a man. It is these gunners—without experience, and wanting in that caution with a gun which experience alone can give—who get their names and names of their victims into the press reports of gunning "accidents." They should be chained up at home, that they may be saved from themselves, that others may be saved from them, and that the woods may be secure for the use and enjoyment of the sportsman.

Mr. W. E. Meehan's suggestion of a conference of the commercial fishermen of the Susquehanna and other Pennsylvania waters with the Fish Commissioners, is one which should be put into practical effect. The commercial fisherman lives by catching fish; and it is the business of the Commission to increase the supply of fish for the fisherman to catch. The two parties in interest should be united in harmonious coöperation and mutual support. The Commission's opposition to certain modes of fishing is based only upon the real or reputed destructiveness of those methods. If the forbidden contrivances are not unreasonably destructive, the Commission should withdraw its opposition to them; and if, on the other hand, they are ruinous, common sense should prevail upon the fishermen to abandon them. There can be here no legitimate difference of opinion nor subject of disagreement. The intelligent friends of fish protection may find in Mr. Meehan's call for coöperation "the better way" to accomplish what a foolish antagonism can never secure.

The Members' Stake of the Eastern Field Trials Club, last Saturday, was an event of unusual note in its effect upon the club and its promise for the future. We take decided satisfaction in publishing the report of the meeting by one of our staff; and all the more, as this is the only first-hand report printed. Mr. Waters was the only press representative at the meeting, and his is the only record of the work written by one who actually followed it. Now as always in our Kennel columns, field trial interests have and will have intelligent, competent and adequate treatment.

Rev. Myron W. Reed, of Denver, who has preached some strange doctrines before now, last Sunday announced to his congregation a determination to see that Game Warden Wilcox and his deputies should be tried for the murder of the Ute Indians they killed the other day. Mr. Reed's declaration created a sensation, as well it might; for the notion that a white man, whether game warden or private citizen, should be meddled with for shooting down an Indian hunting off his reservation is something to make a Colorado range horse laugh; and no wonder the congregation did not know what to make of it.

The renewed enterprise of stocking Atlantic waters with Pacific salmon will be watched with much interest. The experiment was made some years ago on an extensive scale, thousands of fry having been planted in Pennsylvania and other streams, only to disappear and leave no trace to tell the tale. The new plantings have been of yearlings, and the more mature strangers may prove their ability to take care of themselves.

The latest development in the Jackson's Hole, Wyo., elk case is just what we had anticipated from the first, the exportation of the elk to Eastern game preserves by the Eastern agent of the Adams elk-catching enterprise. In response to an inquiry, County Attorney Sammon advises us that Governor Richards has given a permit for the shipment of forty of the elk out of the State. This rounds out and concludes this cunningly contrived raid on the Wyoming game supply by men engaged in the enterprise of supplying Eastern preserves with Western game. Inasmuch as the Wyoming law explicitly forbids the taking of elk for export, except by permission of the State Game Warden, and then "only for the purpose of supplying public parks, zoölogical gardens, or places of public amusement," the Jackson's Hole raiders could not have exported their booty except by favor of a special executive dispensation; and Wyoming is probably the only State in the Union, whose constitution permits individuals to secure for themselves immunity from the statutes by gubernatorial writ of indulgence.

Some of the duck shooters of Colorado express themselves as disgusted with the provision of the game law which restricts an individual shooter to the killing of twenty ducks in a day; and they have set on foot a movement to have the law tested for constitutionality. A subscription paper for the purpose sets forth this declaration: "We, the undersigned, believing that ducks and waterfowl are migratory and belong to no particular State, and that no State has a right to enact unconstitutional laws to limit the proper killing of such game, by means of a shoulder-gun in the proper season, and further, that all sportsmen, as a rule, who kill such game in excess of their own wants, distribute them among their friends who are unable to shoot. And further, as no other State has such a law of limitation in regard to the killing of birds, there is no logical reason why this State should."

Now the word "unconstitutional" is rotund, sonorous and impressive, and has taken the force out of many an obnoxious and wicked law; but sometimes it means nothing more than some other words beginning with "un," as unwonted, unwelcome, or unacceptable. That is its true significance here, and the Colorado duck shooters will do well to button up their purses and lay by their spare funds for new supplies of loaded ammunition. They will not overthrow the ducking law on the score of unconstitutionality. Wildfowl are legitimately subjects of legislation by the several States, nor can the law be expected to draw a fine distinction between birds bred in a State and those resorting to it. The assertion that no similar limits obtain in other States is incorrect. Minnesota limits to twenty-five the birds of any species any individual may kill in a day. North Dakota makes a like limit of twenty-five. Maine puts the limit at thirty, Washington at ten. Other States have similar laws prescribing the lawful number of woodcock—another migratory species—one may kill in a day.

However unwelcome such limitations may be to the sportsman who has been long deprived of shooting and has come at last to a favored time and place, the Colorado law is right in principle and is in line with the recognition everywhere growing that as sportsmen we of the several States owe something to our fellows beyond our own individual State lines. Colorado human nature, as human nature in California and Connecticut, may protest against the staying of one's hand on wildfowl, that the birds may fly to their destruction in another clime, but it is certain that unless in this matter of game protection we do restrain our shooting and do have regard for others as well as for ourselves, there will be no migratory game to protect on our own account or that of others. The common refuge of selfishness is in the plea, "If we don't, some one else will;" and this is a stronghold from which it has been impossible to dislodge the defenders of spring shooting. If the prohibition of spring shooting or the placing of a limitation upon the numbers of wildfowl to be killed should be deferred by each State until every other State should have attended to the proposition, nothing of the sort would ever be accomplished anywhere. Those sportsmen are deserving of the highest credit who have taken the initiative. The interests of game protection to-day demand not that the pioneers shall recede from the advance, but that others shall imitate their example and follow in their footsteps. Instead of overthrowing the laws on migratory game, the sportsmen of Colorado might better be urging their fellows in sister States to join them in the adoption of similar restrictions.

The annual banquet of the Cuvier Club, of Cincinnati, was celebrated on Tuesday evening of this week, and as the arrangements had been made under direction of President Starbuck, we may be sure that the occasion was a most enjoyable reunion of the redoubtable hunters and fishermen who make up the club membership.

Through inadvertence on the part of those who were watching the amendments of the deer law last winter, no provision was made for extending the close term on deer in Sullivan, Ulster and Green counties, where the game had been put out some years ago by the Commission. The five years close time lapsing this season, deer hunting has been lawful in 1897. This fact, however, was not generally known; and the game protectors astutely kept silent on the subject, so that there has been little hunting. Now that the season has gone by, no harm can come of publishing the facts relative to these introduced deer. A new five years close time should be provided for them.

President Gavitt has sent out a cordial invitation to all interested clubs and associations to be represented at the meeting of the New York State Association for the Protection of Fish and Game, in Syracuse, on Dec. 9. This Association stands for protective interests in New York, and it should have the warm support of local clubs. As President Gavitt says, "It is the medium through which all right-minded organizations should seek and give counsel." Only by united and harmonious endeavor, and with the strength that comes of a large representation, can the Association achieve its purposes. If the sportsmen of New York can ever unite they here have the opportunity.

The Sportsman Tourist.

TWO MEN AND A BEAR.

Only two things are supposed to justify one in going hunting in midsummer: science and health. I was not very well, it is true, but probably would have remained at home and let the doctor experiment on me if N. hadn't come along. He is one of these scientific fellows who live in the woods, where they study up new combinations of those wonderful Latin words which Webster's Dictionary puts in parenthesis after the pictures of birds and animals. Any man who will accustom his jaw and brain to the use of this barbarous lingo need not be surprised if he acquires hazy ideas of game, and shows as much interest in the pursuit of a lizard or a mouse as in bagging a grizzly. One thing he is sure to lose, and that is the sportsman's instinctive recognition of open and close seasons.

Now, though it was only July, and though for some reason not known even to the men who can call them by their Latin names, deer are about two months late in coming to their best estate through this part of Mexico, nevertheless the aforesaid N. did feloniously entice me to go forth with him to try to secure a mule deer. A few miles north of the city in which I live is probably the southern limit of the range of this big fellow. He is called Venado Bura in Spanish.

H. G. Dulog and I have been having a learned controversy over that surname, he insisting that it was spelled with one *r*, while I held that it was but the word *burro* applied to the deer, as in English, *mule*-deer. Since I got his last letter on the subject I have been forced to conclude that he was right and I wrong. But I had overlooked till now the slight formality of telling him. A *gringo* has no business knowing more Spanish than an old-time greaser like myself. The etymology of *bura* is uncertain.

In order to be sure of our game we hunted first here in town. In the museum of the Instituto Cientifico, an institution feebly resembling a State university, we found a stuffed specimen. (I did not say mounted. The adjective used is exact.) Also a fine set of antlers. In the business house of one of the wealthy citizens we found another head, a very fine one, though we made no measurements. These all came from Cruces, an hacienda some fifty miles northeast of here. From various sources we ascertained that this deer ranges south over the arid plains of Coahuila and Chihuahua into the upper parts of the States of Zacatecas and San Luis Potosi; that it is an inhabitant of the Central Plateau and confined strictly to the plains. This last item was somewhat of a surprise, but seemed well confirmed. The owner of the big head we saw had been lassoed by cowboys. But this had happened more than twenty years ago, and the more we tried to pin down the information to present day facts, the more hazy it became. We arrived finally at the conclusion that if we would make sure of our game we should have to go somewhere on the line of the Central or Mexican International railway—an arrangement which suited neither of us at that time. We did not clearly make out that this deer had disappeared from his former ranges between here and the northeastern corner of the Central Plateau, but the evidence pointed strongly in that direction. Strange to say, we got almost exactly similar information in regard to the antelope. Twenty years ago this animal was comparatively numerous on all the region mentioned. Now, apparently, it has completely disappeared. Nobody could explain this. The residents did not think hunting had done it. They hunt little, and had no guns fit for antelope hunting.

Meanwhile, as often happens in hunting, we struck another and fresher trail. For while in our search for exact details we were working northward from point to point, trying to pin down the elusive *O. macrotis*, we suddenly (and figuratively) smelled b'ar. We had been told that the hacienda of Concepción had a beautiful sierra on it, and that Don F. Ulano could give us information.

"Yes," said the amiable Don, "there are many animals in that sierra. There are deer, and wild hogs, and plenty of bear." At this N.'s ears went up like a terrier's when he hears rats! Bears? Why, his boss up at Washington wanted nothing worse. He was even writing a piece to prove that there are about ten different kinds in America instead of two, as we used to think. Very likely, this fellow from Mexico would be a still further addition. It wasn't a good season to go killing deer, anyhow, and bears were always in season. Visions of our own names worked into horrible combinations, appearing in future scientific catalogues, preceded by a capital D, rose in our minds. I even went so far as to think that possibly we might be at least on the trail of Hough's long lost pine-nut bear.

"Pues si señores," continued our informant, "there are many; and nobody hunts them. Only when they came down into the plain after *tunas* the cowboys rope them. Not long ago a *vaquero* caught one that dragged him a kilometer or two till he found a telegraph pole and got a turn of his rope around it." In answer to a question, we learned that the owner of the hacienda in question lived in the city, and would probably give us permission to visit it. We called, and found an elderly gentleman, who looked us over very carefully, and catechised us thoroughly. Finally, he promised that when his clerk came in he would have him prepare the necessary permit. Next day it was given me, addressed to the *administrador*. Also a note in a sealed envelope for a young man at the hacienda.

Almost all the way around the Central Plateau of Mexico there is a rim of mountains. They cut off most of the moisture that comes up from the lowlands, and contribute more than anything else to the barrenness and arid character of the inclosed mesa. Here and there, all over this mesa are other mountains, straggling and rugged chains, peaks, spurs and excrescences—the smaller mostly volcanic, the high and more continuous ridges usually of limestone, with strata battered and tilled, often metamorphosed into many-colored marbles. Just south of Saltillo the Mexican National Road climbs over this rim in its northeastern corner, through Carneros Pass, 8,000ft. above sea level. We left the train just as it began the ascent to this pass from the inside or south.

We were on the extreme eastern rim of the mesa, and our destination lay across the plain to the southwest, thirty miles away, or more. It was a gloriously beautiful scene next morning when the sun arose and poured his amber light through the clear air. We trained our glasses on the sierra, which rose seamed and rugged from the flat plain perhaps 3,000ft., looking carefully for evidence of the heavy timber with which we had been told it was clothed. We tried to persuade ourselves and one another that we could see it, but while the rough ridges were softened by dark vegetation, the trained eye of the experienced woodsman coldly dashed our anticipations. The timber was brush!

By noon, perched upon our belongings in a *correton*, dust-covered and sun-scorched, we reached the hacienda. Such we had thought it. We found it only an *estancia* or stock ranch, situated in the midst of an immense plain, which even the prairie dogs had abandoned during recent dry years, with no water except from alkali wells and ammonia-tainted rain-water ponds, no business except herding a few hundred head of goats, cattle and horses; the picture of squalor, filth and decay, the very air redolent of inaction and sloth. The *administrador* stopped playing chess with his storekeeper long enough to read our credentials, assign us a room and order dinner. We were taken in charge by a fresh young man, who immediately brought forth from the treasure of his memory some obscene English oaths, and began to furbish them up for our benefit. He had traveled, he said. Had worked on the railroad awhile. Knew a good deal of English. (Plenty, such as it is, thought we). He was a distant relative of the old gentleman who owned the place. Had been sent to school by him, but didn't like it. Could have gone to the United States to study engineering or something of the kind, but it was too much like work. Liked life on the ranch. Here one sleeps well, one eats well (dried goats' meat, evil-smelling curds, black beans half cooked, musty *tortillas*), and when one feels the need of amusement he mounts on horseback! And he leered at a pair of slatternly girls who passed the door. Yes, sir, fine life. Just suited him.

Here, in an evil moment, it occurred to me to ask if his name was so-and-so. At my orders. Well, then, I have a note for you, and I produced it. Right there, in the expressive language of Jawgy, "I dropped my watermelon." He opened the envelope, and took out two sheets. After reading one, which consisted of about two lines, he trotted off with the other to the *administrador*. Then we comprehended the old gentleman's little game. From the effects before and after taking, we figured out the contents of the two separate documents we had brought to be about as follows:

No. 1. Unsealed.

To Sr. Don Mangano,
Administrador de la Hacienda de Concepción.

Very Sir Mine:

The bearers of the present, Messrs. N. and A., have been sent as special representatives of the President of the United States for the sole purpose of securing the skin of one of our far-famed bears, as well as other objects of interest, for the National Museum of that country. Please treat them with the consideration due to persons of high education, and oblige, Your servant, F. Ulano

No. 2. Sealed.

Dear Nephew:

These idiots think I am fool enough to believe they are hunting those measly little bears. Keep an eye on them. They have probably heard there is gold in our mountain. Don't do any more for them than you have to, and be sure they pay you well for that. The Lord only knows who they are. If you observe anything suspicious, throw them out. Your Uncle.

Thenceforward we had to deal with a man who was under the necessity of devising schemes to bleed us, without lowering his dignity to the point of hiring us horses, selling us feed for them, etc. And as nobody on that ranch was in the habit of thinking, except on rare occasions, it took him a good while. We waited till everybody had had the after-dinner siesta. Then the eternal chess began. We saw we couldn't get off that night, gave it up, and went out to see if we couldn't kick up a jack-rabbit. As night came on, we began to plan and fume for a daylight start next day. Our mountain was still fifteen miles away. Were there any horses? Oh yes, plenty of horses. Could we hire some? Oh no, he wouldn't think of charging us. Could he lend us a saddle-horse apiece? Well, they were all on the range, except those used by the cowboys. When could he get them? Well, *quien sabe*. And so on with *mañana* and *quien sabe*. Could we get burros? No, there were none. Well, a cart? Yes, there was a man who had a cart. He was sent for, got his tip from the boss, and proceeded to rob us. We decided afterward that the cart doubtless belonged to the ranch.

So it went on. We went to bed in a fume, got up in the same condition next day, and kept it up. But it did no good. Everybody else was tranquilly resting. That was one thing they were really skillful at. By main force we launched the cart at 10 o'clock, and toward 3 got off ourselves. We were mounted on some miserable plugs, and were accompanied by a guide, a horse wrangler, a camp keeper, a horse feeder, a cartman, an assistant cartman, and a cartman's son—all to eat off us if we would let them, to get about triple wages, and to render due account when they got back. He didn't charge us anything for the horses—oh, no! Wouldn't think of such a thing!

The camp keeper, we found, was our host's confidential *mozo*, and so did duty as spy. The hostler would not take the horses to water except when we made him, and his assistant, who was to cut and bring them grass to eat, gave them so little that before we had been out a week one of them could not get up when down, from sheer starvation. The guide knew one or two trails through the hills, but nothing more. He kept us out of the only place where there were any deer, and, like the rest, was an unmitigated fraud and nuisance. The only things they could all do was to rest and eat.

The mountains were covered with junipers and other chaparral, a few low oaks and cedars in the gulches. They were exceedingly dry. The dry leaves in the gullies had not been stirred by water for years. There were half a dozen or so little black bears stirring about all through the range, rustling about for something to eat. We could see their tracks here and there, but could not find them, though they were evidently up and about day and night.

We had no trap, but decided to kill a deer for bait, and watch it. Neither of us was strong. N. had just had three years' soaking in the malaria of southern Mexico, and I was but little his better. So the two invalids scratched around on those dry and thirsty ridges, wearing themselves, their clothing and their patience to tatters. When we came in to camp we found no rest, as our faithful attendants constantly used up all the available supply. And though veteran deer hunters, we made a flat failure. We couldn't even get a sight of them. At last we found an Indian hunter who agreed to take us where they were. So next day we had meat in camp. We baited the water-holes and set a gun. Next morning we found that a small bear had climbed above and stolen the bait without discharging the gun.

We baited another water-hole and brought our blankets to take turns watching and sleeping during the night. There was an insignificant little moon, but we were down in a gulch and it was dark. It was also cold. N. took first watch, and I lay down to sleep. The more I tried, the less I slept. I got too warm. Then I got too cold. Then I found a rock under the blankets. Then I heard a noise and reached for my gun, thinking of bears, mountain lions, and a lot of things. Finally, just as I began to doze off, N. conjured the watcher and proved to me it was time to get up and take my turn. He crawled between the blankets and promptly absorbed the soporific that I had been at pains to accumulate. I braced myself and took in the situation. It was dark, and the winds sounded lonesome. I thought of our comfortable tent a mile away, and consigned all bears to that place where bad bears go. I had a little dark-lantern, and occasionally I slipped back the shutter and looked around. Every time a leaf fell or a marauding woodrat rolled over a stone I jumped half out of my skin. A little spotted skunk tried to steal the bait. He tugged and pulled and rattled the pebbles, and kept me in a nervous chill. Finally, after he had eaten all he wanted, he began to "show off." He chased himself up and down the bank. He ran up a log and flirted his tail at me, and then back again. At last he ran right under the bank I was sitting on and began to maneuver around. Disgusted and vexed I let drive down at him with a stone. He vanished to parts unknown, but left behind a memory that was fresh and lasting. Its fragrance gradually permeated N.'s slumbers, and caused him to dream of Araby the blest. I thought N. would understand that inasmuch as he had slept four or five hours and I none at all, it was the proper thing for me to take another turn, so shortly before daylight I woke him up. He failed to take my view of the situation, and made unfeeling remarks. That day we lay around camp and slept. As a committee of the whole, we decided that if bears were to be had only by night-hunting we hadn't lost any. After we had eaten and slept till we felt reasonably certain of being able to take our satisfaction for the night's adventure in abusing the *mozos* rather than in quarreling with each other, we planned another campaign. That night we would set a gun and let it do the watching. Next day we would try a daylight abush of the water-holes.

We almost resumed our usual cheerfulness while setting that gun. N. gave me some points about tying a gun in a clump of bushes, and I invented and applied a back-acting, wooden trigger, which called forth warm eulogy. The little Parker was left, in the full confidence that it would prove bad medicine. But no roar disturbed our sleep that night. Next morning we were out early. The bears had held a regular war-dance around our bait. The ground was trampled to powder, the bait pulled down and eaten, the string stretched and sawed almost asunder, and my stick trigger was broken, it had been hauled at so energetically. In fact, after looking over the situation we felt somewhat relieved that the bears had not untied and carried off the gun itself. The reason no fatalities had occurred was simple enough. After I had carefully adjusted the string and its connections to one trigger N. very carefully put a cartridge in the other barrel. The several miscellaneous kinds of fools we called ourselves and each other didn't seem to mend matters at all.

There were two water-holes, and that day we decided to watch them all day. We were convinced that these bears were astir practically all the time. So N. took the lower and I the upper spring, about half a mile apart in the same cañon. I cleared a nice little seat by a big cedar, and under an overhanging rock about 40yds. from my spring, commanding it and the opposite hillside. I had some lunch in one pocket and a magazine in the other, so the day wore away pleasantly enough. The jays and woodpeckers gathered wild cherries from a stunted tree quite near me, and the wind whispered confidentially with the cedar boughs over my head. About 3 o'clock, while I was serenely investigating the resources and topography of South Africa, as set forth by Mr. Bryce, and making note of its many similarities with Mexico, I heard the chink of a pebble on the hillside facing me. Reaching for my .45-70 Carbine, which stood against the tree, I peeped around and saw my first wild bear. He was sliding along above the spring, sniffing the air in search of another piece of venison. He had not the slightest suspicion of my presence. But I have long trained myself to shoot when game is in sight, and to shoot quickly. The big Weed bullet smashed into the back of his neck, and he collapsed. It reminded me of pig shooting as I used to see it on the farm. He looked more like a shoat than anything else.

N. came boiling up the gulch with round, inquiring eyes. I said: "Is that measly, insignificant-looking cross between a razor-back and a cur the game you have brought me into this wilderness to hunt?" His head was about as big as all the rest of him. His paws and chops were stained with the red juice of *tunas* and filled with prickers. The hair was worn off his rump with sliding down rocky hillsides. N. said he was probably a yearling. I am afraid his ma didn't know he was out. But none of the tracks we saw were much larger than he would have made. It is evidently a very small race of bears, whether a new species or not cannot yet be determined. Our specimen was too immature to serve as a type. So the long suffering public is preserved, for a time at least, from *U. aztecal.*

Next day we had to come out, so we tried the set-gun again. This time it was N.'s .45-90 Winchester. About 9 o'clock we heard its cheerful roar, and went to bed with light hearts. But we got no bear. He was severly wounded, and we followed the trail of blood for half a mile next morning, but had to give it up.

N. was on his way to Washington, and so did not return with me. He had my solemn promise beforehand that the skins of anything I killed should be his. I begged the poor boon of a tooth, a claw, or anything that looked beary, but not a hair could I get. His chief up in Washington was mighty particular, he said. So when I got back home my friends said: "Thanks, awfully, for that nice pork you sent. It is so hard to get good pork in this country." And if I ever make any remarks about my bear, they look knowing and say: "Yes, you and Wilson killed a tiger once, too."

Natural History.

ABOUT THE BIRD OF FREEDOM.

Editor Forest and Stream:

With a heart that is full of sadness, I feel it my duty to inform the readers of FOREST AND STREAM of the untimely and disgraceful end of one of Uncle Sam's proud and noble birds. When I say disgraceful, I mean that he has disgraced his country by trying to capture a German leather carp, one of the meanest fish that was ever emptied out into any of the waters in this country. Mr. Editor, if German carp and English sparrows are fair samples of the fish and birds on the other side of the water, my advice would be to ship us no more. I will now give you a short sketch of the particulars of the sad end of this much admired bird.

It appears that Capt. Jesse Popler, while cruising over the Susquehanna Flats in his yacht, saw at a distance a great commotion in the water, and now and then heard a squeal as if something was in trouble. He was not long in reaching the object, and to his great surprise he saw that one of our large American eagles had both of his long claws hooked in the back of a large fish; and he soon learned that the fish was a large German leather carp. The eagle was nearly drowned when he hauled them both on board of his yacht, and he had to kill the eagle to put it out of its misery and to get its claws out of the fish's back.

The captain says that the fish would weigh about 8lbs., and that the eagle would weigh about 12lbs. The captain seems to think that the eagle, while flying over the flats, saw a school of carp feeding in very shoal water, with their noses down in the mud, as that is the way they feed—exactly like hogs—and that the bird lit down on the back of the fish and grabbed him in the back with both claws, and closed them so tight that when he found that he could not lift the fish out of the water, he could not free himself; and there is where the fun comes in. The captain says that he has many times seen Barnum & Bailey's great circus, but to see one of Uncle Sam's noble birds riding over the Susquehanna Flats on the back of a large German carp "takes the cake." This may sound a little fishy, but it is all true.

Mr. Editor, I claim to know as much about the life and reputation of the eagle family in America as any man in this country, as I have known them seventy odd years. As far back as 1826, when I was quite a small boy and lived on Spesutia Island, where I was born and raised, there was there a great rendezvous for eagles, and, in fact, for birds of all kinds, vermin and reptiles. Eagles were so numerous, that in the spring of the year my father was compelled to have a shepherd to watch over his sheep, to prevent the eagles from carrying off his young lambs. It was a sight to see a large eagle flying off with a small lamb in his claws, and the poor little lamb kicking and bleating as he went through the air. Upon one occasion one of these savage birds made a sad mistake, and undertook to steal a good-sized pig. He darted down and hooked his claws in the pig's back, but could not rise with the pig, and the pig commenced to squeal. This soon brought the old sow, the pig's mother, and she made short work out of the eagle, and made a good dinner out of the eagle for her and her family.

I once saw a fight take place between two large eagles. When they clinched each other they were about 200ft. high, and they came tumbling down and struck the plowed ground, and an old colored man ran to them, and killed them both with a club. They had their claws fastened so deep in each other that he could not pull them apart, but had to cut their legs off to separate them.

The eagle family is the boss family of birds in this country, and a terror to all other families of birds, and they are the smartest and sharpest birds that I have ever seen. They take great delight when they see a fishhawk carrying a fish in his claws, in making him let go of that fish; and the eagle can descend faster than the fish, and catch it in his claws before it falls to the water. This I have seen them do hundreds of times.

The eagle is an awfully savage bird, and a man runs a risk of his life to undertake to rob one of their nests when they have young ones. Three gentlemen of my acquaintance once found an eagle's nest that had two young half-grown eagles in it. One of the party swore that he would climb the tree and capture the young birds. The old eagle was not in sight when he started up the tree, but when he got about half way up to the nest the old birds came and attacked him. His friends happened to have a gun, and had to fire several charges at the eagles before they would leave. He went up to the nest and threw the young birds out, and his friends captured them and brought them to Havre de Grace, where they lived as pets for several years; but finally they became so cross about the house and so destructive to chickens that they had to be disposed of.

I will tell you a good joke. When I was quite a small boy my father told me one day, when the snow covered the ground, to hook up our old family horse to the sleigh and he and I and old Ben, our family dog, would go down in the big woods and kill an eagle. That was fun enough for me and Ben. Ben thought that it was his duty to follow every wagon and sleigh that left home; he was a very large dog, with long, curly hair, and a great fighter. So the old gentleman put a heavy charge in his long single-barrel flintlock gun, and he and I and Ben went for the big woods; and we soon saw a very large eagle on the top of a large oak tree. Strange to say, it is impossible to sneak up near enough to shoot an eagle; but you can ride or drive a horse near enough to shoot one any time. Well, when we got near enough I stopped the sleigh; and the old gentleman banged away and down came the eagle. Ben concluded that it was his part of the play to get the eagle and bring him to the sleigh.

As the eagle was only wounded, when he saw Ben coming he threw himself on his back with both claws up, and when Ben opened his mouth to grab the eagle, the eagle grabbed Ben by the nose, and Ben threw his head up and also the eagle, and the eagle came down on Ben's back and stuck both claws in the long, curly hair on Ben's back, and Ben gave a yelp and started for home with the eagle riding on his back, and after Ben had gone about a half mile he jumped through the gate next to the top rail and got the eagle off, and when we found the eagle he had both claws full of Ben's hair; but Ben never stopped running until he arrived home, and when we got home we found Ben lying in the front yard, and he hadn't a smile on his countenance, and when the old gentleman threw the eagle out of the sleigh and when Ben saw it he jumped over the yard fence and went down to the barn and didn't come near the house for over a week, and I had to carry poor old Ben's meals to him, and every time Ben saw an eagle or a buzzard fly by the house he would run and hide.

In conclusion, I have no hesitation in saying that the eagle family can fly higher and stay up longer and descend faster and fly faster than any other family of birds to be found in this country or any other country, as I watched them many times fly above the clouds.

CAPT. E. B. GALLUP.

AMERICAN ORNITHOLOGISTS' UNION.

As stated in our last issue, the fifteenth annual congress of the American Ornithologists' Union was held in this city at the American Museum of Natural History, Nov. 8, and continued until Thursday, the 11th.

Monday was devoted to a meeting of the Council at Mr. Dutcher's, and to the evening or business meeting of the active members, which was held in the Board Room at the Museum. The public meetings, commencing Tuesday, Nov. 9, were held in the Lecture Hall of the Museum.

The active members present were: Drs. J. A. Allen, Jonathan Dwight, Jr., and George Bird Grinnell, Messrs. Frank M. Chapman, E. P. Bicknell, Wm. Dutcher and L. S. Foster, of New York city; Charles T. Batchelder and Dr. Walter Faxon, of Cambridge; Dr. Elliott Coues, A. K. Fisher, C. Hart Merriam and Mr. E. W. Nelson, of Washington, D. C.; Ruthven Dean and D. G. Elliot, of Chicago; Dr. Thomas S. Roberts, of Minneapolis; John H. Sage, of Portland, Conn., and Witmer Stone, of Philadelphia.

The associate members present during the sessions were: Mrs. Olive Thorne Miller, Dr. Wm. C. Rives, Judge John N. Clark, Vernon Bailey, Harry D. Eastman, Dr. L. B. Bishop, Walter A. Johnson, Wilfred H. Osgood, Gerrit S. Miller, Jr., James Newton Baskett, Louis Agassiz Fuertes, Harry C. Oberholser, Louis B. Gillet, J. A. Dakin, C. C. Young, K. V. Lawrence, C. Will Beebe, Edwin J. Haines, Samuel N. Rhoades, Herbert Wheaton Congdon, Waldron D. W. Miller, Dr. E. B. Southwick, Henry Hales, Wm. L. Baily, Henry W. Beers, Abbott H. Thayer, Prof. W. T. Homaday, Frank E. Johnson, Robert B. Lawrence, Dr. W. E. Hughes, Mrs. Mabel Osgood Wright.

William Brewster was reëlected President; Dr. C. Hart Merriam and Robert Ridgway, Vice-Presidents; John H. Sage, Secretary; William Dutcher, Treasurer; Charles F. Batchelder, Frank M. Chapman, Charles B. Cory, Ruthven Deane, Drs. Jonathan Dwight, Jr., A. K. Fisher and L. Stejneger, members of the Council.

Mr. Charles W. Richmond, of the Smithsonian Institution, was elected an active member. Eighty-eight associate members were elected, many being women.

A memorial paper on Major Charles Emil Bendire, U. S. A., a distinguished member of the Union who died the past year, was prepared by Dr. J. C. Merrill, of Washington. In the absence of the author, it was read by Mr. Elliot.

The portfolio carried by John James Audubon, and also the original MS. of the first volume of his "Ornithological Biography," were exhibited by Dr. Coues. Two original bird drawings by John Woodhouse Audubon were shown.

Mr. Abbott H. Thayer in an open air talk gave a further demonstration of his theory of the principles of protective coloration, a subject of great interest to sportsmen.

Wednesday evening, Nov. 10, an illustrated lecture on "A Naturalist's Expedition to East Africa," was given by Mr. D. G. Elliot before an audience of 1,500 people, in the large lecture hall at the museum.

The report of the committee on protection of North American birds, read by its chairman, Mr. Dutcher, was a most valuable document, giving the progress of the work done by the committee during the past year. This report will be published in abstract in the *Auk*, the official organ of the Union, and printed in full as a separate pamphlet.

Mr. Frank M. Chapman gave an exhibition of lantern slides of birds in nature, from material furnished by members of the Union. He was followed by Prof. A. S. Bickmore, with lantern slides showing recent advances in methods of visual instruction.

Dr. Coues remarked upon certain *Laridæ*. Dr. Dwight showed a specimen of a new species of bird for North America (*Puffinus assimilis*), and Mr. Chapman gave an informal talk on the gyrfalcon.

Resolutions were passed, thanking the trustees of the American Museum of Natural History for granting the use of the Board Room and Library for a place of meeting, and to the Linnæan Society of New York, for its generous hospitality.

It was voted to hold the next annual meeting in Washington, D. C., commencing Nov. 14, 1898.

The papers read at the congress, in addition to those already mentioned, were:

The Summer Birds of the Catskill Mountains, with remarks upon the Faunæ of the Region. Edwin I. Haines.
Protective Adaptations of Insects from an Ornithological Point of View. Sylvester D Judd
Summer Birds of the West Virginia Spruce Belt. William C. Rives.
Nesting Habits of Anthony's Vireo C. W. and J. H. Bowles.
Is Uniformity in Local Lists Possible? Jonathan Dwight, Jr.
Ten days among the Birds of Northern New Hampshire. John N. Clark.
Some Notes on Liberian Birds. Harry C. Oberholser.
Remarks on a New Theory of the Origin of Bird Migration. J. A. Allen.
Experiences of an Ornithologist in Mexico. Frank M. Chapman.
The Great Roosts on Gabberet Island, opposite North St. Louis. O. Widmann.
The Terns of Gull Island, N. Y. J. Harris Reed.
The Petrels of Southern California. A. W. Anthony.
The Terns of Muskeget Island, Mass. George H. Mackay.
Northern Raven Breeding in New England. H. K. Job.
Breeding Habits of the Common Robin in Eastern Massachusetts. Reginald Heber Howe, Jr.

The Horse and the Moose.

NEW YORK, Nov. 5.—The note in your issue of Nov. 6, under the heading of "Curious Freak of a Moose," reminded me of something that happened while I was staying at Mr. Hopkins's camp, two miles below Mr. Ketchum's camp, on Nahmakanta Lake, at the same time that Mr. Sargent was at Ketchum's.

On the evening of Oct. 6, just about dusk, we heard some splashing on the shore just below the camp, and as we came out we noticed some dark object trying to land on the steep, rocky shore.

At first we thought it was a moose, but on closer investigation we discovered that it was a horse, and assisted it in landing, and found that it had received a number of bruises on the rocky shore.

We later learned that this was Mr. Sargeant's horse—the same one referred to in your article as being followed by a moose—and that it must have swam those two miles from Ketchum's to Hopkins's camp, as the shore is too steep and rocky and the water too deep for a horse to wade; and anybody familiar with the shores of Nahmakanta know that it would be impossible for a horse to make its way through the forest, unless a way was cut through for him, which they had to do to get this horse back. M. L. GOOD.

What is a Rough Grouse?

Editor Forest and Stream:

In Opie Read's novel, "A Tennessee Judge," an allusion is made to one of the grouse family with which I am not familiar, and one which I do not remember to have seen mentioned in FOREST AND STREAM.

Decribing the characteristics of the wife of Judge Trapnell, the author says: "At times Mrs. Trapnell was so smooth as to appear positively glossed with urbanity; but at other times her temper was as frowsy as the feathers of a rough grouse."

Is it possible that the sound of a word has misled Mr. Read, and it was a "ruffed" grouse he meant? That can hardly be, for our beautiful friend of copse and woodland with the ruff about his neck, is anything but "frowsy." Perhaps some of your readers may be able to explain the mystery.

LEXDEN.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

WOODS LORE.

How to Read Nature's Compass.

IT frequently happens that the chief pleasure of our annual outings comes in the pleasant anticipations that are incidental to the plans and preparatory details while getting ready, even weeks before the long-wished-for day arrives. Also in numerous cases, the little honest pleasure obtained from a closer acquaintance with mother nature while in the bush is more than counterbalanced by the misfortunes and disappointments that befall one. The stories of those more favored and successful often appear in print, and are related at social dinners, when the imagination, stimulated amid happy surroundings, not only draws on the memory for details, but paints pictures of its own creation that never would be recognized if met during the last hunt or seen in the late camp. The facts that are untold glow with eloquence, and would be by long odds the most interesting reading. The flexible spirit of the true sportsman, however, soon heals the wounds of misfortune, disappointment, etc., and it is not long before he is hopefully looking forward to his outing the next year.

Many and varied are the causes that contribute to annoy, and, as often happens, when added to disaster, bring a sudden stop to further proceedings and bury deep under disappointment what promised to be the most enjoyable days of the year.

A whole library has been written by able pens in an endeavor to instruct those who love the rod and gun, how to avoid the evils of malaria and chills from sleeping on cold, damp beds at night, how to camp in comfort, how to avoid the ravages of black flies and mosquitoes, how to remedy the wretched and unhealthy cooking that is so often an adjunct to camp life.

That this instruction has borne good fruit is seen by the higher standard of sportsmanship that now exists. None of these many works, however, have placed before the sportsman any information that would assist him to pilot his way around in the bush, other than by giving general advice regarding the duties and necessary qualities of guides, etc., and careful instructions if you ventured beyond the light of your camp-fire, to go with downcast eyes fixed on the compass, and to avoid being stared out of countenance or picking a quarrel with it. There is probably no other annoyance, especially to a hunter, so disastrous in consequences as a lack of reasonable ability to find his way around in the bush. It is also probable that any amount of experience or education would fail to make all men alike excel in this particular branch of woodcraft. Some of the poorest woodsmen I ever met were among those who had lived near the woods and tramped the bush frequently as hunters for twenty-five years. The old adage, that hunters and fishermen were born not made, applies with equal force to woodsmen. The best one among many that I ever met was no hunter, rarely killing game of any kind except when in want of meat for food. He was contented with his love of the woods, to tramp amid a wealth of shade, to climb mountains, and to paddle over the surface of stream and lake, purely for a love of his surroundings. His knowledge of bush lore would make a good library.

I think most bushmen will agree with me that no fixed rules exist that can be depended upon as an infallible guide by which the big woods can be navigated, except those used at sea, namely, by the compass, and reckoning from latitude and longitude. While this as a system is correct, it does not commend itself with its many details to those that love to make their way around in the bush free from such mathematical accuracy attached to every footstep.

The Sense of Direction.

Nearly all woodsmen whom I have ever met or hunted with employ, to a certain extent, this system while finding their way around in a strange bush, where experience has furnished them no previous knowledge of its localities, using

the compass to determine the cardinal points while following their line of direction; or when the compass itself is not used, by locating the cardinal points by the many signs of the bush, which I will treat of later on. The latitude and longitude come into play by the ability to calculate the direction and distance from one locality to others; purely a mental operation, learned by experience and observation, some learning much sooner than others and becoming experts in a short time, while others never make progress in estimating distance and direction. This faculty is often developed to a high degree in birds and animals, being called a sixth sense.

In the woods it is often found to be the case that, while the sense of direction is found to be all right, and a clear conception exists of distance and direction between one locality and another, one is unable to lay out and follow a course of even one mile, unless with the assistance of the compass, without losing all trace of the cardinal points, and thus being unable to reach a locality whose direction and distance were known at starting, and would yet be clear if north, south, east and west were not so hard to find and locate. My observation during over thirty years, which has furnished me with considerable hunting every year, together with the ideas of many older and more experienced bushmen with whom it has been my good fortune to be acquainted, make it within the bounds of reason to say that, among the many men who go into the bush only for a few days annually, not more than one out of every ten can lay out a course in a strange bush, and follow it even for one mile, without the aid of a compass, while even then the sun may be shining full in their faces. And not over one in a hundred can lay out a course in an unknown bush and accurately follow it during a storm or when the sky is dark with heavy clouds that obscure the sun, unless provided with a compass. And yet in these very cases, when the cardinal points were hopelessly lost, the sense of direction had not been interfered with. The misguided wanderer well knows the direction he should go, but lacks the ability to locate the cardinal points without the compass to assist him.

Nature's Compass Signs.

The many different methods to determine the cardinal points while on the mountains, in both heavy timber and small bush, or upon the featureless expanse of a great marsh, are exceedingly numerous and reliable enough for all practical purposes during an every-day life in the bush, unless a very long journey is to be made which would require a number of days, and would make it necessary to hold on a very fine point while making so long a distance.

My observations are the result of over thirty years experience, which, added to the notes taken among the French-Canadian hunters and woods Indians of the Northeast Provinces, the lumbermen, hunters and guides of Maine, the hunters, Crackers and marsh rats of Georgia and Florida, make quite a collection of matter on this subject.

Only those which have proved reliable and practical for use during an every day life in the bush under ordinary circumstances, when trouble to locate the cardinal points was the chief cause of complaint, need be dealt with in detail. Only the wanderer, who has been caught far away in the big woods miles from camp with night coming on, the sky of leaden hue, and with seemingly no possible way of laying a course, can appreciate the feelings of those who have been there. Nature's compass is so large, that while those who love the sweet odors and music of the woods can find it everywhere, to handle the subject we will be obliged to divide and examine sectionally.

Trees and their Language.

We will first take notes on the coniferous trees, pines, firs, spruce, cedars, hemlocks, etc. The bark of these is always lighter in color, harder and dryer on the south side of the trees; while it is in color much darker, is also damper, and often covered with mould and moss on the north side. The gum that oozes out from wounds, knot holes, etc., is usually hard and often of beautiful amber color on the south side, while on the northern side it remains sticky longer and gets covered with insects and dirt, seldom drying out to more than a dirty gray in color.

On large trees that have rough bark, especially during the fall and winter months, the nests and webs of insects, spiders, etc., will always be found in the crevices on the south side. A preponderance of the large branches will also be found on the warmest or southern side of the trees. Also, the needles of all the above-mentioned trees are shorter, dryer, and of a yellowish green on the southern side, while they will be found longer, more slender and pliable, damper to the touch and darker green in color on the north side. The cedars and hemlocks, as if trying to outdo the others, always bend their slender tops of new growth toward a southern sky.

The hardwood trees are equally as communicative, and have all the characteristics so far as regards their trunks, as the coniferous trees, except the absence of gums, but this is more than made up by the fungus growth of mould and mosses that is very noticeable on the north side of these trees. Like the coniferous trees also, the largest branches will be found on the southern side, while the leaves of all trees wax eloquent in proclaiming the effect of sunlight and shade. They are smaller, tougher, lighter in color, with darker-colored veins on the sunny side of the tree, while they will be found larger, damper, more tender and much darker green in color, and having larger, lighter-colored veins on the northern side, and, as is the case with the coniferous trees, the insects, spiders, etc., will be found with their nests and webs in the rough bark on the warmest side. I might also add that in the Southern States the air plants that so often cover the hardwood trees will be found most plentiful among the branches on the northern side of the trees. Also, for good measure on the part of the trees, I might add that the heart of all trees is never in the center of the trunk, but is nearest to the northern side, owing to the fact that the concentric rings of yearly growth are thickest on the side next to the sun. Old stubs standing in the woods testify that they are usually harder and dryer, also that they resist decay longer, even until only a thin shell remains on the southern side, while on the opposite side, owing to more moisture held on the shady side, and the fact that the heart, which often begins to rot first, is nearest that side also, and thus assists toward a more rapid decay on the side facing the polar sky.

Mosses and Lichens.

The ledges of rocks, which may be part of stupendous mountains, or merely an occasional cropping out here and there in the woods, or, perhaps, some great boulder alone by itself a silent witness of the glacial period, all alike testify to the effect of light and shade. The sunny side will usually be bare, or at most only boast of a thin growth of harsh, dry kinds of mosses, that will only grow when having the light; while the northern sides will be found damp and mouldy, and often covered with a luxuriant growth of soft, damp mosses that love the shade, while every crevice will bear aloft beautiful and gracefully waving ferns.

The forest floor on the sunny side of hills, ridges, clumps of trees, bushes, big rocks, etc., is more noisy under the foot-fall than on the northern side of such places, where the dead leaves and litter are soft and damp, holding more moisture than in places exposed to the light of the sun.

These places last referred to will frequently have growing grasses and plants of different kinds, and the beautiful little flowers of the woods will be drinking their fill of light in the sunny nooks; while there will be found on the northern side not less beautiful sombre mosses and graceful ferns, that beautify the effect of continuous shade.

In the Marsh.

As a salt-water sailor has a wholesome contempt for a brother of the same craft on the great inland waters of our lakes, so, also, does the old woodsman turn up his nose when he hears of people who lose their way in a broad, flat country free from timber; or one which, at most, has but a scattering growth of small bush; or upon the wide expanse of a great marsh, where you can see for miles around you. Many of those with whom I have hunted agree that it is is equally as perplexing, and as disastrous in consequences, to be unable to find one's way out of the marsh as when lost in the big woods; and that when it comes to matter at hand to draw from that will furnish the clues to the cardinal points, the woodsman has the best of the situation. But the marsh rat also has something "up his sleeve" which he can draw on to guide him on his way, even when the skies are of leaden hue.

In an open country nearly void of timber, clumps of small bushes during summer will furnish all the conditions found to exist among the leaves of the trees, being equally sensitive to light and shade as are the monarchs of the woods. The landscape green with moving grasses and beautiful to the eye which feasts on the countless numbers of wild flowers, representing every form and hue known in the flowery kingdom, also furnishes a reliable guide for locating the cardinal points, as most wild flowers, especially the long-stemmed varieties, hide their faces from the north, and, like the sunflower, turn toward a southern sky. Large boulders, clumps of small bushes, mounds and small hummocks—all testify, too, for the ground around such places exposed to the sun will be burned nearly bare of vegetation, or parched up until of a dead grass color; while on the shady side it will be found quite green, and often here there are growing mosses and ferns of rare beauty, which thrive only where they have moisture and shade.

Laying a Course for the Flat Country.

We will now take an old woodsman from the northern woods and a modern sportsman, one of those preferred who has inherited as an heirloom a sixth sense (namely, of direction), and go into a great marsh in southern Florida for a day's snipe hunting. We will go in a few miles early in the morning, and, as it happens, we have struck a day having a dark, leaden sky, with no sun. On such a day as this the mosquitoes, never bashful, and even more fierce than the New Jersey variety, are abroad in swarms, while the deer-fly joins forces with them and strives to keep all your other senses active. The hunt having begun, we follow the dogs during the day over miles of marsh in every conceivable direction.

We have waded across shallow sloughs, skirted bay heads, worked over the broad beds of dried-up ponds—which are great shallow lakes during the rainy season but now only help to make up the great marsh about us—where all that is left of great bodies of water is here and there an alligator hole of mud and water, and miles of saw-grass that cuts like a knife. We have deviated from our course scores of times to gather dead birds, and have followed birds that were marked down, some making quite long flights, in more than a hundred different directions. It being now late in the afternoon, one of us already out of shells, and all having birds enough, a halt is called and we decide to go out.

The old woodsman looks at the dull, heavy sky, he surveys the flat, featureless horizon which surrounds us on all sides, and his eyes show bewilderment as they behold what seems an endless expanse of sloughs and saw-grass. Off about half a mile is a swamp of water trees of different kinds. In the air over this place are hundreds of buzzards wheeling and sailing on tireless wings while waiting for the gathering gloom before descending to their roosting place.

The sportsman with the sixth sense has also been looking around, and has relapsed into a bit of solid thinking, fully realizing that he has something on his hands more than a gun and an empty shell bag and three or four dozen snipe. All agree that the general course during our day's hunt was to the eastward of our starting point. But who could locate the cardinal points with such a heavy sky, and lay out a course due west was another matter. Surely not the old woodsman, neither the man with the many senses

The above is a true outline of a day's snipe hunting some thirty miles up the Caloosahatchee River, on the west coast of Florida, in which the writer, in company with two old Florida men, took part. The heavy sky prevented my companions from making their way out, while I, a stranger to the country, struck a course due west by the signs of the marsh, much to the astonishment of my companions; and after some three miles had been made we struck our trail near where we started early in the morning. The soft, wet places in the shadow of the tall saw-grass, while quite dry on the sunny side; the bleached and dried grass on the south side of the hassocks, while fresh and green on the north, all told their story, while two old Florida hunters were loud in expressions of wonderment, and both vowing they never could again get turned around on the marsh.

Among the Hills.

In the fall of 1881, a companion and I, taking a light lay-out of duffle, headed for the northern part of New Hampshire, our objective point being a small lake about nine miles in from the settlement. We were driven in to the settlement by Gill, who was a brother of Joe, my companion, who lived some ten miles further down the country. Gill, whose horse was lame, said if we could walk up the hills he could make the settlement with our rig without much trouble.

Arriving at the back settlement we hunted up a character named Fred Brown. He was a little man with bushy whiskers that grew way around on the back of his neck. Gill told us that Fred trapped sable and gathered spruce gum during winter, and in summer did a little farming and considerable loafing, but that he would be a good man to go in and show the way to the lake besides toteing a pack of duffle. Fred could not go in, he had fall plowing to do, and was picking apples on shares with some of his neighbors. But we pursuaded him, and he concluded that the work could wait a couple of days and he grew enthusiastic over the prospect of a chance to stretch his legs. The duffle was divided up into four packs, and we went up through the maple orchard into the timber in tolerable good order.

We had not made more than a mile into the woods when the sky became very dark, which caused Fred to make frequent glances upward in a vain endeavor to locate the sun. Having a good map of the country, I was well aware of the direction the lake was from the settlement, and soon noticed that Fred was bearing a number of points to the west of what should be our course, so I asked him to point out the direction of the lake. This being done and the direction carefully noted, we proceeded on our way. In a short time our course veered still more toward the west, and Fred was again asked to point out the course toward the lake. This being done, it was found the lake had moved around still further to the west, while it should be northeast. A halt was called; Fred's errors were pointed out to him, and he reluctantly admitted his neglect to take along a compass, and said that the heavy sky bothered him to keep his course. Moving to the front, I announced my intention of taking the lead and laying a course for the lake. After noting carefully our surroundings, we struck out about east northeast, which was thought would correct Fred's error and bring us to the lake.

Determined to maintain a course as straight as possible, I led them over ledges, among windfalls and up steep gulches, until Fred vowed we were moving off into a section of country that looked strange to him, and he advised camping where we were until morning. We proceeded, however, and after some tough climbing over an awful rough country, we turned the corner of a high ledge and began to descend a gully, when Fred gave a joyful shout and announced that we were near an old shakedown of his, which was at the end of his winter line of sable traps, and that we were headed straight for the lake, which was only half a mile distant. He declared his ability to lead the rest of the way, and not till sleep closed his eyes that night in camp did he cease to importune me to tell him how a stranger to the locality could lay out and follow a course for nearly four hours over such rough country, without either sun or compass. I presume he is still wondering.

The next day it rained lightly; Gill and Fred, not daring to go out across the country without a compass, went down the outlet of the lake, making the trip out about twelve miles. On the way out, as we learned afterward, they jumped an otter, and after a lively scramble down the brook, he was holed under a ledge. They made a big bucket from birch bark, brought water from the brook and drowned him out, Fred shooting him in the head with a long-barreled, muzzle-loading pistol which he carried hanging at his belt, and whose murderous look had previously excited our wonder. The above truthful account of our trip in is given to show, as was the case on the marsh, that one can travel and lay a course without either sun or compass, if his eyes are used to reading the signs of the bush.

Old bushmen, who may chance to read these notes on bush lore, may recognize old friends that have stood them in good stead in days gone by. While those who go into the woods only for a few days annually, these notes on the signs of the bush, collected from among those who have hunted and camped in nearly every section between the St. Lawrence and the Caloosahatchee rivers, may cause to feel more friendly with their surroundings while courting a closer acquaintance with mother nature.

GEO. W. DEARBORN.

TEXAS AND THE SOUTHWEST.

THE best evidence that the new Texas game law is protecting the game is the dark brown frown of the hotel men and restaurateurs of San Antonio. Heretofore it was dead easy to regale the palates of epicurean guests with succulent birds and tender venison steaks; but now, owing to the scarcity of game on the open markets, instead of receiving "quail on toast," or "venison à la creole," the festive drummer must content himself with the toast without the bird, and the creole *sans* venison. It is claimed by some that this is working a great hardship on that portion of the public that sees no fun in gadding about field and forest accompanied by the ubiquitous canine, but I don't know; they are not so warm. One of our local dailies not long since advocated editorially that the American people ought to eat corn bread, so that we should then have that much more wheat to sell to foreigners, which would materially increase our trade balance and put more shekels in our sock. Following the same line of reasoning, why should not the non-shooting people eat more cornbeef and cabbage, so that the sportsman should have more quail to shoot and eat. In addition to the benefit that such policy inures to the sportsman, think of the increased demand created thereby for cabbage and cornbeef. The ranchman and gardener should hold hands with us and say Amen!

Quail are worth 12½ cents apiece and venison 15 cents per pound, and both are scarce at that, which shows that game is not being brought in by the express companies as of yore.

Quail Plentiful.

I went to Beauregard last week and put up about thirty bevies of quail, and, while the cover is scarce, the birds are plentiful enough to keep up the sportsman's interest for half a day. It is the same old story all along the line of the Aransas Pass Railway. Game is more plentiful than ever.

On the Nueces.

Lieut. Pegram Whitworth, of Fort Sam Houston, who has been on the Nueces River for the past four weeks making war maps for Uncle Sam, told me that the Nueces Cañon is alive with deer and turkey. He killed several bucks, and also fully supplied his camp with turkey.

Critzer, the Dog and a Snake.

A. B. Critzer has several pets—a fox, a civet cat, and an abbreviated Thomas feline, to say nothing of Mongolian pheasants, and dogs of all sorts of pedigrees and fleas. If it is a cold Sunday, the quail and doves catch it good and plenty. If it is warm, he and Tom Brown, the tall Pecan of the Arroyo de la Jewelry, sally forth in quest of succulent morsels for the menagerie. They generally go armed with .22-caliber rifles, and chippies and hawks are the birds sought, which, when bagged, are fed to the pets.

A saucy woodpecker was sighted, pecking his way to a

bug in a post, and when Tom had planted a bullet somewhere near the bird's solar plexus, faithful Bobby, the retriever, was sent to do his duty. But Bobby did not retrieve, not just yet; and on investigating the cause of the fuss Bobby was making on the other side of the fence, he was found barking at a large coach-whip snake, which had the bird tightly clutched in its ravenous mouth. As soon as the bird had been shot the snake had pounced upon it, and when the retriever came, the reptile stood coiled at bay. The snake was promptly killed, the dog finished his job, and the civet cat got his supper.

Redheads and Sprigs.

We had a three days' norther on the 1st inst., and the wildfowl shooting on Nueces, Puerto and Capano bays was very good. One market hunter killed 145 redheads and forty-two sprigs one day, and reports of bags of 100 and over came in thick and fast. The bluebills are not in up to date, but I have just received a wire that Messrs. Stomers and Turner, of this city, killed thirty-five ducks this morning (11:15 A. M. of the 6th inst.). TEXAS FIELD.

MOOSE IN AROOSTOOK COUNTY.

IN company with W. M. Stowell, an experienced hunter, I left New Bedford for Bangor on Monday, Oct. 4, *en route* for the Maine woods to shoot my first moose. Arriving at Bangor on Tuesday we left the same day for Norcross, where we spent the night. At 9:47 next morning we left Norcross and got to Masardis at 1:10. From there we took a carriage to Ox Bow, and after staying that night at the Ox Bow House we climbed into a buck-board and rode ten miles through the woods to our camp, where we met our guides, Walter J. and U. G. Swett.

After a substantial dinner we got into our canoe and went about three miles up the Umcolcus stream. We were rewarded by seeing three does which we would not shoot and hearing two moose.

On Friday we went down stream and saw five deer and two moose. The next day we went in the same direction and saw three deer feeding on the bank of the stream and one small moose. Sunday we saw a deer, a beaver and four moose.

Monday we made another excursion down the Umcolcus and saw a big buck and a small doe, which upon our approach quietly moved off into the woods. Tuesday was rainy and the day was spent in camp, but we did not altogether lose sight of game, for one of us, on looking out of the camp door, saw a doe crossing a dam about 500yds. away.

Wednesday we took a walk up to the lake, and before we had gone far we saw four deer. Mr. Stowell routed one and took a shot at another close to a logging camp. I shot at two large bucks, and the guide saw an enormous moose. During the day we sighted three more deer besides an abundance of small game. Thursday we went into the woods and saw five deer, one of which I killed, and Mr. Stowell got a shot at another. We skinned the dead deer and carried it into camp. It was no light load, and over the rough roads was about all we wanted to lift. Friday, my guide and I went down the stream, and Mr. Stowell went into the woods. He saw three does, one of them being very large, but he did not shoot.

Saturday, Oct. 16, we went down the Umcolcus stream in the morning to Umcolcus Lake, a beautiful sheet of water about two miles long and half a mile wide. On the way we saw five deer—three does and two bucks. We went back to camp for dinner, and at about 5 o'clock in the afternoon Walter J. Swett, my guide, and I took the canoe and went down the stream about one and one-half miles. The guide called for a moose, and we waited until about 6:30, but no moose came. We went up stream about half a mile, where we landed, built a fire, and had supper.

After waiting until about 8:20 we went back again, and once more Swett tried the birch bark horn. We listened for half an hour, and finally I said to him: "It is quite cold and you have no coat on; let's go to camp and tell yarns."

"Oh, no; don't be in a hurry," he replied, "you will get a moose all right. There are plenty of them here."

We paddled a little way back and waited. Suddenly there came a noise, as if all the trees were falling down. Then everything was silent, and though we listened for some time longer we heard nothing more.

"Let's come some other night," I said, for it was getting late and the air was chilly.

We had gone but a short distance toward camp when I saw a dark object standing by the stream. I stood up in the canoe and leveled my rifle at it, and the guide said in a low tone: "Moose." At the moment he spoke I fired, and the moose turned and started down stream. Forgetting that I was in a canoe, I shouted excitedly to the guide: "Pull, pull, pull," for I wanted to get another shot at him. He dashed across the stream, and all I could see was water flying about 10ft. in the air. Into the woods he went and out he came again, trying to gain the other side, where he and a cow moose had been feeding. As he came in sight I fired, and he crashed into the woods once more, but was out again immediately. He started across some rocks and the sparks flew as they knocked together. He stumbled and fell on these, but at another shot he got up and again made for cover. Regaining the woods he lay down, and after lighting our lantern we followed and found him stretched out with his head resting on a stump—dead.

The guide began to sing the refrain of his little song, which was always heard when he was feeling happy:

"My girl is a plain girl,
My girl is not proud."

and we returned to camp.

"If that moose is the first you ever shot," said the guide, "I never saw a man stand it so well."

"Do all moose act as this one did?" I asked him.

"I never saw one that did after being shot like that."

One ball had entered the shoulder and broken off two ribs, while the other had gone into the hip. I had fired six shots, but these were the only ones to take effect. It was 9 o'clock at night when the moose was struck.

On Monday, Mr. Stowell and W. G. Swett, his guide, went down stream about one and one-half miles, and the guide succeeded in calling three moose at once. One turned off and went into the woods before reaching the point where the canoe lay. The other two were heard coming, and one of them, which must have been a big one, judging from the sound of his bellow, which was like a fog horn, came to within 50yds. of them, and then turned and went to the south.

The third came into the water and then started back but at the guide's call again headed for the canoe. Paddling quietly toward the point, they came face to face with him. He was about 40yds away and in the shadow of a tree, so that only the tips of his antlers could be seen. Mr. Stowell aimed under his nose and fired. The moose was evidently wounded, but wheeled and went into the bushes.

"You hit him quite hard, I should think," observed the guide; "but we had better wait until to-morrow morning before we look for him."

After having supper they started for camp, and the guide called again on the way. They looked around them sharply and saw, about a quarter of a mile distant, a shadow, which at first glance they thought was a stump. Closer examination showed it to be a small moose, weighing probably between 300 and 400lbs. He did not have a good pair of antlers, and Mr. Stowell did not fire, but returned to camp quite disgusted at not having killed one of the four that were called. In the morning they took the trail of the wounded moose. He had not commenced to bleed until he had gone some 300yds. They found at intervals good-sized pools of blood where he had stopped to rest; but after following up the trail for six hours without coming upon him, they finally gave it up.

The season was late for moose calling and also for still-hunting, as the leaves were very dry. Does were plenty, but it seemed brutal to kill them, and after seeing a wounded doe once neither of us cared for more of that kind of sport. We had been sympathizing with Mr. Stowell on account of his having but one arm, and that his left, to shoot with. On the second morning after I had killed the moose he started out by himself.

"You may talk all you please," he said as he left, "but let me tell you this: when I do shoot, something will surely drop."

I went out, saw eight deer, and came back empty-handed. Some time after Mr. Stowell came into camp, inquired about our luck, and then remarked that he supposed the guide had said: "It's too bad that poor fellow don't shoot anything; I think he has buck fever;" and that I had answered: "Yes, I guess that's so. He's pretty handy with a shotgun, but a rifle is hardly his weapon." After joking in that style for some time he told us that we would find two young bucks, which he had just shot, lying a few miles away, and that he would like some assistance in bringing them to camp. We went along, found the pair and brought them in on our backs, a performance which gave me a lame shoulder for some time afterward. Mr. Stowell had killed one buck at first shot, and on putting in another cartridge and stepping from cover to get a better view of his game, he saw one more making off some 40yds. away, and a second shot brought him down. That night, as we ate our suppers and industriously picked the moose hairs out of our tea, we felt well satisfied with the result of our trip. Even our cook—a rare article who could not boil water without burning it—was in a happy frame of mind.

As we wanted to make an early start in the morning and my rubber boots were thoroughly wet through, it occurred to me to dry them out by filling them with paper and then setting the paper on fire. The condition of the boots after this treatment may be imagined, but I managed to be on hand next day. We saw three deer and routed three more, while on Thursday, which was our last in camp, I saw two deer. Mr. Stowell saw one and routed four more.

Our trip was in every way successful and satisfactory to us, and to all hunters who desire to employ honest, competent guides, Mr. Stowell and myself can heartily recommend the Swett brothers, of Ox Bow, Aroostook county, Me.

MICHAEL SHEA.

STILL-HUNTING DEER IN WISCONSIN.

WE were camped where the Chicago, Milwaukee & St. Paul Railroad crosses the outlet to Plumb Lake in northern Wisconsin. As I put on my old green hunting coat that blends so perfectly with the pine, hemlock and cedar, and picked up my rifle, I reasoned that a good place to look for deer would be at the south end of Plumb Lake. The lake is about five miles long by a half mile wide, and was frozen over at the southern part, which is surrounded by heavy forest, and it was only natural to suppose that the deer in their migrations southeastward would follow the shore of the lake and pass that point, rather than swim the lake so late in the season.

As this was my first day in this portion of the State, I knew these things only in part and guessed at the remainder. However, the middle of the day found me sitting on a mossy log at the extreme southwestern end of the lake, with my feet on the ice and eating a cold lunch, while my rifle lay across my knees. Thus far I had seen no fresh sign, and after a rest started up the hill toward the south. Near the top of the hill I came on to the fresh tracks of two deer that had gone eastward. The snow was about 2in. deep, but however good the tracking I would not have followed the trail had it not been leading in the direction I intended going. I concluded to follow as long as their course led toward the railroad; and after tracking about one-half that distance came to where one had lain down for a moment, but, as the location had not suited its companion, which had kept on going, it had followed. I had never been able to track deer in the snow and find them before they found me, and I had no hope of doing so in this instance.

We were now on the north side of a ridge that extended quite a distance to the east, and were following its base. We had come about a mile and a half over hills and through hollows, and had passed fallen leafy treetops and other good hiding places; and to follow the twisting, zigzag trail of both deer, together here and yonder separated some rods, and see everything within shooting distance at the same time, had been no little task for a first day in the woods. From their movements now I figured out that they had lain down before reaching the railroad, and presently came to where one had gone straight up to the top of the ridge, while the other went on along its base. I followed the last-named a few rods until it, too, started up the side of the ridge; but, unlike the other, it went obliquely, and led me to believe that the first one had gone east along the top of the ridge.

Now, evidently it became necessary for me to get to the top of that ridge, and I expected to find my deer lying on the south side of the ridge, some distance further on. I took several seconds in making the ascent, although it was not more than 25ft. to the top. What I should have done was to crawl up like a snake. But, as I said, I was led to believe that the deer had gone further along the ridge. What they had done was this: the one to go upon the ridge first, went straight across it and some 50ft. beyond, and laid down on the west side of a leafy branch that had fallen from a tree, and in such a position as to see anything that might follow its trail to the top of the ridge. The other one had gone obliquely across the ridge to the southeast, then turned west, and joining its companion, lain down on the east side of the leafy screen, with its head to the southeast. Thus, as I reached the top of the ridge, the deer were to the right and back of me, and the one looking in my direction was entirely hidden from me. I was as unconscious of its presence as the one lying with its back to me in the open ground was of its danger. I thought the one I saw was the one that went up on the ridge first, and that the other had gone further on. Keeping my eyes on the deer lying there, with its back toward me, and at the same time picking out the spot to shoot at, I swung my gun to the right; but just as I raised it to my face, the deer that was watching me from behind the leafy boughs sprang up and away, and my intended victim followed as suddenly as one quail follows its mate. The second jump carried them behind a cluster of trees, and though I took one snap-shot, I got no deer, for they kept the trees between them and me until out of gunshot. Those deer were discreet in guarding themselves against danger from their trail; however, they didn't do a thing but run for their lives until they came to the railroad; and there they stopped within twenty paces of a man sitting in a blind until he shot one down, and could have shot the other if he had not (as he confessed) got rattled. Thus ended my first day in the season.

Some days later, while south of camp about two miles, I came to where deer had been running in all directions, as if being surrounded. I knew some of our boys were east and some west of me. The large timber was scattering, but there was a great quantity of undergrowth covering the ground, and of every species and size up to 10 or 12ft. in height. As I could see only a short distance through this shrubbery, I climbed a large jack pine that had limbs down to within a few feet of the ground, and stood on one limb some 15ft. from the ground, and steadied myself against another large limb. I stayed on that perch forty-five minutes by the watch, and as I neither saw nor heard any game, concluded the deer had been scared out of that neck of the woods. It was not very comfortable up there, anyway, and I began to feel drowsy, so I climbed down and started on in the direction I had been going. I did not go 50yds. until a deer sprang up in front of me, and looking back sideways as if to see which way to dodge, darted into thicker shrubbery. Of course I took a snap shot at it, but I didn't have time to get the gun to my face and the deer escaped.

About a mile south of our camp was an old survey running east and west. It is also a section line. The original markings on the trees are overgrown and hard to follow through the forest, but we blazed them afresh in places, and as the sky was overcast most of the time and snow fell about every twenty-four hours and obliterated the trails, we found this old landmark a convenient guide when hunting near it. The last day but one of our hunt I went up the railroad a couple of miles intending to hunt off south of the lake and come in on the trail in the evening. I made a circle and came to the trail about two miles from the railroad as the sun hid his face behind the wooded hills. I was on the point of turning to the right and taking up the trail for camp when I saw just to my left some fresh deer tracks that led to the northeast. As I had something like three-quarters of an hour of twilight, and the tracks had been made but a few minutes, I concluded to follow the deer a short distance. Their trail led down hill over the point of a ridge, through a small prairie and along the side of a hill. Here the deer had been going in various directions, feeding no doubt, and darkness was gathering on the heavily wooded hillside. I followed on very cautiously, not knowing in which of three directions the deer might be, nor how far distant, yet unwilling to turn back so long as there was any possible chance of getting a shot, and when on the point of retracing my steps, and while peering through the gloom ahead for the last time, a large buck moved and stood with his head and fine spread of antlers showing in a small open space about 50yds. distant. I could still see the bead on my rifle as I aimed below the ear, but just as I pressed the trigger the buck gave a bound that would have carried him out of danger had I not with equal quickness lowered the muzzle of my gun and pulled the trigger. The smoke from the gun added to the gathering darkness shut off the view in front, but off to the left in the little prairie I saw a deer's white tail for a second, and there I found my buck. He had turned a half somersault and lay with his head toward me, his six-point antler showing above the coarse prairie grass.

And now I had quite a task before me, for it would not do to let him lie there over night, and whether I could hang him up was a doubtful question. When possible to do so, I bend a sapling over the deer, and after tying the head of the deer to the sapling near its top, cut off the top, and the spring of the tree aids materially in lifting the deer from the ground. But in this instance there was no small tree convenient. There was, however, a hemlock tree at the edge of the prairie about 15ft. from where the deer lay, and I first cut a pole that would reach from the buck to the tree. I then cut two sets of forks, the one set about 8 and the other 12ft. long. Placing one end of the pole on a limb of the tree, I looped a small rope I carried for the purpose around the buck's horns and over the end of the pole. The next thing was to lift the end of the pole with the deer attached and set the short forks. Of course, I did not have to lift all the deer, but his head must come up as high as my shoulder before the forks would hold in the ground, and that was a plenty. Succeeding in this, the rest would have been easy on solid ground; but in this soft prairie the forks sank several inches, and by the time I had set the long forks and run the deer up clear of the ground I was glad enough the job was done.

It was so dark I had to gather up my traps mostly by sense of touch. I went across the little prairie to the trail, but I could see neither the blazes on the trees nor tracks in the snow. I started eastward, and by lighting matches and looking at my compass when uncertain of my course, succeeded in going about one-half the distance to the railroad. But my matches were about all gone by this time, and not knowing but that I would have to camp in the woods, I put the remaining ones back in my pocket and pushed on. I had to keep one hand before my face to prevent my running into the low limbs of trees, and as

clouds obscured the sky, and I had nothing to guide myself by, I concluded to signal my friends at camp. I tried it at first with my revolver, but the distance was too great. I then let go with my Winchester, and brought an answer from Hendrick's old .45-70. Thus at intervals I got the location of the camp, and after clambering up one side of hills and sliding down the other side, sometimes trying to walk over logs breast-high, and again slipping backward off the roots of a tree, I finally came out to the railroad and went down over an 8ft. bank; and right there and then was the only place that I did anything in a hurry while getting out of the woods. Now, I did not have to go to camp in that rough-and-tumble fashion; I could have camped in the woods or made a torch and lighted my way out, but I concluded to go in the way I did, and that's the way I went. G. W. CUNNINGHAM.

UP THE ELK TRAIL.

"A-A-'HNAH, Snug willi-mie, it has been said. No man shall follow the path of Moos-moos, the bull elk, up the mountains where the Ducewellips River sings all day. Kakehete, the tyee of all the Skallalatoots, has his lodge there, where this river is born. A long time ago some Indians went there. Kakehete shook the hills and made much snow and many rocks slide down, so that all these Indians were killed. Stay here, my friend T'solo. Stay here and burn powder for Mowitch and let the bull elk go. It has been said."

"You say well, T'quawitch Tyee. But I, T'solo, the one who wanders, cannot well stay here and camp like an old Klootchman who picks berries. I have made many journeys and have seen many things. My gun is good and my eye clear. I am not afraid of Kakehete, the chief of demons, and I am going to look for Chicamun, the gold that lives in the rocks up there where the bull elk feeds by the snow. If you will not go, because your heart is the heart of a woman and much afraid, then I will go and see Kakehete alone. It has been said, and you know that I do not turn back, T'quawitch Tyee. Will you go?"

"No, tillacum, I will stay down here by the sea, where Kakehete does not come. Only evil can happen to him who goes there among the snowcaps. You are a wise man, T'solo, yet you are foolish in this travel, and will not come back if you go up the trail of Moos-moos. I am done."

"Then klook-wah, T'quawitch, and good living while I am gone."

Then I picked up my 65lb. pack-sack and went into the woods, where the elk trail wound away up toward the peak of Mt. Constance, glittering there in the early sunlight like a great jewel, the pride of all the Olympics. The old Indian stood watching me until I disappeared in the shadow of the silent blue pines who people the hills and shelter many wild things that sleep by day and roam by night. Slowly, steadily I went, plodding along up the trail made by the hoofs of countless elk in days gone by. Up, up, always up, winding, twisting in and out, now through an open space redolent with the breath of spring and gleaming with yellow floods of sunshine, warming to life the buzzing underfoot world that peopled the nooks and crannies and robbed the blossoms of their sweets, then through the dim aisles of shadow where no sunlight came, and where the huge seamed trunks of the waiting firs shot upward until their tops were lost in a tangle of limbs somewhere in the blue above. In such places the mosses dwell, and the ferns too, single stems of dainty maidenhair, great banks of the feathery kinds, and here and there the raspy stiffness of the sword fern shone in lighter green. Tiny springs of crystal water burst forth, fed from the melting snows of the higher ranges, to trickle through the moss carpet, over the rocks and down the hill, where their big brother the brook hurries on to join the roaring Ducewallips, that foams and frets at the rocks down there in the valley.

Then further still, until the great cañon opens dim and wild right into the heart of the hills. No wide and steep-walled valley this, but a crevice made by giant hands, a crack riven through the range some time in the long ago, and now the river makes of the crack a path to travel in, a road to the sea. There a man may not go, for the river fills all the space from one straight wall to the other, and even that is all too narrow, so the water roars and booms, thrashes and foams, wells up against those smooth, worn walls, and comes back in a flurry of spumy foam that whirls away in the next sweep of the current.

Down in this cañon the sun never shines; it is always twilight or darkness, and the shadows are a cold blue-green in the swirl of the current. An icy breath sweeps down the river, and the roar of the water makes one's voice very small.

The bull elk who made the first trail up this valley stood here at the end of the cañon, and looked on the blue shadows until it came into his mind that he could not travel there. Then he turned and climbed the hill, straight up, a thousand feet or more above the roar of the river, then traveled on, clinging to the steep sides, always stopping when a loose rock went booming down among the trees to leap over the cañon rim and into the boisterous swirl below.

This I read in the sign of the trail as I climbed along wearily up the old elk path, and fought with my pack-sack that would slip around and put the weight on one side, because of the reaching work of climbing. On all this steep that pitches down to the cañon rim there are loose rocks left by the snows that sweep down, roaring avalanches from the bald and pinnacled cliffs far up the mountain. They hang in all sorts of positions, these loose boulders, poised, balanced for a plunge on down to the river, if you are so unwise or unlearned in mountain lore that you put your weight on them.

Slowly, carefully, I traveled on, testing each rock first, sure of my new foothold before I left my last; always along the path that Moos-moos, the great elk, first made. Then, at last, the hill sweeps back and away from the jagged rim of the cañon, and the trail sags down among the big trees again.

Just here a little creek bawls along, rushing over the rocks, fretting against the big hill there in the shadow of the great giant pines. Stopping to drink of its cold and crystal flood, the thought came to me that perhaps the little stream might bring word from the lodge of Chicamun, the yellow gold that hides among the rocks of the mountains.

Now the way to talk to a brook about Chicamun is to take some of its sand, put it into a gold pan and wash it. Slowly, carefully wash it, until only a little stays in the bottom of the pan, and that little must be clean and black. Then you look with keen eyes and sift the black sand about in the pan. This I did and saw many tiny rubies, little garnets, worn fragments of quartz and agate, and small black crystals of iron; but the golden scales were not there, so I knew Chicamun did not hide in the heart of the great peaks and cliffs up where the snow was, and that I must journey on again.

I sat down to rest a moment before going ahead, and then LePool, the wild blue grouse, came down on rumbling wings from the tree tops. LePool is good meat for hungry men, so when he came down my long rifle looked at him and sang the memaloose song, and LePool died there in the mountain glen, because one man was hungry for his meat.

When the sun came down near the top of the western wall of mountain peaks it made a thin blue haze to hide the trees and soften the ragged outlines of the stained boulders, and then it came to my mind that night was coming to the mountains and that I must find a place to camp or else camp standing, for no man may follow the trail of the elk when darkness is on the hillside, no one save Moos-moos, who has eyes for darkness and a nose to smell danger before he comes to it.

Down the great hillside I went with careful step, and among the shadows I found many cedar trees and a good spring of water—it is a new hold on life to drink of it—water that is as new, red blood to a tired man. There was a little space among the boulders where one could spread his blankets, and there was moss, plenty of thick dry moss, and enough of the filmy sprays of the brown-trunked hemlock—these to furnish a bed for resting on among the wild hills. The cedars, too, were smooth and tall, and gave their bark to build with, and the axe soon had enough poles down for a frame. A few cedar limbs cut off in short lengths and sharpened on one end were all the nails needed.

Before the sun painted the peaks with pink the house was finished and was a goodly place to dwell, for one was snug from howling blasts and dribbling raindrops, too. Then a small fire snapped and crackled and gave a cheery heat, but no smoke to spoil the flavor of LePool, the wild grouse, that simmered, with a flake of bacon, in the pan, while the coffee fretted against the hot side of the pot, fretted and complained, and welled up in fierce bubbles all at once—done. The pack-sack gave other things edible, and soon I sat on a boulder and feasted as no man feasts in the grim city—feasted on good things with hunger for the sauce.

The river roared—no, it sung just here, a wild chant. As the sun went down I reclined on the mossy bunk, my pack-sack for a pillow and my old pipe for company, and watched the setting of the new scene, saw the sunlight in glowing shafts hunt out the peaks and snowbanks far above and across the valley, saw the white change to pink, to crimson, a wealth of colors all run riot there, and transform the grim old mountains into fairy castles.

Then, when the chill came down the cañon—the chill of night, when the cold air comes down in the low places, I saw the snow change to white, so cold, so beautiful, only to fade again—smoky-blue first, then indigo, then an indefinable color, an indistinctness which softened everything and blended rock and pine, peak and snowbank, until all became only a great bulk looming across the lighter blue-black sky, where the stars snapped and flickered—as they do only among God's own hills.

The fire was a ruby glow by the side of the boulder, the river sung in the darkness, and there came a soft voice from the air-tuned pines, and the song of the night was sung—the sweetest music that ever was listened to—music that is rest-compelling, and as I heard it, it came to me that this was peace on earth and good-will to men. In such a country Kakehete, the chief of demons, had no place, and T'quawitch Tyee, in the valley by the salt water, had for once read all signs wrong. But then, T'quawitch has thoughts, and there are some things even he does not know.

EL COMANCHO.

NOTES FROM NEW BRUNSWICK.

THE officials of the Crown Land Department estimate that the receipts from hunting licenses issued this season will reach a total of about $2,000. This has been the banner year for New Brunswick so far as the incoming of big game hunters is concerned; yet, as these figures indicate, less than one hundred American sportsmen have availed themselves of the magnificent moose and caribou hunting to be had here in the autumn months While other hunting grounds are thronged with campers, insomuch that every hill and valley resounds with the crack of the rifle, New Brunswick is practically unhunted still; and in the virgin forests of the Tobique, the Miramichi, the Dungarvon and the Renous, the bull moose is dying of old age and general debility, brought on by over-feeding and want of exercise. Just think of it! Since Mr. Carl Pickhardt and his party came from the Grueggas Lakes in September with three moose, six caribou, a bear, an otter and a fox, not a single hunting party has visited that locality! Think of the sport enjoyed by Mr. Elmer Dixon, of Chicago, who secured two moose, two caribou, a deer and two bears on the Wapski (a branch of the Tobique), and reports that, so far as he could learn, he was the first sportsman who had ever seen the headwaters of that stream! Think, also, of the wealthy English "hog" over on the Restigouche, who, after he had secured his legal allowance of two bull moose, kept on shooting and paying the fine for each additional moose. He said he was perfectly willing to pay the fine for sport like that!

That the unrivaled sporting advantages of New Brunswick are only now beginning to be embraced by American sportsmen, is due to several good and sufficient causes. The chief one is, that its hunting grounds have not been advertised as those of other lands have been. Another is, that professional guides have been few in number, and hence camps, canoes and other facilities dear to the heart of the tenderfoot, were in most cases not available. Many sportsmen can only make a limited stay in the woods. They want to press the button and have the guide do the rest. Many of them object to "roughing it," or camping out in September and October under a shed tent.

But now the time has arrived when another chapter will have to be written. The demand is about to produce the supply. The professional guide is hanging out his shingle. The Province is full of hunters, trappers and woodsmen, who need very little education to make the best of guides. The wonderful success achieved this fall in New Brunswick by the pioneers of that army of American amateur hunters who are ever on the alert to find some new field of sport, has attracted the notice of their fellows, and the Klondike rush will soon set in The local guides are putting up new camps on many of the principal lakes and streams. Some of the Maine guides are locating the best hunting grounds, and will bring their patrons here next season. Many wealthy American sportsmen are negotiating with the Provincial Government, as well as private corporations owning forest lands, with a view to purchasing camping and hunting sites in the choicest game localities It is not certain yet what policy the Government will adopt in reference to these applications. At present the indications are that it will not accede to the proposition to transfer the hunting privileges of the Province to a few affluent individuals, but will leave them open to the general public.

The big game items this season have been almost monotonous in the uniform success of the hunters who have returned from the chase. Nearly everybody brings out his moose, with usually a caribou or two or a bear thrown in by way of chromo. Mr. Dixon, the Chicago man, certainly cannot complain of his luck. His two moose were 56 and 54in. across the horns, respectively, and one of them had twenty-nine points. Mr. Dicataur's 66in. spread is still "high line" this season, and is likely to remain so.

A good many moose have been shot in the Canaan region, but the only "kill" of which exact account has reached me was that which fell to the lot of Mr. John Vanwart, who had as guide the Indian, Jim Paul. Jim states that he destroyed seven moose snares that he found set at one of the lakes in the vicinity

Roger Lawlor and a friend, of Newcastle, had excellent luck on their brief trip to the Bartibogue Barrens. They bagged a caribou and a very large bear. The Bartibogue section is one of the surest caribou chances in the Province. John Connell, of that place, is an experienced and skillful guide.

Mr. Charles Phair, of Presque Isle, brought out his moose from Little River yesterday. The head measured 40in. and was of singular appearance, one of the antlers having three times as many points as the other. Charles is a youth after mine own heart and very supple with the shotgun. While hunting partridges with the writer for five days at Cain's River last week, he bagged the biggest end of sixty-four birds.

Albert Smith, of St. Stephen, is also a meritorious young man. He lost his way in the woods, came upon some strange animal which he could not distinctly see, fired his rifle and then hastily retired from the scene. When he returned with reinforcements next morning he found the mortal remains of a bear that weighed 375lbs.

Mr. C. C. Hills, one of Cleveland's most popular sportsmen, left for the headwaters of the Tobique yesterday for a five weeks' hunt. Adam Moore, of Scotch Lake, is officiating as guide.

A few days ago Mr. William Rice, his son William, and Mr. Barney Breen, the Mayor of Carlow, captured a large bear at Burpee Mill Stream. Bruin had selected his camping place for the winter when the gentlemen referred to came across him and rudely interrupted his repose. It took four men to load the carcass upon a team.

Geese and brant are reported more numerous than for several years past at Miscou and Tabusintac. The accomplished and genial Frank Todd, of St. Stephen, has persuaded a goodly number of the "honkers" to lay aside formality, fuss and feathers.

The first good tracking snow of the season is falling to-day. Yes, Harry, I think we had better drop out at the four mile stump and cross the west branch of the brook and foller up that second growth ridge back of Gallops. I think we'll attend the funeral of that big buck with the hat rack on to-morrow morning sure. FRANK H. RISTEEN.

FREDERICTON, N. B., Nov. 12.

NITTANY ROD AND GUN CLUB.

THE Nittany Rod and Gun Club had their opening at the new club house, located at Hecla Park, Centre county, Pa., on Thursday, Nov. 4. The opening was a highly successful one in every particular, and the members in attendance very much pleased with the club house and all appointments. Dinner was served at 5 o'clock, and Senator J. Henry Cochran, of Williamsport, the president of the club, to whose hospitality the members were indebted for the dinner, acted as host. After dinner speeches were made by Judge Love, J. Gephart, S. T. McCormick, F. C. Smink and others.

A very gratifying test of the club preserves was made that day, when Clarence Sprout and Fred Payne bagged twenty quail in two hours, and were not half a mile away from the club house. The trout stream belonging to the preserve is one of the finest natural streams in the State, and to that sixty-four little dams and riffles have been made and a foot-walk placed alongside the full length of the stream, which is nearly eight miles in length. The stream is fed by springs, and there is not a farm or clearing along its entire length, so that it will not become polluted, and the trout can grow to great length and live and thrive winter and summer

The quail preserve embraces an area of about 20 000 acres of beautiful valley land, and is well watered by several streams and has already been largely stocked for this fall shooting, and more will be planted in the spring for breeding purposes. Pheasants and wild turkeys abound in the mountain land of the preserve and along the trout stream, which is reached by a 200yd. walk from the club house.

The club house has a fine orchard adjoining it on the one side and several acres of land on the other side, making an ideal spot for trap shooting. It is delightfully located at the base of the mountain and near the old Hecla Furnace, abandoned long ago, at the rear of it, and in front is a commanding view of slightly rolling country where thousands of the beautiful Nittany Valley's broad acres stretch miles before the view. A few miles away are the celebrated Penn caves. Within a quarter of a mile of the house is a pretty park with a couple of pretty lakes for boating

The club house itself is of colonial style about 50ft wide by 80ft. deep, a porch, 16 ft in width, extends around the three sides of the house both on the first and second stories, giving an outside floor space of 3 500 q. ft. A never failing spring from the mountain supplies the house with fine water, which is piped all through it. The sitting room, dining room and reception room are large, and provided with open fireplaces all through. The halls are 10ft. in width and the ceilings high, giving the house a fine appearance inside. There are two bath rooms on the second floor furnished with hot and cold water, and the sleeping rooms are large, beautifully furnished, and well lighted and well ventilated, as are also the rooms reserved for the superintendent and his family. The superintendent will live in the house all the time and supply the cuisine, thus making it an acceptable place for an outing at any time in the year. The house committee expect to light the place by either gas or electric light and heat by steam by next year. The favor with which this enterprise has met in the short time since the club was organized in April last is most gratifying to its promoters, the hardest working and most indefatigable of whom were Mr. Frank Warfield and Mr. Andred Brockerhoff, of Bellefonte.

CHICAGO AND THE WEST.

Wisconsin Deer.

CHICAGO, Ill , Nov. 13.—From reports now at hand it would seem that the deer season in Wisconsin this fall has been a good one, some hunters say the best for some time. A trip down the game markets of Chicago shows many dozens of carcasses of deer hanging on the outer walls, mute testimonials of the destination of a good part of the pine woods product. Yesterday I saw one very fine buck hung up at a place on Lake street The antlers were remarkably heavy in beam and branch, and extraordinarily symmetrical. The head would have made a fine trophy.

A great many hunters have been out from Milwaukee, and one train brought down some thirty deer one day this week to that city alone. Among Milwaukee hunters who have been out are Messrs. John F. Burnham, W. C. Holtz, Dr. Stewart, Julius E Roehr and Thomas M. Dwight, who visited the South Side Gun Club preserve near Three Lakes. This party brought down six deer, the only member who failed of killing a deer being Mr. Holtz.

Mr. C. H. Matthews, of Milwaukee, has gone to Girard Junction, Wis., after deer. Several members of the Tomahawk Club are hunting near Wausaukee, in the Pike River country.

At Phillips, Wis., the deer hunting has been very good indeed. Dr. McDill and Dr Frank killed four deer between them on one day last week. Another party who went in at Phillips had twelve deer hung up at last accounts

It is reported that hunters are having fine luck at Channing, Floodwood and Sidnaw. I presume the best of the hunting is found south of the strip which was swept by the heavy forest fires two years ago, at which time there was a practical exodus of the deer from a large territory in upper Wisconsin and Michigan.

At Iron Belt, Wis., on Nov. 10 local hunters killed a fine buck near the edge of town. It was a six-pronged buck and weighed over 250lbs.

Wolves in Wisconsin.

The timber wolf usually follows the deer pretty closely, and although few wolves have been seen in Wisconsin of late years the animal has been by no means absent over a large district of that country. Deer hunters sometimes report seeing the tracks of wolves in the snow, and I knew of one hunter, a rather timid gentleman, who two years ago lost all the pleasure of his deer hunt in Wisconsin because he saw too many wolf tracks. On Nov. 10, near Neillsville, Wis., two Indians, John White and Big Soldier, killed two big timber wolves which they found, like themselves, engaged in the pastime of hunting deer.

Accidentally Shot.

Mr. John M. Clarke, a prominent attorney of Milwaukee, while out deer hunting near Wausaukee this week, accidentally shot himself through the hand, inflicting an awkward, though not very serious wound. Mr. Clarke was hunting with members of the Tomahawk Club He shot himself while walking in the woods with his friend, Mr. Dixon. No one knows how the rifle happened to go off just as Mr. Clarke's hand was over the muzzle, but that is the sort of time usually selected by a rifle for going off without logical reasons, more especially a rifle known to be entirely empty. It is an extremely good rule about firearms never to point them at anything you do not want shot, then they are not so liable to go off. Mr. Clarke received early medical attendance, and being only about a dozen miles from the railroad, was taken to Wausaukee, and thence reached his home in Milwaukee.

Minnesota Deer.

Reports from the Minnesota deer country are at this date not very flattering, although it is difficult to get any adequate idea of the moose and deer crop. But very few moose have been killed, so far as known, and also very few deer, comparatively speaking. The authority best qualified to report on the results of the season says: "I estimate that not one deer in ten will be killed this year as compared to last year, and I think I would be safe in saying not one in twenty. The weather is responsible for this state of affairs in Minnesota, not the scarcity of game. In my trip I traveled over about 100 miles of the finest deer country in the world You know we have had no snow in Minnesota thus far this season, and everything is very dry, and you cannot get any place without making a noise. It is impossible to still-hunt deer in weather like this. Then, our new law making it obligatory on a man to accompany his deer to the place of destination, is going to save a lot of deer that would otherwise be killed and marketed."

Killing of Minnesota Warden.

In a private letter to me this week, Mr. S. F. Fullerton, executive agent for Minnesota, says that he has just returned from a long and hard trip taken for the purpose of investigating the murder by Indians of Warden Wetsel, which was earlier reported in FOREST AND STREAM. There seems to be no question that this was a cold-blooded murder. The Indians, or a great many of them, seem to imagine they can commit all sorts of depredations, and as long as they reach the reservation they will be safe. The poor fellow was literally stabbed to death and then clubbed after death. If he had been of a quarrelsome disposition or a drinking man there might have been some excuse, but he was just the opposite, and everyone who knew him in that vicinity speaks in the highest possible terms of him. He was a man who was not afraid of anything, but of a very quiet disposition. The evidence all goes to show that Wetsel fired the three shots he did while he was on his back and he must have had a desperate struggle for his life against such fearful odds, as he had seventeen knife wounds in his body besides being clubbed.

Mr. Fullerton says that the Indians have been trying to make trouble ever since the order of Commissioner Jones, compelling them to observe the game law. The new Indian agent, Mr. Sutherland, will have the order of the commissioner absolutely obeyed by the Indians, no matter how sullen and ugly they become over it. The State Commission will see that the authorities in Beltrami county push the prosecution against the Indians who killed Wetsel, providing that they recover from the wounds inflicted by the latter before his death.

All who are interested in energetic game protection will be glad to hear that Mr. Fullerton has recovered almost entirely from the injuries received in an encounter with the express company's men, at Staples, Minn. He was badly kicked by these men during the scrimmage, but thinks nothing serious will come of it. Mr. Hay, superintendent of the express company, is making investigation of this matter. The company, after being warned, carried this game out of the State, and on the whole, it would seem, made out a very bad case for itself. There is every probability in the world that before it gets through with this little matter, this particular express company will conclude that it does not own the entire State of Minnesota.

Still we continue to hear good news from the practical protection in Minnesota. Some twenty seizures of game have been made where parties did not accompany their game, as required to do under the law. This has been making trouble for the commission men, who prefer to have the game, and not the owner thereof, make appearance at their places of business. The Minnesota partridge law is working splendidly, and it is claimed will save 75 per cent. of this kind of game this year, no very large shipments of partridges having been spotted so far.

Ducks.

Nobody seems to know what became of all the ducks this fall. As reported generally, the season in the Northwest started in with a rush, but this would seem to have been shooting mostly on local birds, the wildfowl having bred in unprecedented quantities all over Minnesota and Dakota. It was expected that the supply would still be larger when the Northern flight began, but though millions of ducks were expected in Minnesota, but very few of them came through that way. We have not heard of them on the Wisconsin and Illinois line of flight, and it is now about time they were coming if they are to be here at all. The Kankakee shooting was about *nil* On the Illinois River, the duck shooters mostly whistled: "There'll come a time, some day." I know of nine actual ducks being killed in Illinois this week, these being shot by A W. Carlisle, Calumet Heights Club, along the beach of Lake Michigan.

Mr. Mershon, high chief of the Saginaw crowd, says that the duck shooting in Dakota was immense. He also gives another tip or two about the Western trip of his party, but I shall not forestall his coming account of their adventures by running in advance sheets on him.

Gokey, of Dawson.

I regret to see that history is repeating itself in the case of Gokey, of Dawson, whom I have earlier mentioned as the chief citizen of North Dakota. Success and prominence in any line of life bring with them the certainty of envy, calumny and backbiting. Napoleon had enemies, and so had Washington. And although that would have appeared impossible, so it seems has Gokey. Can it be that Gokey has failed to advertise his dental parlors, his harness shop or his photographic studio in the columns of a certain local paper of Dawson? If this be not the case, why should this paper so assail the public character of Gokey, of Dawson, as it does in the following malicious paragraph:

> The case of E C. Nafus vs Cook and his party, was called for last Friday, Justice Gokey presiding Nafus claimed Cook and his party set a prairie fire which did him and others much damage. Six jurors were chosen with much care—taking a whole day in the selection. The plaintiff called several good witnesses, but the defendant had NONE—Cook himself refusing to go on the stand; but in the face of all this, the Honorable? Judge took the case from the hands of the jury and dismissed the case Moral See to it VOTERS that ALL officers of our free country—celebrated all over the world for her "trial by jury"—are American born citizens and not uneducated foreigners.

As I have earlier stated in these columns, Judge Gokey was born in New England, and it has never been judiciously proven of record in any of the courts of this country that a Yankee is entitled to be called a foreigner. He may be a little odd, but he is not necessarily a foreigner. Even if it were true that Gokey were a foreigner, the only thing that Dawson needs is a few more such foreigners, in order to have the seat of Government removed from Washington to Dawson. The further comment of Mr. Gokey's character as a judge is not worth notice by him. The only trouble with that editor man is that he can't be justice himself, and can't shoot ducks half as well as Gokey can. I trust the latter will make him feel bad by sending him a few ducks, and also a few turnips, so that he can get through the winter. As for me, although I have a certain sympathy for any newspaper man, I cannot sit idly by and see any member of the profession, able as he may be, heap wanton abuse upon officials in power. Moreover, while I have never seen this editor, I think Gokey can lick him.

From the Sandhills.

The weird sandhill region south of this city this week produced two specimens unusual for this region, both birds killed not far from the Calumet Heights club house. Mr. W. S. Schmidt killed a genuine raven, with a beak as long as his finger and a spread of 46in. from tip to tip of the wings. Mr. J. Williams killed a snowy owl whose wings stretched nearly as wide as a man's arms could reach. I have not heard of either of these species being seen near Chicago at any time in the last ten years.

Personal.

Mr. Charles H. Kingsbury, of Rochester, N. Y., lately of Spokane, Wash., made a pleasant call at the FOREST AND STREAM office this week. Mr. Kingsbury is just back from a hunt in the Okanogan country in northwest Washington, on the dry side of the Cascade range This region was once a famous one for sheep, but Mr. Kingsbury says that the supply now seems much cut down, and he saw not one where he would have seen ten a few years ago. He did not see one mature ram in a two weeks' hunt, though he killed one young ram. The camp was not without venison, and Mr. W. B. Lee, one of the party, also of Rochester, likewise killed a sheep, a very fair ram, which was the first mountain sheep he had ever seen. The party camped about sixteen miles from Loomis, which is the end of a sixty-mile stage line that runs up north of the Columbia River. Mr. Kingsbury thinks that the game of that section is rapidly diminishing.

Mr. H. Thorn, of the Nickel-Plate Railroad of this city, leaves next week for a trip on the plains south of Pueblo, where he will visit a horse ranch and have a little try for antelope and other game.

Mr. Robert Ansley, of Westville, Ind., called this week. He says there are a few quail in his part of the country. He reports the Kankakee bottoms very dry, and says the bass have all gone to the headwaters in Deep Lake, where they are now biting well. On one day last week Mr. Ansley and a friend saw a curious phenomenon on Deep Lake. Over a large extent of water the fish were leaping by hundreds, so that the water was fairly churned up. The fish were large, but he could not tell of what variety He was told that the fish were carp, which seems a trifle singular. I would about as soon expect to see a hog jump a five-bar gate as to see a carp jump of his own free will.

The Largest Muscallonge.

I have been paying some attention to the record weights of muscallonge of this region for the past few years. The one mentioned last week, 40lbs., taken in Woman Lake, Minn., was the largest known for this year. I never heard of a larger 'lunge taken in Wisconsin than 55lbs , though a guide told me that he once saw a fish of that weight taken by a gentleman from Wausau. I saw a head at a Madison street butcher shop which was described as coming from a St. Lawrence 'lunge, weighing 75lbs. This may have been, and probably was, only guesswork. This week I saw hanging over the desk of Mr. J. W. Rudolph, of Hibbard, Spencer, Bartlett & Co., the heads of two muscallonge which I think are the largest I ever saw. These fish were taken two years ago in Muskegon Bay, on the west shore of the Michigan South Peninsula, in the nets of market fishermen. One of them was a male and the other a female, the former weighing 65½lbs. and the latter 65lbs. even. The male fish was taken on one day and the female the day following, in the same net. It has been a long time since I have known of any muscallonge being taken in Lake Michigan, as the fish is becoming scarce in all the Great Lakes. It would seem that after all we must go to the biggest waters for the biggest fish Incidentally I might say that we must go to Chicago for the biggest fish story; because Muskegon is but a little way from Chicago. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

MAINE GAME AND HUNTERS.

BOSTON, Nov. 13.—Conductor F. L. Gardner, of the Maine Central Railroad, with Mrs. Gardner, has returned from Lilly Bay, Moosehead. Mrs, Gardner is credited with shooting a fine buck deer at 200yds., with a rifle. F. A. C. Hill and E C. Ostry, of Pawtucket, R. I , are out with a big bull moose from Coxabexis Lake, in the Chessuncook region. A. T Rowell, of Hardy Corner, a few miles above Brewer, reports two drunken hunters firing a ball through his trousers as he was sawing wood in his yard. The fellows were dressed like city sports, and were a good deal surprised that Mr. Rowell was not a deer or a moose, though he claims not to look like one, nor does the noise of his woodsaw resemble the notes of either moose or deer. A sportsman was washing face and hands in Sebac Lake recently, kneeling at the water's edge. Two hunters suddenly rounded a point in a boat. It was dusk; but without waiting to see what the object might be, the hunters let fly a bullet, which whizzed close by the kneeling camper's body. He jumped up, and yelled murder to the top of his lungs. The hunters in the boat shouted, "Heavens, 'tis a man!" and were quickly paddled out of sight.

There are reports of deer being dogged in the vicinity of Holden, Me. A hunter, who has lately been there, says that he heard the hounds nearly every day he was out, and reports came to his camp of remarkable success at camps a short distance away.

There is a good deal of earnest talk in Maine about securing the passage of a law, at the next session of the Legislature, compelling non-resident sportsmen to employ registered guides in every instance. Commissioner Carlton is reported to be in favor of it, and the fact that so many hunters who go there seem to be unable to tell a moose or a deer from a man will be urged in favor of such a measure. It is also reported that the wealthy and influential lumber landowners are going to work for it. They claim that they shall feel far safer in regard to fires if no sportsman is allowed on their lands unless accompanied by a native of the section, who is presumed to understand the nature of the forest and the danger from fires. The timber land-owners say that many thousands of dollars loss are traceable to careless and inexperienced sportsmen and hunters, and they will demand that the State take hold and protect their interests as well as the fish and game. Among the wealthiest and most extensive lumber land-owners are Gov. Powers and ex-Gov. Burleigh. Whatever they ask for in the Legislature is very likely to be granted.

Another happy hunting party has returned to Boston. The names are W. J. Higgins, Dick Murphy, Al. McInnes, Dave Power, Walter Pinkham, Henry Stoddard and M. J. O'Hearn. Each of the party shot two deer, except Mr. Power, who got one. He also had the good fortune to secure a *Loup cervier*, which is reported to have swam toward his canoe for an attack, but was shot when within 5ft. of it. The total weight of the deer loaded at the Union Station on the evening of their return was 1,541lbs. The party hunted about thirty miles from Wesley, in the Machias region. Other hunters want to know how they succeeded in getting so near to the law's quota of deer, and also how it was that the *Loup cervier* happened to be in the water, since all of the cat family abhor that fluid? A couple of Plymouth, Mass., clergymen are just out of the Maine woods with a moose and a caribou. The latest reports say that the snowstorm of Thursday night and Friday left 6in on the ground in some parts of Maine and New Hampshire, furthest from the seacoast. This will make excellent deer hunting. Deer to the number of over 4 000 have already been shipped out over the Bangor & Aroostook Railroad up to date, if reports are true.

SPECIAL.

Maine Game Records.

THE Bangor & Aroostook Railroad passenger department gives out its game record for October, 1897, in the following table, which shows the amount of game shipped from the stations of the road:

Shipped from.	Deer.	Moose.	Caribou.	Shipped from.	Deer.	Moose.	Caribou.
Caribou	3	2	..	Schoodic	84	..	..
Presque Isle	..	1	2	Brownville	12	..	..
Fort Fairfield	..	1	..	Milo	3	..	..
Houlton	1	..	..	Alton	1	..	..
Oakfield	2	..	..	Ashland	33	3	4
Island Falls	11	..	..	Masardis	15	8	..
Crystal	2	..	..	St. Croix	5	1	1
Patten	67	3	4	Weeksboro	1	..	..
Sherman	14	1	..	Smyrna Mills	2	..	..
Stacyville	58	3	5	Katahdin Iron Works	36	3	..
Grindstone	62	..	1	Brownville Jct.	4	..	..
Millinocket	31	..	..	Monson	5	..	..
Twin Dam	11	1	..	Greenville	427	11	2
Norcross	261	16	1	Shirley	2	..	..
So Twin	16	..	..	Monson Jct.	1	..	..
Perkin's Siding	24	..	..	Guilford	1	..	..
Ingall's Siding	32	1	..				
West Seboois	19	..	..	Total	1246	55	20

For comparison we give:

	Deer.	Moose.	Caribou.
Game shipped in October, 1894	4 9	24	10
Game shipped in October, 1895	669	53	37
Game shipped in October, 1896	10 9	79	57

The shipments of moose are from Oct 15 to Oct 31 only.

The above statement comprises only game shipped by visiting sportsmen, and does not include that killed by native hunters or the large quantities consumed in camps.

GEO. M. HOUGHTON, G. P. & T. A.

ON THE CROOKED DEAD WATER.

PROVIDING connecting railroads keep their advertised promises, and there are no cancelled trains, a ride of twenty-four hours by rail and team, starting from Boston, will land you on the edge of a great forest, in which moose and caribou abound, where streams and lakes are crowded with fish, and where feathered and fur-bearing game are found fearless and abundant.

Only the borders of this great preserve are ever disturbed, except by hardy hunters and trappers, and an occasional sportsman who is willing to endure and live as these hunters are obliged to. For there is a limit to what can be taken with you in the way of supplies, and that limit strikes very close to the actual necessities.

The lumbermen have penetrated only the edges of this territory, and they have about reached the limit of the belt of marketable lumber. Besides that, recent tariff legislation in a bordering State has lessened the incentive, profit, to further advance, except at a much slower pace.

The center of this tract, about seventy-five square miles, had not been cruised or surveyed until a short time before our party visited this section.
